Again, why impute tendencies to a system dependent upon, and explanatory of, physical phenomena, if those tendencies appear in the methodical presentation of such phenomena? The system can not be made responsible for what it discerns in the field of inquiry which is chosen for its sphere. We must not be understood here as admitting the fatalistic tendencies of Phrenology, but as discussing the question affirmatively. Phrenology did not make man, any more than the sciences of geology or chemistry made the rocks and the various substances composing the soil. Phrenology has created nothing, it has only discovered the properties and functions of things already existing. If to ascertain by analysis that water is composed of hydrogen and oxygen in certain proportions, or that atmospheric air is made up of oxygen and nitrogen in certain proportions, is to impute a fatalistic tendency to chemistry,

the science which has determined merely that water and atmospheric air, things supposed to have existed thousands of years, are so constituted, we will admit that Phrenology must succumb to the "soft impeachment."

If to state that Geology has discovered and classified the rocks and strata of the earth's crust, and thus simplified, or, rather, methodized, the labor of those men who excavate and analyze the various formations in their search for truth, is to accuse geology with enunciating fatalistic heresies, Phrenology must plead equal guilt.

If to assert the established truths of Physiology, to declare that by it are determined what may and what may not be eaten with healthful results, what is poison to the blood and death to the man, how the functions of mastication, deglutition, digestion, and assimilation are conducted, is to convict Physiology of fatalism, then Phrenology is as heretical and as fatalistic. The absurdity of such imputations is palpable. No inductive method or system can be affected by moral or ethical postulates. It is not responsible for the simple facts it gathers and arranges into a definite and convenient form. If inevitable conclusions drawn from the facts contradict certain premises generally received by religious people as *orthodox*, then the best way to dispose of the matter is for those people to relinquish those premises and stand by the facts. That which will not bear inspection, though it may be very pleasant to believe, should not be maintained. Fact, and *fact only*, should be our basis in thought and action where important consequences are involved. Such is the reasoning of common-sense; and yet, in one sense, there may be a fatalistic bearing implied in such reasoning. Thus, given certain facts which sustain certain relations with each other; the conclusions growing out of such relations being inevitable, therefore absolute, are substantially fatalistic; in other words, all established causes for certain effects are, so far as moral considerations are concerned, fatalistic. However, for Phrenology we claim that while it has for a basis certain well-established principles, it recognizes fully the influences of position and association as modifying mental conditions. Organization, temperament, and culture are considered when science would determine character, just as the navigator consults the barometer, the sky, and the wind when he would determine the character of the weather; and if the phrenologist discovers defects in the organization, he indicates their nature, and explains the method to be pursued to remedy such defects. He prescribes for the sick mind just as the physician prescribes for the sick body. Were the organization unchangeable, then were man indeed fatally constituted, and incapable of applying the beneficial suggestions of the true phrenologist. Hundreds, yea, thousands, of improved and enlightened minds are willing to stand up now and testify in grateful accents to the good wrought in them mentally and physically by the appreciation and application of Phrenology. Can fatalism stand such testimony? We trow not.

But there is one important consideration which we have disregarded in our purely logical discussion of the question, and that is the influence of grace, and that, in our opinion, lifts the whole matter beyond the reach of fatalism. The regenerating and ameliorating influence of God's spirit on the heart can not be estimated, hence the Scriptural precept, "My grace is suf-

ficient." And we believe that no man is so badly constituted that he can not be improved and refined.

RICH WIFE AND POOR HUSBAND.—Do you think it dangerous for a young man without property to marry a young woman who has suddenly become wealthy?

Ans. That depends very much on who the woman is, and somewhat on who the man is. If she loves him, and is sensible, it will be a good thing that she has the money. It will give her a kind of independence which will raise her above the mean dictation and petty control which some men unthinkingly and meanly exercise over woman because she is dependent. If we were in the market, we would not hesitate to marry under the circumstances referred to.

Publisher's Department.

OUR ANNUAL OF PHRENOLOGY AND PHNOMONY FOR 1869 is now "in the works," and will be published early in the autumn. It will be handsomely illustrated, containing eighty or more 12mo pages, printed on fine paper, and be sold for 25 cents per copy. The Annual for the year 1868 had a very large circulation. We expect a still larger demand for that of 1869—say from seventy-five to a hundred thousand. A few pages will be allotted to appropriate announcements, including the titles of excellent books on natural science and education. To secure insertion, advertisements must reach this office before the 1st of September. The rates will be made known on application.

PHRENOLOGY IN MICHIGAN.—We are in receipt of a large club of subscribers from Ridgeway, Mich., obtained by Mr. J. C. Schreder, resulting from lectures recently given by Mr. R. C. Barrett, of Ohio. This gentleman is said to have given a course of lectures in the M. E. church at Ridgeway, with great acceptance, and to have taught a class of more than sixty persons in that town. We hope to hear more of this promising lecturer, and of those benefited by his teachings.

IN ADVANCE, OR DISCONTINUED.—It is from no feeling discourteous that we discontinue sending the JOURNAL when the time for which it has been paid for expires. It is painful to feel that we must part company at any time; but *we have no right* to continue sending the JOURNAL and to hold a subscriber responsible for future payment. It is every way better to have pay in advance, and stop when the time expires. In this case the accounts are easily kept, and each knows exactly how the matter stands.

PATTERSON VS. PHRENOLOGY.—Several vigilant correspondents in the West have notified us of an attack, by one Patterson, on Phrenology and phrenologists, which they deem worthy of notice. We have seen the spleen articles referred to, and will reply to them shortly. Without having seen the writer, we venture the opinion that he is a cold, dyspeptic, negative, combative spirit; that he is worse than a doubting Thomas, and delights in criticism. But, in opposing Phrenology, he is "kicking against the pricks," as we shall show and as he will feel. Those who have favored us with information concerning the obscure "professor" have our thanks.

COMPARISONS WITH OTHER JOURNALS.—Our remarks under this head, published in the June number, were unaccountably inaccurate. Each of the amounts in figures should have had a cipher added to indicate the true amount. We reproduce the statements with corrections:

"Some of our cotemporaries have taken considerable pains to show up comparative statements of reading matter as furnished to their patrons during the past year. The *Educator*, published at \$1 a year, prints about 50,000 *ems* monthly; the *New York Teacher*, published at \$1 50, prints 45,000 *ems* monthly; the *American Educational Monthly*, subscription the same as the last, about 63,000 *ems*; and *Hall's Journal of Health*, published at \$1 50, prints some 30,000 *ems*. Our present rate is \$3 a year, and proportionately we should print double the quantity of matter furnished by those three monthlies last mentioned. Taking the *American Educational* as a fair standard, we would do our readers full justice by giving them 126,000 *ems* of reading matter. What, however, is the fact? An examination of our printer's bills enables us to make the astonishing announcement, that in reading matter alone over 150,000 *ems* monthly are furnished. Verily our recent advance of the subscription price is far within bounds. Our old readers, of course, would rebel at any curtailment in the number of pages. They keep crying out for more, more. Well, kind friends, we fain would meet the demand; and should our circulation reach 50,000, we may make further improvements in accordance with such liberal support."

REGISTER YOUR LETTERS.—When it is not convenient to procure post-office orders to remit in payment for publications, it is well to have letters registered. More care is taken of such letters by the post-office authorities, and there is less danger of losses.

LETTER POSTAGE between Uncle Sam and Cousin Canada is reduced to six cents, when prepaid. The old rate—ten cents—is exacted when not prepaid. Everybody should, of course, prepay.

A NEW PICTORIAL POSTER, for lectures on Phrenology, Physiology, and Physiognomy.—We have just issued a very fine illustrated mammoth pictorial sheet (39 by 41 inches), printed in colors, with a blank space for name and place, thus adapting it to the use of all those who may desire to have it. It contains upward of fifty engraved heads and faces of men, women, and animals, illustrating nearly every imaginable phase of character. Those wishing a sample by post may send us 25 cents, and it will be forwarded. Lecturers will find this the most attractive and conspicuous means by which to get attention. They will be furnished by the quantity at the cost.

NATURAL HISTORY OF MAN.—In our advertising columns of this number may be found a list of works on ETHNOLOGY. Owing to the increasing interest in this interesting subject, we believe many of our readers will be glad to draw from this list.

GYMNASTICS AND PHYSICAL CULTURE.—We give in the present number a complete list of works on this very important subject. We also have the accompanying apparatus, a list of which, with prices, is given in our new ILLUSTRATED AND DESCRIPTIVE CATALOGUE, 40 pages. Sent to any address on receipt of two red stamps.

INFORMATION WANTED of "Dr. E. B. De la Matre," who was at Belvidere, Ill., about 20th January last. Should this meet his eye he will know what it means. Any of our Illinois friends will confer a favor by letting us know the "Dr.'s" whereabouts.

WHERE IS HE?—Inquiries reach us as to the whereabouts of one JOHN JONES, a Welshman, formerly of Pittston, Pa. It appears that he left home without leaving any clew to his destination. A few friends and many creditors will be glad to hear from him. Should he report himself promptly it may save his reputation.

General Items.

CHEAP SEWING MACHINES.—There is a little thumb-and-finger concern, largely advertised, to be sold for \$5. It is worthless. There are other machines offered for \$25, and less. Of their merits we know very little, but enough to satisfy us that the Wheeler & Wilson, Grover & Baker, Singer, Florence, Wood, Wilcox & Gibbs, etc., which sell at \$55 to \$75, are every way the best; and we have never recommended any low-priced machine, for the simple reason that we do not believe they will prove satisfactory to purchasers, whatever inducements may be offered to agents. We think the best none too good for us.

STILL IT ADVANCES.—Six hundred miles of railroad completed! Verily the managers of the Union Pacific are progressive. The summit of the Rocky Mountains, 8,363 feet above tide-water, has been crossed, and left fifty miles behind. At the present rate of progression, by the end of this year 900 miles will be in full operation; and it is confidently expected that the year 1870 will witness a continuous line of rail from the Missouri to the Pacific; nay, from Maine to California. Let the work go forward.

A GOOD INSTRUMENT.—One who loves the concord of sweet sounds could not fail to be pleased with a choral organ recently procured by our assistant editor from Messrs. Berry & Thompson, of this city. It is certainly a little gem in its way. If the manufacturers turn out all their instruments as good as this one they deserve a liberal trade.

LECTURES ON THE THERAPEUTICAL USES OF THE TURKISH BATH, by E. C. ANGELL, M.D.—A late number of the *New York Medical Gazette* contains one of the best descriptions of this bath and its uses yet given to the public. We hope soon to give the substance of the same to the readers of the PHRENOLOGICAL JOURNAL, for which we shall expect to deserve their thanks.

THE "ANNUAL" APPROVED.—A prominent religious weekly of New York highly commends our combined "Annals of Phrenology and Physiognomy" as "a capital book for all believers and disbelievers" in the doctrines set forth therein. Its comprehensiveness and clearness have created a considerable demand for it. Price 60 cents, postage prepaid.

WATER-CURE IN KANSAS.—Dr. Thomas W. Organ, from Illinois, has settled in the beautiful town of Emporia, Kansas, where he will try to teach the laws of health and practice the healing art on hygienic principles. Dr. Organ will deliver courses of lectures when and where circumstances favor.

Business.

[Under this head we publish, for a consideration, such matters as rightfully belong to this department. We disclaim responsibility for what may herein appear. Matter will be LEADED, and charged according to the space occupied, at the rate of \$1 a line.]

THE HYGEIAN HOME.—At this establishment all the Water-Cure appliances are given, with the Swedish Movements and Electricity. Send for our circular. Address A. SMITH, M.D., Wernersville, Berks County, Pa.

MRS. E. DE LA VERGNE, M.D.,
335 ADLPHI STREET, BROOKLYN.

HYGIENIC CURE, BUFFALO,
N. Y.—Compressed Air Baths, Turkish Baths, Electric Baths, and all the appliances of a first-class Cure. Please send for a Circular. Address H. P. BURDICK, M.D., or Mrs. BRYANT BURDICK, M.D., Burdick House, Buffalo, N. Y.

INSTITUTE of Practical Civil
Engineering, Surveying, and Drawing, at
Tolleston, Ind. For Circular, address A.
VANDER NAILLEN.

WORKS ON MAN.—For New
Illustrated Catalogue of best Books on
Physiology, Anatomy, Gymnastics, Diet-
etics, Phrenology, Shorthand Writing,
Memory, Self-Improvement, Phrenology,
and Ethnology, send two stamps to S. R.
WELLS, Publisher, No. 389 Broadway,
New York. Agents wanted.

FARNUM & CHURCH, Publishers,
Chicago.

GOOD GRAPES.—WHO WILL
HAVE THEM?—We have just made ar-
rangements with Messrs. FERRIS & CAT-
WOOD, of Poughkeepsie, N. Y., for vines of
the different numbers of their celebrated
"WALTER" GRAPE, which we offer as
PREMIUMS TO CLUBS for the PHRENOLOGI-
CAL JOURNAL at the following rates:

For 5 new subscribers, at \$3 each, one
\$5 "Walter" Grapevine.

For 10 new subscribers, at \$3 each, one
\$10 and one \$3 vine.

For 20 new subscribers, at \$3 each, one
\$10, one \$5, one \$4, and two \$3 vines.

For 25 new subscribers, at \$3 each, one
\$10, two \$5, one \$4, and two \$3 vines, and
one copy of the JOURNAL gratis. And larger
clubs at same proportion.

All packages done up in a careful and
compact manner, and forwarded by express
from the nurseries.

Neighbors and friends by clubbing to-
gether can have the JOURNAL, and at the
same time secure the introduction of this
valuable grape in their vicinity. A full
description will be found in the JOURNAL
for October, 1867, or circular will be sent
by mail on receipt of stamps. Address S.
R. WELLS, 389 Broadway, New York.

Ethnology; or, Natural History of Man.

Types of Mankind; or, Ethnological Researches Based upon the
Ancient Monuments, Paintings, Sculptures, and Crania of Races, and upon their
Natural, Geographical, Philological, and Biblical History. Illustrated by Selections
from the Unedited Papers of Samuel George Morton, M.D., and by additional con-
tributions from Prof. L. Agassiz, LL.D., W. Usher, M.D., and Prof. H. S. Patterson,

dealers keep it for sale. The price for
each copy is Ten Cents, and the subscrip-
tion price is Four Dollars per year, the
same as of other papers of its class.
FARNUM & CHURCH, Publishers, No.
43 Sherman Street, Chicago, Ill. 41.

"American School Institute," a Reliable Educational Bureau, Founded 1855.

1. To aid all who seek well-qualified teachers.
2. To represent teachers who desire positions.
3. To give parents information of good schools.
4. To sell, rent, and exchange school properties.

J. W. SCHERMERHORN, Actuary.
M. J. YOUNG, Secretary.
14 Bond St., New York.

"THE RIGHT TEACHER FOR THE RIGHT PLACE."

Thirteen years' trial has proved the "AMER. SCHOOL INST." a useful and efficient auxiliary in the educational machinery of our country. Its patrons and friends are among the first educational and business men.

Principals, School Officers, and others, should examine the "Teachers' Bulletin" whenever they want teachers. Those who seek positions should have the "Application Form."

TESTIMONY.

"I know the 'AMER. SCHOOL INST.' to be possessed of the most reliable and extended facilities."—Rev. C. V. SPARR, Principal Young Ladies' Institute, Pittsfield, Mass.

"The benefits of a 'division of labor' are happily conceived and admirably realized in the 'AMER. SCHOOL INST.'"—EDWARD G. TYLER, Ontario Female Seminary, N. Y.

"Experience has taught me that I may safely rely upon it when I want teachers."—Rev. J. H. BRAKLEY, Bordentown Female College, New Jersey.

"I commend it to the entire confidence of all."—Rev. D. C. VAN NORMAN, LL.D., New York.

"The business of the Institute is systematically conducted. The proprietors are liberally educated, and otherwise eminently qualified for their duties."—O. R. WILKES, Alexander Institute, White Plains, N. Y.

"Having tried the 'AMER. SCHOOL INST.' I regard it a most desirable medium for supplying our schools and seminaries with the best teachers, and for representing well-qualified teachers who wish employment. All who are seeking teachers will find a wide range from which to select, with an assurance that in stating character and qualifications there is no 'humbug,' and there can be no mistake. Teachers will find situations for which they may otherwise may seek in vain. The highly respectable character of those who conduct the Institute insure fair dealing, with kind and polite treatment."—Rev. BEN S. STEARNS, Principal Albany Female Academy, New York.

"The most remarkable exponent of what method may accomplish, is that system of educational tactics, as conducted and developed by the 'AMER. SCHOOL INST.' Here is a set of gentlemen who keep posted on the entire educational wants of the country. Every department, high or low, comes within the plan. The apparatus, the literature, the wants and resources of education, are tabulated as in a Bureau of Educational Statistics."

"Mark the value of such knowledge. In a time of consideration, what saving! Instead of schools being closed or suffered to decline until the right man turns up, one is provided whose calibre is known—The right man in the right place." The loss of time, misdirection of talent, imposition by unprofessional charity, each in itself no small misfortune to patron or pupil, are happily avoided."—Rev. SAMUEL LOCKWOOD, Keypoint, N. J.

The Masonic Harmonia;

A COLLECTION OF MUSIC,
ORIGINAL AND SELECTED,

For the use of the
MASONIC FRATERNITY.

BY HENRY STEPHEN CUTLER,
Doctor in Music, Director of the Cecilian
Choir, etc.

Being the most complete and best adapted
for use in Lodges.

JOURNAL OF PENNSYLVANIA. Published Monthly. 48 Pages. Price \$2 per annum.

The most original and progressive Medical Journal in the United States. All articles original and thoroughly practical.

Splendid inducements to subscribers for 1868. Premium engravings, valued at \$3, given to each subscriber. Specimen copy sent free.

Address, JOHN BUCHANAN, 227 North Twelfth Street, Philadelphia, Pa.

A. A. Constantine's Persian

HEALING OR PINE TAR SOAP.

Patented March 12th, 1867.

For the Toilet, Nursery and Bath this Soap has no equal. It Cures Pimples, Rash, Chapped Hands, and all Diseases of the Scalp and Skin. Is a good Shaving Soap.

WHAT THOSE SAY WHO USE IT.

Baldness Cured.—It is bringing my hair in beautifully. I consider it the best hair renovator in use.—M. H. COMBS, 213 Atlantic St., Brooklyn, N. Y.

I have used it for catarrh in the head, making a suds and snuffing it through the nose, and it has cured me. I use it constantly for the toilet, and consider it the best soap for that purpose.—G. R. BENSON, Office of the U. S. Life Ins. Co., 40 Wall St., N. Y.

I have used your Persian Healing Soap in my practice extensively, and it has proved the best healing soap I ever used. It has no equal as a soap for washing the heads and skin of children.—L. P. ALDRICH, M.D., 19 Harrison St., N. Y.

I had salt rheum badly fifteen years. Your soap has made a complete cure.—G. M. BALL, 119 West St., N. Y.

I use it for the toilet and bathing, and prefer it to any other I have ever known.—J. H. T. KING, Member of the Royal College of Surgeons, England.

I have used it for soldier's itch. The scalp was badly diseased, resembling scald-head. A cure was effected in a few days.—T. S. P. LORD, M.D., Chicago, Ill.

It is the best medicine we have ever seen for cutaneous eruptions of every kind, and every family should have it.—*American Baptist.*

It accomplishes all it claims.—R. HAM-ILTON, M.D., Saratoga, N. Y.

The wife of Rev. Dr. King, Missionary at Athens, Greece, writes: "I have used your Persian Healing Soap for rheumatism, and find it exceedingly good."

Agents wanted. Send 50 cents for sample, or 3 cents for circular.

A. A. CONSTANTINE,

No. 43 Ann Street, N. Y.

It

DIALOGUE.

Extract from Report of Farmer's Club.

"WILLIAM D. OSBORN: Will the Club give us its opinion of Washing-machines? Is it economy to pay \$14 for one of Doty's machines? Washing-machines have so generally proved to be failures that I am afraid of throwing away my money upon one."

"SOLON ROBINSON: If you had to pay ten times the money you

mention, it would be the best investment you ever made upon your farm. But you must not have that alone. Get the Universal Clothes Wringer with it, and your wife and children will rise up and call you blessed, for they will find washing made easy."

The following Testimonials have been given:

"We like our machine much; could not be persuaded to do without it; and with the aid of Doty, we feel that we are masters of the position."—Rev. BISHOP SCOTT, M. E. Church.

It is worth one dollar per week in any family.—N. Y. Tribune.

"I give it the most unqualified praise, and pronounce it an indispensable part of the machinery of housekeeping."—Rev. HENRY WARD BEECHER.

"In the laundry of my house there is a perpetual thanksgiving on Mondays for the invention of your excellent Wringer."—Rev. THEODORE L. CUTLER.

Every week has given it a stronger hold upon the affections of the inmates of the laundry.—N. Y. Observer.

BOTH THESE MACHINES HAVE RECENTLY BEEN GREATLY IMPROVED.

You may prove the above statement true by sending the retail price: Washer, \$14; Extra Cog-Wheel Wringer, \$9; and we will forward to places where no one is selling, either or both, free of charge. If, after a trial of one month, you are not entirely satisfied, we will REFUND THE MONEY on the return of the machines.—Large discount to the trade everywhere.—R. C. BROWNING, General Agent, 23 Cortlandt St., N. Y.

**WEST'S IMPROVED PUMP.**

Anti-freezing and Double-acting. The best in use.

We do know that the West Pump is all that any man ever requires, being economical, desirable, and efficient.—N. Y. Tribune.

SANCHO-PANZA WIND-MILL. Self-regulating, Self-adjusting, and Self-oiling. The latest and best.

It is very strongly built, is cheap, and always under perfect control.—Scientific American.

OTIS' PATENT LIGHTNING RODS. Of Copper or Galvanized Iron. The only perfect insulation in America.

"I would recommend to the public the use of the Otis' Patent Lightning Conductors."—Hon. HORACE MANN.

Agents wanted everywhere, with exclusive right.

J. D. WEST, & CO., No. 40 Cortlandt St., N. Y.

Dollar Magazine for Young Men.

PACKARD'S MONTHLY.

An American Magazine devoted to the interests and adapted to the tastes of the young men of the country.

ONE DOLLAR a year. Single copies, fifteen cents.

This is an earnest effort to supply young men with unexceptionable reading matter, at so low a rate that there can be no excuse for neglecting its advantages. The very best writers in the country are engaged, and there will be nothing cheap about the magazine but its price.

The contents of the June number will indicate somewhat its character and scope.

Robert Bonner and the Ledger (with Portrait).....By Oliver Dyer.

Success or Failure in Life.....By Horace Greeley.

Clerks and Apprentices.....By James Parton.

Political Duties of Young Men.....By Edward Cary.

Money and Morals.....By Rev. J. L. Corning.

Some Autographs.....By the Editor.

John O'Groat's House.....By Elihu Burritt.

The Telescope of the Stars. (A Poem.).....By G. W. Bungay.

Editorials, etc.

In the July number will be commenced a series of illustrated articles by Mr. Dyer, on the Undercurrents of City Life, truthfully setting forth the gigantic evils which fester in the great metropolis, and proving that "truth is stranger than fiction."

American Artisan and Pat-

ENT RECORD.—New Series.

The *American Artisan*, now in the fourth year of its publication, is a Weekly Journal, devoted to fostering the interests of Artisans and Manufacturers, encouraging the genius of Inventors, and protecting the rights of Patentees.

Each number contains numerous original engravings and descriptions of new machinery, etc., both American and Foreign; reliable receipts for use in the field, the workshop, and the household; practical rules for mechanics and advice to farmers; "Mechanical Movements," and other useful lessons for young artisans; the official list of claims of all patents issued weekly from the United States Patent Office; reports of law cases relating to patents, etc.

Each number of the *American Artisan* contains sixteen pages of instructive and interesting reading matter, in which the progress of the arts and sciences is recorded in familiar language. Twenty-six numbers form a handsome half-yearly volume. The columns of the *American Artisan* are rendered attractive by articles from the pens of many talented American writers upon scientific and mechanical subjects.

Terms of subscription: Single copies, by mail, per year, \$2 50 in advance. Single copies, by mail, six months, \$1 25 in advance.

The publishers of the *American Artisan* are also extensively engaged as Solicitors of American and Foreign Patents, and will promptly forward to all who desire it, per mail, gratis, a pamphlet, entitled "Important Information for Inventors and Patentees." Address

BROWN, COOMBS & CO.,

Proprietors of the *American Artisan*, Mch. 11. No. 189 Broadway, New York.

Watson's Manual of Callis-

THENICS, contains a complete course of physical exercises, WITHOUT APPARATUS. It has all careful directions, rules, and explanations, with sections on phonetics and respiration. The exercises are arranged in accordance with well-known principles of anatomy, physiology, and hygiene. They have been thoroughly tested, securing the happiest results. These exercises, practiced habitually and energetically, can not fail to yield grace, agility, suppleness, a ready hand, as well as robust health, and power of endurance. Almost any school-room or parlor will suffice for the exercises. For those who use the piano to enliven the exercises, there is music, prepared by the best masters.

The book is richly illustrated; is printed on superior paper, and bound in best style. A reviewer writes: "This is the most elaborate and satisfactory attempt yet made to apply practically to educational purposes the great truths of physiology, relating to physical culture and training. To those in authority it is a positive duty to promote the circulation of this book by every means in their power. All who have the physical welfare of the human race at heart, and understand how powerless the intellect is to contend against the burden of a feeble frame, are equally interested in its teachings, and answerable, each in his own sphere, however small it be, for the consequences of neglecting them." Sent by mail for \$1.

J. W. SCHERMERHORN & CO., Pub-

lishers, 14 Bond Street, New York. 2t.

Hall's Great Geological Chart.

Size 6 ft. 6 in. by 5 ft., finely engraved and colored, exhibits the order of successive strata of rocks and the characteristic fossils which have given the key to this arrangement. It gives the appearance if a section were made from the surface toward the center of the earth, exposing the edges of the different layers. It is, in fact, such representation as may be seen in the banks of many rivers, as the Niagara, or in high rocky cliffs of lake or ocean shores, only it is much more extended.

This beautiful Chart was prepared by Professor Hall, that it might render a study so delightful in itself, and so practically useful, more extensively introduced, and more easily understood.

Only a limited number were produced from the lithographic stones. The subscribers have for sale a few of them, fresh and perfect.

Price, Mounted on Cloth and Rollers, \$18; wholesale price to Teachers, \$12.

Key to Hall's Geological Chart, \$1.

J. W. SCHERMERHORN & CO., 14 Bond Street, New York. July, 2t.

Just Received.—We have just received from our London agent the fine English Edition of **THE LIFE AND WRITINGS OF EMANUEL SWEDENBORG**. By Wm. White. 2 large vols. price \$12.

THE STUDY OF THE HUMAN FACE. Illustrated with 26 Full-page Steel Engravings. By Thos. Woolnoth, Esq., historical engraver to the Queen. \$5 50.

THE EDUCATION OF THE FEELINGS OR AFFECTIONS. By Charles Bray. Price, post-paid, \$1 75.

THE CHESS CHAMPIONS is the title of a neat card photograph of a chess-board, each square of which contains the likeness of a prominent chess-player. The following is a list of the sixty-four portraits, in alphabetical order:

Allen, Anderssen, Andre, Barnett, Bayer, Bilguer, Bolron, Bourdonnais, Brenzinger, Brown, Cheney, Cook, Elder, Fiske, From, Fuller, Graves, Grimshaw, Hanstein, Harwitz, Hazeltine, Jaenisch, Journeaud, Julien, Kidson, Klett, Kockelborn, Kohtz, Kollisch, Lasa, Leonard, Lesqnesne, Lichtenheim, Lowenthal, Loyd, Mackenzie, Marache, Maurian, Mead, Meyer, Morphy, Mortimer, Paulsen, Pavitt, Perrin, Petroff, Philidor, Potter, Preti, Reichhelm, Rice, Riviere, Rosenthal, Schlesinger, Schultz, Smith, St. Amant, Stanley, Staunton, Thompson, Walker, Wells, Willmers, Wormald. For sale at this office, *carte de visite* size. 20 cents each, \$2 a dozen. Larger size, \$1 each.

THE VERY HIGHEST PRIZE.

Was conferred on the Representative of the
GROVER & BAKER

SEWING MACHINES

At the EXPOSITION UNIVERSELLE, PARIS, 1867.

Salesrooms,
3t. 495 BROADWAY, NEW YORK.

WANTED—AGENTS—

\$75 to \$200 per month, everywhere, male and female, to introduce the GENUINE IMPROVED COMMON SENSE FAMILY SEWING MACHINE. This Machine will stitch, hem, fell, tuck, quilt, cord, bind, braid, and embroider in a most superior manner. Price, only \$18. Fully warranted for five years. We will pay \$1000 for any machine that will sew a stronger, more beautiful, or more elastic seam than ours. It makes the "Elastic Lock Stitch." Every second stitch can be cut, and still the cloth can not be pulled apart without tearing it. We pay Agents from \$75 to \$200 per month and expenses, or a commission from which twice that amount can be made.—Address SECOMB & CO., PITTSBURGH, PA., or BOSTON, MASS.

CAUTION.—Do not be imposed upon by other parties palming off worthless cast-iron machines, under the same name or otherwise. Ours is the only genuine and really practical cheap machine manufactured.

The Missouri Baptist Jour-

NAL. Palmyra, Missouri. J. H. Luther, Editor. J. A. Jaudon, General Agent. Official Organ of the Missouri Baptists. Circulates principally in Missouri, Illinois, Kansas, Arkansas, Iowa, and California. The Journal is read by at least ten thousand Baptists in Missouri. Terms, \$2 50 per year, strictly in advance. A limited number of advertisements taken. 1t.

The First Volume of Putnam's Magazine,

New Series, is now ready. Containing 772 large pages, and including 90 articles of permanent interest and value. Historical, Descriptive, Practical and Entertaining; by writers of eminent ability. Neatly bound in green morocco cloth, price, \$2 50. N. B.—Cloth Covers can be had separately, for binding the volume. Price, 50 cents, post-free.

The volume is a very handsome one, and contains as much matter as six volumes of Irving's Works—Reading of the most interesting and valuable kind. It contains six portraits, viz.: General Grant, H. W. Beecher, H. Greeley, Speaker Colfax, Fitz-Greene Halleck, and D. Huntington, P. N. A. It is handsomely bound in cloth.

THE "RIVERSIDE" AND "PEOPLE'S" EDITIONS OF IRVING'S WORKS.

G. P. Putnam & Son have now ready the first volume of the Continuation of the "Riverside Edition," in 16mo, on fine paper, green cloth, gilt top. Price, \$1 75; being that most romantic of veritable biographies.

THE LIFE AND VOYAGES OF COLUMBUS AND HIS COMPANIONS.

By Washington Irving. With illustrations on wood and on steel. Vol. 1, 16mo, gilt top. \$1 75.

Also, the same Work, People's Edition, cheaper paper, neatly bound in black cloth. Price, \$1 25.

N. B.—Both editions will be continued in monthly volumes until completed; and also the Knickerbocker edition, larger paper, \$2 25 per volume.

Mr. Prescott, the Historian, wrote of Irving's work: "It is the noblest monument to the memory of Columbus."

Lord Jeffrey said: "It will supersede all other works on the subject, and never be itself superseded."

G. P. PUTNAM & SON'S NEW BOOKS FOR MAY.

In 1 Vol. 12mo. \$1 50.

WIND AND WHIRLWIND.

A Novel by Mr. Thom. White.

"Displays an extraordinary fertility of plot."—*N. Y. Evening Post*.

"A story which holds the reader's attention, and makes him satisfied with himself for having spent the time in reading the book."—*Rochester Express*.

II. A STORY OF THE MORAVIANS.

MARRYING BY LOT.

A Tale of the Primitive Moravians. By Charlotte B. Mortimer. 1 vol. 12mo. \$2. In this volume will be found in detail, ample illustrations of this extraordinary mode of settling the matrimonial destinies of the whole of a Christian denomination.

III. MATTHIEU ROPARS, ET CETERA. By an Ex-Editor. 12mo. \$1.

IV. WHAT SHALL WE EAT?

A Manual for Housekeepers. 12mo. \$1. The design of this Manual is to suggest what is seasonable for the table, each day in the week, and how it shall be cooked, without the trouble of thinking. The receipts have all been tested by actual experience. A daily "bill of fare" for breakfast, dinner, and tea is given, for one week in each month, which may be varied to suit the income. A collection of Pickles and Sauces of rare merit form a desirable addition at the end.

V. THE USE OF TOBACCO; ITS PHYSICAL, MORAL, AND SOCIAL EVILS.

By J. H. Griscom, M.D. 32mo, 25 cents; cloth, 50 cents.

.*.* This "Counterblast" against "the Weed" contains new and startling facts well worth the serious attention of all victims to this narcotic nuisance and pernicious poison.

TUCKERMAN'S BOOK OF THE ARTISTS.

Large octavo. About 550 pages, cloth extra, gilt top. \$5.

THE LIFE OF NATHANIEL GREENE, MAJOR-GENERAL IN THE ARMY OF THE REVOLUTION.

By George Washington Greene. Price to Subscribers, \$4 per volume.

Apparatus for Physical Training.—BACON'S PATENT

HOME GYMNASIUM. The only complete portable Gymnasium ever invented. Invaluable to those of sedentary occupations. No home should be without one. Put up in any room, and removed in a minute.

All complete Gymnasiums that have been previously constructed, have been too cumbersome or too expensive; and those of a cheap and simple character have been lacking in the necessary scope and variety, not being adapted to swinging or somersault exercises. Many attempts have been made to construct one which would overcome these difficulties, and this we now claim to have accomplished in our PATENT HOME GYMNASIUM. It is based on the principles devised and taught by Ling, Schrober, and Dio Lewis, and is a combination of these systems brought into a small compass. While the first exercises are simple enough for children, the last are such as only can be accomplished by the most athletic. It is believed that this apparatus—being cheap, portable, and adapted to all—will be the means through which Gymnastics will become universal.

This apparatus is supported by two strong hooks in the ceiling, eighteen inches apart, and screwed into the joint five inches, leaving only the small hooks visible. It can also be used in a yard, by the erection of a framework such as is used for swings. The straps are of the strongest linen, handsomely colored, and by an ingenious device, the rings and stirrups can be instantly raised or lowered to any desired height. A space six or eight feet wide is ample for any of the exercises. The apparatus can also be converted into a Trapeze for the athlete, or a swing for the juvenile.

Price of the complete Gymnasium, with four large sheets of illustrations (100 cuts), and Hand-book explaining how each is performed. \$10 00
The Trapeze adjustment, with thirty-two illustrations, extra. 3 50
The Swing adjustment. 1 50
A liberal Discount made to the Trade. Sent by Express to any part of the United States or Canada, on receipt of price. Address

ESTABLISHED 1861—THE GREAT AMERICAN TEA COMPANY

Receive their Teas
BY THE CARGO,
 FROM THE BEST
 Tea Districts of China and Japan,
 AND SELL THEM IN
 QUANTITIES TO SUIT PURCHASERS
 AT CARGO PRICES.

To give our readers an idea of the profits which have been made in the Tea Trade (previous to the establishment of the GREAT AMERICAN TEA COMPANY), we will start with the American Houses, leaving out of the account entirely the profits of the Chinese factors.

First. The American House in China or Japan makes large profits on their sales or shipments—and some of the richest retired merchants in this country have made their immense fortunes through their Houses in China.

Second. The Banker makes large profits upon the foreign exchange used in the purchase of Teas.

Third. The Importer makes a profit of 30 to 50 per cent in many cases.

Fourth. On its arrival here it is sold by the cargo, and the purchaser sells it to the Speculator in invoices of 1,000 to 2,000 packages, at an average profit of about 10 per cent.

Fifth. The Speculator sells it to the Wholesale Tea Dealer in the lines, at a profit of 10 to 15 per cent.

Sixth. The Wholesale Tea Dealer sells it to the Wholesale Grocer in lots to suit his trade, at a profit of about 10 per cent.

Seventh. The Wholesale Grocer sells it to the Retail Dealer, at a profit of 15 to 25 per cent.

Eighth. The Retailer sells it to the Consumer, for ALL THE PROFIT HE CAN GET.

When you have added to these EIGHT profits as many brokerages, cartages, storages, cooperages, and waste, and add the original cost of the Tea, it will be perceived what the consumer has to pay. And now we propose to show why we can sell so much lower than small dealers.

We propose to do away with all these various profits and brokerages, cartages, storages, cooperages, and waste, with the exception of a small commission paid for purchasing to our correspondents in China and Japan, one cartage, and a small profit to ourselves—which, on our large sales, will amply pay us.

By our system of supplying Clubs throughout the country, consumers in all parts of the United States can receive their Teas at the same price, with the small additional expense of transportation, as though they bought them at our Warehouse in this city.

Some parties inquire of us how they shall proceed to get up a club. The answer is simply this: Let each person wishing to join in a club, say how much tea or coffee he wants, and select the kind and price from our Price-List, as published in the paper, or in our circulars. Write the names, kinds, and amounts plainly on the list, as seen in the club-order published below, and when the club is complete send it to us by mail, and

we will put each party's goods in separate packages, and mark the name upon them, with the cost, so there need be no confusion in their distribution—each party getting exactly what he orders, and no more. The cost of transportation the members can divide equitably among themselves.

Parties sending club or other orders for less than thirty dollars, had better send Post-office draft or money with their orders, to save the expense of collections by express; but larger orders we will forward by express, to "collect on delivery."

Hereafter we will send a complimentary package to the party getting up the club. Our profits are small, but we will be as liberal as we can afford. We send no complimentary package for clubs of less than \$30.

Parties getting their Teas of us may confidently rely upon getting them pure and fresh, as they come direct from the Custom-House stores to our Warehouses.

We warrant all the goods we sell to give entire satisfaction. If they are not satisfactory they can be returned at our expense within thirty days, and have the money refunded.

The Company have selected the following kinds from their stock, which they recommend to meet the wants of clubs. They are sold at cargo prices, the same as the Company sell them in New York, as the list of prices will show.

PRICE LIST OF TEAS.

OOLONG (Black), 70c., 80c., 90c., best, \$1 per lb.
 MIXED (Green and Black), 70c., 80c., 90c., best, \$1 per lb.
 ENGLISH BREAKFAST (Black), 80c., 90c., \$1, \$1 10, best, \$1 20 per lb.
 IMPERIAL (Green), 80c., 90c., \$1, \$1 10, best, \$1 25 per lb.
 YOUNG HYSON (Green), 80c., 90c., \$1, \$1 10, best \$1 25 per lb.
 UNCOLORED JAPAN, 90c., \$1, \$1 10, best, \$1 25 per lb.
 GUNPOWDER (Green), \$1 25, best, \$1 50 per lb.

COFFEES ROASTED AND GROUND DAILY.

GROUND COFFEE, 20c., 25c., 30c., 35c., best, 40c., per lb. Hotels, Saloons, Boarding-house keepers, and Families who use large quantities of Coffee, can economize in that article by using our *French Breakfast* and *Dinner Coffee*, which we sell at the low price of 30 c. per lb., and warranted to give perfect satisfaction.

Consumers can save from 50c. to \$1 per lb. by purchasing their Teas of the

GREAT AMERICAN TEA COMPANY,
 31 and 33 VESSEY STREET.
 Post-Office Box 5,643, New York City.

THE GREAT AMERICAN TEA COMPANY (established 1861) is recommended by the leading newspapers, religious and secular, in this and other cities, viz.:

American Agriculturist, Orange Judd, Editor.
Christian Advocate, New York City, Daniel Curry, D.D., Editor.
Christian Advocate, Cincinnati, Ohio, J. M. Reid, D.D., Editor.
Christian Advocate, Chicago, Ill., Thomas M. Eddy, D.D., Editor.
Evangelist, New York City, Dr. H. M. Field and J. G. Craighead, Editors.
Examiner and Chronicle, New York City, Edward Bright, Editor.
Christian Intelligencer, E. S. Porter, D.D., Editor.

Independent, New York City, Henry C. Bowen, Publisher.

The Methodist, Geo. R. Crooks, D.D., Editor.

Moore's Rural New Yorker, Rochester, N. Y., D. D. T. Moore, Editor and Proprietor.

Tribune, New York City, Horace Greeley, Editor.

We call attention to the above list as a positive guarantee of our manner of doing business; as well as the hundreds of thousands of persons in our published Club Lists.

COMPLIMENTARY LETTERS FROM CLUBS.

MANHATTAN, KANSAS, July 25, 1867.

GREAT AMERICAN TEA COMPANY,
 31 and 33 Vessey Street, New York.

Your "Advocate" is received and circulated. Please accept my thanks. You are extending a blessing to us old tea drinkers in the West.

My profession keeps me in my office, but the limited opportunities I have shall be devoted to the extension of your trade. The orders I have sent have been purely from private families. I have recommended your house to our merchants, with what success you know, not I. They might not like to have their customers see the profits they make.

I remain, very respectfully yours,
 LORENZO WESTOVER.

DEARBORNVILLE, MICH., July 6, 1867.

GREAT AMERICAN TEA COMPANY,
 31 and 33 Vessey Street, New York.

Gentle: This day I forward you, by M. U. Express Company, \$107 50, being amount due you on one box of tea.

It may be proper here to state that the tea received gives entire satisfaction. This makes two orders from this place. Your patrons are so well pleased with the tea that you may expect to furnish us our tea and coffee. I have sent your papers to Linden, Genesee County, in this State, and other places, from whence you may expect to receive orders.

Please accept our thanks for the promptness with which you responded to our order.

Respectfully yours,
 AMOS GAGE.

BRUNSWICK, MO., March 26, 1867.

TO THE GREAT AMERICAN TEA COMPANY,
 31 and 33 Vessey Street, New York.

The order we sent you last month reached us in due time, and with which we are well pleased. We think there is, at least, 50 to 75 cents difference in your favor, compared with the prices of St. Louis, where we have been buying our teas for several years past. You may expect to receive our future orders.

Yours truly,
 MERCHANT BEAZLEY.

N. B.—All villages and towns where a large number reside, by *clubbing* together, can reduce the cost of their Teas and Coffees about one-third by sending directly to the GREAT AMERICAN TEA COMPANY.

BEWARE of all concerns that advertise themselves as branches of our Establishment, or copy our name, either wholly or in part, as they are *dogus* or *imitations*. We have no branches, and do not, in any case, authorize the use of our name.

TAKE NOTICE.—Clubs and quantity buyers are only furnished from our Wholesale and Club Department.

Post-Office orders and drafts made payable to the order of the GREAT AMERICAN TEA COMPANY. Direct letters and orders to the

GREAT AMERICAN TEA COMPANY,
 Nos. 31 and 33 Vessey Street, New York.
 Post-Office Box, 5,643, New York City.

THE COAL-MINES OF ENGLAND.

THE coal-fields of England are very extensive, and excepting her manufactures, constitute the richest source of profit to the nation. The product of the English mines alone annually exceeds seventy million tons, of which a large quantity is exported to America and the continent of Europe. English coal is used almost exclusively on ocean steamers. The most important coal districts lie in the northern counties of Northumberland, Cumberland, York, Lancaster, Durham, Derby, and Stafford; and the major part of the peasant population there is employed in the mines. In some of the deeper mines, whole families, men, women, and children, live and delve, breathing the noxious exhalations, exposed to imminent peril from explosions and falling rock, and rarely ascend to the surface of the ground and enjoy the genial sunlight. As a necessary result, these wretched victims of the meanest toil are dwarfed and blunted in intellect and semi-savage in manner and habit. Some of the mines, owing to the thickness and multiplicity of the veins of coals, or their inclination, are upward of two thousand feet in depth. It is said that very young children are taken into the damp and filthy pits by their parents, and compelled to labor with them. The destitution, misery, and ignorance which would permit such unnaturalness must be extreme. In a report presented before the House of Commons we read the following confirmation of the above revolting statement:

"In the smaller collieries of the Oldham district, which has only thin strata, varying in thickness from eighteen inches to twenty-four, children are employed so early as six, five, and even four years of age."

Comment is unnecessary when it is remembered that this occurs in a land where Christianity is upheld by governmental vigilance.

Our cut represents an English miner of the better class—a sort of upper workman or boss; yet in the heavy features, thick, blunt nose, and general slouchiness we find no indications of intellectual force or manly aspiration. Such is the low rate of wages paid by the coal companies to the laborers, that the great mass of them can scarcely earn more than the pittance necessary for daily sustenance; the education of their children in the lowest branches of learning being entirely out of the question. Hence by such a system of oppression it can not be wondered at that the mining population should be so low, so brutish, as it has again and again been declared to be by prominent English educators and philanthropists.

There has been legislation with a view to a remedy for the flagrant evils of the collieries, and some improvement has been the result; but British statesman must give more attention to so important an interest as the physical and moral state of their own countrymen. They should see to it that while they boast of the wealth poured into their nation's treasury from coal-mines the richest in the world, it

AN ENGLISH COAL-MINER.

may not be cast in their teeth that the production of such wealth is at the cost of English servitude, misery, and degradation.

A TEXAS EDITOR ON PHRENOLOGY. — The *Galveston Daily News* publishes the following editorial correspondence in a late number of that paper: "Strolling up Broadway the other day, I accidentally stopped in front of the store of our old friends the phrenologists, who used to advertise extensively in the '*News*' before the war, and whose works had a large circulation and a liberal patronage in Texas. After examining the numerous curiosities in the window, which always attract a crowd outside, I stepped in and found Mr. S. R. Wells at his accustomed post in the office, though they have changed their quarters to the opposite side of the way, and are now near Canal Street, in a much larger establishment, with increased facilities for conducting their business. I also found Prof. Sizer in the examination-room, where he is kept constantly employed, delineating the various characters of those who present themselves every hour in the day to ascertain what they are best fitted for, and to gain some knowledge of self, which ought to form a portion of every man's education in this enlightened age.

"Although the science of Phrenology has been much ridiculed, it has been gradually working its way wherever it has been introduced by those capable of grasping the subject.

"Owing to the great changes that have occurred in the South since the war, and the number of young men that have now to seek employment, who had before no necessity to put forth any exertion for a living, I can not but think much benefit might be derived from paying some attention to this subject, as many doubtless possess dormant capabilities of which they are wholly unconscious, which might, by cultivation, enable them to shine in the world; while others have proclivities, which almost amount to besetting sins, of which, as well as the means of correcting them, they are wholly

ignorant. Much valuable information may be obtained from the *PHRENOLOGICAL JOURNAL AND LIFE ILLUSTRATED*, a most interesting monthly magazine edited by Mr. S. R. Wells, which had before the war quite a large circulation in Texas. The subscription price per annum is only \$3, and a single number of it is alone worth the money. Mr. Wells is also the publisher of a long list of works on phrenology, physiology, hydropathy, and other scientific works, as well as a number of miscellaneous books. Any of our Texas friends who may be in New York during the spring and summer, who can spare an hour or two, would be well repaid by dropping in at this popular resort on Broadway, No. 389, where they will be sure to see much to interest them."

A MAN HIS OWN GRANDFATHER.—The following remarkable coincidences will be read with interest: Some time since it was announced that a man at Titusville, Pennsylvania, committed suicide for the strange reason that he had discovered that he was his own grandfather. Leaving a dying statement explaining this singular circumstance, we will not attempt to unravel it, but give his own explanation of the mixed-up condition of his kinsfolk in his own words. He says: "I married a widow who had a grown-up daughter. My father visited our house very often, fell in love with my step-daughter, and married her. So my father became my son-in-law, and my step-daughter my mother, because she was my father's wife. Some time afterward my wife gave birth to a son; he was my father's brother-in-law and my uncle, for he was the brother of my step-mother. My father's wife—i. e., my step-daughter—had also a son; he was, of course, my brother, and in the mean time my grandchild, for he was the son of my daughter. My wife was my grandmother, because she was my mother's mother. I was my wife's husband and the grandchild at the same time. And as the husband of a person's grandmother is his grandfather, I was my own grandfather." After this logical conclusion we are not surprised that the unfortunate man should have taken refuge in oblivion.

"THE PHRENOLOGICAL JOURNAL, one of the most useful publications in the country."—*Providence Press* of May 23d.

THE PHRENOLOGICAL JOURNAL AND LIFE ILLUSTRATED,

Is devoted to *The Science of Man*, in all its branches, including PHRENOLOGY, PHYSIOLOGY, PHYSIOGNOMY, PSYCHOLOGY, ETHNOLOGY, SOCIOLOGY, etc. It furnishes a guide in *Choosing a Pursuit*, and in judging of the dispositions of those around us, by all the known external "*Signs of Character*."

Published monthly, \$3 a year in advance. Clubs of ten or more, \$2 each. Sample numbers, 30 cents. Now is the time to subscribe. A new volume begins with the July number. Supplied by Booksellers and News-men everywhere.

Man, know thyself. All wisdom centers there;
To none man seems ignoble, but to man.—Young.

HENRY DWIGHT STRATTON.

This gentleman certainly deserves some mention in our pages, for he belonged to the front rank of those earnest and zealous educators who have so stimulated the mental growth of American youth. He was a leader in the enterprises of commercial education; the founder of forty-four separate institutions for the instruction of young men in the principles, theoretical and practical, of business life. How many thousands owe advanced and lucrative positions in the counting-room or in the warehouse to their pupilage at those academies it would be difficult to estimate, for they are to be met with in almost every city or town where mercantile enterprise has

PORTRAIT OF HENRY DWIGHT STRATTON.

any marked prominence. Predicated of his portrait we find several conspicuous characteristics by which he was known to friends and associates. First, a temperament of fine quality, delicate, intense, and exceedingly active, yet possessed of much endurance and elasticity. Second, a strong perceptive intellect, imparting clearness of understanding and keenness of penetration. Third, a ready judgment, amounting to intuitional impres-

sion. Fourth, a progressive earnestness which knew little of hesitation, yet was deferential and forbearing. Fifth, a warm sympathy which was quickly aroused by genuine sorrow or distress. He possessed, too, a strong imaginative element, but it was adapted to his practical and energetic intellect, suggesting projects of utility and ministering to the cravings of an incessant activity. He was organized to have "many irons in

the fire," and he could keep them all hot. There was not sufficient vitality, however, to sustain so active a nervous system. Though wiry and tough, though powerful in will and strong in spirit, such an organization would at length wear itself out for lack of bodily support—the wick, so large and perpetually burning, would exhaust the reservoir of oil. His failings lay chiefly in not caring enough for himself, for physical repose and comfort; in working too diligently; and in seeking to accomplish too much. In his line of life he was in every sense of the word a "driver."

For the accompanying portrait and the following biographical account of Mr. Stratton we are indebted to *Packard's Monthly*, a magazine which is "devoted to the interests and adapted to the tastes of the young men of the country."

BIOGRAPHY.

"Mr. Stratton was born at Amherst, Lorain County, Ohio, August, 9, 1824. His father, Jonas Stratton, was one of the first settlers of the town; and, in fact, gave it its name, after Amherst, New Hampshire, his native place. He was the second of four children, and was never a rugged boy, but grew up rapidly and with a slender constitution. His father being a cabinet-maker by trade, he took up that occupation as soon as he was old enough to be of service. His education, until he was some eighteen or nineteen years of age, was such as falls to the usual lot of boys in the country. He then spent a couple of years in the English department of Oberlin College, which is situated but six miles from his home.

"While at Oberlin he became deeply interested in the art of penmanship; and he prepared himself to enter upon this field as a teacher. His first effort as a 'Professor of Penmanship' was at Charlestown, Mass., in the suburbs of Boston. He afterward visited various portions of the New England States, paying his way in teaching; and, after an absence of two years, returned to his native town, a traveled gentleman and a full-fledged writing-master. He was wont, in after-years, to make humorous allusions to his 'Boston' professorship, and to illustrate, for the amusement of others, his original system of inculcating art. A peculiar method he had of making the letter X was so ridiculed by the veteran Spencer, and so humorously defended by its author, that the style has ever since been known, among professional writers, as 'Stratton's Boston X.' He afterward improved somewhat upon his original style, under the able instruction of the author of Spencerian penmanship, but did not again attempt to teach the art.

"For a number of years he devoted himself to such opportunities of making money as occur in country places. He took a contract to

furnish timber for the railroad, in which—although many predicted loss—he was quite successful. With the little capital thus acquired he engaged in the purchase of sheep—a very important business in northern Ohio—and in this, also, was successful. With his accumulations he purchased land, until he became the owner of some 300 to 400 acres of good farming and grazing lands. This gave him enlarged opportunity to prosecute his live-stock business, which he did with fair success.

"In the winter of 1851-2 he took a course of mercantile training at Folsom's Commercial College, Cleveland, in which Mr. H. B. Bryant was chief instructor in book-keeping.

"While here, he conceived the project of establishing a series of institutions in the various commercial cities of the country; and uniting with Mr. Bryant and James W. Lusk—the latter a favorite pupil of P. R. Spencer, and an acknowledged master of the science and art of writing—the plan was perfected, and the first institution started in Cleveland, under the style of 'Bryant, Lusk & Stratton's Mercantile College.' This was in the spring of 1853. During the following winter the second college of the series was commenced, under the same style, in Buffalo, as a successor of Spencer and Rice's institution, which had been in vogue for a year or more. These institutions became at once prosperous and remunerative, owing, in the first place, to a generous administration of their internal affairs, but more particularly to the attractive way in which their claims were presented to the public. Mr. Stratton was the outside manager, and his thorough appreciation of the opinions of good men, as well as his utter confidence in printer's ink, so shaped his course of procedure, that before the colleges had been in operation one year, they were thoroughly well known to all persons who read the papers. One great secret in Mr. Stratton's success as a business manager lay in his thorough self-consecration to whatever he had in hand. He always believed in his work; and was neither afraid nor ashamed to proclaim it upon all occasions, and to all classes of people. He never stopped to inquire whether the presentment of his affairs was appropriate or acceptable, but took it for granted that everybody *must* be interested in what seemed so important to him. He was not remarkable for reticence, and never believed in letting slip a good opportunity to make acquaintances and friends. Notwithstanding this constant pre-ferment of his own affairs, he never, in any sense, became what is termed a 'bore.' His great good-humor, and his intuitive knowledge of what to say, and how to say it, always put him on the best terms with those with whom he came in contact.

"He never believed in doing business with a subordinate, if the principal were accessible—not that he ignored the authority of agents, but because he desired contact with the superior party, both as an incidental aid to his business, and to assure himself that whatever arrangements he entered into were the most

favorable to himself that could be effected. So, in making his way in a new community, he always first secured the good-will and co-operation of the *first* citizens in point of social and political standing, while he was not the less considerate of the friendship and aid of the most humble.

"In the spring of 1856 Mr. Lusk withdrew from the firm. In the following autumn Mr. Stratton opened the Chicago College, which at once entered upon a successful career. The college in Albany was opened in January, '57; the one in Detroit in the fall of the same year. Then followed Philadelphia and New York. In connection with the New York College, the firm commenced the publication of a monthly magazine—the *American Merchant*—which was continued for three years. The severe financial depression which followed the panic of 1857 was not conducive to prosperity in this direction.

"The New York College, which was opened in the Cooper Institute Building on the 1st of October, 1858, gradually grew in favor, and soon exhibited the germ of future success. Soon after its establishment, Mr. Stratton began to investigate the feasibility of having prepared a series of text-books in the several departments of science embraced in the college course; the result of which was the publication within two years of a work on book-keeping, one on commercial arithmetic, and one on commercial law. These works, prepared by competent authors, became at once the text-books of the colleges, and have steadily won the best opinions of teachers and practical men.

"In 1860, Mr. Stratton removed, with his family, to New York, which was thenceforth his home; although, until his last sickness, the greater portion of his time was spent in journeyings between the 'links' of the great international 'chain'—which were being gradually forged, and welded, in the important cities of the continent—and in arranging the financial basis for their successful operation.

"In the early part of his career as an educator, it became necessary for him, at times, to borrow money. He had *one* friend upon whom he relied in such contingencies, and although he was always prepared to give ample security, and never failed to pay his demands promptly—with a good round percentage for the accommodation—the gratitude he ever felt and manifested toward this individual afforded a most positive and pleasing illustration of his unswerving fidelity.

"During the embarrassments of 1857 he found great difficulty in making good his financial engagements, and was often put to straits that would have discouraged a less resolute man. One rule which he adopted and acted upon under such embarrassments is well worthy of mention: 'Never avoid a man you owe.' If he found that it would be difficult to meet an engagement, he went at once to the person who would be discommoded, in case of failure, and without reserve laid the

matter before him in its true light. The inevitable result of this was to inspire confidence in his integrity, and to obtain extension, if necessary. And whenever he had thus tested the kindness and forbearance of a person, he was particularly careful to give him no cause to repent it. The result was that he had no trouble to get whatever terms of credit he desired; and to this fact more than any other is attributable the steady progress of the great enterprise he had in hand.

"In the fall of 1865, while attending the New York State Fair at Utica, he took a severe cold, which settled on his lungs, and put a brief limit to his days. To his friends it was evident, almost at the beginning, that he had entered upon a decline; but he would not permit himself to think so. His interest and energy in his business was unabated; although he was unable to travel and attend personally to its requirements. He was very exacting of the local managers of the several institutions, as to the prompt rendering of the monthly statements of their business affairs; and kept himself constantly posted in all that was transpiring throughout the extended field of his labors. But he could not long hide from himself the fact that labor fatigued him, and that he was growing less and less able to meet the constant demands upon his strength. He was persuaded, too late, to give up business, and devote himself to the re-establishment of his health. Upon the recommendation of his physician he went to Nassau, New Providence, where he spent the months of March, April, and a portion of May, but returned home not at all improved in health.

"He died on the 20th of February, 1867. His remains were placed in a private vault in Greenwood Cemetery, and finally removed to a beautiful lot on 'Battle Hill,' where a suitable monument will be erected to his memory—the affectionate offering of the young men who have been and are members of the institutions which he planted. But a better and nobler monument than can be shaped from marble or granite, will be the memory of his virtuous deeds, which will live in the hearts of his friends."

HIDDEN POWER.—In a building, the outer superstructure attracts the eye; the foundation is hidden. A tree's leaf makes more noise than its trunk; and its roots are all concealed beneath the ground. Yet the tree shakes off its leaves each autumn. But it holds its roots forever; and it even bares itself of foliage when winter comes, in order that the roots may be covered and nurtured below, and thus glorify its Maker and itself in the future spring. So in society. It is not the apparently great men, doing public things, who bless the world. Not many succeed in attracting attention and winning applause. Men do not all run to leaf, merely to get up to that green thinness which rustles for a summer, and then crisps and falls to the ground as a mere nurturer of the strong but modest roots below that live and grow through all the years.—*The Gospel in the Trees*, by Alex. Clark.

PATTERSON ON PHRENOLOGY.

A REVIEWER REVIEWED.

In *The Family Treasure*, a religious monthly magazine published at Cincinnati, there appeared, in February and March of the present year, one of those sweeping denunciations of Phrenology which are every now and then put forth by its opponents with a show of argument. Like the rest of its class, it is only a repetition of the attacks that were made forty years ago upon the first teachers of Phrenology in Great Britain, and which were effectually met and answered then as they have been hundreds of times since. It neither indicates nor claims any original investigation or knowledge by Dr. Patterson. Yet the truth can bear to be repeated as well as error can. It is with scarcely a feeling of impatience that we proceed to confer with the Reverend Robert Patterson, D.D., who comes against us with handles displayed at both ends of his name—as if in this country a "degree" could help either the wrong or the right.

We shall quote the final paragraph of this Reverend Doctor's article, to show what are his ideas of courtesy, and to give in brief the sum of his charges. He says:

"Phrenology, then, is merely a blundering attempt to apply the dogmas of materialism for the discovery of the character of mind; as if one should measure melody in a corn-bushel, or weigh an argument on a steel-yard, or photograph the sun with a pitchfork. It is a kind of monkey physiology, aping the science of mind as nearly as is possible by men who have lost their own souls, and it will continue popular with all who are desirous of a place among the herd. There is an evident propriety that all such should receive the mark of the beast in their forehead, but surely no necessity of public safety demands that they should plaster every half inch of their miserable skulls with a separate lie. Philosophic materialists accordingly now resign Phrenology to its own appropriate professors."

And he elsewhere calls Phrenology "a very lucrative infidel quackery."

It will be seen that this Reverend Doctor asserts that phrenologists "have lost their own souls;" that those who approve it are deliberately beastly, and ought to receive an open and notorious brand of shame; and that they deliberately and systematically lie. These things we merely point out. It is unnecessary to remark upon the state of mind, and the capability for giving fair and charitable judgments, and for pursuing a train of sound reasoning which such language implies.

Aside from these courteous and ornamental phrases, the sum and substance of the Reverend Doctor's charges is simply this: that Phrenology is a form of materialism; that it seeks to apply the "dogmas" of materialism to the investigation of mind; and that it does this in a blundering manner. Our present duty is, therefore, to deal with this charge, and with the specifications under it.

Dr. Patterson's first argument is, that there have been varying conjectures about "the seat of the soul and the mode of its operation

in the body;" and he says, "a glance at the various and discordant guesses of these speculators will . . . demonstrate their imaginative character." This means, if it is an argument at all, that because opinions have differed about the seat of the soul, the phrenological opinion must be wrong. But the learned Doctor would never allow any such mode of arguing about his own kind of theology. For instance, he believes (we presume) that the wicked are damned eternally. Now, there have been "various and discordant guesses" about eternal damnation. But does it therefore follow that Dr. Patterson is necessarily wrong?—a "blunderer," to use his own elegant expression, a liar, or, if he prefers it, that he has "lost his own soul?" We do not believe that is right reasoning, yet it is his. However, after many words on these obsolete notions, the Reverend Doctor—though he is very shy of risking any direct opinions of his own, except of the denunciatory kind—seems to imply that the special seat of the intellect (which he confounds with the whole soul) is the brain, after all, so that thus far he is a phrenologist.

Having thus yielded the fundamental position of Phrenology, that the brain is the seat of the soul, the Doctor quotes various considerations which he seems to suppose have a bearing on his main question. He says that Dr. Morton's tables of the comparative size of brains are unreliable; that physiologists differ about the amount of phosphorus in the brain; that opinions differ about the growth of the brain, its size at different periods of life, etc. Suppose they do. As before, let us try this mode of reasoning on theology. Opinions differ most hopelessly on the doctrine of the Atonement; on the doctrine of Ability; on the doctrines of Perfectibility and of Perseverance; on the importance of the rite of Baptism; on the importance of Bishops and of Apostolical Succession. By the Doctor's mode of reasoning, this would prove that all theology is "a lucrative quackery," and that its professors are "blunderers." We think he does injustice to his order. Phrenology explains how men may differ very widely upon very important points, and yet be perfectly sincere and thorough in thinking and arguing—an idea which the Reverend Doctor Patterson seems as far from admitting as the Emperor Domitian, or the inquisitors of Philip III. of Spain; and it is very true that no mental philosophy, except Phrenology, allows for honest differences of opinion. The Doctor observes: "Mr. Lewis has demonstrated that memory, intelligence, will, and judgment, and the power of exciting voluntary action, are by no means confined to the brain, by the experiment of touching a newt with acid, allowing it to rub the sore place against a box, then cutting off its head and allowing it to touch the box again, when it rubbed as vigorously as before and in precisely the same manner. This is conclusive against the assumption of the brain being the exclusive seat of thought and sensation."

In newts, no doubt—not in men. No man with his head thus cut off would rub any such sore place; therefore, by the Doctor's own reasoning, the brain in man is the sole seat of thought and sensation. We believe that "Mr. Lewis" and Doctor Patterson are the first to discover that newts have "memory, intelligence, will, and judgment" enough to make them fit to classify with men as subjects of philosophical experiment.

The next position taken by the Doctor is his main one; it is, that "materialistic philosophers have laid hold of these alleged facts" (namely, those of the organs of the brain and their indication of the faculties of the mind) "and published theories as conclusive against the spirituality of the soul, and on the strength of them have tried even to discard the investigation of the science of mind by the aid of consciousness as mere childishness." In illustrating this assertion, he principally quotes Dr. Draper's "History of the Intellectual Development of Europe" to support his charge of materialism, and Sir William Hamilton to refute materialism, and thus Phrenology.

Now, Phrenology is not a materialistic doctrine. Materialism denies the existence of spiritual beings, and considers that which we call the soul as a result of physical organization. Phrenology, however, recognizes the existence of spiritual beings, and considers the soul as something other than the body, but which in embodied life uses the body as its vehicle of action. This use is what Dr. Patterson himself will admit; so that the only difference on this point between him and Phrenology is on the question of the particular way in which the soul makes use of the body. Dr. Patterson is exactly as much a materialist as the phrenologists. As for Professor Draper's views, they really have nothing whatever to do with the question, and it is entirely aside of the argument for Dr. Patterson to charge them or to credit them to Phrenology, whether they are an honor or a disgrace.

As a matter of fact, Prof. Draper is not a believer in Phrenology, except in an eclectic sense, and subject to the general results of his own physiological studies.

But again, the history of Christianity is thickset with the stories of heretics and fanatics and knaves who perverted and misused its truths from folly or selfishness. But the cases of the Manicheans, Gnostics, Muggletonians, Familists, John of Leyden, the Rogerines, the Agapemones, Matthias the Impostor, of the hundreds of false Christs that have arisen—all these abuses and perversions of Christianity have no weight as disproving it or disgracing it. In like manner, if pretended conclusions, materialist or any other, are drawn from Phrenology that it does not warrant, the fact is no argument against it.

But the assertion of Sir William Hamilton is quoted by Dr. Patterson, that "no assistance is afforded to mental philosophy by the examination of the nervous system, and the doc-

trines which rest upon the supposed parallelism of brain and mind are, as far as observation extends, groundless." This means simply that Hamilton did not believe in Phrenology, a fact which proves nothing. Voltaire did not believe in Christianity. Comte, the French philosopher, did not believe in Hamilton. There are those who believe in and those who disbelieve in every system. To bring systems to the test of a majority vote would be an absolute exclusion of all new truth, and is substantially the method of persecutors.

Dr. Patterson proceeds next to turn his back upon himself, and admits that the most authoritative expositor of Phrenology, Dr. Spurzheim, denied the charge of materialism. He then expressly admits, further, that this doctrine does not follow from Phrenology; and having performed this extraordinary maneuver, he takes new ground, by plainly asserting that the lecturers on and advocates of Phrenology "support the brutish dogma that 'man is the creature of circumstances.'"

It is sufficiently brazen in this reverend man to assert so square and broad an untruth as this, in the face of the express teachings of Phrenology to the contrary admitted by him, and of its clear demonstration of the only philosophical method for enabling man to rise superior to his circumstances. What Christianity was in religions, Phrenology is among philosophies, the first to lay a sure foundation and erect a stable superstructure; and true religion and true philosophy, Christianity and Phrenology, move hand-in-hand, and with a closer union and more perfect harmony than the world ever saw before between any two systems.

Dr. Patterson further argues against Phrenology, from the fact that Dr. Gall, its first advocate, only came by gradual degrees, after a long time, and through many weaknesses and mistakes, to his ultimate fullness of conclusions; that is, a system must be false because improvements have been made in it!

Next, the Doctor gives a list of people who have had theories of Phrenology that differed from each other; from which he concludes that there is no truth at all in the doctrine. To admit this method of arguing, as we have already shown, would not only make it easy to refute the Doctor's own system of theology, but Christianity itself, and indeed every system whatever.

Then comes the old story of Sir William Hamilton's assertions about the frontal sinus. This sinus is a space between the inner and outer tables, or layers, of the skull, as if they had diverged away a little from each other, just above the root of the nose, and on either side just behind the eyebrows. This separation is just at the base of the brain, but in almost all cases is below the line along which the lower perceptive faculties are indicated. This line is not that of the "superciliary ridge," or eyebrows, but is about half an inch above them. It is very uncommon for this

sinus to obscure materially the indications of the organs; and it is still more uncommon for it to interfere at all with those indications in any other organs than those of Form, Size, Weight, Individuality, and Locality. And the practical phrenologist will find himself able to judge in almost every case, by the peculiar prominence and surface characteristics of that part of the forehead, whether a considerable sinus is to be allowed for. If it is, he makes the allowance accordingly. Moreover, the frontal sinus does not exist at all, or does not rise so high as the base of the brain, until the twelfth or fourteenth year, so that it can not offer any obstacle to correct phrenological observation up to that time, the most important season of life for the study, guidance, training, and education of the dispositions and faculties of the human being. In the female head this sinus is very small, and frequently it is scarcely perceptible.

The assertions of Dr. Patterson, however, which are repeated from Hamilton and others, that these spaces average two and four tenths inches wide, one and a half high, and eight tenths of an inch in depth; that they cover the place of nineteen of the most important organs, including the whole forehead from eyebrows to hair, and even farther—these assertions are simply untrue, and for the proof we appeal to all the skulls in our own collection indifferently, so far as they have been sawn open; and to all the skulls that any one who will take the trouble shall be able to examine.

Having exploited the objection of the sinus, Dr. Patterson next parades another equally ancient and equally weak-kneed objection, viz., Hamilton's statements about the cerebellum and its office. These statements constitute the following argument:

1. The size of the cerebellum located at the lower part of the backhead has no relation to the passion of amateness.

2. On the other hand, the cerebellum is "the intracranial organ of the nutritive faculty," and also "the condition of voluntary or systematic motion."

3. Therefore, since the office attributed to the cerebellum by Phrenology does not belong to it, and these other offices do, the whole of Phrenology is false.

In reply.

First: as to amateness. Whoever will investigate the facts for himself will find that, as a rule, a full lower backhead is accompanied by strong amative tendencies. Therefore there is a relation between the size of the cerebellum and that passion. The facts prove it; and all the arguing in the world will not extirpate a fact.

Second: we specifically admit, without the least hesitation, that there is a good deal of reason to believe that the cerebellum has to do with the energizing and regulation of voluntary or systematic motion. There is nothing in Phrenology that opposes this, and nothing in this that opposes Phrenology. That part of the brain will be admitted to be set apart for

this purpose just so far as experiment and observation indicate it. Whatever there may be in Sir William Hamilton's tables and reasonings that would any farther vary or refute the facts of Phrenology is abundantly contradicted and disproved by the tables and reasonings of other investigators, exactly as competent and as honest as he.

Now comes a statement—also from Sir William Hamilton—so utterly at variance with facts as to prove that whatever was Hamilton's merit as a logician, he was altogether untrustworthy as an experimenter and observer, phrenologically; that is, he had Individuality, Form, and Size very feeble. This statement is, that the skulls of murderers, taken indifferently in numbers, have been found to indicate, on phrenological principles, better moral and intellectual characters than those of respectable citizens taken in the same way. Here, as repeatedly before, we simply appeal to observation and experiment, rightly made. We need not doubt Hamilton's honesty, but these assertions are entirely inconsistent with facts; and of course wholly erroneous.

The Reverend Robert Patterson, D.D., though professing to be a servant of Christ—a man of God—is not ashamed to insult phrenologists by basing upon these mistakes of Hamilton's the following inference: "Phrenology may challenge the whole range of quackery for an equal display of false facts and unblushing fictions, philosophical fallacies and vulgar veneration." This is not a creditable or decent style of discussion. If it were, we should turn it about and fire it at Dr. Patterson and Sir William Hamilton. But Phrenology is under no necessity of using insulting language.

Dr. Patterson next asserts that artificial distortions of the brain, as practiced by Flat-Head Indians, do not affect its volume, nor the intellect; and this, he says, "destroys the whole craniological argument which rests on the shape and size of the skull." In reply to this, it need only be mentioned that the effects of this artificial distortion have never been accurately investigated. Whenever they are, it will doubtless be found that, as in other cases of distortion, the forces of nature have done much to counteract the violence thus applied, and to enable the brain to perform its old duties under its new conditions. Such is the order of things in deformities of the limbs or body, and in displacements or curtailments of members or of interior organs; and it would be strange if it were not so in the case of the brain. Fruits and vegetables sometimes grow between rocks or other hard substances, and the matter is displaced, but its character is not essentially changed. The head of the Flat-Head Indian is by pressure made much broader as well as shorter, and while the brain is displaced and its essential characteristics are maintained, it is not claimed that the brain is at all improved by the distortion, or that fruits or vegetables are improved by deformity.

If Dr. Patterson could show any cases of in-

tellect without brain, or after the intellectual lobe had been cut away instead of being simply distorted, he would refute Phrenology; but he can not.

Lastly, he asserts with a considerable show of statistics, "The size of the brain is no test of intellectual capacity." To this he adds a further specification, that the proviso "all other things being equal," is of no force or significance, for the reason that no two brains are ever exactly alike! Now try this mode of reasoning in another case. A large leaf transpires more water and carbonic acid in an hour than a small one, all other things being equal. Some leaves are more vascular than others, and therefore do their office more rapidly. But is this statement about leaves false by reason of the undoubted fact that no two leaves are exactly alike? Not at all. This unfailing dissimilarity only makes it the more probable that no two leaves do exactly the same total amount of work. In like manner with brains. No two are ever exactly alike in composition, character of fiber, distribution of proportions, and relation to the rest of the body. This, however, does not destroy the truth, that size is the measure of power, all other things being equal. It merely adds to the improbability of any two brains being found totally similar in all respects.

In thus considering the successive points made by Dr. Patterson in support of his main position, we have omitted some minor points, such as his citing of books that do not exist, his misquotation, etc. We have in good faith met squarely the arguments he used, and have refuted them. As for his main position, we have shown that while in one place he charges Phrenology with being materialistic, in another he admits that it is not so, and shifts his ground to an assertion that its upholders argue from it as if it were so. Here we meet him again by showing, first, that this new assertion is not correct; and, second, that if it were, the perversion of a system is no argument against it.

We have not put forth this reply with any expectation of convincing Dr. Patterson. His mind is not of the sort to be convinced. He is deficient in Order, Constructiveness, and Comparison, which would enable him to frame together a systematic argument depending upon resemblances and differences of many parts, or to appreciate one so framed; his method being the merely verbally logical or scholastic one, which has become famous for barrenness in philosophy. He has large Firmness, Self-Esteem, and Combativeness; so that having taken his side he sticks to it, would be very reluctant to change even if convinced that he was wrong, and fights to win, as well as to get at the truth. Besides, he is without Ideality, and is rather slow of apprehension, his percepts not being very prominent or active; so that it takes a long time to make him understand anything. Therefore we have not taken the Doctor into the account, but have set forth the right side of the questions he has raised, for the sake of the cause. We shall very soon have

to do it again, and again. We shall patiently, and with the intention of being entirely fair in matter, and courteous in manner, continue to set forth the truth.

On Psychology.

The soul, the mother of deep fears, of high hopes infinite,
Of glorious dreams, mysterious tears, of sleepless tender night;
Lovely, but solemn it arose,
Unfolding what no more might close.—*Mrs. Hemans.*

THE DEW-DROP.

THERE lies a pearly drop of dew
Within a flower's tiny cup,
And glistening while it greets the view,
The sun comes down to drink it up.

From yonder cool and crystal spring,
That gleams so brightly from the rock
Which woos the wild bird on the wing,
And proves the haunt of all the flock,

From thence it rose, perhaps, in mist,
And slowly drifting to the skies,
The sad and somber clouds it kissed,
Then fell to earth—and here it lies.

The blue flower of the flax took up
The little drop, and now it shines,
Refreshed with this one little sup
Of nature's pure renewing wines.

MARIE S. L.

INTELLECT, AND MORAL SENTIMENT.

In all the universe, man perceives a no more fit subject for contemplation than his intellectual faculties. When he considers their wonderful power, their exquisite adaptation to all the uses for which they were designed; when he comprehends that these are what fit him to subject to his control all the animate and inanimate creation; when he understands that to their legitimate exercise and development there is no apparent limit; when he realizes all this, if he does not feel his greatness as a work of God, and his great responsibility for using these powers aright, he has lost that perception and appreciation of truth which makes him not only an intellectual but a moral being. It is a fact resting upon as broad a basis as mind itself, that if these intellectual powers are not exercised in the manner and direction for which they were intended, their influence is as great for evil as was their capability for good when exercised in accordance with the laws of mental organization. We may well inquire where we shall find a director—a great balance-wheel—for intellect. It is found in the moral sentiments—the greatest gift of God to man. What are the grandest strides of human thought, what the magnificent creations of fancy, when they are not prompted by good influences! What is culture when it reflects not the spirit of morality! Of what use or purpose is any achievement of intellect when it does not influence humanity for good?

God declares to every one, "Thy powers of mind are made for use, and 'highest use.'" Thus man's intellect must be exercised not merely for pleasure or fancy, but for the high

purposes of elevating and adorning his whole nature, considered in relation to himself, to his fellow-beings, and to his Maker.

We may all see that when the intellect is not controlled by moral sentiment, it is the servant of the propensities; abandoned to the gratification of blind passion, which leaves no means untried, spares no labor of invention in its persistent service. The supremacy of the moral sentiment which we advocate is not that of a bigoted, uninformed feeling, but that refined principle of which the soul is the motor and reflection the informing principle. Should we expect a judge to give a just decision without being acquainted with all the circumstances of the case to be decided, or after having heard the argument for but one side? Equally foolish would be the expectation for the moral sentiment to draw just conclusions unless intellect informed it of all the circumstances bearing upon a matter. "The sad and sublime privilege of reflection is error; but reflection is the remedy for the evil it produces."

It is the privilege of man to worship, and to worship foolishly; to have faith, and to believe blindly; to be benevolent, and to be such after benevolence may have ceased to be a virtue; to be very conscientious, and at the same time very wicked; to be righteously hopeful, and to hope recklessly for the visionary and improbable. The inharmonious co-operation of the moral sentiments and the intellect will produce such unhappy results. The former without the latter becomes mystified and walks in the path of error; and intellect without the influence of moral sentiment leads into all excess, without fear or restraint, and serves but to sink man deep in degradation. Every art and appliance of reason is often used to gratify a man's propensities. He becomes worse than a brute, simply because of his superior intellectual capacity. How important it is, then, that each has its proper influence on the character!

We apprehend that the apparent conflict between science and revelation will dispel like mist in the morning sun, as future investigations shall teach the absolute harmony of all God's accomplishments. The evil of philosophy has ever been that it was not sufficiently willing to acknowledge the existence of necessary and self-evident principles, but would question even the authenticity of the Author of principles Himself.

Phrenology announces that man must confide as well as doubt, that he must exercise faith as well as investigate. The spirit of doubt must not drive faith from her legitimate foothold in the human mind. An undue skepticism must not blast the most glorious hopes of mankind.

One of the greatest safeguards of an harmonious action of the faculties is an understanding of the laws and character of mental organization. For instance, we hear of a man, a respectable member of society and of the church, whose conscience tells him that all things that are simply for ornamentation, or

that are intended to please us by their beauty, are wicked; and as such can but be disapproved by God; and in pursuance of his doctrine clothes his children in one somber, unvarying color, and even directs them to paste paper over the engravings in their spelling-books, lest they should be contaminated by looking thereon!

Such is one effect of an inexcusable ignorance of the nature of mind. A correct knowledge of mental organization would have shown this person that God has implanted in the human mind a love and appreciation of the beautiful, and that it can no more be disregarded without violating his high law than if we were to ignore the existence of the faculty of Veneration.

James Parton, in speaking of "Our Roman Catholic Brethren," comments upon their unbounded faith in their Church doctrines, and their easy, credulous belief, tending toward superstition. He says a Catholic never doubts his religion. When he doubts, he ceases to be a Catholic. They cultivate every faculty but the inquiring, doubting one—the one which desires to know the why and the wherefore, and is satisfied with nothing less than a good reason for everything.

In all this is plainly seen a disproportionate action of religious sentiment over the enlightening influence of intellect.

George Combe, in his "Moral Philosophy," says: "I consider the virtue of an action to consist in its being in harmony with the dictates of all the faculties acting in harmonious combination and duly enlightened." According to this view, the peculiar *quality* which makes an action right or wrong is the fact that it is approved or disapproved by all the faculties acting harmoniously. "In all harmonious actions," adds the author, "the moral sentiments and intellect being superior in kind must direct the propensities."

We think that the foundations of right and wrong are deeper than this; and that Combe here mistakes the effect for the cause. We can conceive of no time when there was not right and wrong; we know that they existed before man was created; or, as Burke has said, they "existed before the world itself;" so we apprehend that it is not the fact that all our faculties approve of it that makes an action right, but because of a peculiar and inseparable quality, fixed by God in the nature of things, existing separate and apart from any necessity of approval by man's faculties. Moral truths are independent of man's capability of perceiving them, as objects are independent of the eye which notices them.

When we judge an action to be evil, indignation is aroused against the perpetrator of the action. This emotion is spontaneous, and disconnected from any self-interest, and of necessity presupposes *liberty* in the individual. Therefore the existence of right and wrong proves man to be a *free agent*. How strange is it that intellect should ever attempt to prove such a self-evident proposition to be an error!

The fact that God in His infinite wisdom and benevolence has endowed man with a multiplicity of faculties, each of which is perfectly adapted to make him happy if he but use them aright; that He has given him moral sentiment to furnish him just and pure motives to action, and intellect to devise the means; and that to all these He has added the "perfect law of liberty," is a thought in which every well-wisher of the human race may exult; for it shows that man may be, if he will, all that is noble in thought or action.

It is the unwavering, earnest devotion to moral principle which makes a man truly respectable. Riches, rank, or any other condition, are but dross compared with this. They yield no pleasure so enduring, nor can they produce results half so beneficial to society. It is the conviction of the heart fearlessly stated, the simple expression of honest purpose, which moves men to action.

But, it may be asked, is this supremacy of moral sentiment calculated to insure to the intellectual powers the highest scope for culture and advancement? Will it not fetter genius and clip the wings of fancy? Man's happiness is never found outside of nature's laws. His obedience is his happiness. In viewing the effect we must never be regardless of the cause. It must be happiness through virtue, and pleasure through *principle*, or not at all. No matter how free man's spirit, or how animated his aspirations, he is still man, governed and controlled by the laws of his organization, dependent even for his existence upon his obedience to them. It has been truthfully said that true "liberty does not consist in doing what we *will*, but in doing what we have a *right* to do." The highest state of intellectual excellence can only be obtained through the inspiring aid of moral sentiment. Cousin eloquently says, "We think with Quintillian and Vauvenorgues that the nobility of sentiment makes the nobility of thought. * * * But it is especially in ethics that sentiment shines forth. Sentiment, as we have already said, is, as it were, a divine grace that aids us in the fulfillment of the serious and austere law of duty. How often does it happen that in delicate, complicated, difficult situations we know not how to ascertain wherein is the true, wherein is the good! Sentiment comes to the aid of reasoning which wavers; it speaks, and all uncertainties are dissipated. In listening to its inspirations we may act imprudently, but we rarely act ill: the voice of the heart is the voice of God."

When moral sentiment shall have obtained the station that it should have, in literature, in society, and in government, then shall be realized the hope of the good—the *moral grandeur of humanity*. J. A. R.

GREAT truths are dearly bought. The common truth,

Such as men give and take from day to day,
Comes in the common walk of easy life,
Blown by the careless wind across our way.

Religious Department.

Know,
Without or star, or angel, for their guide,
Who worship God shall find him. Humble love,
And not proud reason, keeps the door of heaven;
Love finds admission where proud science falls.
—Young's Night Thoughts.

SUNBEAMS.

BY BELLA C. BARROWS.

It's the sunbeams, not the shadows,
That remind me of those friends
Whom I hope to meet in heaven,
Where the sunlight never ends.

Shall I tell you *when* the memory
Of the dear ones "gone before"
Comes on rays of God's own sunshine,
Arching sorrow's dark gulf o'er?

It is when the morning sunbeams
Chase the shadows from the earth,
And the whole creation waketh
To a new and glorious birth—

It is when the ardent sunbeams
Kiss the dew from lily leaves,
As a mother tear-drops kisses
From her little one who grieves—

It is when the dancing sunbeams
Play upon the quiet stream
That, unconscious, smiles in answer,
Like an infant in its dream!—

It is when the mellow sunbeams
Fall athwart the woodland shade,
And the birds list to the echo
Which their own sweet notes have made—

It is when the golden sunbeams
Richly paint the western sky,
And the changing tints of cloud-land
Quickly burn, then quickly die—

It is when the fading sunbeams
Mark the hour of closing day,
And the shadows, dark and darker,
Fall upon my lonely way—

That the thoughts of those I cherish,
And whose absence I deplore,
Come into my soul like sunlight,
And I see the clouds no more.

FAITH IN GOD;

OR, CULTIVATION OF THE HEART.

BY A. A. G.

THE most beautiful of all truths, the great and crowning truth of all truths, is that there is a God, a God whose power and love perfectly adapt him to man. Man is a needy being, and God alone can meet his need. In other words, God is exactly what every man wants. It is of more importance to have a clear perception of this truth than to see and clearly apprehend all other truths. Indeed, it underlies all others, and all others will, one day, sink into insignificance before it. Art and science may make it their boast that they can raise man to a great height, that they can develop and cultivate, to a wonderful degree, his intellectual nature, and so they can. But when art has done all it can, when science has done all it can, man still has nothing worth possessing if he has not a God of power and love to meet his highest need. A human

being divorced by his own willfulness from God, and trying to take the long and perilous journey from the cradle to the grave, without Him, is one of the most pitiful of objects. A human being trying to remodel and reconstruct himself and bring himself up from a wreck to a perfect man; a rational, intelligent existence trying to make headway in this world, and hoping to keep clear of rocks and quicksands, and make a prosperous voyage, and sail safely and triumphantly into port, simply by the use of his own powers, and without faith in God, shows most amazing folly.

But it seems to be a great, and not fully answered, question in these days, what it is that God does for a man, and how much he does for him, and what is really the result of his faith in God?

If faith in God brings nothing whatever to needy men, then it is only a fanciful idea, a chimera, a delusion, a something to talk about and write about, if we choose, but of no earthly use to anybody. We, however, are of those who believe that faith in God brings something to the needy, and that its results are glorious and everlasting. We believe that, in answer to this faith, God walks with man, walks by his side, and works in him and for him most powerfully and wonderfully. And therefore we would say to every man: Have faith in God. But let us not for a moment dream that because we have faith in God, we may leave God to do everything for us while we do nothing for ourselves.

No. God works for no man who can, and yet will not, work for himself. This is freely admitted by everybody to a certain extent. It is acknowledged that God does not give to any one the luxuries, or even the necessary things of life, such as shelter, food, and raiment, unless he *works* for them. If a man, grown weary and impatient of toil, should conclude to spend the rest of his days in idleness and ease, and live by faith in God, he would probably have pretty poor living, and a pretty sore experience of poverty. Comfortable homes, fine palaces, fine equipages, rare gardens, and rich fields, all things that men desire and enjoy, come only through toil, and not God's toil, but man's toil. What people want in this world, they must *work* for. They must enter heartily and energetically into some field of *labor*, and work in it patiently and perseveringly if they want what nothing but money can buy. This is God's law. Toil and the fruits of toil are inseparably connected, and it is only those who help themselves whose faith in God as a helper is worth anything. Probably no one will say that this is unsound doctrine. No man in his right mind expects ease or even ordinary comforts, however great may be his faith in God, without working for it. And human, as well as divine, effort is necessary in education, whether of the head or the heart. Let a man pray: "Oh, God, make me a scholar. Reveal unto me all the beauties and mysteries of art and science, and teach me all languages, and spare me the

trouble of study"—let him offer such a prayer, and the sum of his learning and the amount of his education would soon be told. But let him ask God to bless his efforts and to help him grow in that patience and perseverance so necessary to the pursuit of all knowledge, and let him have faith that God will answer, and he will then see exactly when and where faith in God comes in to help a man. He will see how beautifully and perfectly this faith chimes with human effort.

Now, in nothing is human effort so much needed as in the education of the heart, and it is the duty of all who want to be made better, not only to believe in God, but to work with him in the greatest of all labor, the cultivation of the heart. Here, as in all other things to be gained, faith in God will avail nothing if a man does not use all possible means for the cultivation of the heart, and reach out eager hands after all helps, and open his eyes wide, that he may see whatever tends to pull him down or raise him up. And yet it is taught by many, in these last days (we hope they are the last days of ignorance and folly), that men may see anything but themselves, that they must not know their own mental and moral constitution, that if they want to grow better, in other words, want to "grow in grace," all they have to do is to have faith in the God of all grace. But if men knowingly and willingly reject any knowledge that would help to make them better, we can not see how they can consistently ask God to make them better, or how they can expect Him to do it, any more than they can expect Him, without their own effort, to build their houses for them, and lay out the grounds, and cultivate the choice flowers, and rich fruits. God helps men, not by doing for them what they can do for themselves, but by directing them to all the help that is within their reach. And here Phrenology comes in with a strong helping hand, commissioned by God to show men their mental and moral constitutions, that they may know what dangers lie within themselves, and also what helps are hidden in their own being. But too many of them lift up holy hands, and exclaim: "Away with that dangerous ology, Phrenology!" They cry out: "Educate the heart; that's the grand secret; educate the heart, and the head will take care of itself." "Educate the heart!" Why, this is precisely what Phrenology aims to do. But it knows very well that the head is next-door neighbor to the heart, and a very influential neighbor too. Once make the head what it ought to be, get every faculty into its proper place, and get all the faculties to work harmoniously, and there will be no discord between the head and the heart, but both will blend and send sweet music up to God.

The full development and perfect harmony of the whole being is the aim of Phrenology. To bring man into harmony with himself and with God is its blessed work. And in all this work, the phrenologist has faith in God. The science of Phrenology, to which he gives his

life, is too often denounced, but he toils on, and while he toils, has faith in God.

Men and women of the nineteenth century should all work together to advance this great science, this science which, more than any other, educates the heart. And we believe—yes, we have faith in God that the day is not far distant when Phrenology will be everywhere recognized as one of the greatest and best educators of the race.

LIVING FOR A PURPOSE.

Has there ever come floating over your soul in the solemn midnight, or in the hush of solitude, a still, soft echo chanting these words, "For what are you living?" Have not its weird tones followed you to the crowded street?—have they not rang out in the evening bell?—the fearful storm? The voice of the winds has borne them to you; the gushing of the waters as they rush onward to old Ocean, has joined in the murmur, "For what are you living?" And what was your soul's reply to the gentle voice? Was it like the calm music that the sweet-toned harp gives forth to the hand of the musician? or were the strings mute and broken? Do not bid this voice be silent, but think of it—listen to its murmur, and remember that on the answer it receives hangs your future destiny—yes, your *future destiny*; for if your purpose is high and noble, your life will be noble; also, if your purpose is aimless and low, then your life will be likewise, and you will sink into the grave, "unwept, unhonored, and unsung."

There was once a man whose chief aim from boyhood had been to gain riches. For these he sacrificed love, friendship—everything; but when his object was accomplished, and he could count his millions, life became a dreary blank to the miser. In the darkness of night he fancied he saw gaunt forms of men dividing his gold among themselves; and by day the weird face of starvation looked upon him from every side, for he would rather starve than part with the smallest fraction of his hoarded treasure. Do you wonder that he determined to die? Softly he crept from his gloomy cellar, and clutching his idol, bent his steps toward the river. The flowers looked up as he passed, and the sunbeams smiled sweetly, but he saw them not, and shuddered as the winds murmured, fancying that robbers lay concealed amid the trees.

Now he stands by the rushing, shivering river; one moment more, and the fate of the miser will be sealed forever; but suddenly he pauses, for there before him a woman kneels praying for one penny to buy bread for her children. With a half whisper that he would "never need it again," he fills her scrawny hand with money—for the first time in his life gives to the poor—and the woman, little dreaming that she has done an angel's work, prays with uplifted hands that God will bless her preserver.

It is a strange position for the miser, and

with streaming eyes he turns from the dark water. His icy heart is melted, and while he returns along the winding path, the recording angel writes in the book of life,

"LIVING FOR A NEW PURPOSE!"

With the simple words, "Living for a Purpose," how many a heart-history passes before us! grand lives that cause our souls to burn with enthusiasm. You all know them; they are like brilliant stars upon which you love to gaze and wonder. Yet, amid them all, there shines one Star—the Star of Bethlehem—guiding our weary souls to Jesus, enveloping His life, His purpose, with a shining halo. Is there one that can not admire His character? Is there one that can not love Him who breathed out His life upon the cross? Oh, wondrous life! Oh, mysterious death!

And now by the memory of the Savior's suffering; by the memory of the glorious purposes for which he lived; by the memory of His death and resurrection, let us decide upon our purpose in life. With His example before us, our aim can not but be noble.

Let us clasp His outstretched hand,
Looking forward to the land
Where the sunbeams ever quiver,
And there singeth many a river
Softly there.

Let us clasp His hand all tightly.
And He'll lead us, oh, so lightly,
Over rocks and briars, piercing,
To pure happiness unceasing—
No more care!

S. A. K.

Our Social Relations.

Domestic happiness, thou only hilos
Of paradise that has survived the fall!
Thou art the nurse of virtue. In thine arms
She smiles, appearing as in truth she is,
Heaven-born, and destined to the skies again.—*Corper.*

AMUSEMENTS.

BY FRÉDÉRIC W. SAWYER.

We learn from nature that everything in her economy is formed upon the principle of variety and change; that nothing, except the great laws by which matter and mind are governed, is unchangeably fixed. Nature has its successive seasons and its alternations in everything, from wet to dry, from heat to cold, from light to darkness. All the vegetable creation has its alternations, its budding, its blossoming, its fruit season, and its apparent decay, again to revive, and bud, and blossom as before. All the animal kingdom has its alternations, more or less mysterious and strange, always changing, never at rest. There is nothing in nature that seems calculated for, or destined to, an unalterable state of repose. So far from that, everything seems predisposed to change. Such is peculiarly the condition of man. A state of rest with him is a state of death. As long as life is in him, there is continual alternation. Man is a harp of "a thousand strings;" and perhaps throughout his whole life those finely toned chords are never tasked twice precisely alike. The changes in nature

keep her bosom always warm and bursting with blessings; and to the never-ending changes of the human mechanism we are indebted for its keeping in tune so long. He who attempts to hold his arm, or even his finger, in one position for any length of time, will soon learn that continued change is the law of nature.

Everything in nature requires, at stated periods, a certain degree of repose. This is as apparent in the economy of the vegetable as in the animal kingdom. From the tenderest shrub to the mightiest oak, each has its season, when, as it were, the tide of life ceases, and seems for a while to slumber. Everything living has its point beyond which its powers can not be taxed with impunity.

Those who give themselves up to one pursuit, either of body or mind, wear out much sooner than those whose pursuits task every day, more or less, all their faculties. The same system of alternations is required to keep the mind healthy as to keep the body so; in fact, they are so intimately connected that the one can not be diseased and the other not sympathize with it. Man needs at times to be gay as well as grave, and sometimes to be sad as well as joyous. The mind is as capable of stagnation as a pool of water. It gathers noxious vapors as truly as does the air. It needs, as they do, its correctives. The mind is always active, whether sleeping [?] or waking; but it can not always be intent on the same subject. When jaded over the pages of Euclid, it finds relaxation in Plutarch, Livy, or Hume; and when spent on history, replenishes its wasted strength in perusing the pages of the poet or the romancer. Each change tasks new powers and new susceptibilities, and gives the others opportunity to rest.

It is to meet the wants of beings thus constituted that we are given a taste for amusements—those that are corporeal, to task otherwise unemployed and dormant powers of the body, and thus make us healthier; those that are intellectual, to task otherwise unemployed and dormant powers of the mind, and thus improve, strengthen, and regenerate it; those that are social, to task otherwise unemployed and dormant sensibilities of the heart, and thus make it warmer and more alive to generous impressions. In a word, we are given a taste for amusements, and we are given capacities to amuse, that we may gratify the one and use the others for the improvement of our health generally, both of body, mind, and heart; and if we do not gain those advantages from them, we pervert them, just as much as we do the fruits of the earth when we overload our stomachs with them, or distill from them noxious liquors to injure and destroy us; and the amusements are no more in fault in the one case than the fruits in the other. In both cases, the fault is in the *abuse*, not in the *use*, of them.

A MAN of genius is inexhaustible only in proportion as he is always nourishing his genius. Both in mind and body, when nourishment ceases, vitality fails.—*Bulwer.*

RETROSPECT.

BY MRS. HELEN RICH.

You will think of this, my darling
In some evening yet to be,
How the charmed hours in blessing
Brought sweet love to you and me;
How reclining so before me,
Reading in mine eyes the sign
Of the peace and joy thy spirit
Saw reflected fair from thine;

Of the pure and perfect passion
Making beautiful the earth,
Of the tender silence breathing
Unto each the other's worth;
All the bliss of touch and presence,
Memory of our cherished past,
Glory of the Sometime Coming,
All too glad, too bright to last—

You will say, in some sad hour,
(With a sigh of wild unrest,)
"If *she* could but kneel beside me,
With her head upon my breast;
If her eyes and lips together
Could say Darling, I could go
Nobly armed for life's stern conflicts,
Bravely meeting joy or woe."

You will close those eyes in dreaming,
That have lit the world for me,
And in poet fancy's seeming
My poor beauty thrill to see
What was gracious lingering over
The unlovely, veiled, and dim,
As a manly, gentle lover
Prays his *fate* to think of him.

Oh, beloved one! more precious
To this woman's heart than life,
I have given thee a safeguard
From the world of sin and strife.
Like a mantle, I have folded
My true love about thy heart;
That shall bless and shield and save thee,
If together—or apart.

CANTON, N. Y.

THE MURDER OF THE INNOCENTS.

BY CRAYON BLANC.

If a man keep his eyes and ears open in a city like New York, he is pretty sure to see something to grumble at; at least, that is our experience. Now, there is great philosophy in holding one's tongue sometimes; but there are also times when it becomes a duty to speak out. And this is one of the exceptional times.

The other day, happening in at one of our gigantic temples of the *beau monde*, where money and health and common-sense are thoughtlessly sacrificed to the relentless Moloch of "being in the latest fashion," we saw two ladies giving orders for a complete wardrobe of the richest material and most expensive manufacture. Now, if it had been for their own behoof and benefit, we should not have ventured a remonstrance. They were probably quite able to take care of themselves; and if they chose to commit "satin suicide," we knew of nobody who had the least disposition to interfere. But the victim was a beautiful, rose-cheeked, dimple-chinned baby, who sat on the counter, and was bribed into a reluctant good behavior by a paper of pink and yellow candies judiciously administered at brief intervals by "aunty," while "mamma"

gave directions about the number of tucks and the rows of Valenciennes insertion, and the pattern of the embroidery on the little frocks and skirts.

"Let the dresses all be low-necked, of course," went on the lady; "his shoulders are so beautiful, and I always like to see them uncovered, summer or winter!"

Poor baby! it had evidently had a hard time under the hands of the *modiste*! The little scarlet lip was yet quivering, and the tears still hung, wet and sparkling, on the eyelashes! Evidently it didn't relish being fashionable. It clutched fiercely at the shell of lace and embroidery that was being "tried on" upon its downy head, and pushed the officious shopwoman away with all the might of its small energy.

Now, what was the use of all that nonsense? A baby is pretty enough at any time, according to our standard of beauty, without a flimsy garniture of lace and ribbon and French work, at so many dollars per yard! We should as soon think of attempting to ornament a fresh crimson rose, or of "dressing up" a diamond! Children have a royal right to enjoy themselves. Surely it is time enough to trammel and distort them with fashionable follies when they become "young gentlemen" and "young ladies." Let them roll in the grass, and pull double handfuls of buttercups and clover-heads, and throw their tiny arms, round and white as carved pearl, into the sunshiny air just as much as they like! These breezes are so many draughts of fresh life—sunburn is healthy!

It seems to us a very King-Herod-like business to initiate babies of six months and a year old into the murderous observances of fashion—to dress them so richly that they are not to be allowed to move for fear of spoiling their fineries—to leave their little shoulders and knees bare to winter winds and raw air, "because it looks so sweet." If mothers will persist in this course, they must leave off wondering why the little victims cry and fret incessantly—they must not be astonished at pale cheeks and fading eyes. And when "the baby" has become only a word to be spoken with tears, and the waxen eyelids are closed forever, they must not blame prudence—only their own infatuated folly!

THE QUEEN'S ENGLISH.—The following purports to be a copy of a letter written by a fashionable young English lady while visiting Paris during the Paris Exhibition. In versatility it could hardly be equaled by any specimen of "young American" epistolary writing. The national idioms and slang phrases are decidedly refreshing. Altogether, it is an insight of English social life which a thousand made-to-order novels would not furnish.

PARIS, ST. CRISPIN.

"MY DEAREST BEATRICE: We arrived here on Monday all serene, our scheme having been well carried out. Paris is awfully jolly. The scarcity of lodgings is all bosh. It is out of my power to give you a graphic description of the Exposition, which is something marvelous

and a decided success. Our country is not well represented in pictures, few being noteworthy. How idiotic not to have sent better! However, our prestige in water-colors is sustained. The pet utterance, 'They do these things better in France,' frequently crops up with us, but is not applicable to artistic matters. The French landscapes are less effective than ours, and their portraits are not so realistic. Such lots of lovely china, for which you know my weakness! On my return I am going in for Wedgwood, although my taste will be pooh-poohed. On leaving the 'Palatial labyrinth' the first day we were completely sold. It was indeed hard lines, for not a cab was to be found, and we had to trudge in the rain and through the mud for miles. What a sell it was! How I longed for our little trap! We pounced upon our new curate in the act of scrutinizing the copes, chasubles, and church ornaments. Notwithstanding his antecedents and reticence, his proclivities are obvious—not that there is anything yet abnormal in his proceedings. By-the-way, ritual is not likely to be stamped out. Think of our traveling with the Crofts on their wedding tour! They were spooning awfully. How strange that a fast girl should marry such a muff! It seems she has made a mull of it. They were great fun. We fell in also with the Gordon girls with their aunt, in splendid get-ups; their bonnets were stunning. A man of the party was sweet upon Clara. What gushing girls they are! We have almost done Paris already; for the governor, who knows a thing or two, has a specialty for lionizing. He has many a good dodge, and has forked out well; so we have enjoyed ourselves immensely, and are indeed intensely happy. We are not due till Saturday week, but he has elected to return, *via* Dover, sooner; so we may put in an appearance on the Friday. We spied poor Benson one day at a distance, looking seedy. He has long been going to the bad, and I fear has come to grief. Short dresses are now an institution. Thanks many for your sensational letter. Your affectionate ZILLAH.

YOUNG AUTHOR'S SOLILOQUY.

To write, or not to write? that is the question,
Whether 'tis better for a man to endure
The slang and croakings of unfeeling critics,
Or to pass through life in dark obscurity,
And by being naught, shun them.

To read; to write;
Ay, more; for by that life we ever bring
The head-ache, the heart-ache, and other aches
That active men incur. 'Tis indeed very hard
To think of such a course. To read; to write;
To write! perchance succeed. Ay, there's the rub;
For if one falls in this, when once begun,
The world will madly cry aloud
In mockery. That's the reason
An author's life seems so forbidding;
For who would bear the editor's dissent,
The printer's errors, discouraging advice,
The replies of opponents, slander of men,
The publisher's delay, and other ills
That must be borne in the world of letters,
When he himself might destroy his pen,
And thus his pleasure gain? Who would bear reproofs
To groan and work under a weary life,
But that the hope of some good yet to come,
When many articles have been written,
To solace his last days and bring him peace;
And makes us rather bear the ills that are,
Than leave forever the world of letters?
Thus public gaze makes cowards of us all,
And thus native desire of elevation
Is intermingled with fears of failure,
And worthy literary achievements
Which might have rendered the world much better
Are lost in oblivion. C. T. LEONARD.

WE DO NOT KNOW.

BY FRANCES L. KEELER.

We do not know, when the rose is fair,
That a hidden worm lies sleeping
Beneath the folds of beauty, where
Decay is surely creeping.

We do not know that sunniest smiles
Are masks for hearts all broken;
Lips tell not where the life-grief lies—
Deep sorrow is unspoken.

We do not know how many lives,
Lured downward by temptation,
Might be reclaimed by winning words,
And saved from degradation.

We do not know, when the thin lip curls,
How much the soul is yearning
For sympathy from some true life,
Where love is brightly burning.

Nor do we know what woes have rent
The hearts we deem unruined;
So let us do what good we can,
And leave the rest with Heaven.

SELF-CULTURE.

BY MRS. JOSEPH B. LYMAN.

NOTWITHSTANDING the number of colleges and academies in our country, and the facilities afforded our youth by common schools for acquiring at small cost a good education, yet there are a large number of aspiring young men and women who, by the force of adverse fortune, must, to a great extent, educate themselves. Many there are who claim that self-education is, after all, nobler and finer in its results than academic culture. Whether or not this be true, one thing is certain: college education does not create brain power. That is born with man. There are many instances of splendid men in American history who have submitted to established courses of academic culture, as well as of those who have fought their own way up to greatness.

George Washington and Abraham Lincoln wrote their names deeper in the hearts of their countrymen and higher on the arch of history than any other men in the Western World, but they as students never saw the inside of a college. Benjamin Franklin, our greatest philosopher and savant, graduated in a printing-office. Patrick Henry—God only knows the source of his glorious powers—but no alma mater save great Nature lays claim to him. Horace Greeley owes nothing to Cicero or Virgil, to Plato or Aristotle, for his eminence at the head of journalism in this country. And so we might swell the list with many a noble name from our roll of great men, who may thank God and themselves for the positions they have won.

But, on the other hand, there are brilliant testimonials to the advantages of classic culture. Jonathan Edwards, Daniel Webster, Edward Everett, Rufus Choate, William Prescott, and the bright array of men eminent in science and scholarship, who stand at the head of our colleges and universities, the Sillmans, Woolseys, Henrys, and their compeers, show, by both what they are and what they

teach, what prescribed courses of study can do to discipline and polish the human intellect, to aid in the investigation of the mysteries of nature, and bring to bear on the great questions of the present age all the learning and wisdom of the past.

The object of this paper, however, is not to discuss the comparative merits of the two systems, but to throw out some hints for the guidance of those who have no one to direct them in courses of study and thought. Many young aspirants for liberal learning, who have the rudiments and something more of a good education, long to drink deeper at the fountain of knowledge; to become acquainted with the mysteries of science; to understand the profounder truths of philosophy, and develop the resources of their own intellectual and moral natures. They are willing to study, and the world is full of books; but where and how shall they begin? What clew shall guide them through the labyrinthine mazes of libraries to the fountains of truth at their center?

The first conquest to be made is the mastery of language. By this we mean the accurate knowledge of the signification of words, and the ability to use them correctly. The study of Latin and Greek in our schools and colleges is designed to meet this prime demand; but those who have not the time or the means to spend in such long and laborious courses may by the diligent study of two or three books know more of their native English than do the majority of graduates from colleges. In Webster's Unabridged Dictionary may be found the derivation of words so far as scholars can give it, and their various significations. In Crabbe's Synonyms, a book which every student of style and language, unversed in the ancient tongues, will find invaluable, the different shades of words of nearly the same meaning are given, with examples showing their proper use. With these two, and Roget's Thesaurus of English words and phrases, classified and arranged so as to facilitate the expression of ideas, one may acquire as good a knowledge of English as will be of practical utility. All the valuable works of antiquity are translated into our language, and though many felicities of style are necessarily lost in the translation, the intrinsic thought is preserved, so that what is really of most worth in ancient writings, we may enjoy without spending years in the study of dead languages. The habit of knowing with exactness the meaning, the correct spelling and pronunciation of the words we use in ordinary conversation is one of the most important we can acquire. Let the student, then, when he sits down to read or write, have the first of these books, certainly, and all of them if he can, at his elbow, and turn their leaves again and again till the full meaning of the author he reads stands distinctly out in the words he uses, or the written page expresses perfectly the thought he wishes to utter. This course, diligently pursued, will, in a short time, give him clearness of ideas and facility in expressing them. We think in words, and

thoughts which we can not embody in words are practically useless to ourselves, and certainly to everybody else.

But to what department of knowledge shall the unguided student turn?—where shall he begin to quench his thirst? *Pleni sunt omnes libri*—full are all the books. Let him begin at the bottom of the ladder and climb upward, round by round, making every step sure as he goes. Reading, writing, grammar, arithmetic, geography lie at the foundation of common school education, and most everybody is supposed to understand these. But take the first one—reading. What constitutes a good reader? Is it the knowledge of the meaning of the words on a page and the ability to call them over in succession without hesitation? Take any company you please, of people commonly well educated, and call upon some one to read aloud Dickens' speech, for instance, at the Delmonico dinner, for the entertainment of the rest;—how few will be found willing to respond! And yet is there any excuse for inability to comply with such a request?

So with arithmetic. How many go through the arithmetic and into algebra and geometry who are yet puzzled to apply the simple rule of three in cases that come up in every-day life, and are totally unable to calculate interest, either simple or compound. And you shall find those who have passed through Pope's Essay on Man, Cowper's Task, and Milton's Paradise Lost, who can not, or do not, utter three sentences in common unstudied conversation without murdering Lindley Murray in the most savage manner. So in geography. Ask the young person who has finished Mitchell the direction and extent of the principal mountain chains in the world, and the natural effects springing therefrom, how few will answer intelligently!

But to go back to reading. How shall one cultivate himself in this high art? for such most assuredly it is. In the first place he must perfectly grasp the idea of the writer, and in the next, by his tones and emphasis, properly interpret it to his hearers. This accomplishment can be acquired only by practice. Select a fine passage from some author, and read it again and again aloud, giving each word such intonation and emphasis as brings most meaning from the whole passage. If it is descriptive, the picture must be vivid and complete in your own mind before you can fully paint it in the minds of your hearers. One passage of Shakspeare or Milton, or the sublime parts of the Bible, studied in this manner, will do more to make one a good reader than a whole book carelessly read through aloud.

The same system may be pursued with regard to writing. It is a reproach and stigma to any one in this country to be obliged to make "his + mark," and yet for all practical purposes how many can do no more! Look at a great many of the letters addressed to editors and public men. Though the contents of most of them may be guessed at, yet it is impossible in many instances to decipher the signature

and post-office address, and how many mistakes arise in consequence! If penmanship is illegible, it might as well be in Sanscrit or Hebrew as in English. It is a reproach and a dishonor to a person to write a careless, scrawly hand, though many of the literary men of the country, and the journalists with Horace Greeley at their head, should be guilty of it. The handwriting of an individual is in his absence what dress and manners are to the same person when present; non-essential, to be sure, in some respects, but vastly significant, and by no means to be disregarded. Let the student cultivate a round, clear, open hand, legible at least, and beautiful if he can. With the same patient painstaking, let the other branches of common school education be gone over, making haste slowly, doing nothing mechanically or carelessly, and the habits thus formed of thorough culture will be found of inestimable value in later studies.

While the student is polishing these foundation stones, he may at the same time enter upon higher courses of acquisition. The broad fields of literature, science, philosophy lie invitingly open. But let him remember

"A little knowledge is a dangerous thing;
Drink deep, or taste not the Pierian spring:"

which translated into prose means simply this: a half truth is dangerous. If you lay hold upon truth, study it in all its relations, not in a part of them only; know all about it that can be known; master it; make it your own. Such knowledge only will make one truly wise. Such knowledge never puffs up. For instance, you take up a history of England and read it through. Unless at the close of the book you can give some of the lessons which that history teaches, what good will it do you to have read it, even though you may be able to repeat the names of every English sovereign, from Egbert down, with the principal events occurring in each reign. Such knowledge by itself is valueless. History is philosophy teaching by example; not a mere list of names and dates. The time of Richard Cœur de Lion, for instance, will take you into the Crusades. Do not pass on into the next reign without finding out all you can about the Crusades, their origin, their history, their effect upon Europe and the East. So the reign of Henry the Eighth will bring you to the era of the Reformation. You must go over into Spanish, German, Swedish history to get anything like a full knowledge of English affairs at this time. The relations of the European states are so intermingled that a knowledge of the history of one will lead you to an acquaintance more or less intimate with all the rest. Be engaged a year, two years, five years in such a course of historical reading, but be thorough if it takes a lifetime. A little garden patch well cultivated will yield more in fruitage and in satisfaction than an acre carelessly tilled. The great fault with many students in college and out is that they take education as they do the measles or the whooping-cough. It comes but once in a lifetime, and is something to be got-

ten through with. Better be "in glory and in joy behind the plow upon the mountain side," better be breaking rocks upon the turnpike, than wasting time in such profitless, mechanical study. Not the number of books one has read, or the years spent in reading them, but the manner in which they have been read, the valuable lessons learned from them, the intellectual power acquired in their mastery is the true test of scholarship.

There are a couple of errors into which the self-educated are prone to run, and with a brief mention of them we close this article. First: Those who have picked up their information in an irregular way, finding themselves by the natural force and strength of their minds superior to college-educated men, are prone to underrate regular systems of culture. This is unfair. Benjamin Franklin, it is true, graduated in a printing-office; but if his education had been thorough, he would have left a still deeper mark upon his generation. His political writings would have been profound as well as witty, and he would have been the Goethe of his generation. Second: The self-educated are apt to overrate, or at least to overstate, modern achievement. It is true that the Greeks had no printing-press, nor the locomotive, and the Roman supremacy in arms was won without gunpowder; but in poetry, in art, in oratory, in philosophy, in jurisprudence, in pure mathematics, in theology there has been no essential progress since the time of Christ. No military leader ever surpassed Julius Cæsar; no law-giver was ever equal to Moses; no modern poet can outstep the

"Blind old bard of Scio's rocky isle."

The modern intellect, baptized by Christianity and guided by the genius of Francis Bacon, has turned itself upon the philosophy of uses, and the whole brood of modern sciences has been called into being. But these practical knowledges evince no greater exertion of faculty, and were produced by no finer thinking than illuminate the pages of Plato and glow in the utterances of Demosthenes; so that while we feel a natural pride in the achievements of modern philosophy, we should say with the poet-laureate of England,

"Ancient founts of inspiration
Well through all my fancy yet."

WAR vs. NON-RESISTANCE.

DURING the progress of the war the Shaker societies passed through a peculiar experience. Those of them located in the State of Kentucky (Pleasant Hill and South Union) were for years in the power of the Union and Rebel armies alternately. And, although they fed the hungry, and clothed the naked, and nursed the sick of both the contending forces, thus "giving aid and comfort to enemies," yet the officers of either army restrained, as far as possible, the depredations of the rank and file.

They suffered and lost immensely in person and property, but not unto death, or entire destruction of the temporal or community organization.

The frequent communications to the more favorably situated societies of the East, graphically detailing the scenes through which they were constantly passing, ex-

cited one continued state of fear and alarm among the brethren and sisters, leading to the most fervent prayers to the *God of Christians* for their protection and safety. The following lines, just written to those long-trying Western Shakers, will be understood when it is stated that Morgan, the guerrilla chief, was especially friendly and protective to them.

F. W. EVANS,

Mt. Lebanon, Columbia County, N. Y.

WRITTEN BY CECILIA DEYER FOR BR. URBAN JOHNS,
SOUTH UNION, KY.

When traitors to their country's cause
In fraud and treachery grew bold;
When sacred bonds were snapp'd like straws,
And Judas bargained, as of old,
We pray'd your little stricken band
Might firmly for the Gospel stand.

And in the hour when war's dread storm
Bullt round your home a wall of fire;
When wild reports of ev'ry form
Rush'd forth like phantoms filled with fire,
We turn'd our hearts to God in prayer,
That He would keep you in his care.

We watch'd the showers of shot and shell,
'Mid lightning's flash and cannon's roar,
And thought there must be peace in hell,
For earth her own confusion bore;
And humbly bent our hearts to pray
That God the fearful scourge would stay.

When neither friendly man nor law
Could yield protection or relief,
The Lord, who all your peril saw,
Raised up the fierce guerrilla chief.*
Thus human wrath, in our own days,
Was turned, by miracle, to praise.

When clouds and sorrows deepened fast,
Doubt spread a curtain o'er the land:
As fold on fold was thickly cast,
We saw through it the Lord's own hand,
And pray'd that, in that hour of night,
Your dwellings might be filled with light.

And when the bondmen's smother'd cries
Came like the voice of moaning waves;
When earth's red bosom burst with sighs
And gave her bleeding children graves,
We pray'd that, in that matchless woe,
The Lord would ev'ry wrong o'erthrow.

And ever and anon there came,
From you, brave words of faith unmoved;
We knew the Lord the hearts would claim
Whose true dependence he had proved;
With tears we bow'd to God in prayer,
To give you strength to do and bear.

Though still the hour is wild and dark,†
And persecutions lash your home,
The guarding hosts your sorrows mark,
And they will turn the waves to foam;
While earnestly our spirits pray
That God may speed the better day.

As from the fount unceasing streams
Flow to the valleys far away,
As through the gloom the morning's beams
Tunnel and gild the path of day,
Our anxious hearts o'erflow to bless
Our Gospel kindred in distress.

Thus, thus is Christ united found;
His life-blood all true members feel;
In joy or sorrow they are bound,
And stamp'd with love—the heav'nly seal.
So, join'd, we ever will move on,
And watch and pray to still be one.

* Morgan.

† The South Union Society is now threatened by the *Ku Klux Klan* for employing freedmen.

FOOTPRINTS OF LIFE;

OR, FAITH AND NATURE RECONCILED. By Philip Harvey, M.D. New York: Samuel R. Wells, Publisher. 12mo. Fancy cloth, beveled boards, gilt. Price, \$1 25.

THIS volume, if perused with care and candor, will abundantly compensate the reader. It is a poem in blank verse, hexameter measure, and as such displays an acquaintance with the literature of classic times which few authors can claim. The author is a Western physician, a gentleman of extensive reading and much practical research. In his work he has condensed the fruits of long-continued thought and patient examination, and yet presents his views of nature, man, and God in easy flowing numbers which weary not while they deeply instruct.

The Poem is divided naturally into three parts.

First. The Body, comprising the Introduction; the Origin; Progressive Development and End of Animal Life.

Second. The Soul, including Exordium: Soul; Instinct; Reason; Faith; the Laws of Nature.

Third. The Deity, comprehending Retrospect; the Love of God; His Worship; Prayer; Forms of Faith; Universal Prayer; Conclusion.

In his Introduction the author thus defines his undertaking:

Of Nature's deepest mysteries profound,
And secrets that in ancient days she kept
Behind a veil, from mortal view concealed,
And even yet reluctantly allows
The searching eye of science to explore;
Of life, its origin, its course and end,
And the position relative we hold
To other things of life, the world and God,
I fain would sing. * * *

Part First contains an exceedingly interesting, and, considering the difficult nature of the task, a most skillfully managed dissertation on the origin and progressive stages of organic life as indicated by geology and natural history. The beautiful and rapid manner in which the scientific learning of the *savants* is introduced is well illustrated in the following extract:

The next advance was to the reptile class:
The forms that first on land inhaled the air
By means of lungs. Of these, some sought their food
Amid the world of waters; some sought theirs
Upon the marshy surface of the shores,
Yet moist and newly risen from the sea;
And some, again, on leathern wings in air.
Enormous lizard-fishes, swiftly urged
By giant oars, their finny prey pursued
In farthest depths of ocean's blue domain;
Fierce, hungry monsters of capacious maw
And hideous aspect, tyrants of the deep;
The predecessors of true reptiles these.
Then saurian tribes for land or water made—
Two natures linked amphibiously in one—
Wherein, in form and attribute, the fish,
The quadruped, and bird were strangely joined,
In rivers and primeval swamps appeared
And took possession of the double realm,
O'er which their stronger members reigned supreme,
Until the scepter of reptilian sway
Passed to terrestrial tribes of higher grade.

The treatment of the themes embodied in the volume is, as may be seen in the extracts already given, entirely original. The reader is impressed with a deep interest at the very

commencement, and yet becomes more and more interested as he advances. Although the style is facile and agreeable and the imagery in the highest degree poetical, yet the substance of the work is no superficial coruscation of the fancy, no fevered growth of the imagination. It is a rich argument, a feast for the mind, a substantial imaginative repast.

In Part Second the author has given a very fine treatise on the comparative features of instinct and reason. His views, of course, are his own, but they throw no little suggestive light on those much-vexed topics. We have not the space in which to give the whole of his remarks, and risk some loss of connection by the following brief extracts:

If mind must be immortal, as is said
By almost every creed, and I believe,
All mind must share this quality divine.
A ray immortal 'tis, wherever placed,
In kind the same, though different in degree,
And nowhere showing more diversity
Than in the opposites of human kind,
The highest and the lowest intellects.
To some the light of reason is denied;
No seeming import in their form and mark,
They stand as blots upon the page of life;
In some the animal preponderates,
And these by instincts low are hurried on;
And some, more godlike in their faculties,
Weigh well the consequences of their acts,
And pick their way by reason's higher aid.

* * * * *
Reason and instinct both, to some extent,
In all the higher genera are found;
In animals the latter most is seen,
The former most adorns the brow of man;
While instinct only on the narrow walk
Of lower kinds bestows a feeble ray.
Archangel and chief messenger benign,
Fraught with the high behests of Heaven to man,
Reason sublime its brightest halo spreads
Around his head and marks him lord of all.
As different lamps these faculties divine;
One bright, one faint.

There is much wholesome instruction imparted by the vigorous yet graceful exposition of the Laws of Life. It is here the experienced medicist shines forth. This is a specimen:

Ye pallid worshippers at Fashion's shrine,
Whom Indigestion and *Dyspepsia* pursue
Around, like Furies armed with scorpion whips,
Repent in time, turn ere it be too late!
Your superflux to those in need resign,
And taste the luxury refined and true,
That only they, thrice happy, can enjoy,
Who live within the simple, genial bounds
Of Nature, and with wise economy
Her temperate, frugal wants supply, no more;
Her rites administer with hearts sincere.

Part Third, the finest portion of the work, is reserved for the grandest of themes, the Deity. The spirit in which the ascriptions are offered, and the love of the Almighty Father descended upon, is most reverential and pathetic. It may be said in this place that the author does not claim to accord in all respects with the tenets of strict orthodoxy, but pursues his chosen line of discussion unfettered by the *formule* of any special theological, ethical, or metaphysical school. That he bows in humble adoration to the great First Cause and "Parent of all good," is again and again evidenced in the progress of his verse. In the entire range of sectarian

doctrines can we discover anything that seems of a sounder spirituality than this?

Poor dying mass of dust and vanity!
Art thou essential to the universe?
Or needful more to Him who reigns supreme
Than is the humblest creature of His hand?
True, 'tis thy happiness to hold a place
Among the very foremost ranks of life,
For which all gratitude and praise are due;
But art thou therefore all and all to God?
Or does He need thy service or thy praise?
Thou and thy race extinct, He from the stones
Could raise up issue to obey His will,
Without an effort, or the heed of time.
Eternal and Almighty, not for Him
Exists or labor or the lapse of time;
To Him past, present, and to come are now.
Know well thyself, proud offspring of the dust,
Thy true condition see; repent, and ask
For mercy and forgiveness of thy sins,
And try to mend; for by humility
Must all be justified, and not by pride;
We can not mend unless we see our faults.

Dr. Harvey most appropriately and beautifully closes his work with a prayer, which though similar in many respects to the grand Universal Prayer of Pope is so essentially different as to mark the writer's individuality. From first to last it appears to be the earnest outburst of a heart filled to overflowing with reverence, gratitude, and love. A few lines will exhibit its general tenor:

Sinful and weak, before Thee I approach
With wants and imperfections numberless.
Be Thou my strength, O Lord, and comforter!
Into my heart Thy Holy Spirit pour,
The Source of wisdom and of every bliss!
Then shall I falter not, nor go astray,
Nor at Thy dispensations just repine,
Though they incomprehensible may be
To minds unclouded with the mists of earth!
Life at the best is but a mingled scene,
Where joy and grief by turns divide the hour,
And then the curtain falls and all is still.
Mysterious shroud! what eye can penetrate
Its gloomy folds and see what lies beyond?
But Thine alone, Eternal God! Enough
For us to know we live and die in Thee.
With proofs around, so ample, of Thy love,
Why should we fear to sleep within Thy arms?
Now and forever may we trust in Thee,
Whose eyes are never sealed in sleep, but keep
Eternal vigils over all thy works!

This volume to be truly understood and appreciated must be read entire; a few isolated extracts can convey but an idea of its construction and sentiment. The frank, liberal, broad-principled reader will dwell on its pages with pleasure, while all who read it will find abundant material for thought and much genuine instruction.

A TRUE LADY.—I was once walking a short distance behind a very handsomely dressed young girl, and thinking as I looked at her beautiful clothes, I wondered if she took half as much pains with her mind?
A poor old man was coming up the walk, with a loaded wheelbarrow, and just before he reached us, he made two attempts to go into the yard of a small house; but the gate was heavy, and would swing back before he could get through.

"Wait," said the young girl, springing lightly forward, "I'll hold the gate open."

And she held the gate open until he passed in, and received his thanks with a pleasant smile as she went on.

"She deserves to have beautiful clothes," I thought, "for a beautiful spirit dwells in her breast."—*LEX—Little Corporal.*

JAMES D. B. DE BOW,
THE SOUTHERN JOURNALIST.

We have here a comparatively large brain on a somewhat fragile though tough and wiry body. There was a lack of constitutional vigor and power; the nervous temperament greatly predominated; consequently there was more mental activity than vitality and physical strength. The brain was long and high rather than broad, corresponding with his slender body, and in volume it was considerably above the average.

That is a very angular and striking physiognomy. The prominent nose, the large eye, the ample forehead, and the thin cheeks with their deep lines indicate rather a lack of vitality than any special mental peculiarities. As a whole, it would be pronounced a hungry, Cassius-like-looking visage; and his mind was clearly of this stamp. He was ambitious, active, restless, impatient, and impulsive. He was in every sense an agitator; such a nature would not be so much inclined to pour oil on the troubled waters as to stir them up. As a partisan he would almost inevitably become a man of mark and a leader; no matter what the interest, whether political, religious, or scientific, in which he should engage, it would be "agitation" in the beginning, in the middle, and all the time. There was nothing of the calm, quiet, and serene in this nature, but far more of the tart than of the sweet. There was kindness, undoubtedly, so also a fair sense of justice, with considerable dignity and pride of character. He had a strong will, as evinced by large Firmness. Observe that long upper lip! He was not over-cautious; indeed, was somewhat lacking in this quality; and he failed to fully appreciate or anticipate all the difficulties to be overcome. The affections were strong, and he would become much attached to persons and pets and places; still these feelings would be subordinate to his philosophy and his ambition. Acquisitiveness was small; and he would make money far better than he could keep it. See how narrow the head just back of the temples and above the ears! He would be but an indifferent financier.

To him property would simply be a means of gratifying other much stronger desires; nor is this surprising when we consider the improvident nature of those by whom he was surrounded. In the sunny South, where nature produces her vegetable treasures in such rich abundance, where her winters are mild and balmy, there is less occasion to lay up or store away for future use, as in the cold, rigorous North. Economy is not the growth of a tropical climate, and the want of it is seen not only in the white but in the black as well. There was more prose than poetry in this organiza-

PORTRAIT OF JAMES D. B. DE BOW.

tion. Compare this head with that of Poe, Longfellow, Halleck, or Whittier, and note the difference in Ideality and Sublimity as well as in the entire contour. This is a man for facts, dry, hard facts, and not of fancy and imagination. There was something of the Calhoun in him, though, of course, not on so high a plan, nor so highly cultured, but the temperament and form of the brain were similar, and so were their characters. The following sketch reveals the rest.

BIOGRAPHY.

The subject of our sketch was born in Charleston, S. C., July 10th, 1820. He was descended, on his mother's side, from the Norton family, who were among the earliest settlers in that State. His father, Garret De Bow, was

a native of New Jersey, and was a merchant in Charleston, and had been in quite affluent circumstances, but at the time of his death was reduced to poverty. Thus J. D. B. De Bow found himself an orphan in very early life, and with little or no pecuniary means by which to get an education. He obtained a situation in a mercantile house in Charleston, and after seven years' clerkship he had saved money enough to carry him through college. He graduated with distinction from Charleston College in 1843, and immediately devoted himself to the study of the law. At the expiration of one year of intense application, during which time he was obliged to have recourse to a painful variety of ingenious shifts to support himself, he was admitted to the Charleston bar.

Here, however, he soon discovered that he was out of his place—that nature had fitted him for other spheres. He became a contributor to the *Southern Quarterly Review*, then published in Charleston, and subsequently became the editor of that periodical. Under his able direction the *Quarterly* advanced in public estimation and acquired an extended notoriety. In 1845 an article from his pen on "Oregon, and the Oregon Question" produced a considerable sensation in the United States, and excited the attention of some of the statesmen of Europe, so much so that it became the occasion of a debate in the French Chamber of Deputies. That year he was prominent as a delegate in the great Southern commercial convention which was held at Memphis, of which John C. Calhoun was president, and in which nearly all the Western States were represented. The enthusiasm which was kindled in him at that convention, with reference to the internal improvements and future growth and importance of the great West and the Mississippi Valley, never ceased; from that time forward he was always one of the most active members of every Southern commercial convention, and in 1857 was president of the Knoxville Convention.

In 1846, in order to devote his energies more effectually to his future course, he withdrew from the *Southern Quarterly* and removed to New Orleans, where he established a commercial monthly periodical under the name of *De Bow's Review*, devoted to the "Agricultural, Commercial, Industrial Progress and Resources of the United States, and more particularly of the Southern and Western States."

The patronage to this work was so small that Mr. De Bow soon sank his small means, and its publication was suspended. A wealthy sugar-planter by the name of Maunsel White shortly afterward advanced a sum of money sufficient to give the *Review* a new start, and pledged additional support, if necessary, to carry on the enterprise. Mr. De Bow renewed his work with his characteristic zeal and in-

dustry, and was soon so successful as to fully cancel his obligation to Mr. White. The circulation of *De Bow's Review* became large, and its influence was very great in all the Southern States. He was appointed to the professorship of Political Economy and Commercial Statistics in the University of Louisiana—a position of honor, yet of little direct pecuniary value. A bureau of statistics was established by the State, and the charge of it was given to Mr. De Bow, who went zealously to work, as usual, and made a very comprehensive report to the Legislature in the year following his appointment; but the appropriations necessary to carry out the designs for which this bureau had been created were not voted, and it soon ceased to exist for want of support. The time had not then come when the full value of such a department in aiding the improvement of society could be popularly appreciated.

Mr. De Bow was also one of the founders of the "Louisiana Historical Society," which also, from want of sufficient public interest in its promotion, lost a distinctive character, was merged into the "Academy of Sciences" of New Orleans.

He took great interest and a very active part in the attempt to construct a railroad from the Mississippi River to the Pacific Ocean, and was foremost of the committee of seven who were appointed by the National Convention which assembled at Memphis, in 1849, "to collect and publish information and to prepare a memorial to Congress" on that proposed great national improvement. The address to the people of the United States on that subject was mostly prepared by him, and its arguments were sustained and illustrated in his usual forcible style. The success which the enterprise of a railroad to the Pacific has already attained—although the route is farther north than was contemplated by the original projectors of the plan—is owing in part to his efforts for a southern route to the Pacific.

He was appointed superintendent of the United States (seventh) census of 1850, which was, with us, the beginning of a new era in census-taking, being the most elaborate and complete that had ever been made in any nation. The previous enumerations in the United States were narrow, and confined to but few subjects; they were published within one, two, or three years from the time when they were severally made, but in such a manner as unfitted them for general understanding, reference, or use, and with very little tabular system and accuracy. A complete set of them did not exist in the public departments at Washington, and some of them were entirely out of print. Mr. De Bow suggested to Congress that all the previous enumerations which had been made could be condensed, with that of 1850, into a single volume, and be of great value for general circulation. A resolution of Congress ordered the work prepared under the direction of Mr. De Bow, and also ordered 100,000 copies of the book; afterward this order was increased to 150,000 copies, and

issued under the title of "Compendium of the Seventh Census." It contained the result of every previous census, beginning with 1790, in comparative tables, with explanatory and illustrative notes, etc. It remains to this day the most valuable and comprehensive work of the kind in existence.

In speaking of the national census Mr. De Bow says: "The importance of correct information regarding the age, sex, condition, occupation, and numbers of a people, their moral and social state, their education and industry, is now universally recognized among the enlightened of all civilized nations. Where this information can be had for periods running back very far, and for many countries, it furnishes the material for contrasts and comparisons the most instructive, and for deducing the soundest rules in the administration of government, or in promoting the general welfare of society. Statistics are far from being the barren array of figures ingeniously and laboriously combined into columns and tables, which many persons are apt to suppose them. They constitute, rather, the *ledger of a nation*, in which, like the merchant in his books, the citizen can read at one view all of the results of a year, or of a period of years, as compared with other periods, and deduce the profit or the loss which has been made in morals, education, wealth, or power."

He possessed to an eminent degree that capacity which in art is called "grouping," and in statistics is known as compiling and arranging results in a clear and concise manner; but at the same time he lived, as it would appear, inconsistently with his known statistical accuracy, in a little chaos of his own. He seemed to abhor what was systematic, and to act without much premeditation. He appeared never to have a place for anything, or if he had, that the thing was not kept in its place. It was a wonder to those who knew him intimately how much he could accomplish with such apparent carelessness. The secret of it was, that he understood the state of confusion which would have perplexed others. In this fact we have a very striking instance of his peculiar genius. As the cultured musician can detect the slightest difference in sound—when and where one note differs from another, and as a skilled painter can distinguish a shade and a variation of a shade where a less cultured eye could mark no distinction—so with De Bow, all his apparent disorder was order to him, though not perceived by others.

The publication of the *Review* under his editorial charge continued monthly, from January, 1846, without much interruption, until April, 1862; only a few numbers were issued during the war, and its regular publication was resumed in January, 1866.

Mr. De Bow was also the author of several articles on American subjects in the new edition of the "Encyclopedia Britannica," and amid all his other engagements delivered numerous addresses before various literary,

agricultural, and commercial associations in various parts of the United States.

Shortly after the Southern Confederacy was formed, he was appointed by the secretary of the Confederate treasury the chief agent for the purchase and sale of cotton on behalf of the Confederate government. This agency he held to the end of the Confederate government. Soon after the cessation of hostilities he accepted the presidency of the Tennessee and Pacific Railroad Company, an enterprise which seeks to connect the valleys of the Mississippi, Ohio, Cumberland, and Tennessee with the Southern Atlantic, and ultimately to constitute a link in the chain of railroad connection with the Pacific by a Southern route.

Since the war up to the time of his death, which suddenly occurred February 26th, 1867, at Elizabeth, N. J., where he was on a visit to his brother, Mr. De Bow had been one of the most active and useful of men, devoted to the welfare and interests of the South, striving to adapt the new order of things which the war had brought about, to the best advantage and prosperity of his section.

On Physiology.

A knowledge of the structure and functions of the human body should guide us in all our investigations of the various phenomena of life.—*Cubensis*.

My people are destroyed for lack of knowledge.—*Isaiah lv. 6*.

BRAIN OR MUSCLE.

BY JOSEPHINE POLLARD.

G. WELL, John, I'm glad to meet you; tell me, pray,
How the world's used you for this many a day,
Since we were boys and went to school together?

I s'pose you've had some rather stormy weather,

And buffeted with billows of vexation.

J. 'Tis true, I've had but little recreation;
My mind is so absorbed in studies vast,
Digging among the records of the past,
Upon the future speculating too,
Treading the fields that have been trod by few,
And pressing on to that mysterious goal
Where intellect shall have supreme control,
Where mind shall rise—

G. Hold! hold! we've had enough!
You'll drive me crazy with such wretched stuff;
You surely don't intend to have me think
That sort of aliment's your meat and drink?

J. I do, indeed. Why, George, I'd rather far
Read a good book than smoke a prime cigar!
A "bon vivant" I never cared to be,
And what I'll have to eat scarce troubles me.

G. Oh! bosh and nonsense! why, you're
mad this minute,
And worse than all, mad with no method in it;
For here you have each day grown thin and thinner,

All for the want of a good wholesome dinner.

J. I feed on glorious viands!

G. But the question
Is, do they serve to help along digestion?
J. There's *Bacon*, now—
G. Ah! *bacon*'s very good,
But only paupers eat such kind of food.
J. You will misunderstand me; but you know
Those master-minds that flourished long ago—
G. Before the flood?—but pray don't stop
to note
All the wise things that those "old fogies"
wrote.
A literary dish, say now and then,
Is very good among a class of men
Who puff their brain up with the vain idea
That they are moving in a different sphere
From ordinary mortals. As for me,
I do not covet their society.
J. Now, George, you're wrong; your notions
are but crude,
And, though I hope you will not think me rude,
I would advise you to break through your plan,
And cultivate the *intellectual man*.
Even association with these men,
Who dash their thoughts off from a diamond
pen,
Whose rays go flashing with scintillant spark,
Through all the ages error made so dark—
Gives to our minds a new and healthy tone;
Part of their wealth we gather as our own.
G. Ah, when you speak of money, that suits
me!
On that score you and I are sure t' agree;
But then I wish it plainly understood
I do not relish intellectual food.
For all you put on such a doleful face,
I'm sure my palate isn't out of place,
And rather than sit down to dry old fare,
That makes one look as though he fed on air,
I, being less ethereal, can't abstain
From food that gives me muscle—if not brain.
To good roast beef, or capon, I'm inclined,
And turtle-soup's exactly to my mind.
Then, some nice *paté* with mysterious name,
The "*bonne bouche*" after you have dined on
game!
My mouth begins to water! I propose
The board, adjourned, meets at Delmonico's,
Where I am very sure you won't refuse
To test the merits of his oyster stews.
J. I beg your pardon, I must read to-night.
G. Reject my offer, most Quixotic knight!
And go among those cobweb-covered shelves,
Where men in parchment have entombed
themselves!
Forego the classics—spinsters so divine—
And let your will, for once, be swayed by mine.
J. No, no; I care not for those dishes rare,
Then why persuade me?
G. Here's the bill of fare,
Far more attractive, as you must acknowledge,
Than the long list of dishes kept at college,
Or those old saw-dust boxes bound in calf
Which never yet provoked a hearty laugh.
J. Truce to your nonsense; hither comes a
friend;
Let us bid him this controversy end,
By giving us advice which course to pursue,
Whether you go with me, or I with you.

R. Well, what's the matter? what's the row
about?

In a dilemma? Can I help you out?

G. Yes; John persists in stuffing up his brain.

J. No, you are wrong; I pray let me explain;
George has an appetite that's most pernicious,
And tempts his palate with unnumbered dishes,
And has a notion the chief end of man
Is to eat just as often as he can.

He may by this improve his fair physique,
But his are not the pleasures that I seek.

G. No; John, to less substantial food inclined,
Forever crams the storehouse of his mind,
Until his body, kept on scanty rations,
Shows the effect of daily meditations,
And, ere the summer's over, I suppose
He'll grace some field convenient to the crows.

R. Well, as I take it, both are much to blame,
With different tastes, indulging them the same;
Take my advice—since my advice you've
sought—

And while you live enjoy life as you ought;
For he who lives according to no rule,
Is less a madman than a silly fool.
If fond of books, read with a mind intent
On culling flowers of truth and sentiment;
But never till the persecuted brain
Reels with the weight it scarcely can contain;
Mingle your studies with those purifiers,
Sleeping and eating, as the case requires,
For nature in ambition's service pressed,
Must have, when'er she craves it, food and
rest.

Let *moderation* ever be your guide;
She, once enlisted, always should preside.
(To John.) Your face, your form, much better
health will show,

And your eyes bright with animation glow.
While you (to George), who claim good living
to enjoy,

Would find it quite delightful to employ
One half your time in some sort of vocation
Where you'd have food for serious contempla-
tion.

G. That sounds like truth, I'm sure I can't
deny it,

And for the novelty of the thing I'll try it.
I see my fault.

J. And mine.

G. A friend in need,
Has proved himself to be a friend in deed;
And, as a vote of thanks we can not proffer
All written out to-day, accept my offer;
If moderation guides my steps aright,
We'll dine on savory meats before 'tis night;
For who the safe or wise pursuit can plan,
If unrefreshed he keeps the inner man?

A QUAKER gentleman, riding in a carriage
with a fashionable lady decked with a profusion
of jewelry, heard her complain of the cold.
Shivering in her lace bonnet and shawl as light
as a cobweb she exclaimed:

"What *shall* I do to get warm?"

"I really don't know," replied the Quaker,
solemnly, "unless thee should put on *another*
breastpin!"

THE TURKISH BATH.

THE *N. Y. Medical Record* reports the trans-
actions of the Medical Journal Association on
this topic, as follows:

Dr. E. C. Angell read a paper upon the thera-
peutic uses of this agent. The Turkish bath,
as most of our readers know, is that in which
hot air, and not vapor, is employed to produce
free perspiration, the patient drinking water
freely; this is followed by the shampooing
process, and this by the application of water,
in spray or otherwise, at a graduated tempera-
ture; after which the bather is cooled off,
and, perhaps, takes a nap. The paper gave
the history of the bath; and spoke of its great
value to persons of sedentary habits, as supply-
ing the place of exercise, affording its benefits
without its fatigue. The air-bath could be
used at a much higher temperature than the
water or the vapor bath without impeding per-
spiration, accelerating the pulse, or producing
debility. Water could not be used advanta-
geously much above 100° F., nor vapor much
above 115°, while air at 250° might produce no
bad effect. Its value in the treatment of the
effects of alcohol, and in overcoming the desire
for it, was dwelt upon and illustrated by cases.
Heat was the best substitute for the customary
stimulus. Its prompt cure of a case of severe
eruption from poisonous food showed its effi-
cacy in purifying the system from noxious ele-
ments. The poison of rheumatism, and even
of malaria, could thus be completely eradica-
ted; and nearly all fevers could be aborted,
abridged, or greatly palliated. The diseased
body was treated as a soiled sponge. The
water first passed through it was much dis-
colored, the perspiration being commonly
offensive to the smell, acrid to the taste, and
stinging to the eyes; but after a time it became
perfectly clear and pure. The bath had pro-
duced the happiest effect in a case of diphtheria,
which was related. It was very efficient in
inducing sleep, probably by calling the blood
from the brain to the surface, in accordance
with Dr. Hammond's view. The perfect safety
of the bath was shown by reports from the
large establishments in London and Dublin,
where, in an aggregate of two million bathers,
not a single authenticated case of injury could
be produced. In 1861 these baths were intro-
duced into the insane asylum at Cork, more
than doubling the percentage of cures, and
diminishing the death-rate more than one half.
Dr. Robertson of the Asylum at Hayward's
Heath, highly extols the baths in the treatment
of insanity, and of the menstrual irregularities
often found associated with mania. Dr. Angell
had seen several cases in which supposed ster-
ility had, after a few baths, given place to
fruitfulness. The baths might be frequently
used, in some cases as often as twice a day,
with excellent tonic effect.

In response to questions by Dr. Buck, Dr.
Foster, and other gentlemen, Dr. Angell said
that a bath commonly occupied about an hour;
that it should not be taken sooner than three
hours after eating; and that for business men

the evening was commonly the most convenient time. No danger was to be apprehended from exposure to cold after the bath; the skin was stimulated to withstand it; and the habitual bather could wear thinner clothing than others. There was little or no oppression on first entering the bath. The hot air, being dry, could be breathed with perfect ease. The head was commonly kept wet, and the hot foot-bath almost invariably used, to call the blood from the brain. At the Jermyn Street bath, in London, a heat of 250° was sometimes employed. Low and moderate temperatures were used in England to prevent the night sweats of phthisis. In cardiac affections the bath was used to relieve the heart, by stimulating the surface-circulation. The doctor had seen no tendency to syncope in these cases. In acute rheumatism he had gained the happiest results. A patient had been sent him—who had been unable to turn in bed for several days. He was put into the bath for one hour, at 175°, and that was the last of his rheumatism.

Dr. C. F. Taylor thought it important that it should be generally known that air could be borne at a much higher temperature than water. He always used hot air for paralyzed extremities, a child easily bearing this at 150°, where water could not be borne at 95°.

Dr. Carroll said that this had been settled more than fifty years ago, by the experiments in ovens. If the air were perfectly dry, a temperature of 400° could be sustained. As to the therapeutic value of the hot-air bath, although Dr. Angell had not claimed it as a specific in any disease, he thought it might be so considered in desquamative nephritis. In the case of his own child, dangerously, and it was thought fatally, ill with this affection, following scarlatina, he had used only hot air and tonics with decided benefit from the first, and complete ultimate success.

Dr. Angell called attention to a new system of heating, by passing the furnace flame through pipes composed mainly of sand, an excellent radiator. He had introduced it into his own establishment, and been gratified by its working. It was quite cheap, and could be introduced, at moderate cost, into the residences of those wishing to avail themselves of the bath at home.

TO KEEP OFF MOSQUITOES.—As the mosquito plague is to be upon us soon again, it may be convenient to many persons to know how to conduct a successful defense against their intolerable attacks.

Of the various remedies proposed, none are so efficacious as the use of mosquito netting in the windows and around the beds at night. But as this is not always practicable or convenient, we must resort to other means for bidding defiance to our enemies. Of these the best is the smoke produced by burning a small quantity of what is technically called "Persian Insect Powder." This consists of the powdered flowers, and perhaps young stems and leaves, of a plant known to botanists as *Pyrethrum carneum*, a kind of chamomile cultivated largely

in Germany, resembling the common garden chamomile in many of its properties, and of which all the various "insect," "magnetic," "fly" powders are in part or entirely composed. For use against mosquitoes, a small quantity—about what could be heaped upon an old-fashioned silver dollar—if any of our readers remember the size of that coin—is placed at bedtime on a plate, and the top of the heap touched with a lighted match until it shows a red coal. The mass will then smolder gradually away, filling the room with a light smoke, which narcotizes the mosquitoes and keeps them quiet for several hours, after which it may be necessary to repeat the operation.

OLE BULL, THE GREAT VIOLINIST.

OLE BORNEMANN BULL was born at Bergen, in Norway, February 5th, 1810. His father endeavored to induce him to study for the church, but his fondness for music, displayed early in youth, was so great, that opposition only stimulated him to the more assiduous study of his favorite instrument—the violin. In 1828 a performance at a concert obtained

PORTRAIT OF OLE BULL.

for him the position of music director of the city of Christiania, where for a short time he attended the University. In 1829 he went to Cassel, to study under Spohr; but not being favorably received, he posted to Göttingen and commenced the study of the law. His musical inclinations, however, were too strong to permit him to pursue a tedious course of study; he soon restrung his violin, and gave a concert at Minden, with encouraging success. An unfortunate duel with a fellow-artist compelled him to leave Germany; he betook himself to Paris, where he met with such disheartening vicissitudes that he attempted to commit suicide. A lady hereupon befriended him, and enabled him to appear respectably before a public audience. The proceeds of the first concert given in Paris enabled him to start on a musical tour. Having spent several years in traveling and giving public entertainments, he returned to his native town with a considerable fortune, earned by his violin. In 1843 he

visited the United States, and remained here about two years. During the next seven years he gave concerts in the chief cities of Europe, and promoted by well-considered efforts the artistic and literary affairs of his home.

By introducing political sentiments into the performances of a theater which he had founded in Bergen he brought himself into conflict with the Government. The result of this trouble was the loss of a great part of his fortune. In 1852 he again visited America, and with the view to establishing a Norwegian colony he purchased a tract of 125,000 acres of land in Pennsylvania. The scheme failed, and to repair his heavy losses Ole Bull resumed his concerts. His first operations proved disastrous, his returns from the management of the New York Academy of Music not by any means meeting his expenses. Soon afterward he went to Europe, where for some years he pursued his old plan of giving concerts. In December of last year he stepped on the shores of America for the third time, and has been diligently engaged since in performing in his inimitable style before large audiences throughout the country.

Although nearly sixty years of age, Ole Bull is still looking young; his form is tall and erect; his pose firm yet graceful; his step elastic, and his countenance beaming with intelligence.

He belongs to the sanguineous-nervous type temperamentally; is impassible, and very strongly emotional. His organization as a whole is exceedingly sensitive, like the strings of his wonderful violin, responsive to the slightest breath of feeling or sentiment. Our engraving is a very inadequate representation of him, yet in the full, broad forehead, earnest eyes, and serene countenance we see much of the man's character.

THE VIOLIN.

Of all musical instruments that have ever been invented by the genius of man, the violin is the most complete, and the inventor deserves to have his name handed down to posterity as a benefactor to his race. Go where you will, into the most remote portions of the earth, and wherever you find civilization, you will hear the sweet and consoling tones of the violin. It is alike the favorite of the rich and the poor, and may be heard in the palace and the cabin throughout the civilized world. There is no estimating the influence for good which has been exerted by this magical instrument. Every father ought to have his sons taught to play on this or some other musical instrument; for music is a great civilizer, and ought to be cultivated in every family. How delightful it is to hear a family of half a dozen children performing on different instruments and executing all the parts of the music! It is calculated to give us a foretaste of the joys of the "better land," and will add materially to the joys of this "vale of tears." Then let this be an "essential part

of education, and be cultivated with numbers, with science, with literature, and poetry; for it is intimately blended with all these—is the spiritual expression of them all. It should begin ere words are lisped by the infant tongue, and be continued through the whole educational course, yea, through life.” A. K.

WATER-CURES.

MANY of those institutions once so popular and so useful in this country have disappeared, or degenerated into mere cheap boarding-houses, summer resorts, private hospitals, or mere money-getting concerns. Some, professedly water-cure, now administer a mixed treatment, hydropathic, homeopathic, eclectic, Thompsonian, and allopathic, according to the notions of the patient. There are few, very few, in which the pure water-cure or hygienic treatment is exclusively given.

There is altogether too much tinkering and experimenting in *all* modes of treatment. What is most needed by the invalid is (1) rest—perfect rest; (2) freedom from care and anxiety; (3) plain and simple food—not stimulants, condiments, confectionery, nor other poisonous compounds; (4) plenty of sleep and plenty of pure air; (5) systematic bodily exercise taken moderately, as may be agreeable—not fatiguing; (6) right social relations and agreeable surroundings; (7) rational entertainments and healthful recreations; (8) faith, hope, and perfect trust; (9) gratitude to God for sins forgiven, and that even the blessing of life is left to us. These are some of the conditions necessary to a cure. One who is peevish, cross, selfish, and desponding can not hope to improve very rapidly, let the treatment be what it may. One who eats too much or too little; one who is continually dosing, stimulating, or narcotizing; one who dissipates in any way, will mend but slowly, if at all.

The thing to be done is to put the patient in right relations to himself physically and spiritually, and to the natural laws, then wait on good old dame Nature to restore him. If there be recuperative power enough in the system, he will steadily improve. Or, if too far exhausted, then he must patiently bide his time. Neither worry nor hurry can do any good. In any event, the patient must keep clear of the quacks who promise to cure *all* diseases with a single nostrum for so much money. But enough. We could write volumes—we have written and published volumes—on these and kindred themes, somewhat, we trust, to the edification of readers. Still, the world is full of invalids; of doctors, quacks, pretenders, swindlers, and impostors. Beware of them! Among the more creditable water-cures now in operation, we may name those of—

DR. VON KUCZKOWSKI, formerly of Prussia, late of New York city, who has taken charge of the Brattleboro (Vt.) Water-Cure for the season—the same that was once so popular under the management of Dr. Wesselhoeft.

Dr. Von Kuczowski was for many years at the head of a hydropathic institution near Constantinople, and has brought letters of recommendation from Minister Bismarck and other distinguished persons.

There are water-cure establishments at Florence, N. J.; Wernersville, Pa.; Brooklyn, Clifton Springs, Birmingham, Elmira, Danville, Buffalo, and Saratoga, N. Y.; Cleveland, O.; St. Anthony, Minn.; Northampton, West-boro, and Florence, Mass.; Hill, N. H.; Danbury, Ct., etc. Our list is necessarily incomplete, but this will serve for the present.

Well-conducted water-cures would prove of inestimable value to the numerous cases of chronic disease; and to broken-down merchants, preachers, physicians, politicians, and a large class of poor dyspeptics who can get no relief from drugs.

The next best thing to a season at a water-cure is the study of physiology, gymnastics, the movement-cure, etc., by which one may learn how to treat himself, or to direct his own treatment at home. Everybody is supposed to know *something* of his organization and of its wants, in health and disease. Less ignorance and more knowledge would prevent much suffering and premature decay. Read the books.

“HOW I CHANGED COACHES.”

“THE top of the morning to you, Master William. I see you are on your way to school, with your satchel of books. So you’ve changed your mind, it seems. Well, come into my office, this afternoon, on your way home, and I’ll tell you how I changed coaches.”

This salutation from Mr. Dana greeted the ears of “Billy Stokes,” as he passed the lawyer’s office on his way to school, and it was most refreshing to him, so seldom was he call-

ed anything but “Billy Stokes,” or spoken to in the language of kindness.

Blushing and stammering most painfully, he replied: “Yes, sir, I’ve concluded to try my hand at study once more, but I don’t much think anything will come of it, there’s so many things against me.”

“Well, drop in, my lad, this afternoon, and we’ll talk about these ‘so many things.’ Will you come?”

“Yes, sir, if you are willing to be plagued with such an awful greenhorn.”

“I haven’t time to contradict you, Master William, for I hear the second bell; but give me a call this afternoon, and we’ll talk about greenhorns, among other things.”

“Well, I declare,” said Billy Stokes to himself, as he hurried on to school, “I’ve always took that man for a tremendous great gentleman because he drove such a splendid team, and had such a grand-looking driver, but I hadn’t no thought he was so good. Inviting me, Billy Stokes, cowboy, to give him a call! Did I ever hear the like? Well, I’ll go anyway,

for it’ll be better than a show to hear him tell ‘how he changed coaches.’ I reckon, though, if he ever expects to see me change coaches, he’ll have to wait a while.”

When Billy Stokes entered Mr. Dana’s office in the afternoon, his first greeting was:

“So you’ve come, Master William, to hear how ‘Old Ragbag’ changed coaches, have you?”

“Well, I’d like to know,” replied Billy, with an embarrassed manner and awkward smile. “It must be a good story.”

“That it is, my boy; but I can’t tell you the whole of it this afternoon, for it is too long. I can tell you enough, however, to satisfy you that just as good a story may be told about you, some time or other. Well, the first thing I want to tell you is, that I came to prosperity *step by step*. I didn’t wake up, on a fine morning, and find myself grown up and riding round in a coach, but I *worked my way*—and that’s another thing I want you to notice—up to prosperity and into my coach. It was a long time before I ceased to be ‘Old Ragbag,’ and gave up my cart. And now do you want to know what was the first turn in my fortune? Well, it was this: I was riding along in my rag cart one day, when I saw an unruly cow chasing a young lady, and she was running as fast as she could run, while the boys in the street stood and laughed, for they thought it was great fun. As soon as I saw what was the trouble, I jumped out of the cart and pursued the cow, calling out to the young lady not to be afraid, for I was used to cows and could manage a dozen.

“Look back at your cart and see the rags flying,” called out one of the boys. ‘Look! Old Ragbag.’

“Never mind about the rags flying,” I answered coolly, as I returned and took my seat in the cart. ‘I’ve sent that cow flying, and that’s enough.’

“Off I drove, with as independent and kingly an air as if I were in a triumphal car; and I think I held my head a little higher than usual because I had refused to take the young lady’s money that she offered me. She was determined to pay me; but although I was ‘Old Ragbag,’ and drove a cart, I had quite an idea of *gallantry*, and a great aversion to being *paid* for it. Not a penny of her three dollars had I taken, and I drove off, much more satisfied with myself than I should have been if I had had the three dollars in my pocket. But the young lady was not so satisfied, and it wasn’t long before she gave my mother a new spring calico dress, and me, half a dozen fine white pocket-handkerchiefs. I went home one day to dinner, and my mother said to me, pointing to the open package on the table, ‘Why didn’t you ever tell me that you drove off a cow that was running after Miss Fanny Barber?’

“Oh, it wasn’t worth telling,” I said.

“But this dress and those handkerchiefs are worth having,” she answered, ‘and nothing has pleased me so much in a long time.’

“Well, they pleased me too, Master William, and I had a chance that summer to be pleased

over and over again, for there was no end to Miss Fanny's kindnesses. She gave my mother, and me too, a great many presents, and furnished my mother with sewing, and paid her the highest price for it.

"We lived near Mr. Barber's, fortunately, and I was never out of profitable employment after I sent that ugly cow flying. Miss Fanny was always wanting me to do something for her in her flower-garden, and Mr. Barber wanted me to take care of his strawberry-bed, and do many other things which, he said, he knew I would do faithfully. Oh, how happy 'I' was under such treatment and with such confidence placed in me. Well, the good Lord at length gave me such favor in the eyes of Mr. Barber as I never expected. Miss Fanny told me, one evening, when I was poring over a book, that her father was going to send me to school and give me as good a chance for an education as if I were his own son. And he did that very thing, and, in a few years, I was known as Mr. Robert Dana, and the name of 'Old Ragbag' was forgotten. You see, my boy, how I rose, and yet, may-be, you don't exactly see it—so let me give you a few rules to help you up in the world—rules that, I think, fully explain *how I changed coaches*.

"Honor your position in life, whatever it is, and then it can't dishonor you.

"Whatever work is put into your hands to do, do it *well*. 'Be faithful in that which is *least*.'

"Don't let your circumstances get the better of you and pull you down, but do you get the better of circumstances, and the first thing you know, they'll carry you on to fortune, and you'll find you've changed coaches.

"Make the most of your opportunities. Study bravely and faithfully, for there's nothing like education to give a man place and power in the world.

"There is one more rule I want to give you, for I think it is of great importance. Never fail to do a kindness whenever you have a chance, for it will give you the favor of the good, as it gave me the favor of Miss Fanny and her father."

Billy Stokes' eyes filled to overflowing, and they were just on the point of running over, when he made a dash out of the office; but he went out wiser than when he came in.

MOHAMMED.

[CONCLUDED.]

THE star of Mohammed's mission was now rising; his enemies, by their very warfare against the faithful, were fast rolling the wheel of empire toward him; and their rejection of the new revelation was but preparing the way for the epoch of his military apostleship! He had reached the period of his prophetic career most famous for its results. It is called the "Accepted Year," in which, among other notable events, stands foremost the immortalized "Hegira," or the Flight, whence dates the Mohammedan era. First, in the order of re-

markable events, came twelve citizens of Medina on pilgrimage to Mecca, who, hearing the Prophet preach, received the word and swore allegiance and obedience to him. These were honored with the title of "The Defenders." Returning to Medina, they brought others into the faith, and soon after seventy-three more converts from that city came to enroll themselves under his banner; and these on Mount Akaba took the oath pertaining to the gospel of the sword. "If," said they, "we be slain in thy cause, what shall be our reward?" "Paradise!" answered the Prophet. "Then," said they, "stretch forth thy right hand," and he did so. Then they took the oath, and swore that they would uphold and defend the Prophet and his cause. Thus began that mighty military organization which in its growth built up a vast empire, and for centuries, against the chivalry of Christendom, contended even for the dominion of the world.

Up to this important period the "kingdom of God," as represented in Mohammed's mission, had not received its perfect organization, for, according to the very genius of Islamism, the apostleship is the power of God ordained to bear off the kingdom. Notwithstanding, therefore, that unto the Christ of Ishmael's seed it was given to build it up by the might of the sword, he, like the Christ from the chosen seed of Isaac, now called twelve apostles; and thus endowed, Mohammed's dispensation was fairly opened.

Mohammed's "kingdom of God" being now once more perfectly set up upon the earth, by the choosing of twelve apostles, the Prophet sent away "The Defenders," and counseled the residue of his disciples to take their flight to Medina; but the Prophet, with Abu Beker and Ali, remained behind in his beloved native city, not having, he said, as yet divine permission to leave Mecca. This exodus of his followers alarmed the rival branch of the Koreishites; for since the day that the twelve pilgrims took the oath on Mount Akaba, so great had been the success of Islamism in Medina, that this chosen city was now ready to welcome the Prophet as its divine lawgiver and sovereign. His enemies in Mecca, fearful lest his new allies should proselyte other powerful tribes, and return to avenge the cause of their prophet, resolved to interrupt the flight of Mohammed and at once put him to death. They accordingly held a council, in which his assassination was formally arranged by the chief men of the city; but scarcely was the conspiracy against him conceived ere it was known to the Prophet, professedly revealed to him by the angel Gabriel, who now ordered him to take his flight to Medina.

Thereupon, "to amuse his enemies," he directed Ali to lie down in his place, and wrap himself in his green cloak, which he did; and Mohammed escaped miraculously, as they pretend, to Abu Beker's house, unperceived by the conspirators, who had already assembled at the Prophet's door. They, in the meantime, looking through the crevice, and seeing

Ali, whom they took to be the Prophet himself, asleep, continued watching there all morning, thus giving Mohammed the advantage of escape. At length, bursting in the door, they rushed toward the sleeper, when Ali started up and confronted them. Amazed they demanded "Where is Mohammed?" "I know not," replied Ali, sternly, and walked forth, none venturing to molest him.

Abu Beker and the Prophet took refuge in a cave at Mount Thor, where they arrived at dawn of day. Scarce were they in when they heard the sound of pursuit. "Our pursuers," said the apprehensive Abu Beker, "are many, and we are but two." "Be not grieved," replied the grand enthusiast, "there is a third, even God himself. He will defend us." In this cave they remained three days, according to tradition, preserved by another miracle, after which they set out for Medina, taking a by-road. But they had not journeyed far before they were overtaken by a troop of horse, and Abu Beker was again dismayed. The comforting word was still, "Be not troubled; God is with us!" As the Koreishite leader overtook Mohammed, his horse fell, and the Prophet taking advantage of the incident, spoke to him with such words of power and authority that the stern warrior was awed, and entreating forgiveness turned back his troop. The fugitives continued their journey until they arrived at a little village two miles from Medina, where they remained four days, in which time they gathered to him the refugees of Mecca, and a little host of the auxiliaries, among whom was a warrior chief with seventy followers of the tribe of Salram, who forthwith made profession of faith.

On the morning of the Moslem Sabbath, after the service of prayers and a sermon from the Prophet, he mounted his camel and set forth for the chosen city, the troop of horse attending him as guards, and his disciples from Mecca took turns in holding a canopy of palm leaves over his head. By his side rode Abu Beker. "Oh, apostle of God!" cried the Salram chief, "thou shalt not enter Medina without a standard." So he unfolded his turban, and, tying it to the point of his lance, bore it aloft before the Prophet. "Thus," says Washington Irving, "did Mohammed enter Medina more as a conqueror than an exile seeking an asylum."

New dispensations have ever found their crowning opportunities made by the force of the action against them, as though an overruling power worked in harmony from opposite sides. The Egyptian bondage brought forth the exodus of the chosen people—the exodus the nationality of Israel. So also from the flight of the Arabian fanatic grew up the Mohammedan empire.

He now boldly proclaimed his military apostleship, and empowered his followers to make war upon the idolaters, and build up the kingdom of God by the sword. There was a new revelation—a second seal of his dispensation opened. "The sword," exclaim-

ed the Prophet, "is the key of heaven and of hell; a drop of blood shed in the cause of God, a night spent under arms, is of more avail than two months of fasting and prayer. Whosoever falls in battle, his sins are forgiven; at the day of judgment his wounds shall be resplendent as vermillion and odoriferous as musk; the loss of his limbs shall be replaced by the wings of angels and of cherubim."

The first of Mohammed's victories was won in the second year of the Hegira, in the Valley of Beder, over the idolatrous Meccans, headed by his great enemy, Abu Sofian. The forces of the Prophet consisted of only 319 men, while that of the enemy numbered nearly 1,000; notwithstanding, he put them to flight, killing seventy of the principal Koreish, and taking as many prisoners, with the loss of only fourteen of his own men.

In the Koran this battle is immortalized, and the victory of the little band of the faithful ascribed to the presence of the angel Gabriel. Nor less fortunate was the spoil taken from the enemy of the whole caravan, consisting of 6,000 camels, richly laden, from Syria. With this spoil he possessed the means of present reward for his followers, while to the warlike tribes of Arabia the promise of the future was most fascinating, and soon a formidable host flocked to his standard.

The career of Mohammed was thenceforth one of conquest. The pagan tribes, who would not peacefully be converted from their idolatry, he subdued with the sword, and they in their turn became valiant in the "cause of the Lord," proving that the military gospel was the one most adapted to the character of the children of Ishmael, and even consonant with the patriarchal blessing and covenant pertaining to Abraham's firstborn.

In the seventh year of the Hegira, Mohammed assumed the state of a sovereign, and sent embassies to the monarchs around. The emperor of Persia treated the embassy sent to him with supreme contempt, for which the Prophet launched against him the divine wrath, predicting the overthrow of the haughty Persian empire by the conquering arms of the faithful. In the next year, Mohammed appeared suddenly at the gates of Mecca with 10,000 men, before the troops of that city had even been apprised of his departure from Medina. They had no choice left but immediate surrender or destruction; and thus at length was humbled the powerful race from whence the Prophet himself had sprang, and the city of his nativity, which had rejected his message and cast him out. The capture of Mecca, and the submission of the great tribe of the Koreish, was rapidly followed by the conversion to Islamism of most of the remote tribes, until he became master of all Arabia. Having brought all the tribes into one powerful union, and given birth to an Arabian empire, he made gigantic preparations for the conquest of Syria and Persia; but his vast purposes were destined to be fulfilled by his successors, for his own life was now drawing to a close.

In the tenth year of the Hegira, Mohammed set forth on a solemn pilgrimage to Mecca, as the last act of his life and ministry upon earth. He was accompanied by all his wives, and 90,000 pilgrims. With his own hands he sacrificed sixty-three victims, and liberated sixty-three slaves, in thanksgiving for each year of his life. He also shaved his head and scattered the hair among the multitude, which they piously gathered up, to the smallest hair, and treasured as holy relics. He closed the solemnity with his last revelation, pronounced by the "Spirit of the Lord" through the medium of his prophet. "Henceforth, wretched and miserable shall they be who deny your religion. Fear not them, but fear me; this day I have perfected your religion, and completed my grace toward you. I have willed that Islamism be your religion." Finally, as supreme pontiff or Imam, Mohammed dismissed the people with a farewell, the last, as he declared, that he should give them; whence this pilgrimage is called "The Farewell."

Mohammed returned to Medina, and died, in the eleventh year of the Hegira, and in the sixty-first year of his age, having accomplished during his lifetime, in the work of religious empire-founding, more than any before him; and in less than ten years after his death, under Omar, his second successor, was completed the conquest of Egypt, Syria, and Persia, the vast Mohammedan empire established, and Islamism dominant over nearly all the Eastern Hemisphere.

What shall we say of this wonderful man and his mission? This: if there be a God, then must that God, of necessity, be in all the world's great issues. Surely, then, into the hands of Mohammed Providence committed one of the greatest of those issues.

Mr. Carlyle's philosophy of the life of the man utterly rejects the popular notions of Mohammed. He believes that "the rude message he delivered was a real one withal—an earnest, confused voice from the unknown deep. The man's words were not false, nor his workings here below; no inanity and simulacrum; a fiery mass of life cast up from the great bosom of nature herself." He discerns in him a rugged, deep-hearted son of the wilderness—"one of those who can not but be in earnest—whom nature herself has appointed to be sincere." "From of old a thousand thoughts, in his pilgrimings and wanderings, had been in this man: What am I? What is this unfathomable thing I live in, which men name universe? What is life—what is death? What am I to believe? What am I to do? The grim rocks of Mount Hara, of Mount Sinai, the stern, sandy solitudes answered not. The great heaven, rolling silent overhead, with its blue, glancing stars, answered not. There was no answer. The man's soul, and what of God's inspiration dwelt there, had to answer." At length, Carlyle thinks, the answer came in his own grand conception, that "there is one God in and over all."

With this annunciation, made by his own soul, he became possessed with the spirit of a mission to establish in Arabia the truth that there is but one God. That there was a deity in Mohammed's life working out one of the world-issues seems to be Mr. Carlyle's opinion. "Are we to suppose," he asks, "that it was a miserable piece of spiritual

legerdemain, this which so many creatures of the Almighty have lived by and died? I, for my part, can not form any such supposition. I will believe most things sooner than that. One would be entirely at a loss what to think of this great world at all, if quackery so grew and were sanctioned here." Accordingly, he holds that Mahommed's dispensation was legitimate and successful, advancing the nations which received it from their state of idolatry to a higher stage of civilization, and to the faith of One God.

We will close our article with a description of the Prophet, from Washington Irving:

"Mohammed, according to accounts handed down by tradition from his cotemporaries, was of middle stature, square built, and sinewy, with large hands and feet. In his youth he was uncommonly strong and vigorous; in the latter part of his life he inclined to corpulency. His head was capacious, well shaped, and well set on a neck which rose like a pillar from his ample chest. His forehead was high, broad at the temples, and crossed by veins extending down to the eyebrows, which swelled whenever he was angry or excited. He had an oval face, marked and expressive features, an aquiline nose, black eyes, arched eyebrows which nearly met, a mouth large and flexible, indicating eloquence; very white teeth, somewhat parted and irregular; black hair, which waved without a curl on his shoulders, and a long and very full beard.

"His deportment in general was calm and equable; he sometimes indulged in pleasantry, but more commonly was grave and dignified, though he is said to have possessed a smile of captivating sweetness. His complexion was more ruddy than is usual with Arabs, and in his excited and enthusiastic moments there was a glow and radiance in his countenance which his disciples magnified into the supernatural light of prophecy.

"His intellectual qualities were undoubtedly of an extraordinary kind. He had a quick apprehension, a retentive memory, a vivid imagination, and an inventive genius. Owing but little to education, he had quickened and informed his mind by close observation, and stored it with a great variety of knowledge concerning the systems of religion current in his day or handed down by tradition from antiquity. His ordinary discourse was grave and sententious, abounding with those aphorisms and apologies so popular among the Arabs; at times he was excited and eloquent, and his eloquence was aided by a voice musical and sonorous. He was sober and abstemious in his diet, and a rigorous observer of fasts. He indulged in no magnificence of apparel, the ostentation of a petty mind, neither was his simplicity affected, but the result of a real disregard to distinction from so trivial a source. His garments were sometimes of wool, sometimes of the striped cotton of Yemen, and were often patched. He wore a turban, for he said turbans were worn by the angels, and in arranging it he let one end hang down his shoulders, which he said was the way they wore it. * * * He wore a seal ring of silver, the engraved part under his finger close to the palm of his hand, bearing the inscription, 'Mohammed the messenger of God.' He was scrupulous as to personal cleanliness, and observed frequent ablutions. * * * 'There are two things in this world,' he would say, 'which delight me, women and perfumes. These two things delight my eyes and render me more fervent in devotion. It is said that when in the presence of a beautiful female, he was continually smoothing his brow and adjusting his hair as if anxious to appear to advantage. In his private dealings he was just. He treated friends and strangers, the rich and the poor, the powerful and the weak with equity, and was beloved by the common people.'

NEW YORK, AUGUST, 1868.

"If I might give a short hint to an impartial writer, it would be to tell him his fate. If he resolved to venture upon the dangerous practice of telling unbiased truth, let him proclaim war with mankind—neither to give nor to take quarter. If he tells the crimes of great men, they fall upon him with the iron hands of the law; if he tells them of virtues, when they have any, then the mob attacks him with slander. But if he regards truth, let him expect martyrdom on both sides, and then he may go on fearless, and this is the course I take myself."—*De Pua*.

THE PHRENOLOGICAL JOURNAL AND LIFE ILLUSTRATED is published monthly at \$3 a year in advance; single numbers, 30 cents. Please address, SAMUEL R. WELLS, 389 Broadway, New York.

IDEALITY AND SUBLIMITY.

IDEALITY.—Perception and admiration of the beautiful, and perfect in art, painting, and sculpture; love of poetry; refinement; good taste; imagination. *Excess:* Fastidiousness; romantic imagination. *Deficiency:* Want of taste and refinement, with strong passions and a coarse temperament, roughness and vulgarity.

I clothed thee with broidered work, and covered thee with silk; I decked thee with ornaments; I put bracelets upon thine hands, a chain on thy neck, a jewel on thy forehead, earrings in thine ears, and a beautiful crown on thine head, and thou wast exceedingly beautiful; for it was perfect through my comeliness, which I had put upon thee, saith the Lord.—*Ezek. xvi. 10-14.* O Tyrus, thou hast said, I am of perfect beauty. Thy borders are in the midst of the seas, thy builders have perfected thy beauty.—*Ezek. xxvii. 3, 4.* Out of Zion, the perfection of beauty, God hath shined.—*Psa. l. 2.*

SUBLIMITY.—Fondness for the grand, sublime, and majestic in nature; the wild and romantic, as Niagara Falls; rugged mountain scenery, ocean storms, thunder, lightning, etc. *Excess:* Extravagant representations; passionate fondness for the terrific. *Deficiency:* Inability to appreciate grandeur.

And God said, Let there be light, and there was light.—*Gen. i. 3.* The Lord reigneth; he is clothed with majesty. The floods have lifted up their voice, the floods lift up their waves. The Lord on high is mightier than the noise of many waters; than the mighty waves of the sea.—*Psa. xciii. 1, 3, 4.* And the heavens shall be rolled together as a scroll.—*Isa. xxiv. 4.* Thus saith the Lord of hosts, I will shake the heavens, and the earth, and the sea; and I will shake all nations, and I will fill this house with glory, saith the Lord of hosts.—*Hag. ii. 6, 7.* The earth shook and trembled; he bowed the heavens also, and came down, and he rode upon a cherub, and did fly upon the wings of the wind; he made darkness his secret place; his pavilion round about him were dark waters and thick clouds of the skies; the Lord also thundered in the heavens, and the Highest gave his voice.—*Psa. xviii. 7-13.*

WITHOUT these faculties the earth would present but a tame, indifferent aspect. Mountain, plain, and glen would seem alike. Without them there would be no poetry, no art, no sense of the beautiful. These are purely *human* faculties—denied to all animals. They are developed by civilization. We find but their rudiments in the savage. Contrast the rude hut and the simple wigwam with the commodious dwelling and the gorgeous temple. He who ignores the office of the faculties denies himself the exquisite pleasure which their right exercise would give. As sensible human beings we are to recognize both the *useful* and the *beautiful*, and we should not underrate the one nor exalt the other. The "Friends"—a very excellent body of sincere religionists—may pronounce

curses on MUSIC, but they can not annihilate the God-given faculty of TUNE. The Methodists—a devout and zealous people—may prefer to worship in a plain edifice and oppose all architectural ornamentation. They may denounce the folly of foolish fashions—but they can not repress a love for grand and graceful structures, nor for artistic and becoming attire. Excess of a good thing in one does not require its total disuse by another.

Ideality and Sublimity, as well as Acquisitiveness, Approbativeness, and all the rest, are to be subordinated to Conscientiousness, Benevolence, and Veneration. The moral sentiments are the highest in location and in function, and must rule. That we are to be godly, does not imply that we are to be indifferent to the beauties of art or the sublimities of nature. It is our privilege and our duty to exercise *all* the faculties to their fullest normal capacity.

Our attention has recently been called to this subject by the proceedings of the American Congress respecting one of the most sublime portions of this continent. We refer to the

YO SEMITE VALLEY, in California. Here is where the "big trees" grow, and where one's Sublimity may feast to its fullest, and *grow* by what it feeds upon.

The New York *Evening Post* is justly indignant at what it deems sacrilegious selfishness, in a few ambitious persons who would "bottle up" these blessings, and then peddle out the privilege of a visit for a consideration. In an editorial it says:

An extraordinary impudent proposition is now urged upon Congress, which is asked to repeal or disregard a law passed by itself in 1865 to prevent the Yo Semite Valley from falling into the hands of private speculators.

In passing that law Congress acted upon the understanding that there are certain things in every large country which may with justice and propriety be held and guarded by its government as crown jewels are held and guarded by empires and kingdoms—things the safe keeping and proper management of which may be considered a matter of greater moment than that of common property, and the disposition of which should under no circumstances be given over to the chances of private caprice or cupidity. There are those who think it would have been well had Congress fifty years ago been thus wisely conservative of the banks of the Niagara. Our artists and most intelligent travelers tell us that the Yo Semite even more imperatively demands such an exercise of prudence, and the wonderful photographs of Mr. Watkins serve to confirm their report.

When the law of 1865 was passed, the nation

still held the fee of the Yo Semite in all its parts, as well as of all the land for many miles about it. It had no special value for agricultural, mining, or any industrial purposes. It was inaccessible except by difficult trails.

It appears, nevertheless, that even before Congress had taken precautions to prevent its falling into private hands, speculators had already squatted upon the choicest ground, and although the district had never been opened to pre-emption claims, two of these men now have the effrontery to demand that the whole object of the law shall be subverted by a free gift to them of the land they have occupied. The only shadow of reason they offer is to be found in the statement that they would, in all probability, after a time, have acquired pre-emption claims, had Congress not determined that this land should be treated exceptionally. That is to say, had Congress chosen to surrender this ground to anybody who was willing to put himself to the trouble of building a cabin there and living over winter in it, these two men might have established a claim to it; and as the refusal of Congress to do so has disappointed them, therefore, they assert, Congress is bound to recede and prevent the failure of their speculation.

A more absurd proposition never came before a legislative body; and yet we find that the bill has slipped through the House without attention, and has been read twice and gravely referred to a Committee of the Senate.

The commissioners appointed by the State of California, in accordance with the suggestion of Congress, to protect the reservation, had already, it appears, very generously offered to allow these men to occupy each his one hundred and sixty acres of land, rent free, for a period of ten years, on condition that they should preserve the trees, and refrain from damming the streams or seriously defacing the scenery, and should allow the public free passage-way.

It is asserted that this concession would not be sufficient to justify the squatters in building suitable houses for the accommodation of visitors.

If there is a question as to the proper length of the lease, it is obviously one which Congress intended should be considered and settled by the commissioners, who are themselves Californians of high character, chosen from regard to their special qualifications to reach sound conclusions in the premises, and who have been on the ground and carefully studied it. But even if there were reason to suppose that a free lease might be judiciously granted for a somewhat longer period, this would be no justification of the demand for a free gift for all time.

Here is a description of the Yo Semite, by Frederic Law Olmstead, written to that paper. It is very graphic, and will be enjoyed by all who have any love for the grandeurs of nature.

With the early completion of the Pacific Railroad there can be no doubt that the Park established by act of Congress as a place of free recreation for the people of the United States and their guests forever, will be resorted to from all parts of the civilized world. Many intelligent men, nevertheless, have hardly yet heard of it, and hence an effort to give an account of the leading qualities of its scenery may be pardoned, however inadequate it is sure to be.

The main feature of the Yo Semite is best indicated in one word as a chasm. It is a chasm nearly a mile in average width, however, and more than ten miles in length. The central and broader part of this chasm is

occupied at the bottom by a series of groves of magnificent trees, and meadows of the most varied, luxuriant and exquisite herbage, through which meanders a broad stream of the clearest water, rippling over a pebbly bottom, and eddying among banks of ferns and rushes; sometimes narrowed into sparkling rapids and sometimes expanding into placid pools which reflect the wondrous heights on either side. The walls of the chasm are generally half a mile, sometimes nearly a mile in height above these meadows, and where most lofty are nearly perpendicular, sometimes over-jutting. At frequent intervals, however, they are cleft, broken, terraced, and sloped, and in these places, as well as everywhere upon the summit, they are overgrown by thick clusters of trees.

There is nothing strange or exotic in the character of the vegetation; most of the trees and plants, especially those of the meadows and waterside, are closely allied to and are not readily distinguished from those most common in the landscapes of the Eastern States or the midland counties of England. The stream is such a one as Shakspeare delighted in, and brings pleasing reminiscences to the traveler of the Avon or the upper Thames.

Banks of heartsease and beds of cowslips and daisies are frequent, and thickets of alder, dogwood, and willow often fringe the shores. At several points streams of water flow into the chasm, descending at one leap from five hundred to fourteen hundred feet. One small stream falls, in three closely consecutive pitches, a distance of two thousand six hundred feet, which is more than fifteen times the height of the Falls of the Niagara. In the spray of these falls superb rainbows are seen.

At certain points the walls of rock are plowed in polished horizontal furrows, at others moraines of boulders and pebbles are found; both evincing the terrific force with which in past ages of the earth's history a glacier has moved down the chasm from among the adjoining peaks of the Sierras. Beyond the lofty walls still loftier mountains rise, some crowned by forests, others in simple rounded cones of light gray granite. The climate of the region is never dry like that of the lower parts of the State of California; even when, for several months, not a drop of rain has fallen twenty miles to the westward, and the country there is parched, and all vegetation withered, the Yo Semite continues to receive frequent soft showers, and to be dressed throughout in living green.

After midsummer a light, transparent haze generally pervades the atmosphere, giving an indescribable softness and exquisite dreamy charm to the scenery, like that produced by the Indian summer of the East. Clouds gathering at this season upon the snowy peaks which rise within forty miles on each side of the chasm to a height of over twelve thousand feet, sometimes roll down over the cliffs in the afternoon, and, under the influence of the rays of the setting sun, form the most gorgeous and magnificent thunder heads. The average elevation of the ground is greater than that of the highest peak of the White Mountains or the Alleghanies, and the air is rare and bracing; yet its temperature is never uncomfortably cool in summer, nor severe in winter.

Flowering shrubs of sweet fragrance and balmy herbs abound in the meadows, and there is everywhere a delicate odor of the prevailing foliage in the pines and cedars. The water of the streams is soft and limpid, as clear as crystal, abounds with trout, and, except near its sources, is, during the heat of the summer, of an agreeable temperature for bathing. In the lower part of the valley there are copious mineral springs, the water of one of which is regarded by the aboriginal inhabitants as having remarkable curative properties. A basin

still exists to which weak and sickly persons were brought for bathing. The water has not been analyzed, but that it possesses highly tonic as well as other medical qualities can be readily seen. In the neighboring mountains there are also springs strongly charged with carbonic acid gas, and said to resemble in taste the Empire Springs of Saratoga.

The other district, associated with this by the act of Congress, consists of four sections of land, about thirty miles distant from it, on which stand in the midst of a forest composed of the usual trees and shrubs of the western slope of the Sierra Nevada Mountains, about six hundred mature trees of the giant Sequoia. Among them is one known through numerous paintings and photographs as the Grizzly Giant, which probably is the noblest tree in the world. Besides this, there are hundreds of such beauty and stateliness that, to one who moves among them in the reverent mood to which they so strongly incite the mind, it will not seem strange that intelligent travelers have declared that they would rather have passed by Niagara itself than have missed visiting this grove.

In the region intermediate between the two districts the scenery generally is of a grand character, consisting of granite mountains and a forest composed mainly of coniferous trees of great size, yet often more perfect, vigorous, and luxuriant than trees of half the size are ever found on the Atlantic side of the continent. It is not, however, in its grandeur or in its forest beauty that the attraction of this intermediate region consists, so much as in the more secluded charms of some of its glens, formed by mountain torrents, fed from the snow banks of the higher Sierras.

These have worn deep and picturesque channels in the granite rocks, and in the moist shadows of their recesses grow tender plants of rare and peculiar loveliness. The broad parachute-like leaves of the peltate saxifrage, delicate ferns, soft mosses, and the most brilliant lichens abound, and in following up the ravines, cabinet pictures open at every turn, which, while composed of materials mainly new to the artist, constantly recall the most valued sketches of Calame in the Alps and Apennines.

The difference in the elevation of different parts of the district amounts to considerably more than a mile. Owing to this difference, and the great variety of exposure and other circumstances, there is a larger number of species of plants within the district than probably can be found within a similar space anywhere else on the continent. Professor Torrey, who has given the received botanical names to several hundred plants of California, states that on the space of a few acres of meadow land he found about three hundred species, and that within sight of the trail usually followed by visitors, at least six hundred may be observed, most of them being small and delicate flowering plants.

By no statement of the elements of the scenery can any idea of that scenery be given, any more than a true impression can be conveyed of a human face by a measured account of its features. It is conceivable that any one or all of the cliffs of the Yo Semite might be changed in form and color, without lessening the enjoyment which is now obtained from the scenery. Nor is this enjoyment any more essentially derived from its meadows, its trees, streams, least of all can it be attributed to the cascades. These, indeed, are scarcely to be named among the elements of the scenery. They are mere incidents, of far less consequence any day of the summer than the imperceptible humidity of the atmosphere and the soil. The chasm remains when they are dry, and the scenery may be, and often is, more effective, by reason of some temporary condition of the

air, of clouds, of moonlight, or of sunlight through mist or smoke, in the season when the cascades attract the least attention, than when their volume of water is largest and their roar like constant thunder.

There are falls of water elsewhere finer; there are more stupendous rocks, more beetling cliffs; there are deeper and more awful chasms; there may be as beautiful streams, as lovely meadows; there are larger trees. It is in no scene or scenes the charm consists, but in the miles of scenery where cliffs of awful height and rocks of vast magnitude and of varied and exquisite coloring, and banked and fringed and draped and shadowed by the tender foliage of noble and lovely trees and bushes, reflected from the most placid pools, and associated with the most tranquil meadows, the most playful streams, and every variety of soft and peaceful pastoral beauty.

The union of the deepest sublimity with the deepest beauty of nature, not in one feature or another, not in one part or one scene or another, not any landscape that can be framed by itself, but all around and wherever the visitor goes, constitutes the Yo Semite the greatest glory of nature. No photograph or series of photographs, no paintings ever prepare a visitor so that he is not taken by surprise, for could the scenes be faithfully represented, the visitor is affected not only by that upon which his eye is at any moment fixed, but by all that with which on every side it is associated, and of which it is seen only as an inherent part. For the same reason no description, no measurements, no comparisons are of much value. Indeed, the attention called by these to points in some definite way remarkable, by fixing the mind on mere matters of wonder or curiosity, prevent the true and far more extraordinary character of the scenery from being appreciated.

When the great Atlantic and Pacific Railway shall be finished across the Rocky Mountains, we propose to visit the Yo Semite and look on those grandeurs so eloquently described above. Let no American boast of sight-seeing in foreign lands till he has seen the Yo Semite. Hurry up the railway, Californians! get things ready. There will be a "big crowd" to see the big things you have for exhibition!

PARTY SPIRIT.

It was religious "sectarianism run mad," that caused the so-called "Holy Wars," in which millions of human beings were put to death. It is religious sectarianism, to-day, that causes endless little animosities and persecutions all over the world. But, thank God, man is growing up out of his passions and prejudices into the moral sentiments, and is taking on a broad and more liberal Christianity, which begets a larger charity and a higher humanity.

To-day we meet on every hand the most intense *political* sectarianism. We divide on questions of policy; a high

tariff or a low tariff; on a specie or a paper currency; on partial or impartial suffrage; and the nation is in an uproar, the people forming themselves into parties which go for one or more and against the residue of these measures. So violent do inconsiderate persons become in the discussion, that they resort to any means to carry their point. One denounces the other as being all that is bad; and the other proclaims his opponent the immediate offspring of his satanic majesty.

Now, all this is weak and childish. Slight differences in opinion, where moral principle is not involved, are not to be construed into intentional wickedness. High-minded statesmen are above party, as high-minded Christians are above the creed which they themselves make.

When such questions as "liberty or slavery" are up for discussion or action, the *hearts* of men enter into them, and there can be no compromise, no concession, no submission. *Then* it is property and pride on one side, with moral principle and patriotism on the other.

Politicians may be so astute as to thwart the right and perpetuate a great wrong for years. But God is great, and truth is the grand underlying principle of his government; appreciating this, we may confidently declare that the *right* will *finally* prevail. When one honestly seeks the good of his fellow-men; when he favors the dissemination of intelligence, temperance, and true religion, he may be safely trusted. But if he oppose these leading features of social progress and a true civilization; if he identify himself with dishonest men, with low demagogues, gamblers, boxers, bullies, libertines, and other vagabonds, why, we may readily infer where he naturally belongs, for

"Birds of a feather flock together."

But honest men may honestly differ without being open to the charges of corruption or venality. The differences of opinion entertained by honest men with reference to the same thing, leads to the discovery of its essential character, discloses its value.

The golden rule, "To do as we would be done by," is as applicable here as elsewhere. We should seek moderation, counsel self-restraint, and rise above party into the realms of truth, justice, kindness, and godliness.

EVERY AFTERNOON LECTURES.

ON the 8th of last June we commenced a series of every afternoon lectures, at our "NEW CLASS-ROOM," 389 Broadway, New York, over the Phrenological Museum, which were fully attended by ladies and gentlemen of intelligence and influence; and though the weather was warm, and sometimes very rainy, there seemed to be no abatement of interest.

The subjects of the lectures may be understood by the following general titles:

How to read character on scientific principles.

How to choose a pursuit to which one is best adapted.

How to choose clerks for buying, selling, and keeping accounts.

How to improve the intellectual faculties, including the memory.

How to regulate, restrain, and direct the passions.

How to rise in the world, and make the most of our opportunities.

Peculiarities of notable men. Self-reliance, perseverance, genius.

How to train up a child in accordance with principles of nature and revelation.

How to think and how to speak. Philosophy and oratory.

Tact and talent. The available and the more profound mind and character.

Moral culture and integrity, the foundations of society and all good government.

The social relations. Who are and who are not adapted to wedlock.

Why study Phrenology? Is it true? What is its use?

Energy of character, will, enterprise, zeal, force, executiveness, efficiency.

Influence of temperament on character, disposition, capability.

The moral faculties. Man a religious being by organization.

Brain *versus* physique. The symmetrical development of mind and body.

What large or small foreheads indicate.

"Habits" of mind and body; how changed.

Culture of soul, or spirit, while related to the body.

What is intemperance, in its broadest sense? explained by Phrenology and Physiology.

"Signs of character," as indicated by physiognomy, complexion, action, etc.

Instinct and reason. The line of demarcation drawn by science.

It gives us pleasure to say that this experiment of daily afternoon lectures has proved a decided success. Strangers in the city, merchants borrowing an hour from business, and ladies who can not so conveniently leave their homes during the evening, can attend a lecture every afternoon from three to four o'clock, and it affords them agreeable recreation in going and coming, and profitable entertainment while listening to the lectures. Moreover, it enables them to store up matter worthy of their notice, respecting the proper training, management, and discipline of themselves, their children, their servants, and the development of their

own minds. During the sultry mid-summer, or "heated term," these lectures may be suspended, but will be resumed again in the autumn, and the public duly notified of the time.

Thus, instead of "*itinerating*," and repeating a few lectures, all our life long, we are now enabled, by the aid of our extensive cabinet or museum, and by anatomical dissections, to furnish fresh and original materials, daily, month after month, to ever-changing and appreciative audiences, who assemble here from all parts of the wide world.

Hitherto we have been without the facilities for presenting this whole subject in a manner so thoroughly satisfactory to ourselves.

Daily scientific lectures in the metropolis, on all our duties and relations of life from this standpoint, will be a new feature in New York, and an example to other cities, both in the New and in the Old World. Rejoice with us in this new hope for present and future usefulness. The next step will probably be to secure a larger and more commodious hall; but the new "Class-room" will answer for the present.

A NEIGHBOR'S OPINION.

THE PHRENOLOGICAL JOURNAL contains portraits and sketches of several noted personages, with other articles on a variety of topics, besides the matter pertaining to its specialty. There is no periodical that comes to our office which displays more ability in its "make up" than this. Its views, however, on many subjects, are often in direct opposition to our own.—*Christian Intelligencer*.

WE like the *Christian Intelligencer*, for it is a fresh, frank, honest, out-spoken, reformatory paper. It denounces wickedness in and out of the church; condemns error, and commends right. Furthermore, though strictly orthodox it is not bigoted or illiberal; still, "we have a little bone to pick" with the *C. I.* Re-read the above "notice" of the *A. P. J.* We cheerfully accept what it says about "ability," etc., but demur to the words, "Its views on many subjects are in direct opposition to our own." What can the editor mean? Are not all our teachings tending to one end? and in the same direction? Are we not agreed as to the common vices of drunkenness, gambling, and every species of dissipation? Are we not equally the advocates of education, temperance, reforms, and religion? Do we not acknowledge alike the same God and Saviour? Then wherein are our views opposed? We seek to teach the truth as we find it revealed in nature and in books. Are we in error?

POLITICAL SLANG AND SLANDER.—It is unfortunate that any others than gentlemen have to do with conducting that great educator of the people, "THE PRESS." When low, dissipated, pot-house politicians get hold of it, they only disgust decent people with their vulgarity, obscenity, and profanity. Respectable families will not have the nasty trash in their houses. Why do not the law-makers prescribe a code for the better regulation of these things? We suppose there is no remedy, except for those who have a regard for public morals to frown down *all* coarse vulgarity.

FOREIGN CELEBRITIES.

NAPOLEON—THE NEGRO—BISMARCK—ROBERT MÜLLER—LUDWIG II.—MARIA SCHMIDT—GEN. MOLTKE—VISCHER—GARIBALDI.

IN the engraving opposite are presented the portraits of several distinguished European and also some representative national types. They are taken from a German phrenological publication edited by Mr. Gustave Scheve, to whom the larger part of the descriptive remarks on character, in the following sketches, must be credited.

NAPOLEON III.

The study of the head and character of Louis Napoleon, the first in the series of engravings, is interesting, from both the standpoints of phrenology and biography. Indeed, without taking into account these, and the surrounding circumstances of his life, he would be almost an enigma to us. We can understand Bismarck in his every word and deed, because his large Firmness and his conscience work for a united Germany; but how difficult it is to reconcile the first promise of Louis Napoleon, "to act always in the interest of the masses, the source of all right and of all wealth, although destitute of the one, and without guaranty for the other," with his subsequent course! Following in the steps of his uncle, Napoleon I., his chief feature of character seems to be an unprincipled imitatorial ambition, which, unchecked by any large development of Conscientiousness, and constantly fed by an uncontrolled imagination, underlies the greater part of his political acts.

Gustave Scheve, in his little work entitled *Phrenologischen Reisenbilder* (Phrenological Pictures of Travels), gives us an interesting sketch of Napoleon's character, the results of a personal inspection. "His head is very broad at the upper part. It is probably an inch and a half broader at the top than the head of the first Napoleon. His forehead is strongly arched or long. The organs of the sense of Ideality and the sense for what is new and wonderful are very large in Napoleon III. as compared with Napoleon I. While, therefore, the two men are men of understanding, Napoleon III. is in a high degree a man of imagination, which Napoleon I. was not. His deeds, therefore, are not merely directed by the understanding, and are not merely steps of comprehension and shrewdness, suggested and controlled by circumstances, but his whole soul lives in his own creations, and is inspired by them. And this imagination in his character explains two things which we have earlier found inexplicable in him. First, his earlier adventurous actions, which occurred even as late as manhood.

Great as the power of thinking was in him, it was nevertheless controlled by a strong imagination. And it is by his imagination that the great and principal error of his government is explained, which contradicts his usual prudence, and has become dangerous to him—we mean his defective financial administration. In men of very strong imagination

this failure in financial calculations always prevails. This imagination of Louis Napoleon is, at the same time, a security against certain acts that many fear from him. Not merely his understanding, but also his imagination declares against a war for the obtaining of the Rhenish countries. For in such a war there lies nothing which can satisfy his imagination, but only the contrary, a chaos. The imagination seeks images; lives in pictures; it is afraid of chaos. Napoleon I. went down because his power of thinking did not stand beside any power of imagination; or at least, phrenologically speaking, not the imagination of ideality, but the blind and empty imagination of ambition. The opinions on the plans of Louis Napoleon with reference to Germany would be quite different if he had the possibility of acquiring or controlling the Rhenish frontier in a peaceful way. Savoy and Nizza are bad examples, but he knows that this possibility does not exist." In drawing a comparison between Napoleon and Bismarck, Scheve says: "During a number of years Napoleon III. was the most interesting person of his time. In the last few years, however, he has found in Bismarck a worthy rival. The world was deceived in both these men at first. Napoleon III., at the beginning of his reign, was considered of not much importance; and little more was thought of Bismarck (especially of his speeches advocating the late war). The present unusual interest in both is greatly intensified by their position as rivals and adversaries—let us hope never as enemies—and by the fact that the fate of Europe, to a great extent, depends upon their talents or their wisdom. The head of Napoleon III., in the region of the ears, appears to be broader than that of Bismarck, indicating stronger Secretiveness and Cautiousness; while Bismarck's head is relatively long, and the top high; Firmness and Self-Esteem, in his case, are stronger than Caution and Secretiveness.

THE NEGRO. (*German, Neger.*)

From Mr. Jackson's* comprehensive view of the Negro's condition and capabilities we gather the following.

Contemplated through the medium of comparative anatomy, the Negro (African) is but the embryonic, and the Mongol the infantile, form of the Caucasian or perfect man. Their differences, structural and mental, according to this view, only mark successive stages of growth, and, in reality, melt almost imperceptibly into each other. The radical defect of the Negro is want of due nervous development. His brain is less in proportion to his body than that of any other grand division of humanity, and as a result, the involuntary and animal functions altogether preponderate. Passion and affection rule principle and faculty, the basilar and posterior developments being predominant over the coronal and anterior. The African Negro is the improvable type of his race; he belongs to the redeemable families of human-

ity. Hence a study of his character and capabilities is of the utmost importance. From temperament he is slow, but from organization he is persistent, his lymphatic nature being sustained by a considerable amount of Firmness and Self-Esteem. His perceptive faculties are stronger than his reflective or imaginative, and he dwells in the real rather than in the ideal. He has but little reverence for the past, and no very brilliant anticipations of the future, being, from the overwhelming strength of his sensuous nature, swallowed up in the present. It is not that the basilar region of his brain, with his Alimentiveness and Amativeness, is so inordinately powerful, but that the counterpoising elements are so pitifully weak that he gives way to his passing appetites. Simple yet affectionate, fond of his domestic relations, his Love of Approbation would have more influence than force. His elevated Veneration would indicate that he is by no means devoid of the religious sentiment; and creeds in passing through his mind become impressed with the infantile simplicity of the mold in which they have thus been recast. Altogether, he is interesting and promising, but utterly helpless. He must be taught everything. To him slavery has been of providential purport. As a slave alone could the Negro have passed in sufficient numbers to insure his efficiency. Liberia is now the fair promise of his future. He will return laden with the intellectual wealth and highly developed civilization of his tutors, bringing to Africa the rich dower of her future greatness and prosperity. What Africa and all tropical countries want is the Negro constitution as a basis on which any amount of Caucasian superstructure may be reared by subsequent development and admixture.

His hopeless immutability in the past has arisen from his unaltered circumstances. His development has been arrested. His features and head and hair are the same as those represented upon the tombs of the Pharaohs, because his environment has been identical with that of his ancestors. Change the influences, give him new wants, and he is stimulated to fresh exertions for their supply; give him more enlarged ideas, and they will ultimately eventuate in a grander course of action. With his bodily necessities easily supplied, and cut off by geographical isolation from the intellectual culture and social refinement of more advanced races, he has stagnated on in contented immobility through countless ages of well-fed animalism, constituting in that far-off corner of the Old World the great rearguard of the human army. But the days of this isolation are ended. He stands now face to face with the Caucasian, and he must move onward or perish. Africa has yet to reveal her wealth and the splendor of an African civilization.

COUNT BISMARCK.

Carl Otto von Bismarck-Schonhausen was born at Schonhausen, near the Elbe, April 1, 1814. His family claimed their descent, it is said, from the ancient chiefs of a Slavonian

tribe; and from that source he inherits his fine bodily development, characteristic of that branch of the ethnological family. Broad and thick-set, with great amplitude of chest, accompanied by shortness yet muscularity of limb, he has been well able to sustain and to execute, what in most Germans has only been a dreamy idealism, namely, the grand idea of a united Germany under the leadership of Prussia.

He studied at the universities of Göttingen, Berlin, and Greifswald, and immediately afterward entered the military service as a volunteer in the Prussian light infantry, and subsequently became lieutenant in the Landwehr. In 1846 he was a member of the assembly of the province of Saxony, and of the general assembly in 1847. There he was distinguished by the boldness of his address. At that time, he is said to have advocated the extinction of all the large cities, because they were the great centers of democracy. The events of 1848 did not modify these tendencies. In 1851 he commenced his diplomatic career. In his course in the Second Chamber he had attracted the attention of King Frederick William IV., who intrusted him with the settlement of exceptional difficulties in Frankfurt. In 1853 he was made envoy to Vienna; hitherto he had been a warm admirer of Austria, but he saw the danger that she engendered to the life of Germany. Austria had already a very decided influence on Germany; an enemy to union, and therefore of Bismarck. In 1858 appeared an anonymous pamphlet in Germany, entitled "Prussia and the Italian Question," discussing with great earnestness the conduct of Austria toward Italy. In that pamphlet was predicted, in the event of war, the inevitable supremacy of Prussia. Subsequent events have proved the truth of this prophecy. In 1859 he was appointed ambassador to St. Petersburg, where he remained until 1862. He gained the esteem and confidence of the Czar, who conferred upon him the order of St. Nicholas Newski. In 1862 he filled the same post in Paris, his nomination being very favorably received, and on his quitting Paris, the Emperor conferred upon him the grand cross of the Legion of Honor. The stormy conflict on the Prussian army reorganization brought Bismarck to Berlin, and on the 23d of September, 1862, he was appointed president of the council of ministers, and given the post of minister of foreign affairs. He was an earnest advocate of the reorganization of the Prussian military system, but the Chamber of Deputies were opposed to any measure that should weaken the existing Landwehr, and the royal message closed upon a very stormy session. His administration became distinguished for very lively struggles, for conflicts of power, and the strictness of the *regime* against the press.

Indeed, the Prussian newspapers were, and are now, under as strict an oversight as those of France. His course in the Denmark affair, which ended in the duchies of Schleswig-Holstein being divided by Austria and Prussia,

did not succeed in modifying the relations between the minister and the Chamber of Deputies. In the late Austrian war, which arose partly from a quarrel about the division of the spoils of Schleswig-Holstein, Bismarck acted, through the king, quickly and successfully. His motto was then, as it had long been: "The controversies of nations are not settled with words and speeches, but with steel and gunpowder." The result of that short war has placed Prussia the foremost of European nations, and Bismarck the foremost of statesmen. He has become the guiding head of united Germany through her difficult period of union, and his word alone carries more weight with it than even the self-created Napoleon's. A curious circumstance, representing as it does the popular feeling of Germany, may be here cited. It occurred during the recent difficulties between Prussia and France about the possession of the fortress of Luxemburg:

"At the Victoria Theater in Berlin, a *piece de circonstance* was being performed in the presence of King William, in which one of the actors recited the following sacrilegious couplet: 'God, fatigued with governing the world, found a man to whom he could confide that heavy task—that is, Count von Bismarck.' 'Thou art worthy of it,' said God: 'for thy device is: Firm and Forward! Apply it always, especially to Luxemburg!'"

The applause was frantic. The king complimented the manager, and added: "Three years ago these words would have been hissed. Circumstances have changed." Certainly, now he does represent Germany; but he is, as an English statesman lately remarked, "but the foam on the crest of the wave, which catches the eye and diverts the attention from the mass of the wave beneath." Behind him is an army of citizen soldiery, which can only be compared to that one seen lately in the United States, called out only on the necessities of the hour. How mighty is the fact that Germany, which had for so many years assiduously cultivated the arts of peace and commerce, of learning and science, could so soon call up her army of Protestant youth, and beat back the strongest enemy that she had in Europe!

Bismarck is thought by many to represent the Cromwell of the present age. In his unflinching firmness and strong will he is, but he lacks the religious fervor of the Great Dissolver. His character, as seen from a phrenological point of view, has been well drawn by Mr. Scheve: "Bismarck's character, in Germany, has been judged very differently. One places him very high, loves and admires him, while another hates him. Could these conflicting views be reconciled, it is very possible that the political parties of Germany would be brought nearer to each other. If the reader will permit me a little digression, I will briefly denote the difference which Phrenology, in this strife of opinions, indicates.

"Every decided characteristic, every very strong or very weak development of a faculty,

may be an excellence and a defect at the same time, or in the one case an indication of an excellence, and in the other of a defect. Large Secretiveness is an excellence when a man is faithful and discreet, but a defect when he is blunt. Strong Destructiveness is an excellence as the foundation of energy; a defect in so far as it becomes used for passion and violence. In this way, Bismarck's excellences of character, inverted, become his defects. Through his high talent and inflexible, dauntless courage he has secured a united Germany, a work which, however, is not yet unendangered, and which for its completion may still need a master-touch. It is evident that the unification of Germany is at the same time synonymous with the maintenance of peace. We Germans would therefore rejoice in the strong genius of Bismarck; we hope everything from it against the menaces of foreign nations, and we would hope everything for it for ourselves, for we feel that we have grown with him into a great and intelligent nation, and enjoying the same privileges as he, we will not fear him."

ROBERT MULLER.

The portrait of Robert Muller is the type of many thousands who, like him, are engaged during their whole lives in commercial pursuits. The original of our portrait is a native of Germany, where he was born about the year 1833, and is now a prominent manufacturer. To present his biography would be to give merely a mass of dry, routine life, whose greatest ambition has been honest wealth, undiverted by any particular genius.

The German merchant—unlike his American prototype, who generally has "as many irons in the fire" as he can well attend to, and who aims to sprinkle in with his dull business life something of literature—pursues but one steady course, generally the same as his father and his grandfather did before him. There is no change with him; he does not imitate, but steadily works on in the position in which he finds himself.

Germans, generally, devote all their energy to their particular pursuit or calling; and, in many parts of Germany, especially in the manufactories, ~~seven~~ days in the week—with the exception of two hours of public service in the morning of Sunday—and three hundred and sixty-five days in the year, are given to trade. Strange as this may seem to Americans, with their well-kept Sabbath, it is nevertheless a fact, attested by all observant travelers. A stranger passing through the best streets of a city on Sunday morning would not perceive any difference between that and other days. He would find the stores, the churches, and the beer-gardens all with open doors, the first and last being the better patronized. At early morning, too, on that day, the German peasant and his wife go regularly to the field or the garden, remaining there during the day; their boys may be found in the beer saloons, and in the afternoon the young women may be found in the dancing halls.

Mr. Scheve, in his exposition of Herr Muller's character says: "The breadth of Robert Muller's head over the ears indicates a very strong development of the faculty of Destructiveness, while the converging forehead and tophead a very weak sense of Ideality. Muller was an extraordinary wild boy, and it was only after he had expended all his force and rage that he could be prudent and obedient. Now, as a man, he possesses endless activity, he knows no fatigue, accomplishes an amount of work that is almost incredible, and is unhappy and ill-humored when he must be inactive. He is very impatient; for him nothing can go quick enough; what he has to do must either bend or break—and sometimes it breaks. He is very violent, and gets quickly into a passion. But we can not say that he is vicious, for he *can* be very good; but he becomes too often bad through his passion. His whole spirit is energetic; he is extremely sober and practical; and no other thought can draw him away from his business. Poetry and art are to him incomprehensible things; he recognizes them only because other people do so, but in himself he despises them. Still, he is not miserly; he lives according to what he believes to be his position, and lets his children, of whom he has a great number, acquire a good foundation for their studies, because he knows that industry, and energy, and education are the true ways to wealth."

LUDWIG II.

Ludwig II., Otto Friederich Wilhelm, the young king of Bavaria, was born at Nymphenberg, on the 25th of August, 1845, and succeeded his father, Maximilian II., on the 10th of March, 1864. His mother was Queen Friederike Franzisca Auguste Maria Hedwig (born 15th October, 1825), the daughter of Prince William of Prussia. The grandfather of our subject, Ludwig I., lately deceased, did more for Bavaria than any preceding ruler. He was passionately fond of art, and cultivated it at an enormous expense. The Painting Academy, the School of Sculpture, and the Architectural Academy of Munich, all owe their existence to him. At the late Paris Exposition, Bavaria had a large building entirely to herself in the grounds of the Exposition, where she exhibited a magnificent collection of paintings—in fact, one of the best in the whole series. It is from this progenitor that the young king appears to inherit his extraordinary love of the ideal and the beautiful. He has had as yet but little opportunity to show his practical ability as a ruler; but it is said that his passion for music is so strong that in its pursuit he neglects the most important affairs of state. His subjects number nearly five millions, three millions and a half of whom are Catholics, a million and a third Protestants, sixty thousand Jews, and the rest of various denominations. The greater portion of these are descended from three original Germanic tribes, the Boiodrians or Bavarians, the Franks, and the Swabians. Of these, the Bavarians, though least gifted, are

the stimulators of the country's industry. The young king has many improvements to make ere his country can be called perfect. The system of education is far from good; beggary and intemperance are very common; the children of illegitimacy number a third of the whole births, and in the city of Munich reaches one half.

In 1732 there was a large emigration of the Bavarian Protestant element to America, where they settled in the Carolinas, in Georgia, and Virginia. Bavaria was the southernmost stronghold of Protestantism at the time of the Reformation. Many of the great battles of the Thirty Years' War raged in this part of Bavaria, as those of Augsburg, 1631, Furth, 1632. Bavaria has produced many eminent men. The Franconian school of painters produced men of the rank of Albert Durer, Lucas Cranach, and Holbein, and many others equally celebrated.

"The king of Bavaria has a strongly developed head in its upper portion; it is somewhat stronger than the lower. The king is more subjective than objective; he thinks more than he observes. But above all, his Ideality denotes an unusual development. The sense for the ideal is the leading feature in the king's whole character, and it will remain through his whole life. The king will feel happy in his fancy for what is good, honorable, and beautiful; doubly happy as a prince, because he can do so much toward the fulfillment of his ideals; and unhappy if he can not, in comparison with his wishes and hopes, obtain their fulfillment. He will never condescend to the bad, the low, and the vulgar, but will always battle against them. He will belong to the few mortals who remain young even down to old age."

MINNA SCHMIDT.

Miss Schmidt, though a German young lady, is not a fair specimen of that robust, healthy organization peculiar to the Teutonic family. We can not do her better justice, perhaps, than present her to our readers in the words of Scheve.

"I introduce Minna Schmidt, a polite young lady, to our company, in order to say a few words upon her head, which to many is inexplicable. Judgment must be based, not so much on whether it is high or low, as if it is full or flat; that is, whether more or less brain is contained in it. Her forehead is high—as high as Vischer's even; but against this we must take into account its extreme narrowness [seen in the picture by the small space between the eyes]. Minna is not without gifts; when she was in school she learned remarkably quick, but the trouble with her was, that she could not always understand what she learned. She spoke willingly, and much, about everything and nothing, and one heard her all day long with pleasure. Among her friends she is said to be clever [in the English sense of the word], and readily acquires all the knowledge and skill which are necessary for the well performance of house-

hold duties. But deep and profound thinking, or what we call the spirit of genius, is not found with her. If Robert Muller and Minna Schmidt were to attend Vischer's lecture upon the Theory of the Beautiful, the former could, if he would, and saw the necessity of it, understand the sense of the lecture, though he might not comprehend the full meaning and exact value of every word; but it would not be possible for Minna Schmidt to understand the sense of the words."

But it is not just, however, to compare the capacity of a school-girl with the fully-developed powers of a German lingual and esthetic professor. There is one point which Herr Scheve fails to speak of, which is undoubtedly her crowning excellence and beauty, as it is of all women—namely, her well-rounded and fully developed tophead, indicating a high order of the moral and devotional faculties. Her whole training from infancy has been moral and religious, and not intellectual. The greatest pride of a German mother, of Minna's station, is to see her daughter some day settled comfortably down in her household duties. She never dreams that her daughter will fill any other position than the one which she had always occupied; and thus we can not expect to find the intellectual development of Vischer in a mere school-girl. But in the social qualities that belong to her, she is far ahead of Vischer.

GENERAL FREIHERR VON MOLTKE.

The chief of the Prussian military staff is probably the most skillful general of the present time. To him belongs the credit of having so successfully carried through the late Prussian war against Austria. He, however, with modest piety, does not claim all the honor. "I did my duty at the time, in my position," he says, "just as my comrades did theirs, but no more. The almighty power of God led the Prussian eagle forward in its victorious flight. The bravery of our army and skill of its leaders were (equally with my own plans) only the instruments of His will; and when I hear the unbounded and fulsome praise which the public lavishes on me, this thought is always uppermost in my mind."

The failure of any of his plans, upon which that short, decisive war was based, might have resulted in inevitable ruin to Prussia, but by the aid of his large Causality, Constructiveness, and Ideality he worked out results which had been foregone conclusions in his own mind for weeks. He not only baffled the Austrian general, Benedek, by his intricate plans, but his own friends were at a loss as to his intentions.

He had under his command nine *corps d'armée*, numbering 285,000 men, who were distributed over the different theaters of war; but as they could only be used effectively together, the ultimate object and centralization of his plans was their *union* on the battle-field. The different divisions reached their frontier boundaries at Zeitz, Halle, Herzberg, Gorlitz, and Freiburg, but as they were then fifty miles

apart, even good judges of military affairs became alarmed. But when the king of Prussia had decided to strike the first blow, by dint of forced marches, the army was brought together at Koniggratz, the crowning point of his scheme. "On the morning of that day," he says himself, "our army presented a line of four miles in length. In so extended a line, we dare not await the attack, but by an aggressive movement onward we were enabled to concentrate all our divisions on the battle-field itself, and thus to convert the disadvantages of our strategical dispersion into this advantage, viz., we were enabled entirely to surround the enemy." Moltke never lost confidence in the success of his own plans. His motto was to act quickly and forcibly, believing that "a line of conduct which almost always secures the advantages missed by lingerers." The result of the battle of Koniggratz is too well known to our readers to need repetition here in detail.

General Moltke was born Oct. 26th, 1800, in the city of Mecklenburg, Germany, but passed his youth in Holstein. His father served in the regiment Mollendorf, and intended his son for the army. When he was twelve years of age he was sent, with his elder brother, to the military school for cadets in Copenhagen. In 1822 he entered the service of Prussia, and, after a strict examination, was accepted as second-lieutenant in the 8th regiment of Foot. He then entered the military school of Berlin, and was shortly afterward intrusted with the superintendence of the then somewhat insubordinate School of Division. This task was most satisfactorily performed, and he was then attached to a commission for topographical surveys in Silesia and the Grand Duchy of Posen, at the head of which was General von Muffling. He was promoted to the rank of captain, and, two years afterward, received an appointment on the General's staff. In this position he remained seven years, four of which were spent in Turkey; and a journey through Roumelia, under Sultan Mahmoud, resulted in the issue of a historical work entitled "The Russian-Turkish Expedition, 1828-29." Afterward, with four Prussian comrades, he proceeded to organize the Turkish army. While in Asia Minor, he took the opportunity to revise the maps of that region, of which the celebrated Professor Ritter has subsequently availed himself to declare their accuracy.

When he returned to Europe he was appointed to the command of the 4th Corps d'Armée, with the rank of major. In 1859 he became lieutenant-general, and in the same year was appointed aid-de-camp to the Crown Prince of Prussia. When the Schleswig-Holstein affair occurred he did not take an important part, being much restricted by political considerations. It is the late war which has developed his peculiar genius, namely, his planning ability. His course during that period we have already faintly sketched.

General Moltke has a very finely developed form. This, taken together with his countenance, produces on strangers an impression of

extreme sternness and gravity. His figure is tall and erect, and the expression of his features is as firm as iron. A marble statue could not give any better idea of fixedness; and every line seems as if old Time had chiseled it out bit by bit. But he possesses with his power a good and generous heart. His benevolence is as large as his bravery is eminent.

He was an old and esteemed friend of Benedek, the Austrian commander, and probably, by his praise of him, secured him to that position. Moltke's victory at Koniggratz—or, rather, the king's under his plans—was not unmixed with sorrow for his old friend. "A defeated commander!" he said afterward, as an expression of sadness passed over his manly face. "No civilian can have the faintest idea of what those words convey! The Austrian headquarters on the evening of Koniggratz! Ah! when I picture that scene to myself! And such a deserving, brave, circumspect general as Benedek!"

Americans owe General Moltke for many expressions of good-will and interest. To Mr. Bancroft, when engaged upon his "History of the United States," he furnished copies of many important state documents from Berlin, which otherwise would have been inaccessible.

VISCHER.

Frederick Vischer, Professor of Esthetics and German Literature in the University of Tubingen, and in the Polytechnic Institute in Stuttgart, was born in Ludwigsburg, Germany, June 30, 1807. His father was a pastor in that city, and died in 1814. In 1821 he entered the seminary at Blanbeuren, and, four years later, the University of Tubingen, to prepare himself for the theological office. Among the young men with whom he studied were David Strauss, Wilhelm Zimmerman the historian, Gustav Pfizer, who afterwards became distinguished as a lyric poet, and others who have risen to eminence in the German literary world. In the autumn of 1830 he passed his theological examination, was assistant pastor for a year in a small village, and then private tutor in the seminary of Maulbronn. In 1832 he visited the Universities of Berlin and Gottingen. While here he studied closely, but was fully absorbed in the words that fell from his great teachers, Hegel and Schleiermacher. During an excursion which he made to Prague and Vienna, he was surprised by the Oriental physiognomies and dresses that he saw in the streets. The beautiful drives, the grand equipages, the beautiful women, the plays in the theater, and, after leaving these, a summer sojourn amid the beauties and magnificence of the Tyrol, made him forget the teachings of Hegel and Schleiermacher; and when he returned to his studies in Tubingen he found they had become uncongenial to him, and he gradually gave himself to the study of poetry and art. At this time, too, he read Goethe's Faust and his Esthetics; and led into intimate companionship with the skeptical Strauss, he took a sympathizing interest in the work of his friend, "The Life of Jesus,"

which appeared in 1835. For this work Strauss was compelled to leave his position. Vischer then renounced his theological studies and became private tutor of the German Language and Esthetics in the University. In 1838 he was appointed extraordinary Professor in the same institution.

He contributed a series of articles to the "Halle Year Book for Science and Art," and to the "Year Book of the Present Time." In 1839 he visited Italy, Rome, and Greece; and after his return he published the "Critical Walk," being the essays contributed to the year books mentioned above. The first article is on "Strauss and the Wurttembergers." The second essay is on the "General Perplexity in the Occupation of a Doctrinal Chair at the Present Time;" there is also an essay on "The Triumph of Religion in Art," in which he criticises the picture of Frederic Overbeck. The critic opposes, with all the aids of science and of humor, the painting of myths and allegories. He desires to impress art with the spirit of reality. Among other works by him is a criticism of the literature of Goethe's Faust, which first appeared in 1839, in the "Halle Year Book." Soon after the publication of the "Critical Walk," Vischer was nominated regular Professor of German Literature and Esthetics in the University of Tubingen (1845), and at that time delivered his famous academical installation oration, which gave such great offense to the Orthodox and Pietistic party. His numerous opponents succeeded in delaying the commencement of his labors for two years, during which time he carried out his long-designed plan of writing a "Text-Book of Esthetics," which appeared in 1846-1857, in 4 vols. This work constitutes the climax of Vischer's influence upon the German science of the beautiful in nature and art. His influence to-day is very extraordinary; chiefly through the many students and scholars who make use of the work. Vischer devotes a part of his time to lectures in the University of Tubingen, and a part in the Polytechnic Institute at Stuttgart.

"The head of Vischer denotes high intellectual qualities. The organs of Causality and Comparison, together with Ideality, are very strongly developed. Also the whole of the perceptive faculties are pretty strongly developed. In comparison with his high intellect, Vischer's weakness lies in his defective development of the faculty of Language. If Vischer is an orator, it is through the strength and fullness of his thoughts, not through the grace of words."

GARIBALDI.

Garibaldi, the last of our group of interesting public characters, commends himself, in many ways, and more to the hearts of the American people than any of the others. His good, honest heart only beats for one object—united Italy. The assertion that he is an "enthusiast" is true in every sense of the word; because he has pledged his heart, his soul, his life—all to one great, consuming

cause; and this is the best assurance of his final success. The unity of the Italian people, like the Germans through Bismarck, must be accomplished ere they can become a mighty nation. But this can not be while they are still deprived of their legitimate capital, Rome. This is the center around which the future Italian prosperity will depend.

Guiseppe Garibaldi was born at Nice, on the 4th of July, 1807. His father was a mariner, and intended his son to follow that calling. At home, young Garibaldi was distinguished for his remarkable affection for his parents, and his sincerity toward his companions. A voyage led him to Rome, where the condition of the city made a very deep impression upon his mind, an impression which, in 1834, led him to those revolutionary views which exiled him from Italy and compelled him to seek refuge in France. For a time he taught mathematics in Marseilles; but having a distaste for inactivity, he soon afterward entered into the service of the Bey of Tunis, and was made an officer in his fleet. In 1836 he offered his services to the republic of Uruguay, received the command of a squadron to operate against Buenos Ayres, and afterward joined a land expedition wherein he greatly distinguished himself. While in South America he married his wife, a woman of extraordinary energy and of rare devotion, who was his constant companion in all his perils until her death by his side. The reveille of Italian liberty, in 1848, called him again to his native land. He sailed from Montevideo with one hundred compatriots in the *Speranza*, under the Italian tri-color; and though his offer was coldly received by Charles Albert, the king of Sardinia, he played a very important part against the Austrians. In 1849, when the republic was established in Rome, Garibaldi was sent with 1,200 men to take possession of the city, after the flight of the Pope, which he did until April 30, 1849, when the French army, nearly 10,000 strong, appeared outside the gates. With a reinforcement of 1,500 he made a desperate sally, drove the French with the bayonet for several miles, and returned with 300 prisoners. Then he was threatened by the Neapolitans, and the French being strongly reinforced, he was compelled to evacuate Rome and sought safety in the open country, when he issued his proclamation to his volunteers. "In recompense for the love you may show your country, I offer you hunger, thirst, cold, war, and death; whoever accepts these terms let him follow me." He had left Rome with barely 4,000 men, 800 of whom were mounted, intending to reach Venice. But at every step he met the immensely superior forces of the Austrians and the French. The people remained passive, and when he reached San Marino his small army was reduced to 1,800, when he found a fresh Austrian army in front, and 13,000 pressing on his rear. Terms were offered; half of his small force surrendered; but a stipulation to deliver up some French soldiers to Rome led to an immediate rejection by Garibaldi and

the rest of his followers. Garibaldi and about 200 men managed to gain the Adriatic, and embarked for Genoa, but they were perceived by the Austrian fleet; some were captured, others run ashore, among the latter of which were Garibaldi, his wife, and his chief officers. Two days afterward, worn out by fatigue and exposure, died Anna Garibaldi, who would never consent to leave her husband. Then the decree of death was issued to whoever should give him bread, water, or shelter; but his indomitable courage, and his love for the cause of Italian liberty sustained him. He made his way along the west coast of Italy. From Tuscany he embarked for Spezzia; and at Chiavari, in the States of Sardinia, he was arrested and conducted to Genoa, and finally banished from Sardinia.

Garibaldi then turned westward, landed at New York, declined a public reception, and was for a time engaged in the manufacture of candles on Staten Island. He made several voyages to the Pacific, and returned to New York in command of a Peruvian bark. Then came the new war for Italian independence; Garibaldi returned to Nice; and in May, 1859, was appointed major-general, and organized a corps, since celebrated as the "Hunters of the Alps." This war served to bring out Garibaldi's true character before the Italian people, and the peace of Villafranca left him the object of immense enthusiasm. Having delivered over to Victor Immanuel, king of Sardinia, the kingdom of the Two Sicilies, Nov. 26, 1860, that monarch was declared king of Italy in the following year—a title not at that time recognized by Austria.

Since that time Italy has seen an almost constant succession of risings, but as yet ineffectual. In August, 1862, Garibaldi, who had become impatient of the delays of a deceitful ministry, moved on to Rome once more, the watchword being "Rome or Death." But at the battle of Aspromonte he was wounded in the foot by a musket-ball, and with his son Menotti was imprisoned for a time by order of the Italian Government, and afterward he retired to his island home at Caprera. In 1864 Garibaldi visited England, where he met with the most intense enthusiasm. On his return home he took an active part in the politics of the nation. In September, 1864, a treaty for the preservation of the temporal power of the Pope was made between France and Italy, in which each was pledged to prevent any invasion of his Holiness' territory. In spite of the Italian troops, however, the fall of last year found Garibaldi again moving forward, with his two sons and his half-armed followers, to Rome. Italy did not support him, however; the people lost the only chance they had of asserting their independence, and the entrance of the French troops into Rome, and the murderous work of the French chassepot rifle at Mentana and Monte Rotondo closed the short revolution. Garibaldi was once more made a prisoner, with his two sons; now, however, they are once more

living at Caprera, but closely watched at every hand. When the dream of all Italian statesmen is fulfilled—when Italy owns but the sway of a single ruler, and is united under a free and liberal government, with its capital on the banks of the Tiber—then, and not till then, will the great mission of Garibaldi be accomplished.

POETS AND POETRY,

WITH EXAMPLES.

In one respect it may be said that to write poetry is an easy undertaking. In another sense it can be confidently asserted that the production of true poetry is a difficult and laborious undertaking.

Although the saying of the Roman author, *Poeta nascitur, non fit* ("the poet is born, not made"), is substantially true, it must not be inferred that the person so nobly endowed has but to open his mouth to give utterance to the streams of melodious verse which without intermission will be supplied by the exhaustless fountain of his imagination. No. There are but two or three instances on record of poets, who, at a very early age, like Pope,

"Lisped in numbers, for the numbers came;"

while there are many whose names are inscribed in immortal characters upon the tablets of literature, who won their reputation by patient and laborious thought. The organ cadences of Homer, Virgil, Dante, and Milton were not the hasty coruscations thrown off in showers by a fervid muse, but the products of earnest, protracted, and mature deliberation. They wrote,

"Not for a day, but for all time."

The most cultivated intellect of the nineteenth century finds instruction in the flowing verse of the majestic Greek and of the grand Roman.

The proverb, "no excellence without labor," applies as well to the productions of the scholar, the author, the poet, as to those of the artisan or the artist. If one would put such words on paper that they who read may be impressed with noble thoughts, and inspired with higher purposes, he will find his endeavor far from easy. He who writes with a true intent to benefit the world must, with a careful hand, cull from the flowers of his imagination the ripest, the sweetest, the loveliest.

No gaudy blossoms of a prurient fancy must be interwoven with the gems of taste and beauty, else their noxious odors will neutralize and destroy the pleasant perfume of the better blossoms and render vain the object of the writer.

It is easy for one who possesses a fervid fancy and a readiness in adapting words to thoughts to produce a jingle of phrases. His lines may be musical enough as they flow along, but when analyzed for idea and sentiment, they are likely to exhibit the tameness of weak imitation, or the barrenness of abortive originality. Most modern poetry is written "off-hand," or under the influence of a temporary excitement which gives full play to the faculty of Ideality; but how very little of modern poetry is worth pres-

ervation! Even of those who are recognized as leaders in the sphere of poesy, and whose names lend luster to the nineteenth century, but a score have really impressed their genius upon the literature of the times. How few of the pathetic compositions of Mrs. Hemans have fastened themselves upon the minds and hearts of men! "The Homes of England," "Casabianca," and two or three others are all that are remembered with enthusiasm by the masses. Eliza Cook's "Old Arm-chair," Southey's "Battle of Blenheim," Wolfe's "Burial of Sir John Moore," Wordsworth's "We are Seven," "Ruth," and "Lucy Gray," Moore's "Last Rose of Summer," Scott's "Hail to the Chief" and "Lochinvar," Hood's "Song of the Shirt," Byron's "Battle of Waterloo," Campbell's "Exile of Erin," Drake's "American Flag," Bryant's "Thanatopsis," Longfellow's "Psalm of Life" and "Excelsior," Morris's "Woodman, Spare that Tree," and Poe's "Raven," are among the few effusions which have awakened that deep and lasting interest which cherishes the memory of a writer.

True poetry possesses the power of lifting the earnest reader out of himself. He is borne on the same breeze of inspiration which filled the soul of the writer when the "burning words" were penned; and in accordance with the excellence of the sentiment and the fervor of the inspiration is the soul of the reader exalted.

It is not, however, our intention at this time to discuss the philosophy of poetry, but with these few remarks introduce some selections from a huge conglomerate of contributed verses, on almost every conceivable topic, which have accumulated on our hands. All the sentiments, emotions, passions, propensities and faculties, phrenological and non-phrenological, are abundantly celebrated in gushing strains. Themes mournful and gloomy, tainted with odors fresh from the charnel house; themes buoyant and cheerful, as if watered by the frequent showers of springtime; themes heavy and dull, as if ground out under a pressure of difficulties too great for computation; and themes remarkable for their concentrated stupidity, compose in great part this promiscuous collection. We purpose, however, presenting the choicer gleanings from the mass. Here is a passable little thing entitled "The Water Side," and subscribed M. S. L.

The winding beach that binds the bight,
The willow drooping o'er the way,
The water lilies gleaming white,
That softly floating away.

Bright star-flowers are peeping there,
And paler ones lift up their eyes
Upon the light the clear waves wear,
And on the cloudless skies.

The pearly shell fills at the brink
From limpid waters waving nigh,
And shining fish arise and sink,
As sounds the lake-bird's cry.

Near where the rocks like bulwarks stand,
A-ling'ring with a sweet delay,
Upon the smooth and shining strand
Two lovers idly stray.

At morn or eve, a charm is here,
When waters foam or lie at rest,
When clouds in gleaming gold appear,
Or in more somber garb are drest.

Somewhat in keeping with the above are stanzas from an ode entitled "A Spring Song." Criticism is not solicited on the "quantity" of the verse.

There's a laugh on the hilltops,
There's a song in the vale,
While up among the dead leaves
Spring the May-flowers pale—

Flash of the old earth's morning,
Soft pink-tint of her skies—
Winter's night on snow-crowned hills
Now quickly fades and dies.

And Spring's white feet come dancing
Among the reeds and rushes;
The sod breaks into flowers,
Where her foot softly crushes.

Next we find a doleful strain, from which one might infer that the author sorrowed o'er some "blighted hope," some treasure "lost for aye."

Alas! alas! how sad this world!
How bitter and how cold!
E'en Love—that glowing, brilliant dream—
Is soon a tale that's told;
And after that brief glimpse of heaven,
The rest seems faded, bare,
And death in life we wander here,
Till we are called up there.

No species of original composition so well exhibits the disposition of the writer as verse. "Through the Storm" indicates tendencies of mental exaltation on the part of its author. Behold how he leaps and soars in fancy's frenzy!

Adrift! adrift
On the waters strange and wide,
On the waters madly white,
And never a rift
In the dark and solemn night,
And never a star to guide!
Oh! to ride
High o'er the mountain waves,
To leap, to plunge, to whirl, to hide
In their sounding caves!
Ah! to be
Shattered and tempest-torn,
Wretched, forlorn,
Adrift on the angry sea!

Grandiloquence also hath its prominence in our poetic aggregation. Consider how comprehensively the flaming orb of day is addressed:

Central source of fire—ever-shining mark,
By thy glowing ire kindling chaos dark—
Undiminished orb—scintillating sun—
In thy track serene above the cloudy dun,
Who shall sing a regal song for the royal sun?

Dynasties decay—kingdoms rise and set;
Undisputed wear thy crown-burning coronet.
Powers come to naught; empires pass away;
Wear thy diadem unsought—monarch of the day.

For the crestfallen and despondent, now and then there comes a word of encouragement. One whose Christian appellation is Byron has indited these:

Awake! ye who sorrow
In midnight of sadness,
There yet comes a morrow
With sunshine of gladness.

Ye worn ones and weary,
Arise to your duty,
Life is not all dreary,
It still has some beauty.

Hope on, and hope ever;
Spread brightness around you;
And thus shall ye sever
The ills that have bound you.

May they be effectual in dispelling the gloom that shrouds the heart of the lugubrious reader! D. F. P. is evidently a "peace man." Thus he vents his joyful emotion on the return of quiet and peace to the land not long since rent by the throes of sectional strife:

The storm of war is past; gone the dark cloud of night;
Again bright dawns the morning with silver rays of light.

Gone is the cannon's sullen roar from valley, hill, and glen;
No more the strong earth quivers 'neath the tread of armed men—
Contenting hosts no more shall shed the purple flood,
The winter's snow, the summer's bloom, no more be stained with blood;
No more the news of battle shall tender bosoms thrill
With fear, lest its dread carnage has wrought their loved ones ill.
Drawn by the soul's deep terror, pale fear a specter sees,
A soldier bleeding, dying, beneath the forest trees;
A face too well remembered in that dark hour of gloom,
Shall they never more behold it on earth this side the tomb?
And oft that vision proved but true; but time has yet a balm
That yet the wounded spirit shall gently sooth and calm,
When they with pride remember the brave ones who have died
In the cause of truth and freedom borne down by war's fierce tide.

Of course we all echo his hopes, and take comfort from his very sanguine assurances. Some men there are who can not stomach the advance of public opinion with reference to the rights of that sweet morsel of humanity—woman. The writer of our next selection apparently is "on the fence" on this subject; yet take his *dicta* one way, *i. e.*, by reading the first and third lines of each verse together, he seems an earnest champion of the "softer" sex; while by reading him direct, he would appear the "perversest" of celibates.

That man must lead a happy life
Who's free from matrimonial charms;
Who is directed by a wife,
Is sure to suffer for his pains.

Adam could find no solid peace
When Eve was given for a mate;
Until he saw a woman's face,
Adam enjoyed a happy state.

In every female face appear
Hypocrisy, deceit, and pride;
Truth, trust, and confidence sincere
Aren't known in woman to reside.

What tongue is able to unfold
The falsehoods that in woman dwell;
The worth in woman we behold
Is almost imperceptible.

A scrap headed "Mutabile Semper," which, literally rendered into scientific parlance, would mean Continuity very small, evinces the reign of frenzy ecstatic in the author's soul.

Ruled by passion, not by reason,
Is this fev'rish heart of mine;
All she wraps in fire consuming,
I within my heart enshrine.

Changing, changing, ever changing;
I am like the restless sea,
Tossing, tossing, never ceasing,
In my struggle to be free.

Hopes I cherish now so fondly,
Friends the dearest of the dear,
Soon are lost, yes, lost, forgotten,
In my wild and mad career.

Certainly from this confession there is not much "method in his madness." We would recommend a strait-jacket and a little sorrel grass.

Thought! oh, thou mysterious essence, if such thou be,
Who hath comprehended thy mine? or examined thee literally?

Surely none of the sages who have gone before,
Or we would have seen their record.
If I put forth my hand to take thee, thou wilt elude the grasp.

Prehension is not adapted to thy nature.
The hand, however well educated, can not take hold of thee;

Or if I attempt by gentler means the sense of touch to try, I feel in vain.

Surely by this no knowledge of thee can we ever gain;
Mine eye hath never seen thee.

Thou hast never come within the range of my vision (only thy effects);

Thou canst not be magnified, though the most powerful optical instruments be used.

The telescope for thee might as well not be;
With all the acuteness of my nasal organs, no knowledge of thy odor hath been revealed.

To taste thee my palate hath never tried,

For this would fall, as others have done, to test thy qualities.
The ear is quick and powerful to receive impressions from without,
But upon my auditory thou hast never played.
Then if through the five senses I gain no knowledge of thee,
How do I know thou hast a being?

Thus soars M. M. amid the misty heights of metaphysical inspiration. How sublime his figure! how profound his logic! especially the nos(c)ological part! Strange he did not "smell a mice!"

E. J. waxes eloquent on "Home," and doubtless enjoys a good share of Inhabiteness and of the social organs generally:

Our "Home" is all the world to us,
No matter where it lies—
If under Afric's burning sun,
Or Greenland's clouded skies.

We love our Home, our native land;
Where'er we chance to roam,
We think upon our youthful hopes,
We look toward our Home.

We would fain give more selections from the still replete "treasury," but the JOURNAL's columns are already crowded. However, before we consign the unnoticed to the oblivion of our waste basket, we would ask their authors' pardon, and would also humbly express the hope that by this overt act of destruction we do not withhold from the world of thought and action any element or influence which might conduce to its intellectual illumination.

THE BEAVER ILLUSTRATED.*

THE Beaver belongs to the same family with the muskrat, and, like the latter, is amphibious. Indeed, these two species are so nearly alike, that a beaver seems to be only a muskrat enormously enlarged. The body of the Beaver is thick, heavy, and squat; about two feet and a half long; weighing, when full grown, from sixty to eighty pounds. The tail is the most notable part of the animal. It measures from ten to twelve inches in length, and from three to four and a half inches in breadth. It is oval in shape, but flattened on the upper and under sides, and is covered with a species of hairy scales, which are set upon a thick, dusky skin. It is believed by trappers who have diligently watched the ways of this animal that it uses its tail as a spade or trowel in working mud and sand. This member also answers the purpose of a prop, to help the animal stand erect while at work. It serves as both rudder and oar in swimming, being turned under the body at a right angle, and swung from side to side with great rapidity and power, the operation being like the sculling of a boat.

Beavers are not gregarious in summer, but become so at the approach of winter, when they build their huts and dams and gather their stores of food. Their huts are built first, generally in September, and are much like those of the muskrat, but larger and stronger. They

* From "The Trapper's Guide," a Manual of Instructions for Capturing all kinds of Fur-Bearing Animals, and Curing their Skins. By S. Newhouse. A new edition, published by the Oneida Community and by Oakley & Mason. Octavo, pp. 215, with many engraved illustrations. Price, \$1 50. May be had at this office.

THE BEAVER.

rise out of the water, and have their entrances at the bottom. They are made to hold ten or twelve animals each. Some Beavers live on the banks of large rivers and lakes, and, having of course plenty of water, do not build dams, but have their holes in the banks, with their entrances under water, and their huts in front of them. These are called Bank Beavers, though they differ in nothing from their dam-building brethren. Those that live on small streams, where there is not water enough to surround their huts and protect their stores from freezing in winter, build dams to raise the water and create ponds suitable for their purpose. They commence by cutting down with their teeth trees of all sizes, from those of ten inches in diameter to the smallest brushwood. These are cut into pieces suitable for transportation by a single animal, and then are conveyed to the place chosen for a dam, the Beaver laying one paw over the timber, as he drags it along with his teeth. The smaller materials, such as mud, sticks, and stones, are carried between one of the fore-paws and the chin. The dams differ in shape according to the nature of the stream where they are built. In streams where the current is rapid or powerful, the dams are built with a convex curve up-stream, which strengthens them against the floods and the ordinary constant pressure of the stream. In streams where the water has but little motion, the dams are built straight across; and sometimes they have been observed with a curve down-stream. No special order or method is observed in building the dams, except that the work is carried on with a regular sweep, and all the parts are made of equal strength. They are frequently six or eight feet high, and from ten to thirty rods in length. The trees, resting on the bottom, are so mixed and filled in with mud, sticks, stones, leaves, and grass, that very little water escapes, except by running over the top; and the height is so uniform that the water drips evenly from one end to the other. After the dams are built, but before they are frozen over, the Beavers lay in their winter stores, which consist of the bark of the willow, aspen, poplar, birch, and alder. They fell these trees with their teeth, cut them up into short sections, and sink them in the water near their huts. In the winter, when their ponds are frozen over, they enter the water by the holes at the bottom of their huts, collect these sunken trees and take them to their dwellings, as they require them for food. The breeding season of the Beaver commences in April or May, and

they have from two to four young ones at a birth. The young remain with their parents for three years. In the fourth year they start a new colony, and commence breeding, the parents assisting in building the new dam. This is probably the reason why so many dams are built one above another on the same stream. Several can frequently be seen from a single point, and they are generally so arranged that the water from one dam sets back to the next above.

The houses of the Beaver are built of the same materials as their dams. They are proportioned in size to the number of their inhabitants, which seldom exceed four old and six or eight young ones, though more than double that number have sometimes been found. Hearne, in his narrative of explorations in the Hudson's Bay country nearly a hundred years ago, relates an instance where the Indians of his party killed twelve old Beaver and twenty-five young and half-grown ones out of one house; and it was found, on examination, that several others had escaped. This house, however, was a very large one, and had near a dozen apartments under one roof, which, with two or three exceptions, had no communication with each other, except by water, and were probably occupied by separate families. In the spring, Beavers leave their houses and roam about during the summer. On their return in the autumn, they repair their habitations for winter use. This is done by covering the outside with fresh mud. This operation is not finished until the frost has become pretty severe, as by this means the surface soon freezes as hard as stone, and prevents their great enemy, the wolverine, from disturbing them during the winter.

The food of the Beaver, besides the bark of the several kinds of trees I have mentioned, consists chiefly, in winter, of a large kind of root, somewhat resembling a cabbage-stalk, that grows at the bottom of lakes and rivers. In summer, they vary their diet by eating various kinds of herbage, and such berries as grow near their haunts.

Beavers are found in the northern parts of America, Europe, and Asia. They are generally supposed to belong to one species. They are most abundant on this continent. Within a recent period, Beavers were abundant in all the Northern, Middle, and Western States of the Union, as the large number of their dams, and the beautiful "beaver meadows" caused by the filling up of their ponds with alluvial matter, sufficiently indicate.

But they retire at the approach of man; and the gradual clearing up and cultivation of the soil has driven them nearly all from the country. In the upper and lower provinces of Canada, however, they are still found in abundance.

There are several methods of taking Beaver in steel-traps. A few of the most successful I will endeavor to describe.

A full-grown family of Beavers, as I have said before, consists of the parents (male and female), their three-year-old offspring, the two-year-olds, and the yearlings,—four generations of four different sizes, occupying one hut, and doing business in one pond. When a trapper comes upon such a pond, or one that he has reason to believe is inhabited by a large number of Beavers, his object should be to take them all; and, in order to do this, he must conduct his operations so that when one Beaver is caught, it will not have opportunity to alarm the rest; for otherwise the whole family may leave for parts unknown. His care should be directed therefore to two points, namely, first, to the setting of his traps in such a way as to take each Beaver while alone; and, secondly, to arrangements for drowning them as speedily as possible after they are taken. To secure the first point, he should not set his traps very near the dwelling of the Beavers, but should select places at some distance up the pond on some point or neck of land projecting into the stream, where the animals will pass and repass, but where each will be most likely to be alone. The trap should be set close to the shore, about three inches under water, and should be carefully secreted by a covering of some soft substance that will not interfere with its springing. For bait, a small portion of beaver-castor (a milky secretion found in glands near the testicles of the male Beaver) may be left on the bank, near the trap.

If the trapper's approach was made by land, all foot-prints should be erased by drenching with water. To secure the second point, the chain of the trap should be attached to a sliding-pole, which will lead the captured Beaver into deep water and drown him.

Beavers are sometimes taken by breaking away their dam, two inches below the surface, in one or two places, and setting traps in the breaches. They keep sentinels who examine their dams every night, and the least break is soon detected and put under repair; so that, with traps properly set, some of the Beavers will be likely to be taken while at work at this business. But, as the whole family is summoned out when a breach is considered dangerous, and as in any case several Beavers are likely to be engaged in a work of repair, the capture of one is almost sure to frighten away the rest, for which reason this method of capture should be generally discarded as impolitic.

The surest way of taking Beaver is by trapping in winter, in the following manner: When their ponds are frozen over, make a hole in the ice about three feet across, near the shore and near a hut. Cut a tree of birch, poplar, or alder, about two inches in diameter; press the top together and shove the whole under the ice in such a direction that the Beavers will be likely to pass and repass it in going to and from their house. The butt of the tree should be fastened at the shore under the ice. Directly under the butt, about ten or twelve inches below, a platform should be prepared by driving stakes, or by any other means that is convenient, on which the trap should be set. The chain ring should be attached as before to a dry sliding-pole. After the trap is set and secured, the hole in the ice should be filled up with snow and allowed to freeze. The Beaver, passing the newly-cut tree and discovering its freshness, will proceed toward the butt for the purpose of securing the whole for food, and, in gnawing it off near the shore over the trap, will be likely to be taken. The reason why the sliding-pole should be dry is, that if it is green, the remaining Beavers will be likely to gnaw it off and take it home with them, trap, Beaver, and all, for the sake of the bark.

A LESSON FOR GRUMBLERS.—"I never complained of my condition," said Sadi, a Persian poet, "but once, when my feet were bare and I had not money to buy shoes; but shortly after I met a man without feet, and I became contented with my lot."

FROM THE WEST.

OUR ST. LOUIS CORRESPONDENCE.

I HAVE been reading a capital number of the *AMERICAN PHRENOLOGICAL JOURNAL*.

I wish your *JOURNAL* was read in every family in the United States. It is the science of common sense applied to the conduct of human life. Without being technically a phrenologist, I have often wished that the broad principles, the practical deductions, and plain teachings of phrenological publications might be taught more frequently in our educational establishments and in our pulpits.

If the sermons that we hear had less intangible talk in them and more substantial and practical instruction, I think men's souls and bodies would be better off. If one sermon a Sabbath, where two are preached, could be given to plain, common-sense teaching, on the principles which your *JOURNAL* and books have made popular for the last quarter of a century, there would be more morality and obedience to moral and physical laws in the nation, and more happiness in our homes. Without professing to be a religious publication, I have thought that the *JOURNAL* has contributed not a little to teaching obedience to the physical and spiritual laws of our nature. I most heartily wish you success in the great work which all academic and collegiate studies propose, but do not always accomplish, of teaching man something of himself.

Ever since I was a student at Cambridge, and strolled into your rooms in New York many years ago, I have kept an interest in, and a sort of acquaintance with, your movements; and here, in the Far West, beyond the Mississippi, I send you a word of greeting and fellowship, and hope that you will show "Life Illustrated" in many of our homes on the prairies. But I must tell you something about St. Louis and Missouri. It will interest a vast number of your readers who live on the Atlantic slopes, and who may think of following the course of empire that westward takes its way. A native of New England, I long to have New England men come to the fair and fertile fields of Missouri and help us to develop the unequalled wealth and resources of this most magnificent country. Let Eastern people recall the fertile valleys of their own States, the Connecticut, Hudson, Mohawk, Susquehanna, and Ohio, and think how rich they are, and teeming with wealth and population! Let them remember that much of that wealth, those fine cities, and all the arts of civilization and science are the fruits of efforts made chiefly in the last half century. Then let them consider the vast valley of the Missouri, which lies between the Mississippi and the Missouri, and contemplate that magnificent region through which the H. and St. Jo. R.R. runs, and think what it will be in a few years, when the land has the culture of free men—how it will grow in value, and make fortunes, as well as homes, towns, and cities!

Let Eastern populations think of these things, and now enter at the right time into this splendid domain. Land is cheap here now, and is offered on most advantageous terms. Now is the time to get cheap homes and secure a fortune for yourselves and children. Nothing in the historical progress of other nations in population and wealth can compare with the just anticipations which are certain to be realized in respect to this magnificent region. It will be netted all over with a vast system of railways. It has thousands of miles of river navigation. Its capacity of sustaining a great population cheaply must attract to it not only those from Europe but also from Eastern States.

The political power of the Union will center in this great valley. The very magnitude of the features of the country, its magnificent lakes, and rivers, and broad prairies, give a noble tone and character to the people, which, with the dash and energy of Western life, will result in the production of a splendid future, such as no other portion of our country can hope to have. Where, now, land is cheap, thriving cities and large towns in a few years will stand.

SAINT LOUIS MATTERS.

The growth of St. Louis is really wonderful. It seems but a few years ago since it had only the population of some of your larger towns in New York, or some 15,000

inhabitants; but now it has a population of 235,000. It is a solid city, built of brick and stone. My business recently led me to investigate the statistics of the city, and as a matter of interest I will give you some of the items. There are over 100 churches in the city, 22 of which are Catholic. There are about 100 educational establishments, from the primary school to the higher departments of the university, including collegiate, medical, and law schools. At the Washington University of St. Louis as thorough a classical education may be obtained by the student as at Harvard College. This institution has cost, with its polytechnic department and buildings, nearly a million of dollars. It is liberal, and free from sectarian prejudice; and when it is two centuries old, it will be one of the grandest institutions of the nation. There are 18,242 structures, with an assessed valuation of some \$28,000,000 dollars, but whose real valuation is probably nearer \$75,000,000. There were over 1,200 new buildings erected in St. Louis in 1867. There are 311 mills and manufactories here, to say nothing of the 40 breweries, which last year made a barrel of beer for every man, woman, and child in St. Louis.

Among the manufactured products we notice those of sixteen million pounds of soap, four million pounds of candy, and eighteen million pounds of sugar, besides 581,180 gallons of syrup—treacle—and 160,400 gallons of castor oil. We manufactured about fifty million dollars' worth of goods last year, all told, and bought and sold between two and three hundred million dollars' worth. St. Louis covers an area of sixteen square miles.

Like the man who thanked the Lord that religion was cheap, we offer the same thanks for horse-car conveniences, for we can travel seven miles for 5 cents. Indeed, we have one line that extends twelve or thirteen miles north and south, running a long way through streets filled with blocks of buildings.

Untraveled Eastern people have no idea of the growth of this region west of the Mississippi. Towns and cities rise almost as if by magic. An emigration of the enterprising, self-reliant, and strong every year is passing the Mississippi, and spreading over this fertile region. "Westward the course of empire takes its way."

LET THEM COME.

There are thousands of people fighting the battle of life in your Eastern cities and in Europe who ought to come West. If all things favor, they manage to worry through the winter without actual pauperism and suffering. There are a hundred thousand in the city of New York who have no business to be there at all, because they could do so much better for themselves out here in this new country. I do not own an acre of land, and have nothing to sell, but I would like to tell the thousands that read your *JOURNAL* of the several hundred thousand acres of choice and fertile lands open for settlement in this State of Missouri. The Hannibal and St. Jo. R.R. Co. has, for example, on each side of their road, all the way from Quincy and Hannibal to St. Joseph, crossing the entire State for 200 miles, about half a million acres of excellent lands in a charming climate, on the purchase of which they willingly grant to the settler a credit of two or ten years. Those desiring to know more about them might write to the Land Commissioner, Geo. S. Harris, Hannibal, Mo.

Slavery, that cursed the State, is removed. Freedom sings her songs upon our prairies. Missouri now ranks, with all her mineral wealth and possibilities, as one of the leading States of the great valley of the Mississippi.

MARTIN W. WILLIS.

RENTS in New York have reached a height which is little else than "excruciating." The Bostonians complain grievously of the exorbitant demands of landlords in their city. If the following announcements, clipped from a Boston paper, are to be credited, things there have reached "a pretty pass."

"TO LET—One room on the rail recently put up at Bantamville, in the building formerly occupied by Henry Fowle. Price \$300 per annum, and taxes. Apply to A. Ruhster, on the premises.

"RARE CHANCE.—The subscriber, having recently introduced steam-heating apparatus into his house, has no further need for his splendid and commodious ash-hole, which has been cleared out utterly regardless of dirt and expense, and will now be leased to a few single gentlemen, who desire lodgings in a quiet and retired situation. Terms made known on application. Geo. Gripe, 34 Bullion Avenue."

"What They Say."

Here we give space for readers to express, briefly, their views on various topics not provided for in other departments. Statements and opinions—not discussions—will be in order. Be brief.

ARE YOU A ROMANIST?—

A "subscriber" objects to our publishing Roman Catholics and others, not of his or our own faith. He inquires if we are "wavering" in our convictions, or if we are already committed to the Pope? Why not charge us with Judaism, Mormonism, or Paganism? We simply propose to show up, in a proper spirit—i. e., truthfully—all the principal creeds and religions in this country. Does this imply that we indorse them? May we not describe a heathen without ourselves becoming one? Why not credit us with the design of trying to convert them to our faith? If we are right and they in error, is it not our duty to try to bring them to the truth as we understand it? Aye, verily. And who knows how much may be accomplished by these religious exhibitions? Let us have "light, light, more light." There is no cause for fear in knowledge and truth; we would first enlighten, and then bring all mankind to the worship of the true God. But we foresaw this; we know how bigoted, narrow-minded, and prejudiced some folks are. We have been charged with political partisanship, after publishing sketches of politicians, as though we were not above party—and we expected to be classed with Presbyterians, Baptists, Methodists, Unitarians, Universalists, Swedenborgians, Hebrews, and Roman Catholics. But we can stand it. Calling us Jews or Gentiles does not make us one or the other, any more than calling us a Mohammedan would make us a Turk.

A boy put this puzzling question to his wise progenitor: "Grandpa, calling the tail a leg, how many legs would the calf have?" Five, was the unscientific answer, which the more philosophical boy instantly corrected by replying: "No, sir, calling the tail a leg don't make it a leg." So, calling us this, that, or the other don't make us what we are not.

Our object is to let all the world see just exactly where they stand, not only on the question of religion, but on all questions. When we know each other better—as we may—we shall be able to account for personal peculiarities, and not crucify each other for differences in opinion. We look at mankind from a scientific standpoint. With Christ for our example, the Ten Commandments and the Lord's Prayer for our guide, we hope to prove useful to our fellows, and acceptable to Him who judges all men.

There is one God, but many worshippers. The principles of Christianity are as broad and as comprehensive as the globe. Indeed, they may be likened to an orange in their wholeness and oneness. But we finite beings divide the orange into little sections, and claim perfection for our particular piece; we know it is good—we know it is orange; but we are not willing to concede that our neighbor's piece, section, or creed is as good as our own. Our particular mode of worship is simply a matter of education. And if one mode is better than another—having more vital truth in it—that is the sort which will in time absorb others. If Christianity is an improvement on Judaism, it will prevail. If Protestantism is better than Roman Catholicism, it will prevail. If

Paganism has in it more of truth than other systems, that will prevail.

We see, or think we see, a steady progress in knowledge, in science, and in human development from the beginning of the race. And we now look for a steady—and more rapid than ever before—dissemination and acceptance of Christianity. So far it answers every desire or need in the moral nature of man. It is in perfect keeping with all we know of science. It reaches, in its comprehensiveness, into the realms of faith and spirituality, vastly beyond the reach of reason or sense. It reconciles us to all the duties and trials of life; it resigns us to death. There is nothing in life or death, nothing present or to come, that it does not recognize and prepare us to meet. In a word, it is the culmination of all knowledge, all science, all philosophy, all that is human and divine. Let us accept it. Let us live and die by it.

VEGETARIANS.—The following explains itself.

S. R. WELLS, EDITOR.—*Dear Sir:* A few vegetarians have formed a colony at this place, and desire to receive additions to their number. If you will give the few accompanying lines a place in your PHRENOLOGICAL JOURNAL, you will greatly oblige us, and we hope benefit others. Very respectfully yours, MRS. E. L. BONNELL.

[Here are the "lines," which tell the story. We are not advised as to the price of lots, how to reach the place, etc., but all this will be communicated on application to the lady.—ED.]

HEALTH COLONIZATION.

Would any reader like to know Where vegetarians may go, That mind and body sound may be? Let all such join our colony.

The water here is soft and pure, The soil is good, the fruit crops sure; A healthy climate, all will say: Pray come and buy without delay.

Come, if to only make a call; Here's land for sale, enough for all; In quantities both large and small, And near the "Tract" of Dr. Trail.

To Waller, then, you all must come, Who'd make with us, your future home; Or if you choose to write a line, An answer back you'll get in time.

MRS. E. L. BONNELL, Waller, Ross Co., Ohio.

Literary Notices.

[All works noticed in THE PHRENOLOGICAL JOURNAL may be ordered from this office at prices annexed.]

MAN: WHERE, WHENCE, AND WHITHER? Being a Glance at Man in his Natural History Relations. By David Page, LL.D. First American Edition. New York: Moorhead, Simpson & Bond. Cloth, \$1 50. Address this office.

The important questions which constitute the title of this volume receive from the author the cool consideration of an earnest laborer in purely scientific realms. What natural history has to offer in the way of presumptive testimony to the origin of man, he briefly sets before the reader. He would stimulate the movement of inquiry which now has assumed a somewhat definite character in the minds of the thoughtful. "Man's Where, Whence, and Whither," he says in the Preface, "are inseparably linked together, and there can be no intelligent appreciation of the one without a competent knowledge of the others; no successful dealing with one problem unless studied in connection with the other problems that arise from a philosophical consideration of the whole question of man's place in nature." A sum-

mary of the table of contents must suffice our readers. First comes the Introduction, considering the nature and importance of the inquiry. Next, Man: Where? his zoological, geographical, ethnological, and functional relations. Next, Man: Whence? comprising his historical, geological, and genetic relations, and lastly, Man: Whither? his progressive relations, and the practical bearings of the inferences drawn from the argument.

CHRISTIAN SEPARATION FROM THE WORLD: its Philosophy, Obligation, and Extent, considered with special reference to Popular Amusements. By Rev. S. H. Platt. With introductory letter by Rev. T. L. Cuyler. 12mo, pp. 52. Price, paper, 25 cents; muslin, 35 cents. Address the author, 39 Fleet Street, Brooklyn, N. Y.

An earnest appeal in behalf of wayward young men who see no wrong in games of chance and in worldly amusements. According to Mr. Platt, the Christian separation from the world, which is enjoined by the Gospel, excludes, first, all forms of business or pleasure that involve a perpetration of moral wrong, such as smuggling, selling liquor as a beverage, gambling, lottery-dealing, cock, dog, and prize-fighting; selling confectionery, soda-water, and tobacco on the Sabbath (even from drug stores), and all games of chance of whatever description. From the above, it will be inferred that the author has drawn the lines sharply, and gives no license to the wayward. A perusal of the book will strengthen the weak and confirm the strong. It will also serve as a warning to the wicked. Read it.

THE GOSPEL IN THE TREES: with Pulpit Opinions on Common Things. By Alexander Clark. Philadelphia: J. W. Daughaday & Co. Cloth. Price, \$1 50.

This professedly religious book—a volume of sermons certainly must be religious—is something unique in its way. It is replete with the sap of a healthy theology, and as vigorous as the well-grown cedar of Libanus. Here are moral truths extracted from trees, as refreshing as the shady grove in midsummer, and as agreeable to the unperverted appetite as the fruit of the apple or the olive. We will confess to a little general prejudice to volumes of sermons, and we fear this feeling is shared by many reviewers of books, but Mr. Clark's "Gospel in the Trees" disarms our prejudice in the outset. We are fond of the apple; we revere that noble growth of our American soil, and what is said in the first discourse on the apple-tree commands our approval. So, too, the cedar, the olive, the myrtle, the willow, and the palm, each are the subjects of separate discourses which contain much practical religious and scientific instruction.

Besides, in "Pulpit Opinions on Common Things," those familiar enough incidents, Rain, Snow, and Hail, receive such interesting consideration as leads us to respect and admire them more than we have been accustomed to admire them hitherto.

The Dress is the subject of another most impressive discourse; and in those which close the volume, "Every-Day Glory," "One and Forever," "Two Worlds Made One," there is food for the earnest religious heart which will cheer and invigorate it. Mr. Clark has seized a most felicitous series of subjects for religious analysis, and his book deserves a liberal sale. It is spirited and vivacious, yet candid, earnest, and admonitory; instructive and even entertaining, yet fervent with spiritual truth.

FOUL PLAY. A NOVEL. By Charles Reade and Dion Boucicault, with illustrations by George Du Maurier. Boston: Ticknor & Fields. Price, 75 cents.

The interest with which this production of the combined brains of two well-known writers has been received while published in a serial form, has induced its appearance in the present complete volume. It is romance with some sprinklings of probability.

LINDA TRESSSELL. A Tale. By the author of "Nina Balatka, the Story of a Maiden of Prague." Price in paper, 38 cents.

ALL FOR GREED. A Novel. By the Baroness Blaze de Berry. Price, 38 cents.

The above works from the press of Messrs. Little & Gay, of Boston, formerly ran through the pages of that excellent eclectic, *Little's Living Age*. They are esteemed worthy of separate covers.

DOUBLY FALSE. By Mrs. Ann S. Stephens. Author of "Fashion and Famine," etc. Philadelphia: T. B. Peterson & Brothers. Price, \$1 75.

Mrs. Stephens is an expert novelist. She knows much of the inner and outer life of humanity. In reading her works one would think her experience had been involved in the meshes she so ingeniously weaves. "Doubly False" is deeply criminal, yet not too deeply so for real life. The spoiler and the spoiled are the themes she has chosen to describe, and her vivid pen has done the work with a forceful emphasis.

THE ADVENTURES OF OLIVER TWIST; also "Pictures from Italy," and "American Notes" for General Circulation. By Charles Dickens. With Ten Illustrations. Boston: Ticknor & Fields. Price, \$1 50.

This is a cheap volume of the tasteful Charles Dickens' Edition. The publishers certainly do the liberal thing for the reading public in this edition. The fearful scenes of Oliver Twist, the sprightly delineations of Italian life, and the semi-splenetic sketches of America, constitute a plethoric little volume, yet printed in good type and on excellent paper.

HOLIDAYS AT ROSELANDS.—A Sequel to Elsie Dinsmore. New York: M. W. Dodd. Price, \$1 25.

The carefully-written story of Elsie Dinsmore has its counterpart in "Holidays at Roselands." No book can be more acceptable to the healthy juvenile mind. The moral principles inculcated are excellent and the style exceedingly attractive. Elsie's joys and sorrows, excepting a little exaggeration, are described with life-like accuracy; besides, the story loses nothing by its connection with the sunny South and slavery.

GOING TO JERICHO; or, Sketches of Travel in Spain and the East. By John Franklin Swift. New York and San Francisco: A. Roman & Co. Price, \$1 75.

An exceedingly pleasant book this for one to read; having enough of detail to stamp it with the character of a volume of travels, and enough of sprightly incident to render it agreeable.

The portraiture of Spanish and Egyptian life are frank and natural; there is evidently no attempt on the part of the writer to tickle the credulity of his readers with the creations of his imagination. The wonders of the grand old lands in the East are recited in an appreciative and impressive style, yet without any attempt at grandiloquence. Mr. Swift's book is adapted to instruct as well as entertain the general reader.

THE ECLECTIC MAGAZINE OF FOREIGN LITERATURE. Monthly, \$5 a year. W. H. Bidwell & Co., Publishers, 108 Fulton Street, New York.

The value of this standard monthly may be inferred when we state that it has reached its sixty-third volume without a break! Besides the best current English serial literature, the *Eclectic* gives frequent fine steel-plate engravings, of a high order of merit.

THE FARM AND GARDEN is an unpretending monthly of 32 octavo pages, at \$1 a year, published by James R. Jacobs & Co., in Clinton, S. C.

We are glad to notice every attempt to improve the agriculture of the South. Hitherto, journals of this class have not been largely patronized, but now, more than formerly, they will be needed. The agricultural resources of the South have scarcely been touched. Let knowledge go forth; then let the plow and the hoe do their work.

THE LADIES' REPOSITORY: a Universalist Monthly Magazine for the Home Circle. Large octavo. Terms, \$2 50 a year. Universalist Publishing House, 37 Cornhill, Boston.

This magazine now enters upon its fortieth volume. It occupies the same relation to the religious society it represents that the *Ladies' Repository* of Cincinnati occupies in relation to the Methodist Church in America. It has been edited—we think is still edited—by Mrs. Hanford, a lady of high natural ability and liberal education. Among its contributors are some of the best writers of the Universalist denomination.

ALDEANE. A Novel. By Laura Preston, author of "In Bonds," etc. New York and San Francisco: A. Roman & Co. Price, \$1 75.

This is a strong story of Southern life as it was before the extinction of slavery. What a fruitful topic for the novelist is offered in the late dispensation of American slavery! The acme of sensationalism in literature can be approximated without exhausting it.

THE SPANISH GIPSY. A Poem. By George Eliot, author of "Adam Bede." Boston: Ticknor and Fields. Price, \$1 50.

This is a very successful attempt to produce in English the cadence of Spanish verse. The plot is most romantic, becoming the scene of its supposed action; and the time—most fertile of pathetic tale—when the Moors were being exterminated from the peninsula. A Spanish grandee loves a beautiful maiden; their marriage-day is fixed; but just before it dawns, a gipsy chief escaped from the captivity which the Spanish law imposed upon his race, appears before the lady and claims her as his child, many years before lost from his hand. She yields to his authority and leaves the palace of the Spaniard to share her wandering father's lot.

On his return from an expedition against the Moors, expecting to take his bride, the nobleman is deeply grieved by her flight. A few loving words, written in the hurry of Fedalma's departure, explain all. He follows the gipsy band, discovers Fedalma, and having no other alternative in his great passion, he joins the company, relinquishing his titles and name. Soon afterward, discovering that the Zincalo chief had pledged his men to aid the Moors, and had in a sudden attack slain several Spanish noblemen, the new proselyte in anger stabs the chief to the heart and abjures his new relation. He is permitted to leave the camp, and afterward expiates his brief

apostasy by a pilgrimage to Rome. On his way thither he visits the African coast, where Fedalma, as successor of her father, has retired with her band. Their meeting and farewell is depicted in affecting terms, and closes the poem. This work merits the approval of the most critical for its true poetic sentiment and excellence of metrical construction.

THE BOOK OF EVERGREENS.

A Practical Treatise on the Conifers, or Cone-bearing Plants. By Josiah Hoopes, Member of the Academy of Natural Sciences of Philadelphia. New York: Orange Judd & Co. Cloth. Price, \$3.

So important a plan has the evergreen family held in the estimation of horticulturists for its ornamental uses, that we wonder that no special treatise had not long ago been written on it. However, the niche is filled at last by Mr. Hoopes' work. Though more particularly adapted to the instruction of American gardeners, it is fruitful in suggestion to those of other nations where ornamental horticulture is practiced.

The volume is equally adapted to the experienced man and the novice, such terms being used as render the different species of Conifers easily understood by all. A work of 435 pages, it covers about all the known species of evergreens, giving practical directions on the propagation and growth of each. To the botanist it offers an extensive field for investigation in one of the most interesting of the vegetable families. The illustrations are numerous and beautiful.

BOOK OF SUMMER RESORTS,

explaining Where to Find Them, How to Find Them, and their special advantages, with details of Time-Tables and Prices. A complete Guide for the Summer Tourist, with maps and illustrations. Compiled by Charles H. Sweetser, Author of the "Guide to the Northwest," and Editor of the New York *Evening Mail*. New York: *Evening Mail* office.

Now that we are in the high tide of summer, when our cities smoke, fume, and swelter under the fiery sun, the very mention of a book like the above is refreshing. A summer resort at this season means retirement from the dust and sweat of business, rambles by the cool water side, or in the grateful forest shade, delightful baths in the crested sea-waves, noontide dreams on the vine-embowered veranda. Mr. Sweetser's book supplies a want experienced by all tourists who would visit those places which offer the strongest rural attractions. He has appreciated the practical "issues" of summer trips and "stays," and furnished those important items which touch the pocket as well as the eyes and palate. All the important places within ready reach of New York are described with reference to hotel accommodations, scenery, and general advantages. The advice with respect to round trips is valuable, as well as the interesting items of geographical and historical information given in connection with many places that are as famed for their past as for their present. The volume is conveniently bound for the pocket, and should meet with the approbation of the traveling public.

BARNABY RUDGE AND HARD TIMES. By Charles Dickens. With Ten Illustrations. Boston: Ticknor and Fields. Price, \$1 50.

"Here's variety enough for any man." Two of Dickens' stories in one volume!—The Charles Dickens' Edition, too! In the first, low, rough life is depicted in all its vividness; in the second, want, sorrow, and suffering form the plot.

THE ELEMENTS OF AGRICULTURE: A Book for Young Farmers. By George E. Waring, Jr. Second and revised edition. 12mo, pp. 254. Price, post-paid, by return mail, \$1 25. May be had at this office.

We have here one of the best works yet published on agriculture in America. It is simple, yet scientific; it is practical, though profound. All the different soils and fertilizers are described, and their constituents plainly stated. The varieties of farm crops, together with their cultivation, are described at some length. All the processes and advantages of thorough under-draining are given. Various agricultural implements are also described, and almost everything the young farmer needs to know in regard to the treatment of soils, the uses of fertilizers, the nature of seeds and plants, are given in the plainest language. We think a universal distribution of this work throughout our country would be a great public benefit. Our only object in recommending it so highly and urging it upon our people, is for the good it is well calculated to do in the line of agriculture.

WHAT SHALL WE EAT? A

Manual for Housekeepers, comprising a "Bill of Fare for Breakfast, Dinner, and Tea" for every day in the year, with an Appendix containing Recipes for Pickles and Sauces. 12mo, pp. 134, fancy muslin. Price, \$1. New York: G. P. Putnam & Son.

We are not favored with the name of the author, but the names of the publishers are a guarantee that this new cookery book is not all trash. Not being experimental cooks, and wife not having tested the merits of the work, we can say little more than to express our belief that young housekeepers all, and some elderly ones, may find it to their interest to read this book. It is not like the one we ourselves publish, devoted to the herbivorous, granivorous, and vegetarian interests; but this recommends a mixed diet of fish, flesh, and fowl; or we should say, gives explicit directions for their preparation for the table, rather than recommends any particular diet.

We copy a single paragraph. In reference to a good breakfast the author says: "In a chilly climate like America, wine is a mistake, even with French cookery; if strong, it diminishes business quickness; if weak, it imparts no warmth," etc. Farther on: "Fruit is a good digester, so is cranberry jam." But if we were to commence making quotations, we should not know where to stop. The book is handsomely gotten up, as are all those with the Messrs. Putnam's imprint.

EXCELSIOR MONTHLY MAGAZINE, devoted to the Elevation of the Race. Large 8vo, pp. 40. Terms, \$2 50 a year. New York: Olmsted & Welwood.

A handsome initial number, on good type, clean white paper, and very well printed. What amount of talent and enterprise may be put into the work we have no means of judging; but if kept up to the standard of this first number, it will be both cheap and good.

THE WORKSHOP. A Monthly Journal devoted to Progress of the Useful Arts. Edited by Prof. W. Baumer, J. Schnorr, and others. E. Steiger, New York, Publisher. \$5 40 a year; 50 cents specimen numbers.

No. 4 of this richly illustrated monthly is before us, and well maintains the high excellence exhibited by the first issue. The designs for carving are both practical and beautiful, and the accompanying letterpress is instructive.

FIVE HUNDRED AND SEVEN

MECHANICAL MOVEMENTS, embracing all those which are most important * * * and including many Movements never before published, and several which have only recently come into use. By Henry T. Brown, Editor of the "American Artisan." New York: Published by Brown, Coombs & Co. Cloth. Price, \$1 15.

A most suggestive and useful little book. The desire its perusal begets in us is to try our hand—mind—at invention; and we verily believe this interesting work will stimulate many readers, young and old, to the study of mechanical principles, and serve to set the world ahead in this direction. Give a copy to your boys; set them to whittling, boring, drilling, hammering, and inventing. It will prove most interesting and useful. We commend the enterprising publishers for the very handsome manner in which they have brought out the book.

ILLUMINATED TEMPERANCE

CARDS. A new series of Ten Lithograph Temperance Cards, with Short Verses, beautifully illustrated, and printed in gold, admirably adapted to Children, Sunday Schools, Bands of Hope, and other Juvenile Temperance Organizations. They are the most attractive little Cards of the kind ever published, and should be placed in the hands of every child in the land. Price, 40 cents per pack of ten cards, in neat envelope; \$4 per dozen packs. Address, J. N. Stearns, 172 William St., New York, or this office.

These beautiful little "tokens" will encourage the recipients to keep their pledges and live temperate lives. Circulate them.

THE USE OF TOBACCO, and

the Evil, Physical, Mental, Moral, and Social, resulting therefrom. By John H. Griscom, M.D. 18mo, pp. 37. Muslin, 50 cents; paper, 25 cents. New York: G. P. Putnam & Son.

Another blast against the weed. Dr. Griscom is an old practitioner of many years' standing in New York—twenty years in the New York Hospital—and his large practice among the victims of the habit enables him to speak understandingly on this subject. Our own views are already well known, having published, a few years ago, prize essays, for which hundreds of dollars were paid to the writers, and of which many thousands of copies were circulated. Still, the habit seems to be increasing; and though not discouraged, knowing ourselves to be in the right, we rejoice at every new effort in the direction of enlightening the public mind on the subject. The little book may be wisely placed in the hands of those not yet contaminated, who will inevitably be more or less tempted. When, for instance, many of the clergy and prominent statesmen, and nearly all politicians, and certain distinguished generals indulge in the weed, it is not surprising that green boys, who are ambitious to become men, should fall into the same nasty ways. Buy the little book, and distribute it where it may do good, and save the otherwise poor weak "perverts."

"THE GOOD MAN'S LEGACY," a sermon by Dr. Samuel Osgood, occasioned by the death of Dr. Richard Rothe, of Heidelberg, has been published by S. R. Wells, of this city. Of Dr. Rothe some account was given not long since in this Journal. He was one of the most able thinkers of modern Germany, and such was the geniality of his spirit and the beauty of his life, that he was, like Dr. Arnold, of Rugby, beloved and revered by men of all varieties of religious belief. His great work, "Theological Ethics," is made by Dr. Osgood the subject of a brief but satisfactory analysis.—*Evening Post*.

THE LAW OF HUMAN INCREASE: or, Population based on Physiology and Psychology. By Nathan Allen, A.M., M.D., Lowell, Mass. New York: supplied by S. R. Wells, 389 Broadway.

This pamphlet is ably written, and must attract a good deal of attention among thinkers. The author attempts to show why the native population of some portions of the United States is falling off, and why the descendants of large families have comparatively few children. The law of temperament is also explained as affecting this question. Evidently a change must take place in the physical training and condition of the American people, if they would not be supplanted by the fresh importations from abroad. The treatise may be ordered from this office. Price, 50 cts.

THE RESOURCES OF MISSOURI. By Sylvester Waterhouse, of St. Louis, Mo. Octavo pamphlet. Pp. 64. Price, 50 cents. Address the author.

A brief statement of the agricultural, mineral, and other resources of one of the most promising States in the Union.

Messrs. Santee & Wheat, of Rolla, Mo., have also published a small pamphlet with map, all about Missouri, sent gratis, on receipt of stamps.

NEW MUSIC.—Messrs. Root & Cady, of Chicago, send us the following: "L'Opera dans le Salon," a brilliant series of fantasias for the piano, by Robert Goldbeck, of which "Un Ballo in Maschera" and "Ernani" are delightful exponents. Price, 60 cents each. "The Spring at the Foot of the Hill," song and chorus, by J. P. Webster. 50 cents.

TO MR. FREDERICK BLUME, of New York, we make acknowledgment for, "The Excelsior Music Book," for all single instruments, No. 22. Price, 15 cents. "Vivian's Silver Trumpets," a march. Price, 40 cents. "Champagne Charlie," a galop, from the Musical Casket. 20 cents. "Say to Him," from Offenbach's La Grande Duchesse. 40 cents. "Viennese Sugar-Plums," by Johann Strauss. 40 cents.

GOOD NEWS. "A CHEERFUL CHRISTIANITY" and a "ROBUST FAITH."—The prospectus for a new monthly magazine is issued by Messrs. WYNKOOP & SON, 108 Fulton Street, New York, announcing a new magazine with these features, a "Cheerful Christianity" and a "Robust Faith." We like this. It evinces life, vigor, and spiritual virility. The world will have no more long-faced, down-cast, desponding, dyspeptic, cold, repulsive, dead religion. It wants, demands, and must have the kind which animates, encourages, lifts up, and begets hope, courage, and a spirit to do the will of God. The Church is to be made radiant with joyous godliness, and not sepulchral with fear, sadness, and sorrow. The new magazine will represent the Reformed (the word "Dutch" is omitted) Church, and will be published at \$2 50 a year. Specimen numbers supplied at 20 cents. We predict—as we heartily wish—the best success for "GOOD NEWS."

THE AMERICAN STOCK JOURNAL, one of the most enterprising of our rural monthlies, has been removed from Gum Tree to Parkersburg, Chester County, Pa. Persons interested in the improvement of our domestic animals should read this excellent journal. Messrs. BOYER & Co. are the publishers, and the terms are only \$1 a year.

A PRACTICAL GRAMMAR OF THE HEBREW LANGUAGE, for Schools and Colleges. By B. Felsenthal, Ph. D. Cloth, \$1 15.

The following publications have been recently received from Messrs. T. B. Peterson & Brothers, of Philadelphia:

WRECK OF THE GOLDEN MARY. By Charles Dickens. Paper. Price, 25 cts.

THE PIC-NIC PAPERS. Complete. By Charles Dickens. Paper. Price, 50 cts.

PERILS OF ENGLISH PRISONERS. By Charles Dickens. Price, 25 cts.

A HOUSE TO LET. By Charles Dickens. Price, 25 cts.

PEVERIL OF THE PEAK. By Sir Walter Scott. Complete in one volume. Price, 20 cts.

QUENTIN DURWARD. By Sir Walter Scott. Price, 20 cts.

FORTUNES OF NIGEL. By Sir Walter Scott. Price, 20 cts.

ST. ROMAN'S WELL. By Sir Walter Scott. Price, 20 cts.

THE GREAT IMPEACHMENT and Trial of Andrew Johnson, President of the United States. Illustrated with portraits of the principal personages interested in its management. Price, 50 cents.

TOURISTS' GUIDE TO THE UPPER MISSISSIPPI RIVER. By J. Disturnell.—A very handy pocket compilation, with maps, railways, tables of distances, hotels, etc.; is handsomely got up, in flexible covers, and sells at 75 cents. It is the promise or outline of something great, which must speedily follow, to supply the wants of tourists in that enchanting country.

STEREOSCOPIC VIEWS OF FREEER'S GLEN, at Watkins, N. Y. Mr. G. F. Gates publishes a series of the most remarkable views of this wonderfully romantic place, consisting of rocky arcades, galleries, and grottoes; amphitheatres, and subterranean passages; the grandness and magnificence of which are said to be beyond description. There are twenty-four mounted views, and they sell at \$5 for the set.

GRANT AND COLFAX. Messrs. T. B. Peterson & Brother, Philadelphia, are publishing in several styles of binding the lives of these candidates for Presidential honors. Of course, many sweet words are said—as in all partisan biographies—and must prove encouraging to young Americans who aspire to positions of usefulness and honor. Paper, 75 cents; cloth, \$1. For sale here and everywhere.

PART XIII. (May) of "ROUTLEDGE'S ILLUSTRATED HISTORY OF MAN, in all Countries of the World," is at hand. The Camma, the Mpongivé, the Fans, with very interesting narratives of elephant and gorilla hunting, the Krumen, and the Fanti, are among the African tribes described and illustrated. This elaborate work is indispensable to the ethnologist.

NEW MUSIC.—We acknowledge the receipt of the following pieces of new music from Mr. FREDERICK BLUME, No. 1125 Broadway, New York: "Champagne Charlie," Galop; "La Grande Duchesse," Waltz; "Sword of my Father," song from the Grande Duchesse. 30 cents each. Send stamp to Mr. Blume for catalogue of popular music, with prices.

FAMILY PRAYERS FOR FOUR WEEKS. Edited by John Hall, D.D. Cloth, \$1 15.

THE MECHANICS' TOOL-BOOK; with Practical Directions for the Use of Machinists, Iron-Workers, etc. By W. B. Harrison. Illustrated. Cloth, \$2 75.

SUNDAY-SCHOOL HANDBOOK: a Compendium for Pastors, Superintendents, Teachers, etc. By E. House. Cloth, \$1 50.

To our Correspondents.

A CHANGE OF HEART.—Can a child be so brought up and trained by virtuous parents as to make its change of heart or conversion unnecessary? or, in other words, is that the religion of nature?

Ans. Man is endowed by the Creator with faculties which render him a religious being; he may, therefore, be said to inherit a disposition to worship. Aside from our phrenological deductions, we find all mankind, no matter how barbarous or how low in the scale of development, with some form of religion. Indeed, there are no tribes on the face of the earth without it. Even the South Sea Island cannibals, the Hottentots, and the Esquimaux are religious. Is not this evidence enough? Looked at from a phrenological point of view, we find all men—save idiots—with the organs of Veneration, Hope, Spirituality, and Conscientiousness—organs not to be found in any other created being. Nor are there any other beings on earth who recognize a God. Man alone is blessed with faculties which take cognizance of a supreme creative power. So far, then, it must be conceded that man is religious by nature. But natural religion, which may be the miserable superstition of the heathen, or the cold, lifeless philosophy of the skeptic, is very different from the revealed religion of the Scriptures and the living, spiritual religion of Christ. And now to the question. No; a child may be ever so perfect in organization, have all the organs of body and faculties of mind, and yet need the regenerating influences of the Holy Ghost—a change of heart—in order to become a child of grace, "joint heir with Christ," who lived and died as an example for us. Man has a threefold nature, namely, the animal, the intellectual, and the spiritual. Without conversion or a "change of heart" he remains on a plane below the highest. By a "change of heart" he becomes, as it were, spiritually illuminated, and awakened to a higher sense than intellect or reason can ever reach. He becomes *en rapport* with angels and with God. Yet this conversion or spiritual illumination is not abnormal or miraculous; it is simply the earnest aspiration of the soul for its Father and its God, and the reception of the truth by the spiritual faculty; it is the coming home of the soul to its spiritual fountain, the triumph of the religious feelings over the sensual and animal. It is natural, and yet supernatural. It is the thing man was made to do, yet which he is too strongly inclined not to do, without the illuminating grace of God and his truth. Yet this grace and truth are his by birthright as a son of God; and when, like the prodigal, he resolves to "arise and go to his Father," lo! He meets him half way and gives him the "renewing of his mind" by the Divine Spirit, and then he is "born again," "created anew in Christ Jesus."

SPIRITUALISM.—Is modern Spiritualism in harmony with the Bible?

Ans. There are several kinds of Spiritualists. Some claim to be religious, and to accept Christ in an orthodox way; others—and we think the majority—regard the Bible as of less authority than their own teachings and philosophy; and the religious world regards them as heterodox, if not infidel. Suppose you examine both the Bible and Spiritualism, and so find out for yourself whether or not they harmonize.

TRAVELERS' GUIDE-BOOKS.

In Europe, travelers are furnished with guide-books for city and country, with every species of detailed information needed by a stranger. What can be more complete than the plump and portable volumes, Guide-Books of Scotland, of Ireland, of England, etc., and so of the German States? In America we have nothing so perfect. Here are the titles, with prices, of the best we have. And they all need revising every year, to keep pace with the changes and improvements constantly taking place.

HAND-BOOK OF AMERICAN TRAVEL; being a Guide, by Railway, Steamboat, and Stage, to the Cities, Towns, Battle-Fields, Waterfalls, Mountains, Rivers, Lakes, Hunting and Fishing Grounds, Watering Places, Summer Resorts, and all Scenes and Objects of Importance and Interest in the United States and British Provinces. Edited by Edward H. Hall. Accompanied by Maps of all parts of the country, and the principal Rivers. Limp cloth. \$4.

HAND-BOOK OF NORTHERN TRAVEL; containing an account of the principal Watering Places and Summer Resorts, including Niagara, Trenton Falls, White Mountains, Lake Superior, etc. Illustrated with Maps. 1 vol., 12mo. Limp cloth. \$3.

SOUTHERN HAND-BOOK OF TRAVEL; containing a complete account of all the Cities and Towns in the Southern States. Illustrated with Maps. 1 vol., 12mo. Limp cloth. \$2.

BACON'S DESCRIPTIVE HAND-BOOK OF AMERICA, containing valuable Historical, Geographical, and Statistical information. With colored Maps. London Edition. 12mo. \$3 25.

Beside these, which we can send by post, there are Railway Guides, which may be obtained at all the stations. What we really need is a series of handy guide-books for the East, the West, the North, and the South. Who will get them up?

ADVICE AND LONG LIFE

WANTED.—For the stamps inclosed will you please send two of your illustrated catalogues; also, some good advice that would insure a long, happy, and healthful life in this world and an eternal life in the world to come? I am only fifteen, and from the surrounding circumstances am apt to think impure thoughts. I sometimes feel so wicked that I feel almost like giving up in despair; then, at other times, I am encouraged. May God help you to give me good advice from your abundant knowledge and experience.

Have the parents of this youth performed their whole duty to him in the way of fitting him to resist the temptations that beset all boys and girls? If so, would he come to us with appeals for help? Alas! we fear too many parents permit their children to grow up in such total ignorance that they fall an easy prey to passion, appetite, avarice, the quacks, and other "besetting sins." Let them consider their duty and do it. We wrote the young man after inferring what were his needs.

MAY WOMEN TALK IN PUBLIC?

PUBLIC.—Do you think it proper for a young woman to speak publicly in evening meetings? I am tremblingly trusting in my heavenly Father; I attend the Congregationalist Church, and I have a few times stood up for Jesus; and since some of the world's people have told me that they do not think it is proper, and I do think that some professed Christians have that opinion, I should be very happy to hear your opinion. I know of no greater cross than to speak in public, but I do think it strengthens me. It makes me feel, in my heart, nearer to God.

Ans. This is simply a matter of church etiquette. In Methodist, Baptist, and Quaker meetings, women speak when the spirit moves them to do so. But it is not customary in Catholic, Episcopalian, Presbyterian, and some other bodies. Each must judge as to what is best or right in the matter, and act in accordance with the will of Him to whom all must give account. We think in this case you are right.

Publisher's Department.

730—OUR POST-OFFICE BOX
—730.—In future it will be safer for us, and more convenient for the postmaster here, if correspondents will add our Post-Office Box to our address, thus:

S. R. WELLS,
P. O. Box 730,
389 Broadway, New York.

By observing this request it will expedite the delivery of letters and prevent accidents. If "private," say so.

We have occupied the same box many years, and hope to occupy it many more.

It is curious to notice the numerous errors committed by our fifty thousand correspondents, who write from all over the world. For example, letters continue to reach us addressed to Fowler & Wells, Phrenologists, Clinton Hall, 131 Nassau Street, New York, where we held forth twenty years ago; Fowler & Wells, Phrenologists, at 308 Broadway, New York, which we vacated several years ago. Others address us, Wells & Fowler, Phrenologists, New York; S. R. Fowler & Wells, PHRENOLOGY JOURNAL; L. S. Wells & Fowler, PHRENOLOGICAL JOURNAL Office, New York; Wells & Co., New York, Phrenology Publishers, Broadway, U. S. A.; Office Phrenological Cabinet, New York; PHRENOLOGICAL JOURNAL Office, New York; Publishers of "New Phrenology," New York; and so to an indefinite extent in variation. But if the words Phrenology or Physiognomy appear on the envelope, there is little doubt as to where the letter is to be sent. We are addressed in this way to Boston, Philadelphia, Chicago, London, Liverpool, etc., and after weeks' and months' delay the letters are finally sent to 389 Broadway, New York. One letter, posted for us at Mexico, Oswego County, N. Y., was first sent to Mexico, thence to China, India, England, and, after nearly two years' pilgrimage around the world, was safely delivered to us in New York, with its inclosure, subscription money for the PHRENOLOGICAL JOURNAL. This error was caused by the post-office clerk putting the letter into the wrong bag.

Box 730, New York, will, we trust, catch all letters intended for this office.

"WILL IT PAY?"—There are several persons engaged in selling "New Physiognomy"—\$5—who do nothing else. Others sell the "Hand Book—How to Write, How to Talk, How to Behave, and How to do Business"—\$2 25—exclusively. Still others confine their efforts to our People's Pictorial Edition of "Esop's Fables"—\$1—and its companion volume, Pope's "Essay on Man"—\$1. Others take a general assortment, comprising all the books in our list, and sell without restriction as to territory. Each of these do well. One can do better with one thing; another, with something different, according to taste or inclination.

"New Physiognomy" is regarded by many as a *luxury*, and is prized according-

ly, while the Hand Book is looked upon as a *necessity*. And they go well together. But all our publications have "utility" for their motto, hence their popularity among the self-relying and self-helpful people. Encouragement is a prominent characteristic in our books, and the reader is "fired up" with energy to do something in the world worthy of himself.

Yes, it will "pay" to sell good books—it will pay the seller, and the buyer. Hence we advise men and women, not now profitably occupied, to try this new work. Teachers and students, during vacations, may make a good thing of it. The harvest will soon be over, and "something to do" will be sought by many. This is an open, an available field to the active, enterprising, reformatory men and women. "It will pay."

"ON TRIAL" SHORT TERM CLUBS.—We are now giving ten copies of the JOURNAL six months for \$10. The object is to permit the friends of the cause to place the JOURNAL in the hands of many who have not hitherto been readers. Volume 48 commenced with the July number, and terminates with the December number, running half a year, in clubs of ten, at only a dollar each! Quite a number of short term, "trial" clubs are coming in. It is believed that these trial subscribers, when once interested in the study, will continue it. Friends may greatly advance the good work by getting their neighbors, shop-mates, or fellow-students to join them even in a half year's club.

BACK NUMBERS.—To those who wish, we can furnish a few complete sets of this JOURNAL, in numbers, from January to July—Volume 47—at the regular subscription price, viz., \$1 50. New subscribers who care to have the JOURNAL nicely bound in yearly volumes will be glad to avail themselves of this opportunity.

"NEWSMEN HAVE IT"—Not.—Several correspondents write us complaining that they can not procure the JOURNAL from newsmen; that the answer is of late, "All sold!" Now this is not our fault—nor is the newsmen "to blame." He orders as many as he expects to sell. When the demand increases—sensibly—he orders more. If it falls off, he "cuts down his orders. He can not afford to carry a quantity of "dead stock." We may suggest a remedy, namely, that the "would-be constant reader" subscribe. He may do it direct to this office, or he may request the newsmen to serve him regularly. In either case there would be no disappointment.

THE PRESIDENTIAL CANDIDATES.—It was our wish to present all the candidates, with the platforms of each, in this month's number. But we were obliged to go to press before the Democratic Convention had been held. We shall try to serve them all up in the September number, with portraits and succinct sketches, phrenological and biographical.

We are not *partisan*, further than great principles require; nor do we open this journal to mere party politics. We believe in freedom and self-government; in liberty for all; education for all; equal rights for all. But our readers know this already. Let us wait and take a look at the candidates—those who would be our servants, or our rulers, and choose whom we'll have.

ANOTHER PORTRAIT OF GRANT.—The new lithograph of General Grant, published by Messrs. Fabronius, Gurney & Son, is an admirable monochrome

portrait. The pose is easy, and the expression much softer than most of the many lithographs now on sale of the popular candidate for the Presidency. Mr. Fabronius' rendering on the stone is faithful to the fine imperial photograph from which he copied. The portrait is for sale at this office. Price, \$2.

General Items.

GOOD PUMPS.—We do not now refer to those human "pumps" who exhaust their patience by their pertinacious and inexhaustible mental suction—who ask more questions in a moment than you can answer in an hour—who are human "vampires," and as difficult to shake off as a "horse leech;" but we refer to the excellent water pump—one of which we have in use—and will easily throw water four stories high by a little hand-work, which gives one the best bodily exercise, and is double acting; said to be anti-freezing, and is manufactured by Messrs. J. D. West & Co., of this city. It is claimed to be one of the best in use. The makers have received medals and testimonials from various sources.

THE MISSOURI MAMMOTH BLACKBERRY.—Messrs. Thompson & Myers, of Brookfield, Linn County, Mo., announce the largest variety yet produced. They sell plants at \$40 a hundred. They send descriptive circulars on receipt of stamp.

A COLLEGE FOR BOTH SEXES.—In our advertising department will be found a brief circular of Urbana (Ohio) University—an institution in which a liberal education may be obtained by American youth of both sexes. A regular college course can there be pursued by young ladies as well as by young gentlemen, with equal advantages as to graduating. The standard of scholarship aimed at is high and meritorious.

GIVE GOOD BOOKS TO BAD MEN.—A worthy New Yorker, on looking into one of our State prisons, found the inmates in a worse condition than is generally supposed. Besides being overworked—earning for the State several thousands of dollars more than their entire expenses—they are kept on poor food, are poorly clad, and not properly bathed, aired, or instructed. Indeed, this visitor was most profoundly impressed that the poor criminals were being fitted for a life lower than ever by the treatment received while in prison. He found the prisoners almost destitute of good books, with mind and morals sluggish and low. Little or no attention is given to their education, and in years of confinement they lose what little they had previously acquired. We will not now specify the particular prison referred to, but shall venture to call the attention of the proper authorities to this inexcusable, nay, this wicked neglect.

To correct the evil, in at least one respect, this generous citizen gave an order at once for the worth of one hundred and fifty dollars in good books, to be carefully selected for the use of the prison-bound unfortunates—a donation, we might say, to the State, which we filed.

One object of imprisonment is *correction*, and "correction" implies improvement. It is possible to work, whip, and punish one's life out of him when we have him within high walls and iron grates. But is it humane? Is it wise? Is it Christian? Would it not be every way better

to put the prisoner in the way of penitence and pardon? If he be so changed, so educated, and so improved as to become self-regulating and self-supporting, we have made a citizen instead of developing a demon. In short, is it not the duty of the more fortunate to render such aid as they may to improve the criminal? Let us see to it that our prisons, asylums, hospitals, and reformatories are made what they profess to be—schools and training academies instead of places of methodical torture.

COPY YOUR LETTERS.—In all commercial houses large and expensive copying presses are used. Indeed, they are considered indispensable. But many persons not so situated that they can have the use of such a "press," may, nevertheless, wish to retain copies of their MS., and yet not be able to afford time to write out a duplicate copy. For the use of this class, and for those who are on the wing, traveling much of the time, a most convenient invention has been made for the purpose. It is called *Hoe's Patent Portable India Rubber Copying Press*, and it is advertised on one of the margins of the JOURNAL cover. We have seen the work it performs, and believe it will prove a real convenience to those using it.

SOMETHING SWEET.—This term—sweet—is often applied to flowers, fruits, babies, kisses, sweethearts, and so forth. We use the term according to its proper meaning when we apply it to the article sent us by our friend and patron, Mr. H. E. Simon, of Bloom, Ohio. It came in a nice little box, all the way by express, and it was real, *sweet* MAPLE SUGAR. Wife and the girls speak well of that young man, and one of them wonders if he is married!

STRAWBERRIES AND CREAM.—We had our annual present in the joyous month of June, namely, a basket of the most beautiful, and, at the same time, the most delicious, strawberries we have ever seen, from the grounds of our excellent friend, Mr. George H. Hite, of Morrisania, Westchester Co., New York.

Mr. Hite grows several varieties of the choicest sorts, seedlings of his own originating. The variety before us has been tested for four years. It is a pistillate, and the flavor much like that of the celebrated Hovey. It is large and very prolific. It is also a very hardy plant. Mr. H. has sold a few thousand plants during the past year.

We are promised from this artist-fruit-culturist an essay on the strawberry, either for publication in the PHRENOLOGICAL JOURNAL, or in pamphlet form. That Mr. H. understands the production of fruits and plants in their highest degree of perfection, we think can be made evident to all who examine his theory and observe his practice. But more on this subject at another time. Our month waters as we recall the luxury of the delicious and healthful fruit.

C. O. D. COLLECT ON DELIVERY.—The plan usually adopted by our book agents, who buy to sell again, is to remit a P. O. order or a bank check, say 25 per cent. of the amount in advance, and then, on receipt of the books, pay the balance to the express company, taking their receipt for the same. By this mode both the agent and the principal are sure of immediate attention and no risks. We now send out packages every day by all the express companies connecting with New York.

MR. F. T. PERRIS, merchant, of the house of George Cronyn & Co., of Salt Lake City, places us under obligations for a very beautiful specimen of petrified wood—pine—out of a tree more than one hundred feet long, obtained in the celebrated Weber Valley, in Utah Territory. The petrification is one of the most perfect specimens we have ever seen, and will form a part of our large collection of curiosities.

THE NEW YORK MEDICAL COLLEGE FOR WOMEN.—We congratulate the lady managers on their recent great achievements. It shows what well-directed efforts, combined with pluck and perseverance, can do. They have recently purchased a property in the heart of this city worth *forty thousand dollars*, which is to be the local habitation of the College. Till now it has been a portable concern, working in hired halls without any fixed home of its own. In future it will lift up its dignified head and stand erect and on a level with the best State institutions.

The splendid mansion on the corner of Twelfth Street and Second Avenue, built for Mr. McIlvaine, is now the settled headquarters of our lady students—the aspiring followers of "Esculapius." Here learned professors will teach Anatomy, Physiology, Chemistry, the Theory and Practice of Medicine, and all that is taught in the best medical schools. The next term commences Monday, Nov. 2d, and continues twenty weeks.

Announcements are now ready, giving full particulars as to time, terms, and conditions. These announcements will be freely sent to all who wish to participate as students, donors, or helpers, on receipt of two or three stamps with which to prepay postage. For these and for other information address the Dean, any of the Lady Managers, or Mrs. Charlotte F. Wells, Secretary, Box 730, New York.

It is now confidently believed that the good work will steadily progress; that donations from our liberal-hearted citizens will permanently endow chairs and professorships, furnish all the necessary apparatus for the laboratories, etc., to place the College at once on a perfectly independent footing. Here is a chance for our rich men to place their name on the roll of honor and philanthropy.

THE STIMPSON STEEL PEN is enjoying a great run just now; having been very extensively advertised, "everybody" wants to try it. That it has real merits we do believe, and that it will secure for itself general adoption we have no doubt. With the fountain holder, it serves to economize time, and prevents those breaks in mental action caused by frequent "dipping." Several sorts are made of different degrees of fineness, and every one's hand may therefore be suited.

MUSIC TEACHING.—The time was when instrumental music was regarded as a special accomplishment. There were comparatively few who mastered it. But the time now is when a knowledge of music is, or should be, a part of every one's education. We refer to the younger portion of society, who have all the facilities within easy reach. The piano, melodeon, organ, or harp is a part of the household furniture of all who can afford one or the other, and vocal music is now everywhere taught, in every church, every Sunday-school, and—it should be—in every common school. Indeed, music in one or more of its various forms enters into every private or public entertainment; and what is there in the whole realm of mental expression more

universally acceptable than this? We grant there is a difference in the ability to learn, as well as in the ability to perform. But all who are not imbecile, or who have not some constitutional infirmity, may learn music as well as they can learn to read or to talk. One will surpass another in skill as in other things; but *all* well-organized girls and boys *may* learn and *should* learn music. One of our most capable and successful private teachers is Mrs. Mary Marcus, 745 Eighth Avenue, New York. This lady is a thorough classical scholar, and *earns* the reputation she enjoys.

HOMEOPATHIC MUTUAL LIFE INSURANCE COMPANY, 231 Broadway, New York. D. D. T. Marshall, President; James Cushing, Jr., Vice-President; Eliza Wright, Consulting Actuary; Edward A. Stansbury, Secretary; A. Halsey Plummer, Assistant Secretary; Stewart L. Woodford, Counsel; A. Cooke Hull, M.D., Medical Director; E. M. Kellogg, M.D., J. W. Mitchell, M.D., Medical Examiners.

Is it a fact that those who are treated homeopathically can be safely insured at a lower rate than those treated by other methods?

This is what the company claim. If any of our readers are curious to look into the matter, they may obtain full particulars by addressing J. W. Mitchell, M.D., as above, who will send the printed documents.

THE WALTER GRAPE is now being offered to the public for the first time. Its merits have been thoroughly tested, and we believe it has been proved to be one of the best varieties. It is a cross with the Delaware and Diana. Both of these are native, and hardy as well as good varieties; and the **WALTER** is claimed to be very much superior to either of them. In size and flavor it is said to resemble the Catawba, and ripen earlier than the Hartford Prolific, which makes it now the earliest good variety known. It contains sugar enough to preserve it, and will retain in any dry situation indoors or on the vines. It has not been known to mildew, or the fruit to rot. It was originated by Mr. Caywood, of the firm of Ferris & Caywood, Poughkeepsie, N. Y., with whom we have now made arrangements for offering the **Walter** as premium to clubs for the **PHRENOLOGICAL JOURNAL**. We offer their different numbers at the following rates:

For 5 new subscribers, at \$3 each, one \$5 **Walter** grapevine.

For 10 new subscribers, at \$3 each, one \$10, one \$5, and one \$3 vine.

For 20 new subscribers, at \$3 each, one \$10, two \$5, two \$4, and two \$3 vines.

For 25 new subscribers, at \$3 each, two \$10, two \$5, two \$4, and two \$3 vines, or any combination of vines to the same amount.

All packages are put up in a careful manner, and forwarded by express direct from the nurseries, and orders are to be filled from there in the order in which they are received. Those sending clubs at once may hope to receive their vines in time to plant this autumn. Others will be furnished next season. Neighbors and friends, by clubbing together, can have the **JOURNAL**, and at the same time secure the introduction of the **Walter** in their vicinity. A complete description will be found in the **JOURNAL** for October, 1867, or a circular will be sent by mail on receipt of stamps. This offer is very liberal, and we believe that many of our subscribers will be glad to avail themselves of this opportunity.

N. B.—The offer in the July number is withdrawn, and this is substituted. Address this office.

Business.

[Under this head we publish, for a consideration, such matters as rightfully belong to this department. We disclaim responsibility for what may herein appear. Matter will be LEADED, and charged according to the space occupied, at the rate of \$1 a line.]

THE HYGIEAN HOME.—At this establishment all the Water-Cure appliances are given, with the Swedish Movements and Electricity. Send for our circular. Address A. SMITH, M.D., Wernersville, Berks County, Pa.

MRS. E. DE LA VERGNE, M.D., 325 ADELPHI STREET, BROOKLYN.

HYGIENIC CURE, BUFFALO, N. Y.—Compressed Air Baths, Turkish Baths, Electric Baths, and all the appliances of a first-class Cure. Please send for a Circular. Address H. P. BURDICK, M.D., or Mrs. BRYANT BURDICK, M.D., Burdick House, Buffalo, N. Y. tf

INSTITUTE of Practical Civil Engineering, Surveying, and Drawing, at Tolleston, Ind. For Circular, address A. VANDER NAILLEN. 41*

ADVERTISE! ADVERTISE!! The *Carrier Dove*, or Mecklenburg Female College Magazine, is offered to you as an advertising medium. It is a Quarterly Magazine of 48 pages, elegantly printed on fine paper, and issued from Charlotte, N. C., at the low rate of \$1 per annum, in advance.

It goes to the following States of the Union, viz.: Iowa, Connecticut, New York, New Jersey, Pennsylvania, Maryland, Virginia, North Carolina, South Carolina, Georgia, Alabama, Florida, Texas, Tennessee, Kentucky, and Illinois.

It goes into the hands of that very class of persons whom advertisers wish to reach. Its principal circulation is in the Southern States. Rates moderate.

For further information in regard to the Magazine, or in regard to Mecklenburg Female College, send \$1 for one year's subscription to the *Carrier Dove*, or simply correspond with the undersigned, REV. A. G. STACY, 2t, Charlotte, N. C.

DR. JENKINS' HYGIENIC INSTITUTION, Binghamton, affords the best facilities for the treatment of all forms of chronic diseases. A few hygienic boarders can be accommodated. Special treatment given to ladies by Mrs. Jenkins. Address E. S. JENKINS, M.D., or MRS. L. A. JENKINS, M.D., Binghamton, N. Y. tf

SPURZHEIM.—Photographs from Lizar's superb engraving of Spurzheim, from an original drawing by Madame Spurzheim. A magnificent head and face. 4-4 size, \$1; "carte-de-visite" style, 50 cents.

S. R. WELLS, 389 Broadway, New York, or JOHN S. D. BRISTOL, Detroit, Mich.

MUSIC—VOCAL AND INSTRUMENTAL.—The undersigned will instruct individuals or classes by the month or the quarter, on favorable terms, at their own residences. She refers to Rev. Dr. G. J. Geer, of St. Timothy's Church, New York. Address MRS. MARY MARCUS, 745 Eighth Avenue, bet. 51st and 52d streets, New York. A.t.f.

Advertisements.

[Announcements for this or the preceding department must reach the publishers by the 1st of the month preceding the date in which they are intended to appear. Terms for advertising, 50 cents a line, or \$50 a column.]

Chickering & Sons' AMERICAN PIANOS,

GRANDS, SQUARES, AND UPRIGHTS.

Messrs. C. & Sons were awarded at the Paris Exposition the First GRAND PRIZE—the Legion of Honor and a Grand Gold Medal—making sixty-three FIRST PREMIUMS during the past forty-five years.

WAREHOUSES, 5t, 652 BROADWAY.

A Practical Homeopathic TREATISE on the Diseases of Women and Children; intended for Intelligent Heads of Families and Students in Medicine, By HENRY MINTON, M.D. Price, cloth, \$3; sheep, \$4. Sent by mail, post-paid, by S. R. WELLS, 389 Broadway, New York.

Education and Health.

DANVILLE SEMINARY, Danville, Livingston Co., N. Y.

H. R. SANDFORD, A.M., Principal.

Fall Term commences August 24, 1868. By its healthy location, fine buildings, thorough course of study, and able faculty, this institution offers superior educational advantages.

The Seminary is located within a few rods of Dr. Jaa. C. Jackson's celebrated Water-Cure, "Our Home on the Hillside," the lectures of which students can attend, and thus, while pursuing their studies, acquire a knowledge of the Laws of Health.

Board and Tuition at reasonable rates. Address the Principal.

Architecture and Building.

The Carpenter and Joiner and Element of Hand-Railing. With thirty-two Plates. By Robert Riddell. Just issued. \$1.

WORKS ON TOBACCO, showing its Effects on Body and Mind, by several distinguished authors, with instructions for overcoming the habit. Price, \$1 50.

THE USE OF TOBACCO: its Physical, Intellectual, and Moral Effects on the Human System. By Dr. Alcott. Price, 25 cents. Sent by mail, post-paid, by S. R. WELLS, Publisher, 389 Broadway, New York. Aug., 3t.

"American School Institute," a Reliable Educational Bureau, Founded 1855.

1. To aid all who seek well-qualified teachers.

2. To represent teachers who desire positions.

3. To give parents information of good schools.

4. To sell, rent, and exchange school properties.

J. W. SCHERMERHORN, Actuary.
M. J. YOUNG, Secretary.

14 Bond St., New York.

"THE RIGHT TEACHER FOR THE RIGHT PLACE."

Thirteen years' trial has proved the "AMER. SCHOOL INST." a useful and efficient auxiliary in the educational machinery of our country. Its patrons and friends are among the first educational and business men.

Principals, School Officers, and others, should examine the "Teachers' Bulletin" whenever they want teachers. Those who seek positions should have the "Application Form."

TESTIMONY.

"I know the 'AMER. SCHOOL INST.' to be possessed of the most reliable and extended facilities."—Rev. C. V. SPEAR, *Principal Young Ladies' Institute, Pittsfield, Mass.*
"The benefits of a 'division of labor' are happily conceived and admirably realized in the 'AMER. SCHOOL INST.'"—EDWARD G. TYLER, *Ontario Female Seminary, N. Y.*

Experience has taught me that I may safely rely upon it when I want teachers."

—Rev. J. H. BRACELEY, *Burdentown Female College, New Jersey.*

"I commend it to the entire confidence of all."—Rev. D. C. VAN NORMAN, LL.D., *New York.*

"The business of the Institute is systematically conducted. The proprietors are liberally educated, and otherwise eminently qualified for their duties."—O. R. WILSON, *Alexander Institute, White Plains, N. Y.*

"Having tried the 'AMER. SCHOOL INST.' I regard it a most desirable medium for supplying our schools and seminaries with the best teachers, and for representing well-qualified teachers who wish employment. All who are seeking teachers will find a wide range from which to select, with an assurance that in stating character and qualifications there is no 'bumbug,' and there can be no mistake. Teachers will find situations for which they may otherwise may seek in vain. The highly respectable character of those who conduct the Institute insure fair dealing, with kind and polite treatment."—Rev. E. B. S. STEARNS, *Principal Albany Female Academy, New York.*

"The most remarkable exponent of what method may accomplish, is that system of educational tactics, as conducted and developed by the 'AMER. SCHOOL INST.' Here is a set of gentlemen who keep posted on the entire educational wants of the country. Every department, high or low, comes within the plan. The apparatus, the literature, the wants and resources of education, are tabulated as in a *Bureau of Educational Statistics.*"

"Mark the value of such knowledge. In a time consideration, what saving! Instead of schools being closed or suffered to decline until the right man turns up, one is provided whose calibre is known. The right man in the right place. The loss of time, misdirection of talent, imposition by unprofessional charity, each in itself no small misfortune to patron or pupil, are happily avoided."—Rev. SAMUEL LOCKWOOD, *Keport, N. J.*

The Masonic Harmonia;

A COLLECTION OF MUSIC,
ORIGINAL AND SELECTED,

For the use of the

MASONIC FRATERNITY.

BY HENRY STEPHEN CUTLER,

Doctor in Music, Director of the Cecilian Choir, etc.

Being the most complete and best adapted for use in Lodges.

Published under the auspices of St. Cecile Lodge, No. 563, city of New York.

Price, \$1. Sent free of postage on receipt of price. Descriptive Catalogues of Masonic Books, Regalia, etc., sent free on application.

MASONIC PUBLISHING AND MANUFACTURING CO.,

432 Broome Street, New York.

The Bartram & Fanton

Elastic Stitch SEWING-MACHINES. For Family and Manufacturing Purposes.

This Machine was awarded First Premium, American Institute. Prize Medal, Paris Exposition. Principal Office and Salesroom, at Madame Demorest's Emporium of Fashions, No. 838 Broadway, New York.

The Manufacturers of the above Machine believe that, after a careful and thorough examination as to the merits and qualifications of the different kinds of Machines adapted to Family Sewing, they have overcome the faults and imperfections of the many now in the market. The BARTRAM & FANTON MACHINES are pronounced by connoisseurs to be better designed, better finished, more accurate and reliable, with a greater capacity for performing all kinds of Family Sewing than any other Machine ever before offered to the public; and are so perfect and simple in their construction that a novice can operate them with perfect success.

An examination of our Machines will convince the most skeptical that we have produced the *ne plus ultra* SEWING-MACHINE.

This Machine uses but one thread, and that directly from the original spool, making a beautiful stitch, and locking the thread firmly at every stitch. The work requires no fastening off, and dispenses with all the extra machinery that is necessary to operate a two-third machine, which is an important desideratum to all operators.

The design of the BARTRAM & FANTON MACHINE is different from all others. It is so constructed that it is impossible for a lady to soil the work or dress while operating it, or become entangled in the machinery. It will sew equally as well upon one kind of fabric as another, from the finest muslin to the heaviest woolen.

This Machine will make Button-Holes upon thin fabrics, and finish them off complete, which no other machine can accomplish. It has also an attachment for making eyelet-holes.

Each Machine is provided with Castors, and can be readily moved from place to place, yet stand perfectly firm when in use. It will also embroider, tuck, quilt, cord, bind, gather, fell, ruffle, braid, and hem, etc., etc.

Each Machine is provided with a button-hole attachment, gauge, screw-driver, wrench, oil-can, three-quarter doz. needles, etc., and perfect instructions imparted to all purchasers of Machines free of charge. Price, \$60.

Every Machine is warranted for one year.

Each Machine is so constructed that an attachment for Fancy Embroidery and Eyelet-Holes, Button-Holes, etc., will fit it.

Reliable agents in every city and town. Illustrated circulars mailed free on application.

"For Summer Travel and

SUMMER REST."

THE GOSPEL IN THE TREES.

A book of Opinions on Common Things, Illustrative of Religious Experience and Christian Work.

BY ALEXANDER CLARK, A.M.

13mo. 305 pages, beautifully printed on tinted paper, and bound in gilt back and beveled boards. Price, post-paid, \$1.50.

The charms of imagination are enlisted in the service of conscience, and the familiar ideas of the Bible are here clothed with new freshness and power.—*New York Tribune.*

One of the most charming books we have read for many a day, brimful of the choicest fruits of mental and religious culture.—*Pittsburgh Evening Chronicle.*

The sermons all read well, and no single extract will give a fair example of Mr. Clark's power as a writer.—*Philadelphia Inquirer.*

The author is a liberal-minded and large-hearted Methodist minister, and wields a practical pen.—*Advance, Chicago.*

A comely volume, designed to pour evangelical truth through the channels of nature.—*Congregationalist.*

We add this to the list of good books. It was worth making; it is worth using.—*Northwestern Christian Advocate.*

Its external garb is an index to its internal goodness and grace.—*Steubenville (O.) Herald.*

American Artisan and Patent Record.—New Series.

The *American Artisan*, now in the fourth year of its publication, is a Weekly Journal, devoted to fostering the interests of Artisans and Manufacturers, encouraging the genius of Inventors, and protecting the rights of Patentees.

Each number contains numerous original engravings and descriptions of new machinery, etc., both American and Foreign; reliable receipts for use in the field, the workshop, and the household; practical rules for mechanics and advice to farmers; "Mechanical Movements," and other useful lessons for young artisans; the official list of claims of all patents issued weekly from the United States Patent Office; reports of law cases relating to patents, etc.

Each number of the *American Artisan* contains sixteen pages of instructive and interesting reading matter, in which the progress of the arts and sciences is recorded in familiar language. Twenty-six numbers form a handsome half-yearly volume. The columns of the *American Artisan* are rendered attractive by articles from the pens of many talented American writers upon scientific and mechanical subjects.

Terms of subscription: Single copies, by mail, per year, \$2 50 in advance. Single copies, by mail, six months, \$1 25 in advance.

The publishers of the *American Artisan* are also extensively engaged as Solicitors of American and Foreign Patents, and will promptly forward to all who desire it, per mail, gratis, a pamphlet, entitled "Important Information for Inventors and Patentees." Address

BROWN, COOMBS & CO.,
Proprietors of the *American Artisan*,
Mch. 11. No. 189 Broadway, New York.

Watson's Manual of Calisthenics.

contains a complete course of physical exercises, WITHOUT APPARATUS. It has all needful directions, rules, and explanations, with sections on phonetics and respiration. The exercises are arranged in accordance with well-known principles of anatomy, physiology, and hygiene. They have been thoroughly tested, securing the happiest results. These exercises, practiced habitually and energetically, can not fail to yield grace, agility, suppleness, a ready hand, as well as robust health, and power of endurance. Almost any school-room or parlor will suffice for the exercises. For those who use the piano to enliven the exercises, there is music, prepared by the best masters.

The book is richly illustrated; is printed on superior paper, and bound in best style. A reviewer writes: "This is the most elaborate and satisfactory attempt yet made to apply practically to educational purposes the great truths of physiology, relating to physical culture and training. To those in authority it is a positive duty to promote the circulation of this book by every means in their power. All who have the physical welfare of the human race at heart, and understand how powerless the intellect is to contend against the burden of a feeble frame, are equally interested in its teachings, and answerable, each in his own sphere, however small it be, for the consequences of neglecting them." Sent by mail for \$1.
J. W. SCHERMERHORN & CO., Publishers, 14 Bond Street, New York. 2t.

Hall's Great Geological Chart.

Size 6 ft. 6 in. by 5 ft., finely engraved and colored, exhibits the order of successive strata of rocks and the characteristic fossils which have given the key to this arrangement. It gives the appearance of a section were made from the surface toward the center of the earth, exposing the edges of the different layers. It is, in fact, such representation as may be seen in the banks of many rivers, as the Niagara, or in high rocky cliffs of lake or ocean shores, only it is much more extended.

This beautiful Chart was prepared by Professor Hall, that it might render a study so delightful in itself, and so practically useful, more extensively introduced, and more easily understood.

Only a limited number were produced from the lithographic stones. The subscribers have for sale a few of them, fresh and perfect.

Price, Mounted on Cloth and Rollers, \$18; wholesale price to Teachers, \$12. Key to Hall's Geological Chart, \$1.
J. W. SCHERMERHORN & CO., 14 Bond Street, New York. July, 2t.

Doty's Washing Machine, lately much improved—and the new Universal Clothes Wringer.

Improved with *Rowell's Patent Double Cog-wheels*, and the *Patent Stop*, are now unquestionably far superior to any apparatus for washing clothes ever invented, and will save their cost twice a year, by saving labor and clothes.

Those who have used them give testimony as follows:

"We like our machine much; could not be persuaded to do without it, and with the aid of Doty, we feel that we are masters of the position."—*Rev. Bishop Scott, M. E. Church.*

"It is worth one dollar a week in my family."—*N. Y. Tribune.*

"In the laundry of my house there is a perpetual thanksgiving on Mondays for the invention of your excellent wringer."—*Rev. Theodore L. Cuyler.*

"Every week has given it a stronger hold upon the affections of the inmates of the laundry."—*New York Observer.*

"I heartily commend it to economists of time, money, and contentment."—*Rev. Dr. Bellows.*

"They save three-fourths of the labor and time, and pay for themselves, both in money and contentment."—*New Orleans Picayune.*

"Friend Doty—Your last improvement of your Washing Machine is a complete success. I assure you 'our Machine,' after a year's use, is thought more of to-day than ever, and would not be parted with under any circumstances."—*Solon Robinson.*

PRICES.

Send the retail price, Washer, \$14, extra Wringer, \$9, and we will forward either or both machines, free of freight, to places where no one is selling; and so sure are we they will be liked, that we agree to refund the money if any one wishes to return the machines free of freight, after a month's trial according to directions.

Cauvassers with exclusive right of sale make money fast selling them.

Sold by dealers generally, to whom liberal discounts are made.

Book and Job Printer, and Stereotyper, No. 20 North William Street, New York, announces to his friends and the public that his establishment is replete with Presses, Type, and material for the rapid production of every description of printing.

Cheapest Bookstore in the

WORLD.—New Catalogue, No. 18, free. Send a stamp. 100,000 Old and New Books on hand. Immense prices paid for Old Books. LEGGATT BROTHERS,
113 Nassau Street, New York.

Good Books by Mail.—Any Book, Magazine, or Newspaper, no matter where or by whom published, may be ordered at Publisher's prices, from S. R. WELLS, 389 Broadway, New York

WANTED—AGENTS—

\$75 to \$300 per month, everywhere, male and female, to introduce the GENUINE IMPROVED COMMON SENSE FAMILY SEWING MACHINE. This Machine will stitch, hem, fell, tuck, quilt, cord, bind, braid, and embroider in a most superior manner. Price, only \$18. Fully warranted for five years.

We will pay \$1000 for any machine that will sew a stronger, more beautiful, or more elastic seam than ours. It makes the "Elastic Lock Stitch." Every second stitch can be cut, and still the cloth can not be pulled apart without tearing it. We pay Agents from \$75 to \$300 per month and expenses, or a commission from which twice that amount can be made.—Address SECOMB & CO., PITTSBURGH, PA., or BOSTON, MASS.

CAUTION.—Do not be imposed upon by other parties palming off worthless cast-iron machines, under the same name or otherwise. Ours is the only genuine and really practical cheap machine manufactured.

THE VERY HIGHEST PRIZE.

Was conferred on the Representative of the

GROVER & BAKER

SEWING MACHINES

At the EXPOSITION UNIVERSELLE, PARIS, 1867.

ESTABLISHED 1861.

THE GREAT AMERICAN TEA COMPANY

RECEIVE THEIR TEAS BY THE CARGO

FROM THE BEST TEA DISTRICTS OF

CHINA AND JAPAN,

AND SELL THEM IN QUANTITIES TO SUIT CUSTOMERS

AT CARGO PRICES.

The Company have selected the following kinds from their stock, which they recommend to meet the wants of clubs. They are sold at cargo prices, the same as the Company sell them in New York, as the list of prices will show.

PRICE LIST OF TEAS.

OOLONG (Black), 70c., 80c., 90c., best \$1 per lb.
MIXED (Green and Black), 70c., 80c., 90c., best \$1 per lb.
ENGLISH BREAKFAST (Black), 80c., 90c., \$1, \$1 10, best \$1 20 per lb.
IMPERIAL (Green), 80c., 90c., \$1, \$1 10, best \$1 25 per lb.
YOUNG HYSON (Green), 80c., 90c., \$1, \$1 10, best \$1 25 per lb.
UNCOLORED JAPAN) 90c., \$1, \$1 10, best \$1 25 per lb.
GUNPOWDER (Green), \$1 25, best \$1 50 per lb.

COFFEE ROASTED AND GROUND DAILY.

GROUND COFFEE, 20c., 25c., 30c., 35c., best 40c. per lb. Hotels, Saloons, Boarding-house keepers, and Families who use large quantities of Coffee, can economize in that article by using our FRENCH BREAKFAST AND DINNER COFFEE, which we sell at the low price of 30c. per pound, and warrant to give perfect satisfaction. ROASTED (Unground), 30c., 35c., best 40c. per lb. GREEN (Unroasted), 25c., 30c., 35c., best 35c. per lb.

Parties sending club or other orders for less than \$30, had better send a Post-office draft or money with their orders, to save the expense of collections by Express, but larger orders we will forward by express, to "collect on delivery."

Hereafter we will send a complimentary package to the party getting up the club. Our profits are small, but we will be as liberal as we can afford. We send no complimentary packages for clubs of less than \$30.

Parties getting their Teas of us may confidently rely upon getting them pure and fresh, as they come direct from the Custom-House stores to our warehouses.

We warrant all the goods we sell to give entire satisfaction. If they are not satisfactory, they can be returned, at our expense, within thirty days, and have the money refunded.

N. B.—Inhabitants of villages and towns where a large number reside, by *clubbing* together, can reduce the cost of their Teas and Coffee about one-third (besides the Express charges), by sending directly to "The Great American Tea Company."

BEWARE of all concerns that advertise themselves as branches of our Establishment, or copy our name either wholly or in part, as they are *bogus* or *imitations*. We have no branches, and do not, in any case, authorize the use of our name.

POST-OFFICE orders and drafts made payable to the order of "The Great American Tea Company." Direct letters and orders (as below, no more, no less).

GREAT AMERICAN TEA COMPANY,

Nos. 31 and 33 Vesey Street, New York.

Post Office Box 5,643, New York City.

Electro Vital—Dr. Jerome

KIMMER'S Highest Premium Electro-Medical Apparatus, warranted greater magnetic power of any called magnetic.

The patent labels of the United States, England, and France are on the machine itself, as the law requires for all genuine patented districts.

"The best yet devised in any country for the treatment of disease."—Dr. Hammond, late Surgeon-General U. S. A.

Caution.—The latest improved bears the patent labels of 1860 and 1866.

Address DR. J. KIDDER, 478 Broadway, New York.

Our Gymnastic Apparatus

is made of well-seasoned wood, varnished and polished. Dumb-bells and Indian Clubs are made of maple, beech, or birch; Wands of white ash; Hand-rings of cherry, birch, or mahogany.

There are four sizes of Dumb-bells—Nos. 1 and 2 are intended for boys and girls; No. 3 for women and youth; No. 4 for men. Price, per pair, of Nos. 1 and 2, 50 cents; of Nos. 3 and 4, 75 cents.

Two sizes of Hand-rings—No. 1 is for boys and girls; No. 2 for men and women. Per pair, 75 cents.

There are eight sizes of Indian Clubs—four of long clubs, and four of short ones. Nos. 1 and 2 are for women and youth; Nos. 3 and 4 for men. Price of Clubs, per pair, \$1 75 to \$3.

The Wand is seven-eighths inch in diameter. Price 30 cents; with metallic balls, 75 cents.

GOING AND GROWING.

MOTION is the first principle of life; stagnation, the prime element of death, moral, mental, and physical. The veins, the nerves, the tissues of the human body, are instinct with animation, every function performing its part properly when in perfect health. To be alive is to be in motion. Only the dead tree gives no response to the quickening influences of returning spring; only the dead limb, the useless appendage of the body, refuses to perform its required office.

But it is not living, simply, to be alive; there must be visible growth, an effort to attain to the full stature of a man; and this is not to be accomplished by standing still. It is through intercourse with each other that we obtain a knowledge of human nature, and not by close application to books; and practical Christianity is the surest evidence of a "growth in grace."

Going in the right way, a man becomes daily stronger, better, more like his Master. The mind also is enlarged and improved by travel. Take a man out of his study, and start him off where his books are the "running brooks," and if there is anything in him he will

FIG. 1.

develop more in one month, and feel himself altogether stronger, than if he had digested all the books that were published during that time. Let a farmer leave his agricultural pursuits for awhile, and mingle in scenes outside his own territorial possessions, and he will begin growing at a rate very far in advance of his corn or potatoes, and in a different way from onions or cabbages. His neighbor may be just as good a farmer, his corn and potatoes and grain may yield as large a profit, but if he does not move out of his place, he grows only like a vegetable, and is a poor, tasteless affair at the best.

We have often spoken together of the excellent qualities of a mutual friend, and remarked it was a pity he couldn't leave his business long enough to travel; it would be such an advantage to him. The opportunity came, and although he only went as far as Nebraska, and was absent but a fortnight, the effect upon him was similar to that produced by the Turkish bath. He had used his eyes; studied the people; viewed the country; and shaken the dust off his garments, so that he came out altogether a new man.

It so naturally follows, that the more we

know, the more we want to know, that you have only to give some people a start in life, and they are bound to keep on going. Planets that give out any luster are the planets that are in motion; and it is a pleasant thought that

FIG. 2.

even in a mundane sphere it is possible to attain to a splendor of growth that shall illuminate the pathway of those who shall come after us.

One day in winter a little fellow started from the corner of the street with a small-

FIG. 3.

sized snowball; he rolled it over and over, and before he got to the next corner it was more than he could manage, and he had to leave it. I am sure he learned a valuable lesson just there, that will be in his mind long after that mammoth snowball has melted away.

FIG. 4.

There's nothing like travel for taking the "warp" out of a man, and letting light into dark places; so if you are depressed in mind or body, sick of yourself and everybody else, "stand not upon the order of your going, but go at once."

VIRGINIA VARLEY.

HATS À LA MODE.

HERE are specimens of ladies' hats according to the latest prescriptions of the *mode*. Verily, not one of them is serviceable to the maiden who would sport amid rural scenes in the laughing summer sunshine and avoid that "horrid" disfigurement, *tan*. We are, however, inclined to think that a little application of sun-ray to the pallid cheeks of our city belles would be a vast improvement. When on the beach, or in the meadow, girls, do not fear to face the sun in all his glory. Leave your parasols at home; get healthy, brown faces and peach-tinted cheeks; then you will have no need of Madame —'s cosmetics and beautifiers; you will possess the genuine and inestimable "bloom of youth." If you must wear these little restricted patches of hats, do as we suggest. We have less objection to these little hats than to the thoughtless little heads they are intended to cover. It is not the *natural* hair that is in the way of a phrenological examination, but the great heaps of artificial waving piled on simply to make a show, that we object to. When, O when will ladies dress their hair in a neat, clean, and healthful manner? But let us see what our neighbor, Mr. Terry, 409 Broadway, who brings out the new styles, has to say for them.

LA BELLE HELENE—Fig. 1.—Fine white Leghorn, low, sloping to the back. Trimmed with white ribbon twist band, and a nestling of oak-leaves and acorns. The brim is peculiar, being longer in front, sloping down fully over the forehead.

THE NILLSON—Fig. 2.—Is of white English Milan, the

FIG. 5.

brim rolled and set close to the crown near the top, on the left side, the crown tapering very much, and small, flat top. The trimmings of white velvet, roll band and sprigs of daisies. White ribbon bow and streamers.

THE WHITE FAWN—Fig. 3.—Is of drab dunstable, taper crown, and long curled brim, faced with satin of same shade as hat. A gathering of raspberries vining around the crown completes the trimming.

THE UNION SQUARE HAT—Fig. 4.—Of English dunstable, brim faced with silk. Silk band and streamers. This hat is the gem of the season. It is in white drab and brown straw, and trimmed in the different colors according.

THE CAPE MAY—Fig. 5.—A straw of China pearl with an apology of a crown, and broad, sloping brim, trimmed with black velvet and streamers. Daisies are appointed in the squares.

Now, Mr. Terry, please let us have something seemly and sensible for the masculine gender. You fix up the hats, and we will fix up the heads!

THE PHRENOLOGICAL JOURNAL AND LIFE ILLUSTRATED.

Is devoted to *The Sciences of Man*, in all its branches, including PHRENOLOGY, PHYSIOLOGY, PHYSIOGNOMY, PSYCHOLOGY, ETHNOLOGY, SOCIOLOGY, etc. It furnishes a guide in choosing a Pursuit, and in judging of the dispositions of those around us, by all the known external "Signs of Character."

Published monthly, \$3 a year in advance. Clubs of ten or more, \$2 each. Sample numbers, 30 cents. Now is the time to subscribe. A new volume began with the July number. Supplied by Booksellers and News-men everywhere.

Man, know thyself. All wisdom centers there;
To none man seems ignoble, but to man.—Young.

ANSON BURLINGAME, THE CHINESE MINISTER PLENIPOTENTIARY.

THE interest displayed in the remarkable mission which this distinguished American has undertaken in behalf of the Chinese Government is universal; and it would therefore be no slight omission did we not present his portrait to our widely disseminated readers.

Mr. Burlingame exhibits temperamentally a combination of the Vital and Mental, a condition which produces much ardor of feeling and unusual sprightliness of mind. He is harmoniously developed in body, the recuperative organs furnishing abundant material for the use of his mechanical and nervous forces, so

PORTRAIT OF ANSON BURLINGAME.

that his different powers work with vigor, efficiency, and but little friction.

His social feelings are strong, rendering him genial and friendly, affectionate

and accommodating. The head rises high in the moral region, showing considerable interest in truth, justice, and religion, while at the same time he evidently possesses much pride and staunchness of character, which serve to strengthen and ennoble his manhood.

He has a sharp and practical intellect; readily appreciates the point and utility of whatever is proposed to his judgment, and quickly decides on the merits or demerits of questions. He possesses considerable executive ability by cerebral organization, which his sprightly temperament and positive intellect stimulate to active and prompt demonstration. He is industrious naturally, and at the same time ambitious to accomplish much more than what lies within the province of mediocrity. A good development of Hope inspires much enthusiasm in his nature, and renders him sanguine in expectation and influential with others.

Without the abstract philosophical profundity of the mere theorist, he possesses the practical energy and readiness of the utilitarian, and is the man to appreciate the real character of men and things, and adapt substantial means to the attainment of valuable ends.

He should, in fine, be known for his ambition, independence, resolution, promptness, cheerfulness, industry, warmth of social feeling, practical ability, manliness, and integrity.

BIOGRAPHY.

Hon. Anson Burlingame, Minister Plenipotentiary from China, was born at New Berlin, New York, November 14, 1822. While a mere child his father moved to the "Western Reserve," Ohio, and not long afterward to the (then) Territory of Michigan. At the Detroit Academy, and at the branch University of Michigan established in Detroit, young Burlingame found good opportunities for intellectual culture. After completing the collegiate course he entered the Law-school of Harvard, then enriched by the presence and instruction of Judge Story. Having received the Baccalaureate there, he opened an office in Boston in company with Mr. Briggs, and commenced the practice of law.

From the first he displayed much interest in politics; and soon after he had attached himself to the Boston bar, he was sent to the Massachusetts Senate, and subsequently was elected a member of the State Constitutional Convention by the town of Northboro'.

In 1853, being but thirty-one years old, he was elected to represent the district comprising Boston and Cambridge in Congress, and served in that capacity six years. He early acquired

prominence for oratorical ability, and, though one of the youngest members, exercised no little influence in the House of Representatives. He did not speak often; but when he did rise to address the chair, his language was emphatic and directly to the point. Probably his most memorable speech was that made on the occasion of the cowardly assault on Charles Sumner by Preston S. Brooks. Smarting under the wrongs of Massachusetts, he threw down the glove to the pro-slavery men of the South, and declared himself ready to defend freedom of speech and the State he represented on any field they might be assailed. Brooks sent a challenge. Mr. Burlingame accepted, and named a rifle. His father, a pioneer of the Daniel Boone type, though a stern old Puritan, had taught his son to be a "dead shot." The "fire-eater" Brooks was probably aware of this unpleasant fact, and failed to respond.

During the exciting political campaigns of 1856 to 1860 he canvassed the whole country, speaking in almost every State, and addressed many literary societies on the great topics of the day. Mr. Lincoln, shortly after his inaugural, tendered him the mission to Austria. Austria refused to receive him, because he was instrumental in raising the mission to Sardinia from the second to the first class, thus recognizing that great idea of Count Cavour's, "the unification of Italy." This act of Austria might have been questioned; but as the United States had a war at home to settle, it was thought better to transfer Mr. B. to China, and attend to Austria at a more convenient time.

Mr. Burlingame's career as Minister to China is well known. With Sir Frederick Bruce, Mr. Berthene, now at Washington, Mr. Balzerzech, the former, and Mr. Vlangally, the present Russian Minister, he laid the foundations of the "co-operative policy" now adopted by the chief Treaty Powers, and sustained by their present representatives at Peking. This policy substitutes fair diplomatic action for the old doctrine of force, guarantees the autonomy of China, and proposes co-operation on all material matters in that empire. He made the draft of this co-operative policy, which received the assent of his colleagues as an authoritative history and exposition of it. He drew up an elaborate paper giving a construction of the different treaties upon a great number of hitherto doubtful points. This received the approval of his colleagues.

He was conspicuous for his opposition to the "Concession Doctrine," under which it was proposed by different civilized powers to take concessions of land at the Treaty ports, and which would have led to the disruption of China. Interesting himself in the development of the resources of the Chinese empire, Mr. Burlingame prevailed upon that Government to employ an American geologist, who has demonstrated the existence of vast coal deposits in the northern districts of China. He has been instrumental, also, in furthering the cause of education among the Chinese, so that a college has been opened. The first grant of

a submarine telegraph connecting the Treaty ports from Canton to Tien Tsin was made to Mr. Burlingame; and pursuant to his suggestion, "Wheaton's Elements of International Law" have been translated into Chinese at the expense of the Imperial Government, and has become a national text-book.

Mr. Burlingame has contributed much toward aiding mission effort among the "Celestials," where not many years ago no such enterprise found the slightest sympathy, but rather malicious opposition. Stations are now established on the plains of Mongolia, and are doing a good work with encouraging success.

The most important measure, probably, for the advancement of China in the interests of civilization, and that which has brought our fellow-countryman most conspicuously into notice, is the authoritative mission with which he is now invested, to represent the Chinese Government at the courts of all the Treaty Powers. Sir Rutherford Alcock said: "It is the greatest compliment ever paid to any man, and Mr. Burlingame deserves it."

Mr. Burlingame was on the point of visiting the thirteen Treaty ports, and then returning to the United States. Prince Kung had invited him to a farewell banquet, and during the ceremonies said: "Will your Excellency represent us officially as well as non-officially at the courts of the Treaty Powers?" Mr. Burlingame, supposing it was a graceful Chinese compliment, said that he would represent them unofficially as a friend, and the conversation passed into other channels. He was very much surprised when Mr. Brown, the Chinese secretary of the English Legation, called on him a few days after with a formal proposition from the Prince Regent Kung tendering him the mission. Mr. Burlingame, after very serious consideration and grave consultation with his friends, determined to accept it. He instantly communicated all the facts to his colleagues. They very kindly approved and rejoiced at this progressive step taken by China. Prince Kung came in solemn state to the United States Legation and presented the imperial decree, which bears date November 26, 1867, and is written on heavy yellow parchment, wrapped in yellow brocade satin, the imperial color, and encased in a yellow box. He has given him the title of Ambassador, and clothed him with the most ample powers.

The following interesting paragraphs, taken from a New York paper of June 25th last, are well worth a place in our sketch. They serve to show that China, after all, is not the slow and pent-up nation which she has been so long represented to be.

"Fourteen hundred years ago—it is the recorded evidence of written history—the Buddhist priests of China, representing a civilization and religion young enough to be aggressive, and led by missionary zeal, forced their way into our continent through its northwestern gate—Alaska—and explored intelligently and with tolerable thoroughness the Pacific slope.

"This is history, although Mr. Sumner has not embodied it in his exhaustive oration. Professor Carl Neuman, of Munich, whose name accredits all his statements, while in China, where he spent many years in a study of Chinese antiquities and bibliography, having collected, perhaps, the best China library extant, out of that kingdom, found in the year-books of the empire this fact well established. Those famous volumes have been preserved in that conservative country with marvelous care and accuracy, second only, perhaps, to that with which they were written. This distinguished scholar from these learned the story of the wonderful travels of the fifth century. Impelled by the laudable desire to carry their faith to the ends of the world, the priests of that day ventured the snows of the north and the stormy passage of the Aleutian isles, gained our western shore, and penetrated into Mexico. This was the country which struck them with especial admiration, and of which they have left flowing and impassioned descriptions. They called it the land of Fusung,—fusung being the Chinese name for the maguey or Mexican aloe, the fecund and wondrous tree which furnished the indolent and sensuous natives with shelter, clothing, and drink.

"This marvelous episode of history has passed out of memory, out of common tradition, and had almost been buried in the *debris* of forgotten records,—the pub. docs. of fourteen centuries ago. The time had not yet come,—the religion of the East was broad enough for all the lands. The heart and conscience of the world had not been awakened to the duties and responsibilities of the common brotherhood of race, and the bravery, and devotion, and learning of the old Buddhist priests went for nothing, or at least served only to point an ephemeral tale.

"The intercourse between continent and continent, which the long years have buried in oblivion, is to-day strangely renewed. The embassy headed by Mr. Burlingame is only another page of the bewildering romance, grander than the wildest flights of Oriental fancy, that crowds our swiftly advancing decade. No one can read the report of the banquet just given to the embassy, and the speeches made, as related yesterday, without emotions of intense intellectual excitement. The whole scene is a grand and impressive tribute to our advancing civilization. It tells of a latent strength in our undeveloped catholicity, which is working out for us a future we could not perhaps now even comprehend. And our country leads the van, "foremost in the files of time," and our radical, aggressive, moving party leads the country. *Gloria tibi, Domine.*"

PHRENOLOGY IN THE SCHOOL-ROOM.—A teacher in Pennsylvania says: "During the last five years the science of Phrenology has been of vast service to me. It has rendered the school-room one of the most pleasant of places, and its inmates among the happiest of persons." Every earnest teacher who tests Phrenology thus, will confirm this testimony.

PHRENO-ANTHROPOLOGY.

THE possible union of the English Phrenological and Ethnological bodies is now quite a prominent subject of discussion both in London and Edinburgh. In Germany, the "modern" ethnologists have pretty generally accepted the doctrines of Phrenology; but still "that citadel of bigoted prejudices," as a German ethnologist styled the English ethnological world, holds out. Dr. Hunt, a member of the London Anthropological Society, at the last session of that body in 1867, chose to attack the phrenological axiom, that "the brain is the organ of the mind," which he designated as a "gigantic assumption, because we know nothing of mind," and added: "We only know of mental phenomena in connection with the nervous system." In the course of his remarks he also made use of the expression of "the bastard science of Phrenology." His absurdities have, however, been pretty severely refuted by other members of the same body. J. W. Jackson, F.A.S.L., the author of several works on ethno-phrenological subjects—a long-tried, and one of the ablest defenders of Phrenology in the United Kingdom—took up the subject, and at the annual social meeting of the Edinburgh Phrenological Society, on the 21st of October, 1867, delivered a lecture from which we extract the following remarks:

"It is one of the most important events in the history of Phrenology, that it had thus been introduced to the notice of the Anthropological Society of London. He trusted to remove the adverse impression which appeared to exist on this subject. He would not, however, derange the order of the remarks he intended to make on the history and prospects of Phrenology. He would proceed to make a few observations on the errors of their predecessors, and on the manner in which their deficiencies may be supplemented, and add to the list of their discoveries by employment of clearer views and renewed energy. First, it was to be admitted that from the absolutely inductive method in which the several organs now constituting the phrenological chart were discovered, by a most careful comparison of character with cranial contours, extending over many hundred individual instances, it was almost unavoidable that Gall and his immediate followers should be organologists, thus exaggerating the importance of particular organs, regarded separately, and proportionately undervaluing the grander outlines of cranial contour. In accordance with the materialistic spirit of the age in which they lived, they assigned too much importance to quantity while disregarding quality. They continually rang changes on the size of organs and volume of brain, while temperament was spoken of rather incidentally, till at length it came to pass that large heads were regarded practically as the test of superior endowment. Cerebral development was also regarded as almost the sole index of character, and consequently they underestimated the significance of the remaining portions of the organism.

They were but imperfectly aware of the importance of respiration, alimentation, and locomotion to effective cerebration, and hence were not sufficiently careful in their observations on the chest, the abdomen, and the limbs and the extremities. They did not sufficiently understand that the organism is a structure integer, and not a mere congeries of isolated organs and independent functions. These errors marked the progress from ignorance to knowledge. After a pause of nearly a quarter of a century, Phrenology has entered upon its second phase of development, and the original founders of the science have lost much of their hold upon the reverence of the men of the present age. It is now necessary to look to the future rather than to the past, so as to prepare for the demands modern science is likely to make upon the professors of Phrenology. It was necessary to cease being only cerebral physiologists. Physiognomy must be studied, a bipolar relation between head and face being admitted, the functional activity of the former being often predicable from the predominant expression of the latter. Temperament should be studied in connection with anatomy and physiology, to learn their reaction on cerebration. The brain must also be studied pathologically as to quantity, quality, and contour. This would supply a new chapter to medical science, supply the physician with data hitherto unknown, for estimating constitutional tendencies. It was desirable to advance from human to comparative Phrenology by a careful comparison of the brains of brutes with their known habits and instincts. This should extend from the simplest radiate, through the mollusca, articulata, and vertebrata, up to man. The vertebrata would probably be found the most interesting, and among these the mammalia, as nearest to man; but the lower divisions should not be neglected, as in the articulata, for instance, we find the ant and the bee, with whom blind instinct assumes the form of a high intelligence. In such an inquiry it is most important to take into consideration the racial diversities of man, and by a careful comparison of these different types to endeavor to ascertain the conditions which determine their respective places in the scale of rational being. In this phrenologists would be aided by a study of those grander divisions of the nearly allied mammalia, termed by Prof. Owen *Lyncephala* (small brain), such as kangaroo; *Lisencephala* (smooth brain), such as sloth; *Gyrencephala* (convoluted brain), such as the ape, lion, dog, elephant—approaching so nearly, yet differing so from the *Archencephala* (governing brain), whereof the only existing example are the various races of men.

"Without insisting on the truth of a suggestion already familiar to some present, that man, as the aerial type of these quadrupedal mammalia, must ultimately produce profoundly correlative orders, species, and genera, whereof existing races and varieties are the germinal beginning; and contemplating the mammal brutes as simply the type of sentient being most nearly allied to man, we may feel sure

that a carefully conducted study of their habits and instincts, as compared with the simplicity or complexity of their cerebral structures, can not fail to throw considerable light on the capabilities of the various races of man. The speaker specially commended for study those animals susceptible of domestication. Their anatomical and physiological specialities should be compared with those of the wild and irreclaimable varieties and species; and do these specialities throw any light on corresponding aptitude and inaptitude in their human correlates? From this it would at once be seen what a vast province of inquiry and weighty investigation lies beyond that narrow bound of recognized organology and temperament which phrenologists have been so contentedly studying for the last quarter of a century; that is, since he, whose labors we have now met to commemorate, had passed the meridian of his powers. And here—were George Combe once more among us—clear-headed, vigorous, expansive, and receptive as he was at five-and-thirty, he would be more dissatisfied than any man in this assembly with the fossilized condition of existing Phrenology, and would apply himself with all the vigor, force, and unwearied assiduity of the olden time to enlarge the boundary of this investigation, and to place it abreast with the wide areas and profound views of cotemporary science. And this brings me to our present position and the duties arising from it, more immediately in relation to the recent discussion on physio-anthropology during the last session of the London Anthropological Society of London. This discussion, as already remarked, inaugurates a new era in the history of Phrenology. It places it once more in the list of living sciences, and as a necessary accompaniment of this new position, our time-honored conclusions are questioned and our traditional ideas are disturbed. Some here are very indignant at the intimation that Phrenology is based on unfounded assumptions, derived from the older systems of mental philosophy which preceded it. But contemplated from the stand-point of positivism, such a conclusion is unavoidable. So viewed, Phrenology is still very largely in its metaphysical stage, and would be defined by a rigid follower of Comte as a philosophy rather than a science. Now, it is not necessary to be angry at this. Positivism, which may be defined as induction in its ultimates, was unknown in the earlier days of Mr. Combe, and was, of course, never dreamed of by Gall and Spurzheim. Its severity would have astonished Newton, and probably appalled Bacon himself. It inaugurates the reign of facts as opposed to that of ideas; and, left to itself, would probably enthrone the concrete on the ruins of the abstract. In the logic of events, its advent was unavoidable. Its apostles are worthy of all honor, for it is their vocation to work at the foundation of knowledge, to see that these are trustworthy and secure. Their business is to look to the stability of the edifice of science, by the exclusion of all unsound blocks from its struc-

ture, and by insisting on the most rigid adherence to the plan of induction in the process of its edification. Phrenology, subjected to their ordeal, will emerge with its facts confirmed and its hypotheses destroyed.

"Again; some are astonished that our anthropological friends speak of reinvestigating the entire subject of cerebral structure and functions *de novo*, as if nothing certain had yet been ascertained as to the relation of the latter to the former. But why should we be offended at such a proposition which, if honestly carried out, can only eventuate in the establishment, on a still firmer basis, of all those great truths whereof we have been for so many years the despised witnesses? Would any astronomer object to a society of distinguished men determining to repeat the observations and verify the calculations on which his science professes to be based? It is the same with the chemist and the electrician. These gentlemen know that a reinvestigation of their accepted facts could only eventuate in their confirmation. And is there any reason why we should be animated by less confidence, or more alarmed by such iconoclastic zeal on the part of our new converts? If I have interpreted our attitude aright, during the many long years of patient expectation in which we have waited for such an event as the present, we have desired and courted rather than feared a thorough and searching investigation of the facts and principles of Phrenology, feeling assured that in all its main facts and grander conclusions it would emerge unscathed from the process.

"And lastly, some of you seem offended at the contemplated change of terminology, more especially the disuse of the term Phrenology. But on this subject I think we may remain comparatively easy, as, unless our friends the anthropologists succeed in founding an entirely new claim of cerebral physiology, it is not likely they will prevail in imposing a new nomenclature on a province of inquiry where they are as yet utter strangers, and wherein their labors will, as we apprehend, eventuate, not in the discovery of fundamental laws, but in the addition of corroborative and supplementary facts. This, however, is a question the consideration of which may well be postponed to a future occasion, when we as phrenologists shall doubtless be parties to the settlement.

"This brings me to the conclusion of my remarks, and to the object which I consider of more importance than anything else yet touched upon. I allude to the possible union of the phrenologists and anthropologists, if not in one society, then at least as closely allied and intimately associated bodies, avowedly devoted to the same grand object, namely, the Science of Man; pursued, not in the subjection to traditional ideas, but in strict obedience to the teachings of nature. With this science, Phrenology constitutes a most important province; and I trust, therefore, that the day is not far distant when every anthropologist will also be a student of Phrenology, and when, conversely,

every phrenologist will feel an enlightened interest in the progress of anthropology. But it is a step in this direction that we should rejoice at the recent discussion in London, inaugurated by the manly and fearless address of Dr. Hunt, who has doubtless initiated a movement which can not fail to be productive of the most important results to the Science of Man."

WHO ARE THE YANKEES? AND WHAT?

BY ONE OF THEM.

ABROAD, we are all Yankees. Here, unless we happen to be of the New England type—or rooted and grounded among the granite hills of New Hampshire, a capital place to emigrate from, according to Webster—Daniel Webster—or among the icebergs of Massachusetts, or the lumbering population of Maine, or the natives of Connecticut, Rhode Island or Vermont, we plead not guilty, and vow and protest, if we do not swear outright, that we are not Yankees, no matter what people may say abroad; and that the Yankees—the real genuine Yankees—dyed in the wool, double twilled, with two knocks in the weaving, are always lying to the North and East of us, wherever we may happen to be found, whether in the Middle, or Southern, or Western States; and generally, wherever you find what passes for a *homogeneous* people—a people, that is, who, if they are not absolutely English, are at least British; being compounded of the English, and Scotch and Welsh and Irish, to begin with, and having scarcely a taint of Italian, or French, or Spanish blood, or a drop of the Swedish, or German or Dutch blood, outside of the larger cities; while, if you but step over the line, into New York, or New Jersey, Delaware, Pennsylvania, or Maryland, you find the Dutch, the Swedish, the German, or the Irish, not only abounding, but predominating; with intermixture, from every nation, kindred, and tongue, not only in the larger cities, and manufacturing towns and marts of trade, but all through the country; and if you wander away to the North, or to the extreme South, you have the French or Spanish populations, and sometimes both, swarming about your way. And yet, we are a homogeneous people. And why? Because we are like no other people on earth, being made up from the odds and ends of all creation—out of New England. Everywhere, from the Canadas to Louisiana and Florida, from far away Down-East to California, we talk the same language, so as to be understood by everybody belonging to us, which can not be said of any other people; while the stranger who speaks only good English, will find himself all at sea, twenty or thirty miles out of London, whether he journey toward Lancashire and Wales, or into Yorkshire and Northumberland, or along the sea-coast. We read the same books, and have substantially the same religious and political

views and social habits; and the same fixed, unchangeable, self-reliant spirit.

But the *National Yankee* is one thing; the *Sectional Yankee* another. As Americans, we have a character abroad, which does not belong to the *Sectional Yankee*, or *New Englander*. All our great historical achievements are credited to the *Yankees*, or to *Brother Jonathan*, which is the same thing to the multitude. All our doings in science and literature, all our discoveries in government, finance and legislation, all our improvements in war and peace, and all our victories by sea and land, are ascribed to the *Yankees*. If Mr. Teneyck's horse wins against the field at Newmarket, and he carries off a hundred thousand pounds, more or less, Mr. Teneyck is called a *Yankee*, and his horse another. If an American yacht outsails a whole fleet, so that some of the most renowned crafts are "*nowhere*," the credit is given, not to America, or Americans, not even to the United States, or New York, but to *Yankee-land*. This is all wrong, and must be put a stop to. New England has enough to brag of, and enough to justify her imperturbable self-complacency, without being allowed to arrogate for herself the national reputation.

If Powers launches a Greek slave, or Tilton, or Bierstadt, or Church a magnificent picture; if Hackett amazes all our ancient play-goers with his Falstaff, or Miss Cushman, with her Meg Merriles; or if Miss Kellogg astonishes in opera, or a prodigious outcry follows the exhibition of our sewing-machines and reapers and pianos; or if Prescott, or Motley, or Irving or Holmes, or Longfellow, or Whittier, are mentioned, they are always mentioned, not as Americans, except by the reviewers and magazines and newspapers, but as *Yankees*. Shall this be allowed to continue?

But the real *Yankee*, the unadulterate live *Yankee* is a creature by himself, and like no other upon the face of the earth. You find him nowhere out of New England, unless he may have been dislocated by some social convulsion, or driven abroad for awhile by the unappeasable restlessness of his nature, to "seek his fortune," here by hunting whales, and there by chasing buffaloes, here by digging gold in Australia or California, or by opening refreshment rooms on the way to Cairo, or among the Pyramids, or by dipping for oil, far below the deepest foundations of our strength.

Go to the Great West—you know where that is, I hope—and you will see much to remind you of the native *Yankee*, the drawling and loose-jointed, though active, shrewd, watchful, and quick-witted *New Englander*; but all these are counterfeit *Yankees*, *Yankees* at second-hand, with all their homely proverbs, quaint forms of speech, and whimsical extravagancies, exaggerated and caricatured. Out of New England, but among the diluted *New Englanders*, you may hear about "greased lightning," and about a politician or a stump orator "slopping over," or "drying up;" but

never within the boundaries of New England, *never*.

When Edward Everett spoke of scattering opinions "broadcast," and the phrase became forthwith a part of our common speech; and when somebody else of a like temper in the North said something about the logic of history, and the logic of events, and all our newspapers and orators and preachers took up the phrase, until they could hardly work out a long paragraph, upon any subject, without introducing their logic of this, and their logic of that, our Western brother would characterize a candidate for public office whom he was "going for"—"first, last, and all the way through"—as "all sorts of a man," and would say of a horse that lagged behind another, that he couldn't *begin* to run with him, or that, like the English yacht already referred to, he was *nowhere*.

"And so," said a Western traveler to one of our long, slab-sided, shiftless-looking lumbermen from Down-East, after they had been talking together awhile, "and so—you are from the East?"

"Rather guess, I am."

"*Why!*—I thought the wise men came from the East."

"*Wal*—an' the further you go west, the more you'll think so, I kind o' consate," said the Down-Easter.

Charles Matthews, although he caricatured our Brother Jonathan without remorse or compunction, and called him, not an American, but a *Yankee*, had capital notions of the truth, so far as dialect is concerned, or intonation, and his "Uncle Ben," and "I'll thank ye for that air trifle," both adopted from Jarvis, the painter, certainly one of the best story-tellers that ever breathed, were among the richest representations ever offered upon the stage; and yet, when he clothes that *Yankee* in "striped trousers" and a seal-skin waistcoat, and sets him running about, and shaking hands with everybody he meets on board a crowded steamboat, and makes him say, "I reck'n," "I guess," "I calc-late," he confounds all distinctions, and grossly caricatures. And so with our friend Hackett. Although his *Yankee* laugh is inimitable—so fat and unctuous—when he draws in a long breath after it, and most of his phraseology is unmatchable, where he gives a Western type of the translated *Yankee*, in the representation of "Nimrod Wildfire," and "puts it to you, like a gentleman," still, taken as a whole, as the embodiment of character, it is neither national nor sectional, but a gross idealism, like the Englishman's Johnny Crapeau in Hogarth's picture of Calais, or a Frenchman's notion of John Bull, with a monstrous paunch and a red waistcoat, stuffed with *ross-bef*.

And then, too, just call to mind the language that passes current on the stage, or in story books and newspapers, for *Yankee* speech. He is made to say *haouse*, *raound*, *paound*, etc., etc., as if that were characteristic of a *New Englander*; when you may traverse the whole

of Massachusetts, New Hampshire, Rhode Island, Connecticut, Vermont, and Maine without hearing the sound referred to, except now and then along the borders of Canada, or among the aboriginal *Yankees*, who preserve the dialect of their English fathers, from Devonshire and Yorkshire.

And yet, if you will but step over into New York, or into Maryland, even among the fastidious and highly cultivated *Baltimorians*, or into New Brunswick and Nova Scotia, you will hear cows called *caows*, pound-cake, *paound-cake*, and as the settled pronunciation of the country. And so too, among the President-makers. Much of their language is pure *Yankee*, the *Yankee* of our Revolutionary fathers—*naow* for now, and *haow* for how. So common is this in England, that even Mr. John Stuart Mill never pronounces these and other like words in any other way.

"I all'ys ride with a *trottin'rein*," said a fashionable young *Baltimorian* to me one day, at Cambridge, and with such a decidedly nasal twang, that I had no idea what he meant, and supposed, at first, that he was trying his hand upon our provincial *Yankee*, until he had repeated the phrase two or three times, when I found that he was talking *Baltimore*, instead of *Boston*, and only meant that he rode with a trotting rein.

Another peculiarity supposed to be characteristic of the *New Englander*, or genuine *Yankee*, is that of dropping the final *g* in such words as going, pudding, moving, etc. Yet, if you wander through Virginia, or Maryland, or parts of New York, including the city itself, or New Jersey or Delaware, you will find the habit almost universal, even among the well bred, the well educated, and the fashionable. Are they all *Yankees*? They say "good-mornin'," "will you try the puddin'?" and seem to regard it as a downright vulgarity, or at least as pedantry, to sound the *g*. Fifty or sixty years ago, the *New Englanders* were in that way; but it was never a characteristic—never a distinguishing ear-mark of that people; and is only to be heard now among our backwoodsmen, or the old-fashioned of a past generation. But on the stage, and off, and not only over sea, but among ourselves, in the Middle, Southern, and Western States, all these are held to be unquestionable *Yankee*.

Most of the clumsy, blundering misrepresentations which prevail, however, about our *Yankee* speech, may be traced to "Sam Slick" and Judge Halliburton, who give us for *New Englandisms*, the adulterated, or corrupt *Yankee* of the British Provinces, compounded with extravagant stage *Yankee*. For example: you never heard a native *New Englander*—hardly ever a native American—say, I thought as *how*—unless, to be sure, he was a native American, born 'tother side o' the line. Nor will you ever, under any circumstances, hear a native American—a native I mean of the United States, to say nothing of *New England*—say "I eats," or "I drinks," or

"they eats or drinks," or "I sees," or "they knows," language constantly put into the mouth of a newspaper Yankee, and sometimes of a stage Yankee, though the habit is almost universal in the mother country, among what are called the laboring, or lower classes, and among her expatriated provincials. At the bar of New England you will often hear, and from educated lawyers too, in the examination of witnesses, atrocious barbarisms, like "you was," and "they was," or "was you?" and "was they?" a habit acquired in their youth perhaps, and never entirely overcome by a collegiate education. To be sure, if hard pushed, these gentlemen might plead the example of Duncan's Cicero, or Leland's Demosthenes, for the grammatical propriety of "you was." And by the way—our "Conneticut Yankee," the blue light shingle-weaver, and manufacturer of wooden nutmegs, horn gun-flints, and cuckoo-clocks, with one single exception, that which the late General Humphreys, of merino celebrity, published in a capital farce fifty or sixty years ago, is a monstrous caricature, alike absurd, offensive, and preposterous. Generally speaking, he is made up from the English clown, the Yorkshire peasant, and the Western Buckeye or Hoosier.

Though a close observer, and a faithful delineator on ordinary occasions, and where the subject is familiar, and he is not betrayed into overdoing for the green-room or the omnibus, even Charles Dickens gives for genuine Yankee such forms of speech as the following:

"If you are an Englishman," says he, in his "American Notes," "he *expects* that that railroad is pretty much like an English railroad. If you say no, he says *yes* (interrogatively), and asks in what respects they differ. You enumerate the heads of difference one by one, and he says *yes?* still interrogatively, to each. Then he *guesses* that you don't travel faster in England, and on your replying that you do, says *yes*, still interrogatively, and it is quite evident don't believe you."

Now here is the strangest jumble, worse than anything I had to take Mr. Charles Matthews over my knee for, in a London magazine, ever so long ago. The man that *guesses* never *expects* in the way mentioned; and the man that *expects* would consider it as a personal affront, if you should charge him with *guessing*. The native New Englander—the real Yankee—*guesses*; but the Southerner *reckons*, and therefore *expects*. All through Virginia, Ohio, and the West, everybody *reckons*—and all through New England, almost everybody *guesses* or *suspects*.

As well might our friend Boz have put into the mouth of a *natyve* such a phrase as the following—a phrase that no native American, born within the territory of the United States, ever used, except perhaps on a late occasion, when Mr. N. P. Willis, who had been Anglicised by his first marriage, ventured to introduce it, in the hope, may be, of its running like his "upper tendom"—"Robert is a good fellow—is Robert."

And as for the interrogative answer *yes?* which Mr. Dickens has made such account of, not only did he never hear it from the mouth of a New Englander, but never, we may be very sure, from a native American belonging to this great Commonwealth of Empires. It is in fact essentially and characteristically English—and altogether English—like their saying "different *to*" for "different *from*," and so piteously exaggerated by the colonists and provincials of the mother country; like the stammering of their public speakers, a—a—a—and their parliamentary hesitation, aw—aw—aw—that you are generally sure of a running accompaniment from the well bred and fashionable, of *yes? yes, yes?* to everything you say among the Blue-noses, alternating with "*you know*," at every hitch and, with every answer, until you know not what to say, nor which way to look.

Yet more. In Chapter VI. we have the details of a conversation, held by Mr. Dickens with some subordinate of a prison, about the rules of the establishment. "When do the prisoners take exercise?" he asks. "Well, they do without it *pretty much*," is the answer, which would be anything but characteristic, admitting the answer to be faithfully reported. "Do they never walk in the yard?" says Mr. Dickens. "*Considerable seldom*," he would have us believe was the reply. "Sometimes, I suppose?" "Well, it's rare they do." And these are a part of the "American Notes, intended for general circulation," deliberately revised and corrected by the author, after the experience of twenty or twenty-five years. The incidents are undoubtedly American, and the object of the author eminently generous and just, but the language is not, nor in any sense, characteristic of our people. On the contrary, it would seem to have been made up for effect, as funny farces are compounded in the closet.

And again: here we have a sample of what the author heard with his own ears, twenty or twenty-five years ago, and then published to the world, not as a magazine story, not as an allowable romance, but as truthful and characteristic of a people he wanted his fellow-countrymen to be acquainted with; not as the tale of a traveler, but as the conscientious testimony of a witness on his good behavior, if not actually on oath, all which he now reaffirms without misgiving or compunction.

"There is a *clever* town in a *smart* lo'-cation," he says, "where he *expects* you *conclude* to stop;" as if any mortal man ever employed such a collocation of words, in all his life, anywhere, as *clever*, *smart*, *expects*, and *conclude* in a single sentence, and after such a fashion—off the stage, I mean, or out of a newspaper. "*Clever*," when used in the sense referred to, is pure Yankee. "I thank you, sir, I'm *cleverly*," says "Mr. Richard Beverly," of Marblehead, according to Paul Allen; *smart* is pure Virginia, though used throughout the Carolinas, and over much of the West; a "right smart chance," they say

there, even the best educated, when they desire to recommend a tobacco plantation or a country store; "*expects*," you constantly hear in the South and Southwest, and nowhere else, employed in the sense mentioned, and "*conclude*," only among the native Yankees.

Yet all these ear-marks are crowded together, and sent abroad as so many distinguishing peculiarities of the New Englander. Why, even Yankee Hill, whose representations of the native Yankee are often masterly, though sometimes extravagant, was never guilty of such atrocious antitheses.

Nor is he altogether trustworthy in matters of more importance. He takes too much for granted, and jumps at conclusions, while portraying the "natyves." For example, speaking of the factory girls at Lowell, and of their handsome dresses and general appearance, he says they are "not *above* clogs and pattens"—not meaning a pleasantry, but that they wear such encumbrances, and of course are *above* them, at such times. And yet the probability is, that not one girl in a thousand throughout New England ever saw or heard of a clog or patten. For myself, I can safely say that I never saw but one pair in all my life on this side of the Atlantic. English dairy-maids and Scotch lassies may sometimes bring over a pair, being unacquainted with the usages here, but they are soon cast aside, or go into the ash-hole, with dilapidated hoopskirts and unacknowledged brogans.

Let it be understood then, once for all, that the Yankees are New Englanders, and New Englanders only; that their dialect, intonation, and habits of speech are both incommunicable and inimitable—though capable of being counterfeited by such craftsmen as Jarvis, Matthews, Hackett, Hill, and Valentine, so as to deceive the unwary; and that they are as truly characteristic as are the peculiarities of the Scotchman, the Englishman, the Welshman, the Irishman, or the Frenchman; being, moreover, not *national*, but *sectional* or provincial, like those of the Yorkshireman, the Northumbrian, or the Cockney.

That the Yankees are wonderfully "cute"—sagacious, and crafty; honest, as the world goes, though not always overscrupulous in a bargain—and not much more given to stuffing turkeys and geese with pebbles, or leaving the crops in, than the Southern chivalry are to selling heavy logs and large "rocks" for the market price of Sea Island cotton, may as well be acknowledged at once. Their wooden nutmegs, horn gun-flints, and shoe-pegs which they are supposed to sell for the most precious of seeds by the dozen, do not find customers at home—the people are "too far north," as the Yorkshiremen say; and so they are sent South.

Thousands of stories are in circulation, both abroad and at home, about their unprincipled cunning and craftiness; but most of them are extravagant falsehoods, the "weak invention of the enemy." Yet many are true, and sometimes transcendently characteristic. For

example: one story, well authenticated, runs after this fashion: A "Connecticut" peddler was on his way through northern Virginia, jolting and rattling so that his approach was heralded far and near, as with the sound of trumpets or steam-whistles. On reaching the tavern at Madison Court-House, he lost no time in displaying his "notions," having what he called an assortment of "most everything under the sun." After night-fall, the bar-room and piazza were crowded with planters and politicians and lawyers and statesmen—all President-makers, or embryo Presidents. They soon set upon our peddler, badgering and bantering him by turns. But he kept his temper, and sometimes managed to turn the laugh upon his tormentors. At last, one of them took up a handful of dirty cards and asked him what he would charge for one of his Yankee tricks. "Wal! he had 'em of all sizes and for different prices—from two dollars up to five—best of 'em cheap enough at five." Tickled with the idea, they held a consultation, and finally agreed to "go in for a five," with most uproarious laughter.

"Agreed," said the Yankee, holding out his hat, and laughing as loud as the best of them; "but please pony up—shell out—we never trust in our business; all cash down."

The money was paid up, and pocketed, and buttoned in, with all seriousness, and after shuffling the cards a few minutes, the Yankee got up, and stretched himself, and gaped, and then he took a light and disappeared. After waiting awhile, the company began to grow impatient, and asked the landlord to let him know that he'd better hurry up. It was dark and muddy, and some of them had a long way to go. The landlord went up stairs and found the fellow asleep, or pretending to be asleep, with his door locked and the bed pulled up against it. The landlord being indignant, and the company in what they called a *fix*, they sung out all together for him to put in an appearance, and show them the trick they had bargained for "right away." "The *trick*," shouted the Yankee from underneath the bed-clothes—"don't want another, do ye? Ha! int I showed you the best I know?" This the fiery young men thought was too bad; but inasmuch as the laugh was against them, and all the gray-headed planters too, they determined at last to let the fellow off, instead of lynching him on the spot, or barbecuing him like a runaway slave.

Another story they tell in the region where it was said to have happened, runs thus: Another "Connecticut" Yankee—he must have been of the Connecticuts—where babies are born with their eye-teeth cut, went away off into the back parts of Pennsylvania, among the honest, credulous, thriving German population, with a wagon load of cuckoo-clocks, which he got rid of at fifteen dollars a-piece, taking a part of his pay in "truck." He warranted the clocks to go for ten years—declaring if they didn't turn out good after trial, he would make them *good for nothin'*. But all

of them stopped, and gave up the ghost within a week or two at farthest.

Next year, having run himself out, and being unable to replenish his stock on tick, he started off with the odds and ends of what he had left, and one cuckoo-clock—one only—and went over the same route, and saw the same people. But how? On reaching the log cabin of the first man he had "shaved," he professed great sorrow for the trouble he had given him, and for the disappointment he had caused; but he had been grossly cheated by the manufacturer, who had fobbed him off with a very inferior article, not worth five dollars; that as soon as he discovered the cheat, he meant to be off without losing a day; but, the weather was bad, the fall rains had set in, and he wanted to have certain improvements introduced, whereby the clocks would be sure to run for a week without winding up, and would be worth at least twenty-five dollars a-piece. Having had enough made to supply his customers along the last year's route, he had now come to take the old affair off their hands, and "seein' 'twas you," would say twenty dollars for the new clock, and take the old one at the price he had sold it for, in part pay. "Vell now, datsh vat ich call vair, *und ich danke Ihnen*," said the honest German, and the bargain was clenched.

With that old clock, the unprincipled scamp started off to play the same trick on the second customer—and so on with the third and fourth, until he had gone through the whole—taking care not to return by the same road; pocketing five dollars with every exchange, and getting rid of his haberdashery at his own prices on the way. This story, allowing somewhat for exaggeration, is probably true—true in substance, I mean; but occasionally we get something a little too extravagant for belief, though verified by affidavits. For example, a certain peddler, who had become the pest of a neighborhood, which he had visited year after year, called at the door of a log cabin, where he had always managed to get rid of somethin', and to carry away somethin', however determined the old corncracker and his family might be, never to have anything more to do with the 'tarnal Yankee or his plaguy wares.

"Anything wanted to-day?" he screams, through an open window, at which he sees a great bouncing girl. "Nothin' to-day," was the reply. But the Yankee persisted, and so did the girl, who finished at last by saying that "Dad was determined never to buy nothin' more—not a copper's worth—of any o' them good-for-nothin', thievin' Yankees," imitating the nasal symphony she supposed to be their characteristic. Still he persisted, offering to show her his treasures, and vowing that he never had such an assortment before, and never such bargains—in fact, he'd got about everything she could ask for.

"Any tin side-saddles?" squeaked a voice from the dark interior.

"Tin side-saddles! O, git aout!" said the Yankee, nodding to a white-haired old man, he had just got a glimpse of—as he sat rubbing

his knees and chuckling to himself near the window—"come to think on't," he added, after a moment's consideration, "I rather guess I've got one left," lugging forth a voluminous tin kitchen as he spoke, which it is said, though I can't quite believe that part of the story, he bought for a side-saddle, and gave to Bouncing Bet for a marriage gift.

Once more—at Norfolk, Virginia, they believe that many years ago, when the yellow fever was raging there, a Yankee sloop arrived with a cargo of coffins—in *nests*—the inside ones stuffed with onions. That such a story should be told of any people, whether true or false, shows, at least, what they are supposed to be.

[TO BE CONTINUED.]

Religious Department.

Know,
Without or star, or angel, for their guide,
Who worship God shall find him. Humble love,
And not proud reason, keeps the door of heaven;
Love finds admission where proud science fails.
—Young's Night Thoughts.

THE VIOLET IN THE SNOW. AN EMBLEM OF FAITH, HOPE, AND CHARITY.

BY REV. T. S. W. NOTT.

'Twas in the spring-time's early day,
When suns begin to beam
With fitful warmth, I took my way
Along a valley stream;
And as I passed sweet scenes among,
With pensive steps and slow,
I saw, where winter lingered long,
A violet in the snow.

"Sweet, fragile flower! what dost thou there?"
—'Twas thus my thoughts arose—
"Why to this cold and biting air
Thy tender frame expose?
Why com'st thou thus untimely forth,
Like smile of joy in woe?
Thou little spark of life in death!
Thou violet in the snow!"

The modest flower made no reply,
But firm upbore her head
'Midst wind and cold, while in her eye
I marked a smile which said:
"Go, ask fair Virtue how she's bright
Where tears in darkness flow;
And then thou'lt learn to read aright
A violet in the snow."

And then I saw the moral here:
'Tis thus where all is gloom,
Where naught is left in light to cheer
Our passage to the tomb;
Where saddest seem their hearth and home,
To mortals here below,
The angel-form of Hope will come,
Like violets in the snow—

To say a fairer, happier day
In the dim future lies—
Our March is passing into May,
Our April's cloudy skies
Will soon receive a warmer sun,
Nor cold winds longer blow,
Nor streams be seen with ice to run,
Nor violets in the snow.

The moral yet is clearer now,
'Tis thus where sorrows fall;
Where gath'ring anguish knits the brow,
And life's worst ills appall;

Where even Hope itself hath fled,
Sweet Charity will go
To soothe the heart, and rear the head,
And dry the tears that flow.

The moral yet is clearer still:
'Tis thus where darkness lowers
'Round the tried soul, and doubting ill
Benumbs her nobler powers,
That Faith new born will point above,
And peace serene bestow,
Speaking of coming life and love,
Though all around be snow.

Eternal Source of all that's bright,
And pure, and fair, and brings
Thy nobler, holier truth to light,
By means of humbler things!
Oh, teach my heart to see Thy love,
Instruct my soul to know
Thy hand alike in stars above,
And violets in the snow!

And as I pass life's vale along,
Oh, lend me still Thy light;
Still give me grace to flee the wrong,
And aye pursue the right;
To read some lesson in each flower,
Each scene where'er I go;
In every leaf that decks the bower,
And violets in the snow!

Long years have passed since then away,
And joy and grief been mine;
I've seen life's fairest flowers decay,
Youth's warm, bright sun decline;
I've wandered on with weary foot,
Through toil, and pain, and woe;
I've loved and lost, but ne'er forgot
That violet in the snow!

INDIVIDUALITY IN RELIGION.

THE Gospel was never designed to be unbibled and made into lettered catalogues of *musts* and *must not's*. "The letter killeth—the spirit giveth life." The restraints of religion do not lie along the Christian's pathway as so many roseless thorns to pierce and pain us at every step. Christianity does not require us to be forever looking after the faults and failures of others, in order that we may know exactly what things *not* to do. It is not a list of uneasy negatives. It is not a system arranged to push or drive by rearward forces. No man, since grace and truth were revealed in Jesus Christ, was ever scolded or scared any nearer heaven. The thunder of Sinai threatened and made men tremble; but there is another mount, though not so high and dark and awful, whose summit held a cross, and He who was lifted up thereon *draws* all men unto Him! The blood of Calvary is greater than the lightning of Sinai. Henceforth love is mightier than precept. Henceforth religious life is not so much a form as a service—a service which is the highest liberty, because it is emancipation in Christ Jesus who makes his followers free indeed.

We are not obliged to pass on in our discipleship with book in hand, or mortal confessor in sight, reading a ceremony, or listening to a sound, or ruminating on the published sins of other people, else we should commit new ones ourselves so rapidly and unexpectedly that the most orthodox creed-arranger would become bewildered in the attempt to classify them. The religion of Christ does not annoy us with

mere formal technicalities. There are no chronometer-gauged exactions to goad us to duty as a miserly creditor's constables dun a poor debtor for dues. No books of faith and service outside the Bible are worthy the permanence of stereotype plates to be printed from. No true man who recognizes his own individual accountability for *deeds done in the body* (not for words pronounced or unpronounced from the creed)—no true man can live in these grand republican years with any ecclesiasticism ahold of him, drilling and driving as a machine. The Scriptures of divine truth do not require that my soul's worship shall be a strict duplicate of the worship of somebody else's soul. Neither is my work to be estimated by the number of chips and shavings at the bench of the robust brother who has double the muscle that God has given to me.

Christianity gets deeper into a man than his clothes or his skin. It does a nobler thing to a man than bow and bend, and halt and turn, and shove him hither and thither in the crooked grooves of some blunderer who lived in the dim ages long before the wood of the cross began to grow. It has a grander mission than merely to take charge of the *seen* and *heard* of a man; it lodges deep in the inmost soul, and works out from that center, until the world not only sees and hears, but knows and feels, that he "has been with Jesus and learned of Him."

I may subscribe to a system of rules, and be as exact in my observance of them as a clock is in ticking its swinging monotonies all day long and all night through; and, just like the clock, be only running down the while. The Gospel is a marvel in its freedom from all non-essential sectarianisms which any mimic of a man might observe to the very shadow of a letter without being a spark the brighter or a degree the better for his trouble. It is time the Church had grown out of the childhood ages of the world—time that she waked up in the new morning this side the long night of ritualistic shades and symbols to the light and liberty of the Saviour come and risen. The Christian system, simple but sublime, infused by the impulses of the promised Spirit of all Truth, lifts men out of deep-worn channels, and places them on elevations of light and glory from whence vast and beautiful horizons sweep around, and glowing with living workers for God and man. There is growth from minority to manhood in the Gospel, and equal suffrage for all and forever. ALEXANDER CLARK.

SMILES.—Nothing on earth can smile but human beings. Gems may flash reflected light; but what is a diamond flash compared with an eye-flash and mirth-flash! A face that can not smile is like a bud that can not blossom. Laughter is day, and sobriety is night; a smile is the twilight that hovers gently between both, and is more bewitching than either. It is possible for us all to wear a smile or a frown, at our own option. Either becomes habitual from frequent repetition.

LOVE.

Love, transcendent and divine,
Gleams sweetly in the bread and wine,
That speak of Christ the crucified,
Who once for wretched sinners died!

Love, born of God, eternal, true,
Stands sweetly forth to wondrous view,
In God the Spirit's work of grace,
To cleanse, exalt, and save our race!

Love, higher still, beyond degree,
In God the Father we may see,
Who gave his Son and Spirit too,
Rebellious sinners to renew!

Love kindles in the Christian heart,
And takes a brother's kindly part,
In every time of sorest need,
His soul to soothe, his form to feed.

Love, like the gently beaming sun,
Imparts his grace to every one,
Producing life and beauty, where,
Else, all were death and blank despair.

Love bridges o'er the stream of death,
And makes its passage but a breath,
To which succeed the choral lays,
Of bliss on bliss through endless days.

Love shall ascend with Christ the Lord,
Takes His exceeding great reward;
For saints redeemed, a crown of light,
Celestial brilliant, dazzling bright.

C. WELLINGTON.

ABBE FRANZ LISZT, THE CONFESSOR-MUSICIAN.

THIS countenance is indicative of unusual temperamental intensity. The sharp, nervous features are, to be sure, a little modified by their association with the broad cheek-bones and strong jaw of the Hungarian physique, but the extreme delicacy of organization and the fineness of the brain quality are marked. He is in the highest respect sensitive and susceptible to the influences of feeling and emotion. The high and ample forehead denotes intellectual discernment; the capacious top-head exhibits moral and religious strength; the side-head, so far as it can be seen, shows a deep sense of the beautiful and awful; and the social tendencies, apparently, are by no means deficient. If the great breadth of the forehead, just over the superciliary ridge, evinces anything, it certainly shows Tune very large, and developed backward and upward toward Constructiveness and Ideality.

Spirituality is well marked by the broad arch of the top-head. This organ has doubtless exercised a most potent influence on his life,—an influence seemingly antagonistic to the great longings of his ambitious musical and ideal nature;

and by it may be explained many of his extraordinary acts.

The mouth is an impressive feature in our portrait, indicating force of will and earnestness of purpose, while the symmetrical nose evinces unusual fullness of cerebral development. The Abbé must be a genial, winning priest as he is a fascinating musician.

BIOGRAPHY.

Though the Abbé Liszt now lives in the gloom and solitude of a Roman cloister, his genius still pervades the world, and his influence upon the musical life of the present day is probably as great as that of any other living master. "A strange star shone on his birth," says a German biographer, "the comet, which in that year of the world attracted all eyes upward," and disappeared. And such has been Franz Liszt's life. Like a resplendent meteor, he passed on his triumphal musical career, and to-day, as if tired of the world's applause, he seeks the retirement of a monk.

He was born on the 22d of October, 1811, at the little village of Raiding, near Oedenburg, Hungary, a few hours' ride from the Austrian capital of Vienna. At the age of five years, he manifested a remarkable aptitude for music, and his father, who was a musician of some repute, carefully instructed his son on the piano-forte. In his ninth year he was taken to play at a public concert in Presburg, where his astonishing musical talent attracted the notice of some Hungarian noblemen, who procured for him the instructions of Karl Czerny and Salieri. For nearly two years he studied very earnestly under these distinguished tutors, and then again made his appearance before a public audience. A German journal thus describes this occasion:

"Franz Liszt was only eleven years of age when, in 1822, his father introduced him, a slender, blonde-haired boy, into one of the most brilliant circles in Vienna, already acquainted with a Mozart. Karl Czerny and Salieri were there; they sat with the boy's father, Adam Liszt, the friend of Haydn, in the neighborhood of the piano-forte, and watched the boy's graceful movements with deepest interest. From the farthest corner of the great hall a lady watched the young

PORTRAIT OF ABBÉ FRANZ LISZT.

musician eagerly as he now advanced to the instrument, and a sad smile flitted over her pale face as she heard the first notes vibrating through the hall. It was a concert piece of Hummel's, wonderfully spirited and vigorously executed; the player was not confused by the brilliant company, but appeared as calm and self-possessed as a pilot on a troubled sea. Not so the lady. She heard the rapturous applause which was given to the young pianist; she noticed the smile that settled upon his countenance as he rested for a moment by his father's side, and felt a conscious pride as she heard the admiration of the audience. * * * Again the boy advanced to the piano; a short childlike bow, and the slender fingers glided in Hummel's H minor concert; the audience was delighted; and that womanly countenance became suffused with a deep blush of joy. For the last time he took his place for a free fantasia. The great hall was as still as a church during prayer, and one scarcely dared even to breathe. The themes were from Mozart and Beethoven, and his fingers moved in a magical, wondrous manner. Over Salieri's

countenance reigned now a proud smile; but the head of the blonde lady had sunk upon her breast, the hot tear-drops rolled down her cheeks, and she wished that no one might see her; her hands were clasped, and a silent, fervent prayer went up from that pure and pious soul for the young musician. So absorbed was she that she did not hear the voice which now startled her: "Madam, your son has played bravely. I am satisfied with him. You will live to delight in him, and may well feel proud of your boy. We will go to him!" The mother of Franz Liszt, for she it was, now arose, placed her hand in the arm of the gloomy-looking man who stood before her, and both walked toward the piano. The assembled people everywhere gave place to them; they did not speak; but every now and then the mother raised her tearful eyes to her conductor in wonder and almost in fear. Finally they came to the young musician.

"Mamma! — you really here—Beethoven!" cried he, blushing and agitated. A moment later the 'star of the evening' was hanging upon the neck of his mother; and the friendly smile of Ludwig van Beethoven was the first genuine laurel which the young musician ever gained."

This was Liszt's first real success. His first musical excursion was made in the following year, accompanied by both his parents. They gave concerts in many of the principal cities of Germany; and in Munich young Franz was greeted as "a second Mozart." These were the words, too, that greeted the slender, boyish form in the gilded salons of the aristocracy of Paris. There he was the subject of the most flattering attention. The Parisian press, without exception, were loud in their praise and prophecies. The concerts which Adam Liszt gave ended in a perfect ovation. But the boy did not become intoxicated by the overwhelming applause; his pious-hearted mother was his constant guardian. The *élite* of Paris could not draw from Franz Liszt his full powers; it was only when he was in his own room, with his own loved mother, that he was seen to perfection. Then his cheeks would glow, his eyes be lit up with joy, the hour and the time would be forgotten, until at last his fingers would drop tired and helpless, and his burning forehead would lay soothed on the shoulders of his mother. She was his idol, and he poured

out his young soul to her. The sudden illness of an only sister called the mother away, and father and son now traveled in the Departments, and crossed over to England, where Franz received the greatest attention.

In 1825 we meet Liszt again in Paris. A short opera, "Don Sancho," was being represented in the theater of the Royal Academy, and met with the greatest applause. The audience cried out the name of the composer, and Franz Liszt, scarcely fifteen years of age, was led forward to make his acknowledgments at the public tribunal.

Soon after this performance new sentiments were awakened; he became gloomy, melancholy, and solitary; he plunged deeply into religious books; the lives of the martyrs and the Confessions of St. Augustine were his constant study. But he still had one friend to whom he wrote out his scruples, his doubts, and his reveries, and she thanked the Lord for such an early transformation, and felt that her prayers were answered when she saw her beloved son resting in the deep shade of a religious establishment.

But even this silent life soon grew irksome, as it did also to her who had first wished it. His still life was suddenly broken. Paganini, the violin-king, was to give his first concert in Paris (1831), and at his first performance young Liszt sat in the far corner of the hall, drinking in the inspiration that he felt; and he returned home with the fixed idea of becoming the Paganini of the piano-forte. Day and night he never wearied in his endeavor to attain his goal.

When he again made his appearance in Paris, it was in a far different style from his former performances. Instead of the aristocratic *salon*, it was now merely a parlor. But it was graced by the ornament of bright intellects. By her own fireside sat the charming Madame Aurora Dudevant (George Sand); in the flickering light could also be seen Alfred de Musset, Jules Sandeau, Alfred de Vigny, the talented painter Delacroix, and sometimes even Victor Hugo was there.

In the company of Madame Dudevant and Adolph Pictet, Liszt, in the following year, spent the most delightful and untroubled portion of his life. Without plan or object they wandered wherever fancy led them, and were everywhere enthusiastically received. Of this period George Sand has written her charming Letters of Travel, and Pictet's Journey to Chamounix is simply an apotheosis of Liszt. Liszt himself has related the impressions of these treasured hours in his Years of Pilgrimage. In the cathedral of Freiburg, the most beautiful women and intellectual men listened to the world-renowned organ controlled by his master hand.

Thalberg appeared in Paris, and broke up the entrancing "dolce far niente" of Liszt, who felt jealous of the new rival whose concerts excited the wonder and praise of all Paris. Liszt presented himself before a public audience, and the *éclat* with which the Parisians received

him, showed that his long absence had not diminished their enthusiasm over his music. Mendelssohn himself went to hear him, and wrote: "I have never seen a musician who has the musical sense so entirely at his finger's ends as Liszt has. * * * He possesses a through-and-through musical feeling, the like of which is nowhere to be found." The judgment of the Paris world between the elegant Thalberg and the brilliant Liszt was charmingly expressed by a lady, who, when asked which was the greatest man, said, "Thalberg is the first, but Liszt is the only one."

It was ever a strange feature in Liszt's character that the moment the storm of rapturous applause began to ring about him, his soul would ardently long for solitude. He loved then to disappear suddenly from the theater of his success, and bury himself for months in unbroken stillness. This is the reason that we find him, in 1837, wandering through Italy, to Venice, Genoa, Florence, Rome, and Naples, without any definite object. It was only in the following year that he again appeared in public, at Vienna, when he gave a series of concerts in aid of the sufferers by the great inundation at Pesth. No wonder that his Hungarian countrymen could sing: "Franz Liszt, the people are proud of thee." In the same year he received a deputation of Hungarian noblemen, who invited him to Pesth, where he was received with extraordinary enthusiasm, and presented by the inhabitants with the sword of honor and the right of citizenship. The next few years was a succession of fresh triumphs, and probably no musician in the same space of time received so warm and flattering a welcome wherever he went; and nowhere was his reception warmer than to his own native village of Raiding, whose every inhabitant turned out to greet their "son;" for Franz Liszt never forgot the home of his childhood.

This wandering and apparently restless life may appear strange to us; but in that land of music, the poorest itinerant can travel from one end of the continent to the other with both ease and pleasure, giving his rude concerts at every little village. In a higher degree was this life of Liszt's. The language of Bach, of Handel, of Beethoven could be understood in every land; and it had never found a more eloquent expositor. Franz Liszt gave concerts in Vienna and Prague in 1840, and in St. Petersburg, Moscow, and Riga, in Russia, in the same year. In the summer of 1841 he visited England, returned through Holland and Belgium to Berlin, where he was received as "only his own fatherland" could receive him.

The following year he wandered over nearly the whole of Europe—Russia, France, Spain, Portugal, and Germany. In August, 1845, in company with Spohr, he directed the Beethoven Festival, held in Bonn, on the occasion of the inauguration of a monument to the great master. He visited also Hungary,

Transylvania, Moldavia, Wallachia, Constantinople, and Odessa, and tired of glory, voluntarily closed his career as a performer in the zenith of his fame. Then he commenced the second great mission of his life, that of director and composer, and in 1848, accepted an invitation from the Duke of Weimar to assume the conduct of the court concerts there. Henceforth Weimar became the chief musical center for all Europe.

"Who has ever seen Liszt as a conductor must have noticed the enthusiastic power with which he rules the whole orchestral strength as a totality. The accompanying orchestra is an animated body which he permeates and inflames with the inspiration of his own soul," said a critic who had seen him at Weimar. From 1848 to 1861 Weimar was continually crowded during the season by the nobility and talent of Europe. Many took up their residence there permanently. He was the means of bringing many promising young composers to public notice. Richard Wagner owes the success of his chief operas to Liszt's friendship. He taught many young and promising pianists gratuitously, for whose benefit he gave private performances. Here he wrote, in 1852, his "work of love"—a biography of Chopin, the famed Polish pianist and composer (born, 1810, at Zelazowa, near Warsaw; died at Paris, Oct. 14, 1849); the "Gipsies and their Music," in 1859; and contributed many articles on the operas of Wagner and other subjects in the "Neue Zeitschrift für Musik." His compositions, transcriptions, paraphrases, symphonies, organ and piano-forte pieces, sonatas, fantasias, capriccios, reminiscences, concertos, etc., mostly belong to this period of his life, and are very numerous. His most genial beauties are probably found in his "Hungarian Rhapsodies," in the melodies of his home, the songs, the dances and the marches of the Hungarians and the gipsies. The joys and sorrows of his own people, all their feelings and emotions, find echo therein.

Yet Franz Liszt was never happy even amid his most glorious successes. The early impressions fostered by his mother had taken deep root. She was in Paris, but their correspondence was as constant and loving as ever.

Great was the sorrow when, in 1861, Franz Liszt departed from the theater of his grandest success and took his course toward the "Eternal City," to re-enter the cloister.

Four years later, on the 26th of April, 1865, was consecrated, in the chapel of the Vatican, Abbé Liszt. His compositions now partook more of his religious character. He had in earlier years composed several smaller hymns, psalms, and sacred piano-forte and organ pieces. In the summer of 1862 he finished his celebrated opera of the "Holy Elizabeth." Under the roof of the Vatican he completed his opera of "Christ," which was first performed in the service of the mass there. His "Holy Elizabeth" has been performed in most of the chief cities of Europe; and at the Lu-

ther Festival in the Wartburg, in 1867, the composer himself was present as the conductor. That was a grand day for the German musical world.

This was the last appearance of Liszt outside of Rome in his professional capacity. In 1864, he had visited Weimar and Munich, and his own mother in Paris. This was his last visit to her; she died in 1866. Liszt lives now in the cloister of Monte Mario, which he chose as his residence soon after his entry into Rome. Before we close this sketch, let us take a glimpse at the life of the great musician there.

"Forty-four years (1866) have flown since Franz Liszt, the blonde-haired boy, began his brilliant career in Vienna. Again is a concert given by Franz Liszt; again we see him seated at the piano-forte. But instead of a crowded hall, this time there is only a single hearer, an aged countenance—Pio Nono, the Pope of Rome. In an apartment of the Vatican the Abbé Liszt plays before the Pope, and the melancholy eyes of the aged man brighten at the sounds which the earnest man in the dark robes evokes from the strings. * * * In general, Liszt still lives in the cloister of Monte Mario. His intercourse is confined to a few friends, chiefly the high dignitaries of the Church. A near relationship binds him foremost to Cardinal Hohenlohe, with whom he lived, after his consecration, for nearly a year in the Vatican. The Pope himself has shown him many fatherly favors and numerous distinctions, which in former years were mostly given to him only by worldly princes, and as a mark of his highest grace added the brilliancy of his own order to the dark priestly robes of the musician. Sometimes he also visits him in his solitude, in order to listen to the charming productions of his genius, and Liszt usually remains then a long while in the presence of the Pope, who calls him 'his true son,' 'his Palestrina.'"

"HONESTY IS THE BEST POLICY."

THIS old saying, repeated so often by good people, and gaining thereby a kind of sanctity, is, nevertheless, a mischievous one to be floating so freely through the world.

That honesty and policy can have any connection whatever, can hardly be thought of by a right-minded, true-hearted person; and it seems to me a misfortune that the two words were ever linked together. The moment one stops to think of *policy* before doing what seems to him a duty, that moment his *honesty* becomes of a doubtful character.

It is sad to see how people are coaxed into "doing right" and "being good;" sad to hear so many appeals to the selfishness of our nature; sad to know that *policy*, after all, is the secret of much seeming honesty.

I heard a mother say to her little boy one day, "Now, do be a good boy, and you shall have a large piece of maple-sugar." The same

day I heard a minister say to his people, "Follow the course I have marked out to you, and you will not only gain much in this world, but eternal life in the next."

It was policy for the child to put on the appearance of goodness, and he understood it. Many may have thought it policy to be Christians when such inducements were offered.

Dangerous teachers are they, whether mothers or ministers, who teach those under their charge to look out for the gain, the result, of whatever they do. Is it right? is followed too often by that other question, "Is it expedient?" betraying an entire want of confidence in the providence of a loving Father who will ask nothing of His child that is not best for him to do—setting up weak human judgment against His all-wise and just demands. We can not know what is expedient, for the greatest seeming failure has often proved to be the most glorious success. But we *can* know what is *right*; at least we can know our highest conviction of right, and following that we shall be *true*, and a *true* man is to be honored, though he come far short of absolute truth, for he proves that he is striving after it, and is on the right road toward it.

Oh, mothers, do not offer rewards to your children for being hypocrites! Childhood should be glad and bright and beautiful, and it can never be when so unnatural.

Give to them, abundantly, tender words of sympathy and encouragement. Place in their hands gifts of love and appreciation, but never teach them to think that right doing deserves reward; for they will soon learn to value it according to the pay they get. Let goodness and truth be as natural to them as fragrance is to the flower, just as it ought to be. Do not send them out into the world with such miserable, unreliable guides as "Honesty is the best policy," "The *safest* way is to do right;" but rather teach them to cast policy away altogether, to forget reward, to feel that

"'Tis perdition to be *safe*,
When for the truth we ought to die."

"Is it right?" My brother and my sister, when this question comes to you, for it often comes to all, and what is truest and best in you answers, "It is," let no forebodings of the result, no whispers of policy, detain you from obeying unhesitatingly this command of God. Though sacrifice and pain be the result, it will only show that they are needed.

"Is it truth?" If from the deepest consciousness of your soul the decision come, too plain to be misunderstood, that it is truth, then accept and advocate it, though it bear you into places new and strange, though it lead you into the most unpopular church and party, though it take from you friends and bring you enemies; though reproach and poverty and pain come upon you, still be true for the *truth's* sake, and like the noble Luther be too brave to "speak or act against your conscience."

HOPE ARLINGTON.

IN VAIN.

O'er the golden prime of morning time,
To brood in sullen sorrow;
From coward fears of future years,
A stream of trouble borrow,
When the sunny shine of present time
Foretells a bright to-morrow.

The speeding noon comes all too soon
To those whose hearts are lightest;
Soon follow cares, and silver hairs
O'er heads that now are brightest;
But youth well sped, rich blessings shed,
When bright locks change to whitest.

In vain to sigh for days gone by;
Youth's mantle fits the wearer;
But work and pray that ev'ry day
May be to you the bearer
Of something good of mental food,
To make the soul grow fairer.

For all the harms of winter sterned,
If we're prepared to greet them
With strength of nerve that does not swerve,
But bravely, boldly meet them,
Will strengthen roots to bear the fruits,
And he who works shall eat them.

Then look aloft, and see the soft
Gray light of dawn is nearing,
And gleaming through the ether blue,
The promised land appearing,
When days of youth return in truth,
In triple brightness cheering.

For God is just, and you may trust,
Though ne'er his law divining,
That though dark clouds the sunlight shrouds,
Each has its silver lining,
And 'round the wreath of cypress leaf
The amaranth is twining.

SCIENCE AND SKEPTICISM.—The revelations of science may, and in the nature of things must, often be at variance with popular preconceptions; but variances of this kind need not give rise to hostility, nor preclude conviction. Theologians may be startled by new discoveries in science, just as their predecessors were by the assertions of astronomy; but they are not on that account entitled to accuse men of science of skepticism and infidelity; nor, on the other hand, have men of science any right to retort on theologians the charge of dogmatism and bigotry, because they are not prepared all at once to accept the new deductions. The skeptic and infidel is he who refuses facts and rejects the conclusions of enlightened reason; the dogmatist and bigot is he who, overestimating his own opinions, undervalues those of others and obstinately resists all conviction. What may be accepted by one mind under the bias of early training, may be insufficient to induce belief in another differently trained but equally earnest to arrive at the truth. "To faith," says Bunsen, "it is immaterial whether science discover truth in a spirit of skepticism or belief; and truth has been really found by both courses, but never by dishonesty or sloth." Arguments may prevail; abuse never wins over converts. Bad words never make good arguments; and we may rest assured that he who is in the habit of using them is by no means in a fitting spirit to enter as a worshiper into the great temple of truth.
—*Man: Where, Whence, and Whither?*

VAMBERY IN HIS DERVISH DISGUISE.

ARMINIUS VAMBÉRY,
THE HUNGARIAN ORIENTALIST.

THE Magyar or Hungarian race has long been a subject of profound investigation by the ethnologists of Europe. Its origin has not yet been exactly ascertained, although it is the generally received opinion that the Magyar is an offshoot from the Turanian stock. Differing in blood from nearly all the rest of Europe, this people exhibit marked peculiarities of mind and mode of life, which indicate both an Asiatic and a nomadic ancestry. The subject of this sketch is considered a good representative of the Magyar type, with some Teutonic elements infused. He early became interested in the endeavor to solve the intricate problem of the original derivation of his race, and he wished, as he said himself, by a practical study of the living languages of the related grades between the Magyars and the Turkish-Tartar tribes of Middle Asia, to trace out this origin. This was the star which led him to the Orient, from Hungary to Constantinople and Mecca; from Teheran, in Persia, across the Turkomanian desert to Khiva, Bokhara, and Samarkand, and even to Afghanistan. The accounts which he has given of his researches while on this journey are treasures of ethnographical facts in relation to the Middle Asiatic tribes, some of which had never been visited by a European since the days of Marco Polo. Our sketch of himself and his travels must necessarily be very brief.

Arminius Vambéry (Vamberger) was born, in the year 1832, at Duna Szerdahely, a Danubian island belonging to the province of Presburg, Hungary. His ancestors appear originally to have emigrated from Germany, though they had been settled for some time in Hungary. His father, who died when Vambéry was very young, was a common Hungarian peasant, and his mother, a pious Protestant woman, early sent her son to the village school. When fifteen years of age he attended a school in the city of Presburg, where he studied industriously, though in great poverty, and managed to support himself by teaching the Slavic cooks and servants the Hungarian language. His own talent for languages developed very early, and by the time he was seventeen he had acquired, without a teacher, the Latin, Greek, French, Italian, English, Servian, and Croatian languages. He not only acquired them theoretically, but could speak them quite fluently and correctly; and his memory was so retentive that he daily committed six hundred words.

A testimony to his correctness of speech is thus recorded: he had been studying for a short time in a school at Vienna, where he was in very great poverty, when he was obliged to return to Presburg. He had no money with which to pay his fare, but while standing in the railroad depot he courageously spoke to two gentlemen, respecting his situation and need, in such excellent Latin, that

they immediately gave him a sum of money which more than sufficed to procure his passage ticket. His remarkable talent gained for him many friends after this, and in 1854 an office was procured for him in Posego, in Slavonia, whither he traveled on foot; but he did not hold his appointment any longer than consisted with the purpose he had in view of visiting the East.

In order to complete himself for this work, it was necessary that he should become acquainted with the languages, literature, and customs of the Mohammedans, and for that purpose he went to Constantinople. In an incredibly short space of time, his whole stay being little over four years, he had acquired twenty Oriental languages perfectly to his command, even exciting the attention of the sluggish Turks themselves, to whom he could talk like a native. He gained in position among them until he was made private secretary of Fuad Pasha, who gave him a good salary. In this office he had access to the archives of the country, received and answered all the state papers, and copied at his leisure hundreds of the most important historical documents. He forwarded important contributions of these labors to Hungarian, Austrian, and German journals, with which he was in constant correspondence. He called the attention of the Hungarian Academy to the existence of the remainder of the library of King Korrian, and for this and other service he was elected one of its members in 1860. It was through the influence of this Academy that he was enabled to consummate his long-projected travels.

Vambéry left Constantinople mysteriously in the year 1861, and, joining a party of Beggar Monks, proceeded first to Mecca, the shrine of the pilgrim monks, and thence to Teheran, the chief city of Persia. Here he gave himself out to be a pious Mohammedan, calling himself Reschid Effendi, and was soon known as a good friend of the poor and ragged Mecca pilgrims. He introduced many of these to the Turkish consul, procured them assistance, and even kept some at his own expense in order that he might thus more perfectly learn their language. In this manner he became acquainted with a party of pilgrims who were on their homeward journey to Bokhara, and to them he communicated his genuine Islam wish to visit the holy people of Khiva, Bokhara, and Samarkand. The Tartar pilgrims answered, "We are resolved not only to be thy friends, but also thy servants;" and he was received into the caravansary as a fellow-traveler, though they did not know him except as a holy dervish like themselves, for he, too, had been to Mecca the holy.

This caravan was a motley collection. "Some," says he, "rode on mules or camels, but the poor, foot-sore worshipers were very ragged. In my wretched clothing I had considered myself a beggar, but among these people I was a king." The head of the caravan was Hadschi Valal, of Aksu, in Chinese Tar-

tary, priest to the Chinese-Mussulman Government of the same province.

The time occupied in the journey was occasionally enlivened by the pilgrims singing pleasant songs, by relating to each other their adventures. The Hungarian dervish soon made himself friends by his conversations; he understood his audience intuitively, and realized now that he was fairly in the midst of Asiatic life.

The route from Teheran taken by the caravan was eastward, across the borders of Persia, across the Turkomanian Desert to Khiva, the chief city of the Turkomans, known even amid the lawless tribes of that portion of the country as the very seat of cruelty. He relates several appalling instances of judicial cruelty which he himself there witnessed. The present Khan of the province would procure for himself the name of a defender of his religion, and believes that he will acquire it by punishing the smallest offense with the most rigorous severity. The casting of a single glance upon a deeply-veiled woman is enough to bring upon the offender terrible punishment. A man who has committed adultery is hanged, while the woman is buried to the waist, in the neighborhood of the gallows, and then stoned to death by the mob. Scarce a day passed, during Vambéry's stay, that did not witness some poor victim hurried off to the scaffold. "But amid these rough scenes and customs," he remarks, "I have spent in Khiva and its provinces, in my dervish incognito, many of the most beautiful days of my travels."

From Khiva, which lies to the south of the Aral Sea, in Turkistan, the caravan proceeded in a southeasterly direction to Bokhara. Vambéry's mode of traveling was about as our engraving represents him. He had for his own use an ass, upon which he sometimes rode, and also half of a camel, which carried his traveling bag.

The heat, when they were fairly upon the desert, was intense, for it was July. They were obliged to travel six hours every day, besides at night, and the nomad Turkoman robbers constantly annoyed them.

Vambéry mentions a caravan station which they reached on the 4th of July, which bore the very attractive name of Adamkyrylgan, that is, the place where people die. And truly it was a lifeless waste. As far as the eye could reach, extended an apparently boundless sea of sand, now whirled by the wind into huge rolling waves, and now reflecting the rays of the sun like the zephyr-stirred mirage of a still sea. No bird in the air, no worm or beetle upon the earth, was to be seen, but only traces of extinct life; the whitened bones of men and animals, in great accumulation, served as way-marks to the pilgrim travelers. This desert is very wide, and not a drop of water upon it. Vambéry's party soon felt the need of drink, and the languishing cry, "Water, water," was repeatedly uttered in vain by parched lips. On July 8th, Vambéry had only eight glasses of water in his store, and half of this was de-

voted to a dying fellow-traveler. The caravan can not wait for those to recover who fall sick, else the whole caravan would be lost. As soon as one's strength fails, he is placed on the way-side, a leathern bottle of water and some food are left him; he sees the long lines of the caravan gradually disappear in the far distance, and is left alone to his fate.

The leader of the caravan saw in the distance the signs of an approaching sand-storm, and having announced it, the pilgrims immediately threw themselves upon the sand; the camels instinctively laid themselves down upon their knees, stretched out their long necks, and buried their heads in the sand, while the travelers found what shelter they could behind them. The sand was driven over them with terrific force by the gale, and when it had subsided, the hot sand covered them to the depth of many inches. Toward evening of that day they were gladdened by the sight of a well in the distance; but, to their disappointment, it was found that the water was totally unfit to drink. Vambéry was now quite exhausted; he could not even alight from the camel upon which he had been placed, and his companions laid him down upon the sand. His inside burnt with insufferable heat, and his dizziness completely stupefied him. "I thought," says he, "that the last evening of my life had come." Fortunately, however, his fellow-pilgrims did not desert him. They did not forget his kindness in Teheran.

When he awoke on the morning of the 12th of July, he found himself in the miserable hut of a Persian slave, who refreshed him with milk, while his dark-bearded dervish companions stood around his bed, anxiously awaiting his recovery. Soon he was well again, and all the hardships of the past were forgotten, when, on the next day, they passed across the borders of Bokhara, and two days later entered the city of that name. This was the destination of his fellow-pilgrims, and it was a sad parting to him, for they had been his constant companions for nearly six months, and had stood faithfully by him in his need. "My heart would break," he says, "as the thought came to me that to these, my best friends in the world, whom I had to thank for the preservation of my life, I could not trust the secret of my incognito, but must constantly deceive them."

We have not the space to give in detail his arduous wanderings among the nomad tribes of Middle Asia. He everywhere maintained his dervish disguise, though he was often compelled to change his traveling companions. From Bokhara he first went to Samarkand, once a famous seat of Mohammedan learning, visiting the many and various native tribes on his way. The wandering, plundering Turkomen are set very vividly before our eyes in his descriptions of them; we see them fastening their solitary Persian prisoners to stakes in the lonely desert, and leaving them there to die; or, again, taking them in gangs across the dreary waste, and goading them by the sharp-

pointed spikes of the camel-drivers. Vambéry spent above a year among these people, and thence proceeding south and southwest to Afghanistan, which he describes as being an immense battle-field, ruled by various robber princes, who extorted money from the traveler under every pretext whatever. One stopping-place, Andschi, is thus characteristically described by the proverb: "Andschi has bitter, salt water, burning sand, poisonous flies, and scorpions; commend it not, since it is a picture of the real hell!" Some parts, however, especially the neighborhood of the city of Herat, the capital of a state of that name in Afghanistan, is described as being beautiful naturally, and is compared with a paradise. Herat itself is considered as the "gate of India and Central Asia," and is a place of great political importance. Its narrow, dirty streets are full of ruin, but among its bazaars, its mosques, its caravansaries, and its citadel, Vambéry found opportunities to carefully study the many different races that daily assemble there, from Khiva, Russia, India, Tartary, Turkestan, and Persia.

In this city Vambéry was in absolute want; his money was almost exhausted, and he must sell his faithful ass to get bread, or starve. His attendant, a native of Khiva, named Mollah Sochak, who now lives in Pesth, even went into the street and begged nourishment and materials for fire. In this extremity Vambéry went to the ruling prince, who was a mere boy, being only sixteen years of age, and who had been placed by his father over the conquered province. The young prince reclined upon a chair at the window, and continually amused himself by watching the evolutions of his soldiers in the court-yard, who were drilled after the European fashion, and were even under the command of an English officer. It was here that the following scene occurred as Vambéry made his appearance, showing at the same time the completeness of his disguise and the keenness of the young prince. The latter was surrounded, as usual, by the dignitaries of his court, and his vizier occupied a seat by his side. The dervish uttered the usual form of greeting as he entered, and then seated himself in front of the young prince. "God, our Lord," said Vambéry, uttering the customary prayer on taking a seat, "let us receive a blessed place, for, truly, Thou art the best giver of quarters." The young prince looked eagerly into the face of the supposed dervish, and ere the latter had uttered "Amen," and composed his beard, sprang up from his seat, and pointing with his finger at Vambéry, half laughingly and half in wonder, exclaimed, "By God, I swear thou art an Englishman!" A loud laugh followed this singular fancy of the young ruler, who now stood by the stranger's side, amused as a child who has made a lucky discovery. "Tell me, he continued, 'is it not true thou art an Ingles in disguise?' The dervish replied: "Stop! Thou knowest well the proverb, 'He who declares, even in jest, that a believer is an unbeliever, is himself an unbeliever.' Give me, rather, some-

thing for a fatika, wherewith I may continue my journey." The young prince sat down, remarking that he had never seen a Hadschi of Bokhara with such a face, whereupon Vambéry interposed that he was from Stamboul, showed him his passes, and was successful in getting his temporary wants supplied. Vambéry did not forget to write to this clever young Persian after he had returned home, and wished him success on account of his acuteness, and told him that though he was not an Englishman he *was* at least a European.

On the 10th of October, 1863, Vambéry left Herat in the company of a caravan nearly two thousand strong, and soon reached Mesched, in Persian Chorassan, where he could, now that all his dangers were past, bid farewell to his dervish dress, and once more appear as a European. But he could not part with his ragged old cloak, which had protected him so long; for it contained the results of all his wanderings, had protected him not only from the intense heat of a burning sun, but also from the observation of his companions, for if they had seen him engaged in writing they would have at once suspected his object. He wrote with lead pencil, in the Mongolian language; and when he made out plans and maps of the cities and states through which he passed, he secretly sewed them, together with his notes, into the lining of his cloak, which finally became so heavy that it was almost impossible to walk under its weight, and he constantly feared that its bulk would betray him. He limped, too, in his walk, slightly; but this apparent misfortune was a fortunate thing for him, as the Mohammedans reverence all men who are afflicted with any bodily infirmity.

In the month of June, 1864, Vambéry entered Constantinople, as unexpectedly as he had disappeared. He had long been given up as lost, for he had never dared to write. But his fame had gone long before him, and he was honored with marked attention from the learned and the great of every city through which he passed. In Vienna, the Emperor of Austria was personally introduced to his now distinguished subject, and the chair of the Professorship of Oriental Languages in the University of Pesth was immediately offered to him. This position he accepted, and still holds. He delivered his report before Sir Roderick Murchison and the London Geographical Society, and received marked attention while in England from Palmerston, Russell, and the most eminent scientific men.

The account of his journeyings appeared in the English language in London, in 1864, under the title of "Travels in Central Asia; being the Account of a Journey from Teheran Across the Turkoman Desert on the Eastern Shore of the Caspian, to Khiva, Bokhara, and Samarkand." This was followed by "Sketches of Central Asia; being Additional Chapters of Travels and Adventures, and on the Ethnology of Central Asia." Both these works were written by their author in the English language. We have before us a letter from him ourselves,

and can hardly detect a flaw either in the orthography or in the grammatical construction.

These works have found a warm reception in both England and America. They are thoroughly practical, and full of observations of the greatest value, now that the Eastern question excites so much interest. Among the topics discussed, the following are well worthy of attention: the productive power of the oases of Turkestan; the Turkoman and the slave trade; the inner life of the people of Central Asia; the Mohammedanism of Persia, etc. He tells us that these people are beginning to feel the pressure of the Western world; and their old organization must be broken up by the constant tide of emigration. His sketch of the literature of Bokhara proves that the Asiatic states have experienced a partial civilization.

The most interesting and entertaining part of his works is—a subject which no one is so well qualified to speak as Mr. Vambéry—the ethnography of the various races—the Turanian and Iranian—of Central Asia. There are two other races which he does not fail to discuss—the Anglo-Saxon and the Muscovite, the Briton and the Russian; the one extending its territory northward from the boundaries of India, and the other pushing forward its Oosack hordes across the steppes of Northern Asia southward. Soon they must meet, and the conflict, commenced in the Crimea, will probably have to be settled upon the sandy deserts of Central Asia. Mr. Vambéry says that Russia's progress needs watching.

Mr. Vambéry's last work is published in German, under the title of "Cägataische Sprachstudien" (Leipsic, Brockhaus, 1868). This is a work for which few possess equal qualifications, being a grammar of the language of Turkestan. The work is prefaced with an interesting essay on the distinctive peculiarities of the various dialects of the Turkish language, followed by copious notes and illustrative passages, including selections from the chief Uzbeg writers. The work is receiving great attention at the hands of the German scholars.

"By FITS AND STARTS."—Spasmodic efforts amount to little or nothing. It is steady application that accomplishes. One may be easily "fired up" to do something, and as suddenly cooled off. The team—of men or horses—that pull together, and pull steadily, will do the work. But those who are always beginning, and never finishing, have more of the spasmodic than of the persevering. Moral: Teach your children to do one thing at a time, and to *finish* what they begin.

LET our laws and our institutions speak not of white men, not of red men, not of black men, not of men of any complexion; but, like the laws of God, the Ten Commandments, and the Lord's Prayer—let them speak of the people.
—Horace Mann.

Our Social Relations.

Domestic happiness, thou only bliss
Of paradise that has survived the fall!
Thou art the nurse of virtue. In thine arms
She smiles, appearing as in truth she is,
Heav'n-born, and destined to the skies again.—Cooper.

WHO AM I?

BY MRS. GEORGE WASHINGTON WYLLYS.

Who am I?

What does the PHRENOLOGICAL JOURNAL reading public want to know for? What difference does it make who cooks the intellectual omelette down in the editorial kitchen, as long as it is served up hot, smoking, and satisfactory?

There are some people who can't be satisfied unless they know all that there is to be known about everybody and everything. They are perpetually tormenting themselves with trying to ascertain the "reason why" of every occurrence. They never travel without establishing an immediate *rapprochement* with the machinery on steamboat and locomotive engine; they can not enjoy a new book unless they know the author's Christian, middle, and surname, and why he wrote it; and exactly how much money he got for it; and why he didn't get a little more; and why it was published by Press & Company, instead of Type & Sons! They pounce, the first thing, on the "Personal" column of the newspaper, and gloat with delight over the impertinent (and too often imaginary) little items that sensational reporters nowadays steal from the very edge of the domestic hearthstone—in short, they go through life one continual interrogation point. You avoid them by instinct, and yet they follow you like your shadow. If you add fuel to the fire of their curiosity by answering their questions, they are only stimulated to fresh investigations. Nobody but a policeman and a "First Lessons in Geography" has any business to ask so many questions.

What are you to do with such people? How can you satisfy them? You may tell a child that it has "two ears and but one mouth," and that its vocation in life is "to be seen and not to be heard;" but it won't do to apply the same charmingly repressive method to the grown-up babies who are unreasonably inquisitive. They are quick to take offense, and eager to imagine slights; and if you once begin to indulge their propensities, you will find your communications gradually enlarging and complicating themselves, after the fashion of that ancient and well-authenticated legend "The House that Jack Built!" When you have told them who you are, what security have you that they won't want to know how old you are, what your complexion is, whether you are tall or short, what church you are in the habit of attending, and what school of medicine you are partial to? Where is the catechism to end? Haven't I as good a right to turn round and ask who *they* are? And don't you think

they would very speedily intimate to me the propriety of minding my own business?

"They like me!" I am much obliged to them, and I fully appreciate their kindness; but just imagine me walking up to the first person on Broadway whose *tout ensemble* impressed me favorably, with "Excuse me, madam, but I like you—who are you?"

Perhaps it's the other way, and they *don't* like me, a circumstance that has been known to happen, improbable as it may seem. All the more reason that I should have the advantages pertaining to the anonymous state. Borrowing yet a second illustration from the practical aspect of every-day life, what sane individual would walk up to his neighbor and begin, "Sir, I do not like your appearance at all—the cut of your coat and the shape of your whiskers are quite intolerable to me, consequently I insist on knowing who you are, at once, and definitely!"

Don't you see that this delightful frankness wouldn't work well at all in general practice?

Some of my unknown friends want my photograph, too!

Now, of all things stiff, unmeaning, and inflexible, a photograph is the stiffest, most unmeaning, and least flexible. It may look like me, just as a marble statue looks like warm, glowing, living humanity—just as the artificial sparkle of a diamond resembles the free sunshine; but who ever knew the photograph that really gave any correct idea of a person, unless you have beforehand some personal association to vitalize its cold lines and formal, unthinking stare.

No, you can't have my picture, friends! When I am dead and gone, then is quite time to fall back upon photographs. But as long as there is a living, breathing, existing Me, just so long will I protest against being misrepresented by any such painfully correct libels. I am not a celebrity, and don't want to be, and don't pretend to be. And, consequently, I don't fancy the idea of my photograph in an album between Tom Thumb and Ex-President Jefferson Davis. It would certainly take unto itself wings and speed away. That is, it would, if it were anything like me; for I have always had a preference for choosing my own company!

I haven't told you who I am yet, have I? No, I thought not. A woman *can* keep a secret sometimes, even when she is discoursing upon that most delightful and attractive of subjects—herself.

Yes,—wouldn't you like to know? Wouldn't you enjoy canvassing me, and pulling me to pieces, figuratively speaking? Not that you are all so destructively inclined; there are some of you to whose gentle keeping one might safely trust name, fortune, and almost soul! who would be ready to palliate faults, excuse failings, and spread the comprehensive mantle of the sweetest charity over all backslidings. What would young writers do—aye, and old ones, too—if there were not such kindly spirits in the great audience of the public? But there are people enough to whom

the mere fact of authorship is sufficient to rouse all that is belligerent and fault-finding—people who think they *must* criticise every woman who is audacious enough to take up the pen. I can imagine their verdict quite vividly enough without giving it the advantage of reality: "Yes, an old maid, of course; nobody but an old maid would ever write in so exceedingly bitter and prejudiced a vein! A failure, socially speaking, in the great end and aim of a woman's life—matrimony—scarcely ever improves the temper. Bluestockings are almost always old maids!" "Married, is she? Well, they should think that a married woman might have enough to do without turning literary, that is, if she kept her home in decent order and looked after her husband's shirts!" "Old, eh? that juvenility of style is seldom acquired without years of practice!" "Young—what business has *she* to express herself so dogmatically?" "A country girl can certainly have had no great experience; it is the height of impertinence in her to attempt to discuss such social topics!" "A city lady necessarily moves in an artificial atmosphere, and has no means of judging society from an impartial standpoint!"

You see I have read my Esop's Fables—S. R. Wells' Illustrated Edition, page 70, "The Miller, his Son, and their Ass," with six pictures! I know very well that I couldn't please, any more than that respectable old piece of antiquity the Miller, even if I were to try—therefore I don't mean to try!

Here's my platform, since platforms are the fashion just now. I am going to mind my own business, and do the very best I can to instruct, amuse, and perhaps improve a little. If you want to become acquainted with me, why, here I am, most happy to spend a few minutes with you, once a month, under the protecting wing of my good friend the PHRENOLOGICAL JOURNAL. But you mustn't ask too many questions. It is so much easier to express one's mind from behind theegis of the little sanctum in No. 389 Broadway! And every reader of the JOURNAL is my special and confidential friend; taken individually, I'm ready to shake hands with him or her in spirit, at any time they please. I have much kindness and indulgence to thank them for. Nor do I forget the patience with which they have heard me. Now, what else could the most unreasonable and exacting of publics ask for?

Dear me! what a lot of I's there is in this article! but how else can a body excuse a body for not telling everybody else who a body is? (Not an uningenious way of avoiding the obtrusive personal pronoun that!) Egotism can not always be avoided.

Who am I? A faithful reader of the AMERICAN PHRENOLOGICAL JOURNAL; a believer, not in *isms*, but in reforms; one who can sew on buttons and hold a pen with equal dexterity; a devotee of nature, and a *woman*, with all a woman's instincts and impulses. Don't you think you ought to be satisfied with this answer?

BEAUTIFY YOUR HOMES.

AMERICANS are necessarily utilitarians. In a new country, "use," before ornament, is the order. The various steel traps to catch wolf, bear, and fox are not inlaid with gold, silver, and pearl; nor is the ax, the hoe, or the plow ornamented. The frontiersman wants a rifle that is steady, strong, and true—that will put a bullet where he wants it put; while the more fashionable sportsmen of old settlements uses a polished or gilded gun. So the pioneer wears plain, strong "homespun" instead of silks, satins, and fine laces. But even the trapper, the hunter, and the pioneer farmer may do *something* toward cultivating a taste for the beauties of art and of nature. When locating his humble cabin he may have reference to the landscape, and so placing it that he can have a beautiful view of earth, trees, and sky. He may have evergreens, wild flowers, cascades, and other interesting natural objects. A patch of ground may be set with shrubs and vines, as well as with corn and cabbage; very soon the fragrance of sweet flowers, the charm of hill and dale, and the song of birds will beget a love even for the new home, though it be far, far from the haunts of early childhood. Later, when all the *necessaries* of life have been supplied, when the wants of the body no longer press, *then* we may look still higher for sources of improvement and enjoyment.

Now we come up into the region of ART. We think of architecture, music, painting, sculpture, and such accompaniments as tend to refine, elevate, and beget a higher civilization. Now we patronize those most skilled in the art of beautifying our lawns, our parks, our public buildings, and our private dwellings. Now, such works as were produced by the old masters are readily reproduced by newly invented processes at a very moderate cost—one-tenth of the original—and find their way into our drawing-rooms, libraries, and bed chambers.

Look at those marvels of beauty and cheapness produced by Messrs. Prang & Company of Boston, called "*chromos*." What can be more attractive, what more refining, than to have the walls of our rooms hung with these beautiful pictures? Money expended in this way will be invested in the means of a higher and constantly growing culture. What more appropriate birth-day present, by a father or mother, to son or daughter, than a choice picture, which would be a joy forever?

We should give more time and means to the cultivation of flowers. Every church—every school-house, seminary, college, hospital, and prison, as well as every dwelling-house, should have a flower garden. The humanizing influence of this could not be computed. It would soften the temper of the hardened, subdue and humanize even the brutal and criminal, and chasten and spiritualize those most favorably organized. Husband, wife, son, or daughter can not more surely win the esteem, the admiration or love of others than by doing all they can to beautify and render home attractive.

THE VAGABOND-SAGE.

AN old man of very active physiognomy, answering to the name of Jacob Wilnot, was brought before the police court. His clothes looked as though they might have been bought second-handed in his youthful prime, for they had suffered more from the rubs of the world than the proprietor himself.

"What business?"

"None; I'm a traveler."

"A vagabond, perhaps?"

"You are not far wrong. Travelers and vagabonds are about the same thing. The difference is that the latter travel without money, the former without brains."

"Where have you traveled?"

"All over the continent."

"For what purpose?"

"Observation?"

"What have you observed?"

"A little to commend, much to censure, and a great deal to laugh at."

"Humph! what did you commend?"

"A handsome woman who will stay at home; an eloquent preacher that will preach short sermons; a good writer that will not write too much; and a fool that has sense enough to hold his tongue."

"What do you censure?"

"A man that marries a girl for her fine clothing; a youth who studies medicine while he has the use of his hands; and the people who will elect a drunkard to office."

"What do you laugh at?"

"I laugh at a man who expects his position to command that respect which his personal qualifications and qualities do not merit."

He was dismissed.

FUN AT HOME.—Don't be afraid of a little fun at home, good people! Don't shut up your house lest the sun should fade your carpets; and your hearts, lest a hearty laugh shake down some of the musty old cobwebs there. If you want to ruin your sons, let them think that all mirth and social enjoyment must be left on the threshold without, when they come home at night. When once a home is regarded as only a place to eat, drink, and sleep in, the work is begun that ends in gambling-houses and reckless degradation. Young people must have fun and relaxation somewhere; if they do not find it at their own hearthstones, it will be sought at other and perhaps less profitable places. Therefore, let the fire burn brightly at night, and make the homestead delightful with all those little arts that parents so perfectly understand. Don't repress the buoyant spirit of your children. Half an hour of merriment, round the lamp and firelight of home, blots out the remembrance of many a care and annoyance during the day; and the best safeguard they can take with them into the world is the unseen influence of a bright little domestic sanctum.

A home with mirth and cheerfulness is one of the dearest of earth's possessions.

JOHN H. LITTLEFIELD, THE PORTRAIT PAINTER.

THIS gentleman possesses a brain of fine quality, allied with a good degree of the Motive-Mental temperament. It is owing to his inheritance of many constitutional qualities from his mother that we find so much of clearness and delicacy pervading the features. In those traits of character which appertain to social life, to sensitiveness, emotion, and intuition, he, doubtless, represents the feminine more than the masculine. In intellectual apprehension and practical ability he is masculine. The forehead is high and projecting at the eyebrows, indicating a predominance of the perceptive faculties. He appreciates the characteristics, qualities, and peculiarities of substances; is a clear and sharp judge of things, and would be a first-rate critic of property and whatever pertains to art.

His Language is not indicative of much fertility in the expression of thought, but is free and fluent enough to convey his opinions on any subject with which he is acquainted, in a clear and definite manner. He is careful in the selection of words, and very specific in the use of terms. Were he educated or trained for authorship he would exhibit much delicacy of expression and considerable descriptive power, and weave in with the current of his thought many figures of speech and metaphorical allusions. He is by organization adapted to a pursuit at once delicate, artistic, graphic, and practical. He is not philosophical enough to find satisfaction in mere ideas or speculations. His imagination is based upon the real, and finds enjoyment in its refinement and exaltation. Constructiveness is apparently well marked, and allied with Ideality, so that he would be inclined to modify or improve upon his model; for his invention would be exhibited in the alteration or improvement of the designs of others rather than in the production of entirely new devices. In a mechanical line, as an artisan, he would be known for his "finishing touches," for the extra polish, the extra decoration he would give to his work, as well as for the closeness of his imitation of a pattern.

PORTRAIT OF JOHN H. LITTLEFIELD.

He has an ambitious nature; is fond of popularity, but at the same time would shrink from conspicuous undertakings in which there were chances of failure. A slight loss of reputation would be most acutely felt by such an organization as his. He is a little lacking in physical vigor, and should avoid all those exciting and irritating circumstances which wear upon and exhaust the nervous system.

We rarely see one having so sensitive a nature who is so firm, stanch, and steadfast. He is also executive, thorough, and forcible, and with his strong perceptive talent he will bring to bear upon whatever he undertakes the full force of his power in a concentrated manner.

BIOGRAPHY.

Mr. Littlefield was born at Cicero, a small town in Onondaga County, N. Y., on the 20th of March, 1835. His father was a native of Vermont, but had settled in Cicero, where he pursued the calling of carriage-making, and into his shop, at the early age of ten years, the subject of our sketch was taken and set to painting work as it came from the wheelwright's hand. In early childhood he had exhibited an aptitude for drawing and coloring, and this aptitude, doubtless, influenced his father in selecting the painting-room for John's sphere of industry. Here he remained steadily employed several years, excepting the winters, during which he attended the village school. These winter intervals of study were appreciated and turned to excellent account in the culture of his intellect. Besides being very fond of reading, he at other seasons devoted much of his leisure to such books as his limit-

ed opportunities brought him in contact with. By the time he was sixteen years of age he had attained to a good degree of skill as a carriage painter, commanding the wages of advanced workmen, and ornamenting and finishing fine vehicles. Thus early he was able to support himself and carry into execution his purposes of self-improvement.

In 1858 he commenced the study of law at Grand Rapids, Michigan, whither his father had removed a few years previous, and after one year's preparation he went to Springfield, Illinois, where he entered the office of "Lincoln and Herndon," the lamented President Lincoln being the senior partner of the firm. In this connection he remained two years; was admitted to practice at the bar, and launched forth into what he conceived would prove his life's business.

Taking some part in political affairs, he felt so much interest in the cause of his late legal principal, that in 1860 we find him "stumping" the State in behalf of the Republican candidates for the Presidency and Vice-Presidency, Abraham Lincoln and Hannibal Hamlin. During this campaign, which was sustained by the Illinois State Executive Committee, Mr. Littlefield is said to have made sixty speeches, the last being delivered in the Springfield "wigwam" on the night before that memorable election which ushered in the great crisis of our national history.

The general depression in business circles which ensued on the breaking out of the war was nowhere more seriously felt than in the legal profession. In the Western States the dearth of clients, especially to young members of the bar, was extreme, so that nearly all who depended on the returns from active practice for their maintenance were obliged to look for employment in other spheres. A large number of young lawyers enlisted and performed good service in the field, as the military records evidence. Mr. Littlefield went to Washington in 1862, and through the influence of President Lincoln obtained a position in the Treasury Department. There he continued until shortly after the lamentable death of his friend. Moved by strong emotions of friendship and regret, and by the prompting of the old aptitude, Mr. Littlefield conceived the idea of representing on canvas the murdered President's death-bed scene. The idea was well carried out; for the "Death-bed of Lincoln" in the original painting, and in the very many engraved copies which have been extensively sold, has been warmly commended for the excellence of the portraiture, the grouping of the figures, and the artistic handling of the whole. When, however, it is known that the artist had never received any instructions in painting, and had never before attempted a work of the kind, his success can not be regarded less than remarkable. Having completed the publication of this picture, he di-

rected his attention to the "coming man," as sagacious politicians term him, General Grant, and produced a portrait which connoisseurs pronounce a most faithful and finely executed likeness. This portrait has been engraved on steel by one of the best artists in America, and though but lately published is commanding a large sale.

Mr. Littlefield has also painted a portrait of President Lincoln, which is now being engraved in pure line, the size of life. Although we have not seen the production, we may infer from the recognized merits of his "Grant," that it will sustain the artist's reputation. Those who have seen the portrait pronounce it a superb work of art. We understand that Mr. Littlefield is now engaged on a full-length portrait of General Grant, which, when completed, will probably be exhibited throughout the country. At a time when so much attention is given by the American mind to politics of a national character, and when the name inscribed on the banner of the dominant party is Grant, the artist, whose career has been briefly sketched, may "stump" as efficiently for that party through the proposed exhibition of his portrait of Grant, as he did in 1860 by personal efforts.

On Physiognomy.

A knowledge of the structure and functions of the human body should guide us in all our investigations of the various phenomena of life.—*Cubaensis.*

My people are destroyed for lack of knowledge.—*Hosea IV. 6.*

USE LEGS AND HAVE LEGS.

[We think the following excellent article on "Legs" is by Rev. Hugh Stowell Brown, of Liverpool. If not mistaken, it is out of one of his practical week-day evening discourses, such as he delivers before the people. We insert remarks in brackets.—*ED.*]

"Practice makes perfect." "The used key is always bright." "Drawn wells are seldom dry." The principle expressed by all these maxims is, that the healthy exercise of our faculties of mind and organs of body increases their power. This is true; and it is equally true that if we do not exercise them, their power will decline; for, as "to him that hath shall be given, and he shall have abundance," so "from him that hath not, shall be taken away even that which he hath"—[i. e., we are to make the most of what advantages we have, for personal improvement and for the increase of means, etc.]

"Use legs and have legs." This is a maxim in regard to the muscular system; and without regarding it, no one can increase much in strength and activity. One can lift three hundred pounds with ease, another can scarcely move one hundred; one can run a mile in a few minutes, or walk forty miles a day without fatigue; another is dead beat with a run of a hundred yards, or with a walk of five miles. And, very often, the older man is stronger and more active than the younger,

the smaller than the larger, the heavier than the lighter. Whence this difference in strength and activity, a difference that often amounts to 800 per cent.? Of course, in many cases, and to a great extent, it is to be accounted for by the fact that one man is born with a much better constitution than another; but it is really astonishing to observe in how many instances, and to how great an extent, the difference is explained by the principle of using legs and having legs. Exercise often reverses the original relationship of two men, in the matter of muscular power. He who was originally the weaker becomes the stronger. The disadvantage of a feeble constitution is overcome by exercise, and the advantage of a strong constitution is lost by the neglect of exercise. All do not come into the world with the same physical capacities; but all do not, through life, continue in the same ratio of inequality; and it is the use, or non-use of our powers that effects such alterations in their ratios.

We often speak, with profound pity, of those who have lost the use of their limbs; and by such persons we mean poor creatures who have been paralyzed, so that they can neither run, nor walk, nor stand. But such unfortunate beings are not the only people who have not the use of their limbs. The use of our limbs, their full, perfect use, is what very few of us possess. The probability is that most of us have not more than about one half the use of our limbs. [This is equally true in regard to our mental faculties. If used and educated, we should occupy a much higher plane in the scale of human existence.] Those who are not practiced gymnasts would do well to visit a gymnasium, and witness the feats that are performed there. In the running, the leaping, the jumping, the wrestling, the fencing, the climbing, the lifting of great weights, and throwing of heavy bodies, our non-athletic friends would see what the full use of legs really is; and the sight, without any attempt to perform such wonders, would convince them that, although, happily, not paralyzed, it is absurd to say that they have more than one half the use of their limbs—if, indeed, they have that. [Indolence is the parent of weakness and effeminacy; while energy, resolution, and perseverance build up the one who puts them to use.]

Most persons think that they are what God made them; and they will be startled and shocked to be told that this notion is decidedly doubtful. But it is more than doubtful, it is altogether erroneous; we are not, many of us, what God made us, but what we have made ourselves, through the use, or the non-use of the faculties which He bestowed upon us. It is surely very desirable that we should be, even physically, all that our Creator has rendered us capable of being; therefore let us, by careful culture, make the best use of what power remains to us, and, as far as possible, recover what we have lost. Upon young people especially, let us urge the duty of using legs as the only means of having legs.

LONGEVITY AND INTELLIGENCE OF ANIMALS.

Dr. J. V. C. SMITH read the following interesting paper before the American Institute Farmers' Club at a recent meeting. He said:

With a considerable degree of accuracy, naturalists have determined the ages of horses, oxen, sheep, goats, asses, mules, cats, dogs, and many others, so long ago, that it would be difficult to refer to those who are entitled to the most distinction for their industrious researches in that relation; and, further, experience of ages has proven the fact that their lives can not be much prolonged beyond the ordinary limit assigned by the laws of nature, with the utmost effort of human ingenuity.

Among men there are individuals whose vital strength carries them further forward in age than others. It is not so frequently the case, however, with the lower animals. Occasionally horses have attained 50 or 60 years. But such instances are extremely rare, and depend more on some original endowment in their organization than from any particular care bestowed upon them with a view to their greater longevity. A white mule in Virginia, belonging to Gen. Leighton, was 85 years old; it lived through three generations, and knew more about the work on the plantation than anybody else.

Dogs can not be kept alive much more than 20 years in any tolerable condition of health. Their vigor wanes; vision becomes exceedingly imperfect; and although the sense of smell is the last of the special senses to fail, if it ever does before death, they are reluctant to move from comfortable quarters, where they sleep most of the time. Dogs understand several languages, such as French, Italian, and Spanish.

A dog on Fifth Avenue, in this city, understands only Italian. It is related that a yoke of oxen was killed in crossing a railroad, because one of them was French and did not understand his English driver. Poultry understand no language disconnected with feeding. Fish will come to feed at the ringing of a dinner-bell.

When the domestic animals become aged—which, with some of them, may be at 20 or 30 years—they lose flesh and strength. It is almost impossible to fatten them thus, as the food seems to be imperfectly digested. At least nutrition is defective, and gradually they have a lethargic appearance, and finally die without the indications of disease. This is a decay of life with them. In all the intermediate periods between youth and middle age, they may fall victims to infectious maladies, injuries from combats, or excesses in gorging themselves after protracted fasts. No other excesses can be laid to the charge of dumb beasts, as they are controlled in other respects by instincts and by times and seasons which do not reduce their physical energies. They violate no laws of organic life, without the exercise of reason, that intellectual man does with all the consequences before him, and reason for a guide.

With this accumulated knowledge respecting animals intimately associated with man, which has the merit of being pretty accurate, it is rather surprising that more exact data have not been established in regard to man himself. If the greatest study of mankind, in Pope's day, was man, it is no less so now, when institutions have grown into public favor that ought to be able to decide upon the probable limits of life with more certainty than has hitherto characterized tables of expectancy, probable longevity, and some other guess-work assumptions in the department of vital statistics.

With the records of centuries, and the collected observations of careful students who have earnestly interrogated nature with a hope of ascertaining how she gauges the lives of males and females, and by what signs the secret may be brought to light that will invariably point to the positive day of death, it is still too much left to conjecture and theoretical speculating.

By referring to Goldsmith's *Natural History*, a work quite obsolete and perhaps out of print, but which, nevertheless, abounds with curious statements, a pretty correct mortuary table may be found which chronicles the life-period of animals with which we are most familiar. It is quite evident, in the very constitution of things, long life was never intended for those which multiply rapidly and mature in one, two, or three years. Were they to exist as long as man, the surface of the earth would not accommodate the irresponsible myriads, nor food be produced in sufficient abundance to meet their necessities. It is therefore in accordance with a Divine arrangement, which contemplates the greatest amount of happiness for all, that a law of limitation fixes unalterable boundaries for life in all races, types, and forms of organized beings. To this decree man must submit. With such facts before us—and they have been recognized by learned naturalists for ages—it is strange indeed that it has not yet been ascertained to what length of life our own race may attain. Thomas Parr married at 80 for the first time, and lived to 152 years—left a grandson who died at 124. This demonstrates an actual transmission of vitality; but Henry Jenkins—a still more remarkable example of longevity in modern times—reached the patriarchal age of 169. But this by no means determines the duration of human life. It seems to have been a received opinion in the time of King David, that 70 years was the ordinary measure of human existence. Any years beyond are poetically represented as unsatisfactory and burdened with infirmities. The difference, therefore, between the ages of the patriarchs of the Jewish nation and of men in the most flourishing period of Jewish nationality was very striking. Moses died at 110, and his natural forces, says the chronicle, were not abated.

Hufeland believed the duration of human life might be about 200 years. With an experience of 6,000 years, the problem is still an unsolved one; it has not been determined how long we could live.

We have settled the question respecting the length of life with domestic animals associated with man. Their days are specifically limited. They are quickly developed, and almost as rapidly fall into decay. Man's mission and ultimate destiny are so widely different, the laws governing his organic structure operate in conformity to a higher nature; the corporal lasts longer, that his intellect may be exercised for directing and controlling the mineral, vegetable, and animal kindoms—he being truly lord of all he surveys.

DOES HE DRINK?

WHEN riding in Central Park, New York, not long ago, two gentlemen were thrown from a carriage, and one of them—a distinguished politician—was instantly killed! A sensible and sympathizing lady, on hearing of the unfortunate event, instantly inquired, "Had they been drinking?" Yea, verily. They had been "dining and wining." They were imprudent enough to attempt, when in a state of partial inebriation, to drive a span of spirited horses! The wonder is that both horses and men had not been killed.

"DOES HE DRINK?" Then, no matter what accident happens, nobody is surprised. He was expected to come to a bad end. ACCIDENTS are, nine times in ten, the results of drink. The man was tired, or sleepy,—he took a glass, and was run over by a railway train; or he lost his money, his hat, his coat, his boots, or his life.

"He was a promising boy; but, like his father, he took to drink, and was ruined."

He graduated at the head of his class, was an excellent scholar, but, in an evil hour, gave way to his appetite and is now a public pauper.

He was an only son; all the hopes of his fond parents were centered on him; but he became a drunkard, and is lost! lost!! lost!!!

Charlie was a handsome fellow,—popular with all the lads and lasses; but—ah, that fatal "but"—DRINK sent him to an untimely grave, and bowed the heads of his bereaved parents with unutterable sorrow for his heartless conduct and his impenitent folly and sin.

Reader, cast about for a moment, and in your own experience recount the human wrecks which lie stranded on the coast of time! There was handsome William, stately Henry, plucky John, benevolent Jonathan, magnanimous James, noble Abraham, wise Daniel, the kindly Oliver, and numerous others, cut off prematurely by "drink." O God! save us from this destroyer. Frequent accidents must inevitably happen to all who drink alcoholic stimulants. Misfortunes will surely and swiftly follow in the track of dissipation. Calamity awaits the transgressor. "God is not mocked." Little sins of body or mind grow daily, as the weeds, and if not checked in time will choke down the better plant and prevent its maturing. Young man, do you drink?

Ships are lost at sea; steamboats are blown up, or collide on river and lake; horses are killed or crippled; carriages smashed; railway trains thrown off the track; public buildings and private dwellings are burned, and the lives of thousands are sacrificed or jeopardized. Why? By what? Because men give way to a perverted appetite and indulge in that which is an enemy, and *only* an enemy to their bodies and souls. Young man, do you drink?

THE EDUCATION OF CRIMINALS.

"EVERYWHERE education produces its inevitable effects. One, however, is astonished when it is considered that although thousands of years have passed, man has yet to understand that the discontinuance of prisons depends upon the improvement of schools and the general diffusion of education among people. We know only what we understand. How will you become upright if you have no idea of uprightness; if you are not made to appreciate its graces; if you are not early taught to practice it? It certainly is necessary to take into account the impetuosity of natural propensities. But, indeed, is not this necessity a reason for the better organization of the contest against them, so as to bend them, and to oppose them by the counter-balance of the better sentiments and feelings carefully directed?

"In the houses of detention, in the convict prisons (*bagnes*), how many persons there are who, without a definite character, only owe their fatal errors to lack of instruction, to want of restraint, and to bad examples! The fiercest (*farouches*) prisoners are perhaps more approachable than it is believed. So far as the little which one may have acquired, that would be always something; but he has disregarded intellectual culture too much. And in such a case what could a few pastoral exhortations do which were given at long intervals, without rule and without light? The success of education in the colonies of young offenders should be an admonition. The advantage is but lame; one by it attains only to the pace of a tortoise, and is left even worse off than before; for it can be understood that instruction under such circumstances should be so imparted as not to be the means of torturing unhappy law-breakers, but of reforming them. Appreciating this principle, a leading jurist, M. Edmund Turquet, the imperial prosecutor at Vervins (Aisne, France), instituted a course of lectures for the benefit of the prisoners of that city, and the results thus far have exceeded all expectation. There were at first some unbelieving and obstinate criminals, but soon the enthusiasm of the undertaking, extending in the measure of its progress and of the reformation of opinions, each became enamored with the benefit afforded, and now those prisoners, before so degraded, are equal in advancement to the pupils of the best primary schools."—*Journal de Médecine Mentale*.

THE CANDIDATES FOR THE PRESIDENCY AND VICE-PRESIDENCY.

It is a fact, that there are "many men of many minds" in this world. Indeed, there are no two persons exactly alike in the whole realm of humanity. As we differ in height, weight, strength, and complexion, so we differ in temperament, talent, capability, culture, taste, and character. To none more than to the phrenologist and physiognomist is the great diversity among mankind more apparent, or the endless shades and phases of human character so clearly seen. Is it surprising, then, that there should be more than a thousand different religious creeds among the millions of mankind, or more than three hundred creeds among Christians? Do not differences of opinion on various questions arise even among brothers and among sisters, not to mention neighbors and nations? Were they not educated together? Then why do they not take the same view of things? Simply because each looks at a subject through different eyes, or glasses of different shades, or of different degrees of power. If one be hopeful and another desponding; if one be generous and another selfish, there must be a *cause* for it—and that cause may be discovered. It is organic, and inclines to a material manifestation. The action of the mind produces effects on the body. This accounts for the fact, that certain parts, such as the muscles of the arm, become large and strong in the blacksmith; so of the organs of the brain; *use* calls more blood to the part or parts most used, and *growth* is the result. This is as true of the mental faculties as of the physical organs. The best men are but partially developed—none are perfect—no, not one. *All* are susceptible of improvement. Many, by bad associations and bad habits, deteriorate, become perverted, and so become degraded. The "candidates" before us are no exception to the rule. They are as different from each other as others are from them.

A few words more, preliminary. It should be remembered that a good-looking head does not always *insure* a good character, though a good character will, in time, *produce* a good head. Nor does a bad head, *i. e.*, a head less favorably organized, imply a bad character. Men with fine heads sometimes fall, and the worst may be reclaimed. No phrenologist, who is not a pretender, will venture to affirm that one is good or bad; has done or will do certain acts, judged solely by one's phrenology. He may say the developments of one strongly incline him to this or that course of life, temptation, or excess, such as avarice, sensuality, cunning, cruelty, timidity, irritability, superstition, appetite, etc., but he can not say

one is *necessarily* a thief, robber, or murderer. Nor can it be said with certainty, that the character of one must be good or bad, judged by the developments of the brain alone. Nor that one would *certainly* make a good president or a post-master. But we may affirm—our judgment being based on organization—that the natural tendency of *one's* mind is in the direction of truth, justice, and mercy; and that the mind of another naturally tends directly the other way. Thus it will be seen that a naturally good man may become *perverted* from the truth, and that a naturally bad man

may be *converted* to the truth—the one to a downward course, and the other to an upward course of life. But what of the candidates? We range them in the order of their nomination, and remark—

ULYSSES S. GRANT, REPUBLICAN NOMINEE FOR PRESIDENT.

General Grant* is a well-built man of average stature, with a snug and strong frame, dense and compact

ULYSSES S. GRANT.

muscle, and of fine quality. There is no surplus tissue, nothing out of place, and few, if any, excesses in the general make-up. Heart, stomach, lungs, with a healthy, nervous system, derived, in the main, from a tough, hearty, and long-lived ancestry, he may be pronounced a very good specimen of the average American man. His brain is of good size, in proportion with the body, and it is large in the perceptive, full in the reflectives, large in Constructiveness, Human Nature, Cautiousness, Continuity, Secretiveness, Hope, Spirituality, Conscientiousness, Destructiveness, Combaticiveness, and Benevolence. The social affections are also fully developed. Language, Acquisitiveness, Imitation, and Suavity are but moderately indicated. Approbativeness and Self-Esteem are subordinate; but Firmness is decidedly prominent. What is the effect of this combination? First, almost uniform good health; second, strong practical common sense with an intuitive perception of character; knowing at a glance whom to trust. He possesses good mechanical ingenuity, with planning talent, watchfulness, application, policy, prudence, honesty, enterprise, kindness, friendship, and generosity, without much French palaver or make-believe. He is a man of few words and great courage, fortitude, resolution, perseverance, and executiveness. These are some of the leading points in this character. We may add that he is no egotist, no vain boaster, nor will he turn to the right or the left for the love of praise or for the fear of blame. We say nothing of his generalship, and nothing of his—prospective—statesman-

* Our portraits are not only inferior likenesses, but insignificant works of art. We can say nothing satisfactorily on the physiognomy of our candidates, with such inadequate representations.

ship. The following brief biography must complete our sketch.

Ulysses S. Grant was born at Point Pleasant, Clermont County, Ohio, April 27, 1822. His early ancestors were Scotch, and emigrated to America not long after its settlement by the Puritans. In 1823 his parents removed to Georgetown, Ohio, where he obtained his early education. When seventeen years of age he obtained an appointment to West Point, where he became conspicuous for his courage and manliness, if not for brilliant mental ability. Subsequently to his graduating from West Point, he served in the United States Army in Missouri, Louisiana, Texas, and in Mexico under General Scott. In 1854 he withdrew from military life and engaged in agriculture and other lines of peaceful life. In 1859 he became engaged in the leather trade, and was thus occupied when the civil war commenced. Then

SCHUYLER COLFAX.

General Grant's old military ardor at once hurried him into the ranks of the Union soldiers. He raised a company and went with it to Springfield, Ill., where it was mustered into service. In June, 1861, he was appointed Colonel of the Twenty-first Illinois Volunteers, and immediately went into active operations. His skill and success, during the rapid events of the war in the West, won for the nation promotion after promotion, until in March, 1864, he had obtained the highest position known in the army; and he summed up his brilliant victories by compelling the surrender of General Robert E. Lee, April 9, 1865, and virtually closing a ruinous and fratricidal strife.

SCHUYLER COLFAX, REPUBLICAN NOMINEE FOR VICE-PRESIDENT.

Schuyler Colfax has a very large brain and a very active mental temperament. His body is of average size, well shaped, and if lithe, he is tough, wiry, and enduring. Both he and General Grant derive their leading physiological and mental qualities from their mothers, whom they most resemble. The reflective faculties predominate in Mr. Colfax. He has a large intellectual lobe, and his head is very long and very high. Benevolence, Conscientiousness, Approbativeness, Causality, Mirthfulness, and Cautiousness are very large. Secretiveness, Acquisitiveness, and Destructiveness are small. Indeed, the head is narrow at the base, rather than broad, and the leading tendency of his mind is in the direction of intellect and moral sentiment. Language is large; hence he is a fluent speaker and a copious writer. He is youthful, mirthful, genial, familiar, companionable, and popular; is always dignified and manly—not distant or haughty. He is thoroughly self-regulating,

strictly temperate, and in hearty sympathy with all measures for the education, improvement, and elevation of the people. Should he fail to sustain the high position he has attained, or should he fall, it will be from the *perversion* of a naturally aspiring and well-disposed nature. He has all the qualities requisite to make him pre-eminently happy, in the social or domestic relations. We see nothing in his organization to prevent him from continuing to rise until he shall have reached the highest position, intellectually, morally, and socially, among men.

Speaker Colfax was born in New York city on the 23d of March, 1823, and is a lineal descendant from General Schuyler and Captain Colfax, both of Revolutionary celebrity. All the academical instruction he was favored with was received before he had reached ten years of age, and that was obtained, chiefly, through his own diligent application. At the age of thirteen he went to Indiana. In one of the towns in that State he entered a printing-office, and continued the pursuit of a printer, with degrees of advancement, until the year 1844, when he became editor and proprietor of the *South Bend Register*. He was then only twenty-one years of age. His paper was a political organ, in the interest of the Whig party, and though commenced with a small circulation and little influence, it steadily grew in popular favor, by reason of its bold avowal of honest sentiments. This paper brought him conspicuously into view among the politicians of Indiana, and his straightforward and consistent course eventually secured for him a considerable reputation.

In 1848 he was appointed a delegate from Indiana to the Whig National Convention, of which he was elected secretary. In 1850 we find him occupying a prominent position in the Indiana Constitutional Convention.

In 1854 Mr. Colfax was elected the representative of his district in the American Congress, and from that time to this has always been returned to his seat in the national assembly.

In Congress the same energy and industry have characterized him which were so prominent in his private life and personal vocation.

He was first elected Speaker of the House of Representatives in 1863, and twice since has been re-elected. He has so discharged the important duties of the Speakership, that he is considered one of the best presiding officers that has ever been called upon to conduct the proceedings of a great body.

In personal appearance Mr. Colfax is of medium height, and solid and compactly built. His hair and whiskers are brown, not a little tinged with gray. His countenance

has a pleasing and frank expression, and evinces the man of substantial endowments.

THE REPUBLICAN PLATFORM.

The platform on which the candidates already noticed severally announce themselves to stand, indorses the reconstruction policy of Congress; perceives the necessity of equal suffrage among the loyal men at the South; denounces "all forms of repudiation as a national crime" and a stigma on the national honor; recommends the equalization and reduction of taxation, and the contraction of the

national debt and of the expenses of Government as speedily as is consistent with prudence and honesty; deplors the "untimely and tragic death of Abraham Lincoln," and regrets the accession of Andrew Johnson to the Presidency; would equally maintain the rights of native and naturalized citizens when in foreign countries; awards especial

honor to soldiers and sailors who contended for the Union in the late war; encourages immigration; declares its sympathy for the oppressed of all nations; offers a cordial and friendly co-operation to all those in the South who, though once in arms against the Government, now honestly unite with it in restoring peace, harmony, and prosperity; and proclaims its recognition of the great principles of the Declaration of Independence "as the true foundation of Democratic government," and hails "with gladness every effort toward making these principles a living reality on every inch of American soil."

HORATIO SEYMOUR, DEMOCRATIC NOMINEE FOR PRESIDENT.

Horatio Seymour has a large-sized brain, something more than twenty-three inches in circumference, with a mixed temperament, in which the vital, motive, and mental are fairly blended, the mental or nervous somewhat predominating. There is no lack of quantity of either bone, muscle, or brain. But what of the quality? Were he sound, or in perfect health, and were the quality equal to the quantity, he would, with his high culture, become a power in the nation. As it is, there is no deficiency of intellectual ability, no lack of knowledge, ambition, love of property or power. But can he endure, or will he break down under care, trials, and hardships? That is an important question on which success or failure, happiness or misery, depend. A front view of this head reveals a very broad brain at the base; the head is wide between the ears, and Acquisitiveness, Destructiveness, and Alimentiveness are conspicuous. A side view shows very large perceptive, with retreating reflectives. Very large Firmness, full Self-Esteem, with less Hope, Spirituality, and Con-

scientiousness. Veneration and Benevolence are fairly indicated, but not large. Cautiousness is full, Secretiveness is large, and so are Comparison and Language.

This combination produces or indicates a strong unyielding will, great love for property and the luxuries of life, a ready perception, a good memory of facts, with less disposition to theorize. His moderate Hope would incline him to form moderate views of future accomplishment, and to make desperate efforts to realize present wishes. There would be little or no penitence or compunction; little faith in

the fulfillment of promises. He would seek to obtain his ends by stratagem, management, cunning, and intellectual generalship. He will maneuver with the best and keep his plans well concealed. He is a shrewd politician, a sharp, snug business man, a close economist, an unyielding and unrelenting opponent; he is ambitious, tenacious, fluent, belliger-

ent, secretive, and a "study" for any man. Indeed, he will never be fully known, not even to himself.

Mr. Seymour was born in Pompey, Onondaga County, N. Y., in 1811. Educated for the law, he early attained to eminence in its practice at Utica, but withdrew from it to manage the large estates left by his father and father-in-law. Advocating the principles of the Democratic party from the first, he was in 1841 elected to the State Legislature. There his talents and oratorical ability soon made him conspicuous, and upon his re-election in 1845 he was chosen Speaker of the Assembly.

In 1850 he was the Democratic candidate for Governor of New York, opposed to Washington Hunt who was elected after a close contest. In 1852 he was again nominated for the same office, and was elected. His term of office was chiefly signalized by his "veto" of the "Maine Liquor Law," which coupled with his well-known opposition to restrict by legislation the sale of intoxicating liquors, doubtless led to his defeat in the gubernatorial contest of 1854.

In 1862, having again been nominated, he was elected Governor by over 10,000 majority. He had been from time to time proposed as a candidate for the Presidency by portions of the Democratic party, but without definite result until the recent convention, which, having failed, after several days' sitting, to make choice of a man from the many proposed, unanimously nominated him on the first announcement of his name.

Mr. Seymour is of fine personal appearance and bearing; his manners are those of the finished gentleman. As an orator, he is calm, graceful, and dignified, yet fluent and persuasive. He is the first candidate for the

HORATIO SEYMOUR.

FRANCIS P. BLAIR.

chief executive office in the gift of the people that has not served in some department of the national Government.

FRANCIS P. BLAIR, DEMOCRATIC NOMINEE FOR VICE-PRESIDENT.

One accustomed to observe character from portraits could not go far wrong in judging this man, even from the imperfect representation above. There is a current anecdote to this effect. A gentleman inquired of a rather non-committal old lady what sort of a man Mr. Smith was who lived near by? With the double purpose of being polite and not committing herself, she replied: "Well, sir, I have known him many years, and consider him just about such a kind of a man as one would naturally take him to be." So we may say of the portrait of Mr. Blair. He looks the character he is. In the Bowery nomenclature, he would be pronounced "a bully boy." There are evidences of strength, if not of refinement or delicacy here. We "reckon" he would smash things generally if provoked, and the safest place for the offender would be at a respectful distance. Mr. Blair's safety consists in his living a *strictly* temperate life. Fire him up with bad whisky and foul tobacco, and he would be something like a mad "bull in a china shop." Let us see how he is made up. He has a large bony structure, a strong muscular system, with heart, lungs, and stomach to match. All the animal functions are in working order, and he eats, drinks, and sleeps with hearty relish. So far, there is nothing wanting. The head is big—not disproportioned to the body—and very high in the crown, rendering Self-Esteem, Firmness, and Approbateness large. The intellect is strongly marked; he would display much originality and a facile comprehension. He is not without ability to plan and lay out work. Indeed, he would be far more inclined to project new schemes than to execute them. He has more Combativeness—which exhibits itself in talking and writing—than Destructiveness, which gives practical executiveness. Most of his fighting would therefore be done with tongue or pen, rather than by sword. But he will *threaten*. The devotional, the spiritual, the penitential, meek, and the humble sentiments are not prominent. When he submits, it will be under severe pressure. Still, he has qualities not altogether unamiable. As a man of the world, he would be hailed as "a good fellow," and be considered above the average in intelligence. He is generous in giving hospitalities to or receiving them from his chums; is a good liver, and will provide the "luxuries" for his friends. His ability to get money is greater than his power to keep it. We should not select him for a banker, nor for an economist. But he could superintend a plantation, navigate a ship, take charge of a colony of criminals—Van Diemen's Land, for example—or do a hundred other things, where a disposition to be "boss" and take the responsibility is concerned, *providing* others would submit to his rule. Will, strength,

frankness, bluntness, and indifference to praise or blame are among the traits in this character.

Francis P. Blair, Jun., was born at Lexington, Ky., February 19, 1821, was educated at Princeton College, New Jersey, and, removing to St. Louis, adopted the profession of the law. He entered into political life as an advocate of emancipation. In 1848 he sustained Van Buren and the Free Soil party, opposing the extension of slavery into the Territories, and advocating its abolition in Missouri. As an Abolitionist he was elected in 1852 to the Missouri Legislature, and was re-elected in 1854. Two years afterward he took his seat in Congress as a representative from Missouri, and remained in that capacity until the opening of the civil war. He had exhibited much gallantry as a volunteer in the Mexican War, and was moved to again take the sword in behalf of the Union as a Colonel of Volunteers in 1861. He was soon afterward appointed Brigadier-General, and won general favor by his intrepid conduct on the field.

In May, 1863, he commanded a division of M'Pherson's Corps, and was before the close of the year appointed Major-General, when he resigned his seat in the Thirty-eighth Congress. When M'Pherson in 1864 was made commander of the Army of the Tennessee, he was succeeded by General Blair in the command of his corps. This command he held until the close of the war, attending Sherman in his marches from Atlanta to Goldsborough.

In 1866 he was appointed Collector of the Port of St. Louis, and now is brought before the American people as an available man for the party which a few years since owned no sympathy for him.

THE DEMOCRATIC PLATFORM.

Treating this somewhat lengthy declaration of principles in a style of brevity similar to that with which we have disposed of the Republican manifesto, we find it to assert that its framers stand upon the Constitution, recognizing the questions of slavery and secession as settled for all time to come, and demanding that all the States be immediately restored to their rights in the Union; that amnesty be offered "for all past political offenses," and the citizens of the States regulate their elective franchise; that the public debt be paid "as rapidly as practicable," and unless the obligations of the Government expressly state that they are to be paid in coin, they ought to "be paid in the lawful money of the United States;" that every species of property be subject to taxation, including Government securities, and there be one currency for the Government and the people; that the Government be economically administered, the army and navy reduced, the Freedmen's Bureau abolished, the Internal Revenue system simplified and equalized, the credit of the Government maintained, all acts for enrolling the State militia into national forces in time of peace repealed, a tariff upon foreign imports, and "such equal taxation" as will afford incidental protection to domestic manufactures without impairing the revenue be imposed; that abuses and corruption in the administration be rectified and the civil power be exalted over the military, and that the equal rights of naturalized and native citizens to protection at home and abroad be maintained, and the American nationality asserted for the example and encouragement of "people struggling for national integrity, constitutional liberty, and individual rights."

Then follow articles of indictment against the "radical party" for sundry acts in the course of its administration, which are de-

nominated as a "disregard of right, and unparalleled oppression and tyranny."

The platform further demands that the public lands "be distributed as widely as possible among the people," and disposed of only to actual settlers; and declares that Andrew Johnson is "entitled to the gratitude of the whole American people" for the course pursued in his relations with Congress.

OUR WINTER CLASS.

THOUGH we have already received many applications for membership in our annual professional class, which commences its session the first Monday in January next, and have responded by sending circulars setting forth an outline of the subjects taught, terms, conditions, etc., we are still receiving letters almost daily on the subject. Those who have a desire to ascertain the particulars relative to the class, should do so at once by sending for the circular entitled "Professional Instruction in Practical Phrenology."

We are making ample preparations to meet the wants of a larger class than we have ever yet had. Our previous students are making for themselves a high mark in the lecturing field. We have letters of encouragement and satisfaction from them, and are beginning to feel assured that this wide field of beneficence is not always to wait for the hand of the harvester. The laborers have, indeed, been few, and are still few, compared with the amount of work to be done. There is a call everywhere for competent phrenologists. We are doing our best to send forth well-instructed men to meet that demand. The list is still open for applicants, and those who have decided positively to be of the class of 1869 will confer a favor by notifying us specifically at an early day.

FIAT JUSTITIA.—A religious cotemporary devoted half a column to the consideration of our August number (which, by the way, was an excellent specimen, take it all through), but displayed an amazing lack of critical acumen, both doctrinal and literary, in its reflections on some of our articles. Passing over its unscientific, unlearned, and very much adulterated remarks on "A Reviewer Reviewed," we would merely call the particular attention of our readers to "Faith in God," which the religious paper's erudite critic terms "a semi-infidel description." Will some candid and discriminating person be kind enough to point out the *infidelity* avowed in that article? We believe it to be a clear, earnest, cogent expression of Christian sentiment. "Poets and Poetry" contains a few fair specimens of versification, but "Mutabile Semper" and "Thought" are specified by the above critic as excellent poetry, a declaration sufficient to damage his future hopes as a reviewer of esthetic writing. Ideality, certainly, is not well developed in his cerebrum. Perhaps the spleen of the critic was due to our severe denunciations of the practice of advertising patent medicines by some religious journalists—truly, a sort of "infidel quackery," and from which the aforesaid critic's paper is by no means exempt.

Other religious critics allude in very commendatory terms to our August JOURNAL. Strange that it should have been allowed the above reviewer alone to discover our great weakness!!

NEW YORK, SEPTEMBER, 1868.

"If I might give a short hint to an impartial writer, it would be to tell him his fate. If he resolved to venture upon the dangerous precipice of telling unbiased truth, let him proclaim war with mankind—neither to give nor to take quarter. If he tells the crimes of great men, they fall upon him with the iron hands of the law; if he tells them of virtues, when they have any, then the mob attacks him with slander. But if he regards truth, let him expect martyrdom on both sides, and then he may go on fearless, and this is the course I take myself."—*De Foe*.

THE PHRENOLOGICAL JOURNAL AND
LIFE ILLUSTRATED is published monthly at \$3 a year in
advance; single numbers, 30 cents. Please address,

A KEY THOUGHT.

A "KEY THOUGHT" is one that unlocks shut questions. As a key opens doors, so a key thought opens doors of thought, and enables the thinker to pass on when otherwise he must either stop short or turn back.

The present key thought is this:

The cause of any national good or evil in the United States is the average character of the people.

"What is the use of that statement, even if it is true?"

The use of it is, to enable thoughtful people and good citizens to trace out the sources of public and private virtues and vices, excellences and defects. Having done this, they can see just how to use their influence in order to produce reform or improvement.

Some instances will make the case clear. They will be instances wherein improvement is needed—because those naturally attract most attention and are most important for consideration. It must not be supposed that it implies any doubt or discouragement respecting the United States. Nothing human is perfect; our country has its faults, yet, notwithstanding them all, it is the best country in the world to live in, because it offers the best future to the average man. And notwithstanding the partial or temporary defects which will here be noted, it is none the less true that the world at large improves, and that the United States improves, steadily and surely. Hope is wisdom. Progress is a fact. Faith is common sense.

Now for the instances referred to:

1. There is a great deal of wrongdoing and folly in the management of political parties; in obtaining nominations to office; in securing elections;

in making town and city ordinances and State and national laws; in conducting the business of government. In consequence of this state of things, there has arisen what may almost be called a regular professional body of politicians, an undesirable body of men; there has grown up a feeling among many good people that it is hardly respectable to hold office, and at the same time a despondent feeling that nothing can be done about it, and that politics must be allowed to grow worse and worse, without any hindrance from honest men.

Now apply our key thought:

The reason of this trouble is, that the average character of the people is not morally sensitive and self-denying enough to make them clean up our politics and keep them clean. Rather than spend time and labor (which are money) in arguing and negotiating for a good candidate instead of a bad one, many a citizen leaves primary meetings and all the rest of the political machinery to the exclusive management of those whom he knows to be exactly the wrong men. To effect the needed reform would require great labor to begin with, and "eternal vigilance" afterward. The average citizen thinks he is "minding his own business" in thus letting politics alone, and that he is rather meritorious than otherwise in so doing. Far from it. The phrase of "the sovereigns," applied to our voters, is not a mere flattery,—it is a perfectly appropriate descriptive name. Our voters have absolutely unlimited power—the power of a despot; and being, collectively, in the place of the king, they are bound to his duties just as much as they exercise his powers. Thus the citizen who refrains from helping to choose good men for office, violates his duty just as a king would who should neglect to appoint good subordinates, and should give himself up to his private pleasures and the management of his private property.

"Well, perhaps that may be so. But how does your key thought help the evil, after it explains it?"

Let us have another instance or two, and let us state afterward, for all the cases, how the key thought points toward an intelligible remedy.

2. A monstrous quantity of harm, including sickness, death, shortening of

average life, bodily suffering during life, waste and loss of money, vicious and criminal conduct, together with the accruing expenses for courts, jails, hospitals, and workhouses, arises from the use of rum and tobacco.

Apply the key thought:

The reason of this trouble is, that the average character of the people is not (on this point) mentally enlightened enough and morally elevated enough to make them understand this state of things and quit the abuse of stimulants. Vicious and criminal persons are of low organization and crave the excitement of these things, probably to a great extent because they know of nothing better, or are only capable of animal enjoyments. Those of better character and higher station enjoy (or say they do) the delicate flavors of their alcoholics and narcotics, or what they call the stimuli to their mental and social faculties.

3. The country is suffering very widely and very deeply from its recent five years' civil war, whose consequences still weigh us all down. Every citizen feels the heavy load of increased taxes and increased prices. All trades and employments are embarrassed because nobody buys or contracts for anything that he can do without. The great business relations of the Southern half of the country have been exploded as a volcano explodes the business of a region where it breaks out; and a broad, festering, angry margin of bitter quarrels, poverty, suffering, starvation, open violence, secret conspiracy, and all manner of crime, is impeding the return of the country to a condition of social and commercial unity, and is at the same time continuing to embitter the political action of our parties.

Apply the key thought:

The reason of slavery, of the rebellion, of the disorders still trailing after it, of the angry debate over paying the national debt, of the social troubles throughout the South, is one and the same: The average intelligence, benevolence, and sense of justice of the people of the United States have not been and are not of a grade high enough to enable them to deal competently with the case.

Perhaps these are instances enough to show how this key thought may be applied to clear up and simplify the un-

derstanding of questions of this class. Others might easily be proposed, as:

The enormous waste of labor and money involved in our present organization of labor and of household economy.

The deficiency in American literature of writers of large knowledge, high culture, and trained depth and breadth of thought.

And so on. Now, to answer, at once for all, this range of questions, and the objection supposed at the statement of the first one, viz., "How does your key thought help the evil, after it explains it?"

It is clear enough that the understanding of an evil is the very first requisite toward helping it. If you know where the wolf is, you can shoot at it; but to go and fire into the woods generally, is not likely to hit anything in particular. The understanding of the case does not in itself effect the cure, nor even insure the cure; but it shows how to direct the efforts that are made toward the cure.

As the evils here mentioned have been traced to the single common cause and source of defect in average character of people, so it follows that the cure must be by improving that character.

It is not pretended that the mode to be suggested for that improvement has been invented or discovered for the present occasion, or that it is startling, or even particularly promising. All that is attempted is, to give some means for clear thinking on such questions. And if the cure that is to be mentioned be reckoned slow or insufficient, yet (it is believed) it is the only one there is, and therefore should be vigorously engineered by all true-hearted reformers and good citizens.

"You can't teach an old dog new tricks." Grown-up men and women do not change much. Reading, speaking, discussion, organized effort by societies and the like, have some effect, but no decisive effect. The improvement required in the popular average character of the United States can not be effected thoroughly and permanently, except by providing a better generation of citizens to succeed us who are now alive. It is from our characteristic national institutions for moral and mental improvement that the cure must come. In other

words, we must look for real and permanent national progress to

The free schools and the free churches.

Suppose a new, earnest, vigorous, systematic, persevering employment of these machineries for the coming ten years. That period will bring into the voting body a full third of new voters. Imagine all these to have imbibed higher views than any preceding generation, of their duties as citizens; of the relative importance of money and virtue; of what real enjoyment is; of the way to handle their own faculties. It is evident that there would necessarily result a higher tone of politics, a wiser ordination of the parts of life, a greater power of harmonious adjustment of internal national polity, more skill in organizing effort and in saving drudgery, more leisure, more wealth, more beauty in character and culture, in short, more happiness.

CATTLE SHOWS.

FARMERS throughout the Union are notified to trot out their fancy animals for exhibition. Horses, cattle, sheep, hogs, poultry, fruits, flowers, and every variety of farm and garden produce, will have places, and compete for prizes. There is but one feature connected with these exhibitions which detracts from their usefulness—that is, the low, demoralizing sport of horse-racing. Say what you will of the desirableness of fast horses—and we grant that speed as well as strength has its uses—it would be better for the whole country if the race-course were not opened.

Betting on horse-races is a sort of gambling which opens the gates to other vices, and thousands of the unwary and weak go in thereat. It may be the first step of an otherwise promising young man to a life of vice and crime. Horses are noble animals, contributing largely to the advancement of civilization as well as to our personal comfort; but there are larger interests at stake in our industry, and the horse should not absorb or monopolize our attention.

The farmer who produces the best variety of wheat, corn, potatoes, the best apples, pears, and peaches, strawberries, blackberries, or grapes, is as deserving of our gratitude as he who cultivates the best horses, cattle, and sheep. We oppose every species of gambling, and would not put the temptation in the way of our countrymen. Evidences enough of brutality on the race-course are seen in England, where the thing is patronized by royalty—indeed, by nearly all classes; and "the Derby Day" is almost a national holiday. Let us not follow her bad example, but set her people a better, as we have done in some other things.

Let us encourage the largest exhibition of all

our useful products, and do all we can to improve, from year to year, everything which can be made to minister to the *real* wants of man. Every State, every county, should have a genuine annual AGRICULTURAL exhibition. Show off your horses among the rest; but dispense with racing, and blessings, without curses, will follow.

OUR DAILY LECTURES.

BESIDES occasional lectures before the different literary and other associations in New York city and vicinity, we shall soon resume Daily Lectures in our New Class-Room, 389 Broadway—second floor—so agreeably inaugurated in the month of June last. Among the subjects for elucidation we may name the following:

MAN, made in the Image of God—the distinctively Human Attributes—the Selfish Propensities—the Social Affections—the Moral Sentiments—the Religious Emotions—Morality without Piety—the Relations of Piety and Morality—a Harmonious Moral Character—the Self-Perfecting Faculties—the Artist and the Artisan—the Commercial Faculties—the Aspiring Faculties—Pride of Character, and how it is useful—Vanity, and how to modify and make it a virtue—the Abuses of Pride and Ambition—the Prudential Elements of Character—Rashness or Imprudence, and its results—Fear or Timidity, and how to overcome it—Education, its breadth of signification—Practical Talent, and how to use it—Reasoning Power, and how to cultivate it—Memory, and how to cultivate and retain it—Forgetfulness, and how to overcome it—Imitation, its use and abuse—Fashion, its use and its abuse—the Executive Elements, how to develop and direct them—Appetite, and how to educate and regulate it—Prosperity, and how to acquire and how to use it—Economy, or Saving and Wasting—Parasimony, Avarice, and Theft, and how to obviate them—"Policy"—Concealment, Deception, Superstition—its causes explained—Faith, and how to cultivate a trusting spirit—Veneration, the spirit of devotion and worship—Integrity—the sense of "right," a part of Human Nature—Depravity, and how it is increased—Moral Improvement, and how promoted—Language, Oratory, and how cultivated—What to do, and how to find it out—Clerks or Assistants, and how to select them—Success in Life, and how to attain it—Notable Men of the Past, their developments—Marked Men of To-day, and why—How to Train and Educate the Young—Self-Improvement, the way to do it—Objections to Phrenology Stated and Answered—Fatalism, Infidelity, Fanaticism—Materialism, and Personal Responsibility—Insanity, and its right treatment—Intemperance, and how to cure it—Comparative Phrenology, Human and Animal Heads—Chain of Gradation in Sentient Beings—Animal Phrenology, and how to read it—How to Judge different Nationalities—Temperament, and how to study it—Combination of the Phrenological Organs—Singular Characters, and why—Physiognomy of the Heavens and the Earth—Natural Language of the Faculties—"Signs of Character," in face, form, and action—Why some Persons Lie and Steal—Hereditary Eccentricities—Partial Idiocy, combined with partial genius—Curiosities of Mental Development—Principles and Proofs of Phrenology—the Errors of Investigators—Superiority of the Phrenological Method of Investigating Mind and Character—the Races, Ethnology—white, black, and red—Body, Mind, Soul, Spirit—Our Beginning and Our End.

The above are among the subjects on which we lecture. Each lecture will be complete in itself, yet one must relate to another. We begin and we end in Anthropology, which includes man's physical, mental, and spiritual state or condition. See daily papers and hand-bills for particulars as to time and terms.

THE DEVELOPMENT THEORY.

SECOND LECTURE BY DR. THEODORE GILL, OF
THE SMITHSONIAN INSTITUTE.

RETROSPECT.

IN appearing before you for the last time, ladies and gentlemen, and in continuation of the subject that engaged our attention on the last evening, it will be necessary to recapitulate some of the propositions then referred to; but I shall have to rely upon your memory to recall much of that which was said on not only that but on previous evenings. In reference to the classification of animals, we took into consideration the conformity to plan of animals now living and in times past, and their various relations as individuals, varieties, species, genera, families, orders, classes, and branches. We found, on examination of the animals of the past, that the same principles which are applicable to the classification of animals now living are also applicable to them. We then took into consideration the rudimentary organs, referring to the fact that in many animals there were rudiments of parts which subserved no evident purpose in the economy of the animal, but which, in animals nearly related to them, were found to be well developed and assuming functional characteristics.

On examining embryology, we found that animals all originate from eggs, which in their earliest condition are similar throughout all of the branches. In their development, we found that they all start from one point and take specific directions; that the representatives of each group, with some limitations, undergo similar changes in development, and that the animals that are lowest in the scale seem to correspond in some manner to a certain stage of the development of animals that are above them in the scale. In considering the facts of the geographical distribution of animals, we found that they are distributed in space and congregated in various assemblages called faunas; that the diversity of species is generally in ratio to the extent of the area inhabited, and that it was also in ratio to the isolation of areas; that intermediate types inhabit different areas, and that when intermediate types do not occur in these times, they did exist in times past. For, in determining the laws of geographical distribution, we are necessarily obliged to take into consideration, not only animals and plants now living, but also all that have lived. We found, also, that the variability of species is more or less in proportion to the extent of the area that they cover; and when we more especially questioned paleontology, we found not only that the same type was apparent in the animals of former days, but that those that are now widely separated were connected by intermediate forms, which combined characters now characteristic of very different groups; and further, that the differentiation of animals now living from those that were, is, in the main, in ratio to their separation in time; and that in differentiation, time and space bear inverse ratios to each other.

I have drawn up a series of propositions embodying these facts presented in the last lecture and in those preceding it; and the inferences or suggestions deducible from these propositions may be regarded as corollaries. Considering them in the order in which we have discussed and expounded them, we have, first, systematic or classificatory zoology. Our studies have furnished us with the basis for these propositions or laws:

SYSTEMATIC ZOOLOGY.

1. The differences between animals are the resultants of modifications of the same elements common to a few great groups.

In zoology such groups are called branches or sub-kingdoms. In botany, there are no groups with these designations; but the division of the phanerogams and cryptogams may be taken as correspondent to the branches of the animal kingdom.

2. Animals exhibit all degrees of affinity and all degrees of subordination from relationship as individuals upward.

3. Groups widely differentiated, so far as living animals are concerned, are connected by extinct intermediate forms.

These propositions being admitted, and they are tacitly admitted by all competent naturalists, we may embody the inference which follows in a quasi-corollary.

The affinities and subordination of animals and conformity to plan suggest genetic relationship.

That this suggestion is not a mere assumption is evident from the fact that from the very earliest times, and before the relations of animals and conformity to types were known so well as now, that relationship was expressed by the same terms; for the divisions and subdivisions of the realm of organic nature we have borrowed the designations of the social distinctions of mankind—that is, the family, the order, the class, the kingdom, etc.; and there are other but less generally admitted groups that have been named in analogy with the same idea.

RUDIMENTARY ORGANS.

In connection with the systematic natural history and the consideration of plan, we must consider the subject of rudimentary organs. The results of our examination may be embraced in another proposition.

Elements or organs are developed or exist in a rudimentary condition and are functionless, but represent elements or organs specially functionalized in allied groups.

Of course, this is a fact too obvious to be denied. The statement which might be volunteered, that the presence of such rudiments is in accordance with plan, would furnish no explanation whatever, but would only substitute one fact for another. We are indeed compelled to adopt this corollary.

The presence of rudimentary functionless organs is only explicable by the theory of genetic relationship with animals in which such organs are functionalized.

EMBRYOLOGY.

Passing now from the consideration of ani-

mals in their general relations to animals in their stages of growth, the facts we have gleaned may be resolved into these propositions:

1. All animals originate from eggs.

This is simply another form of that old adage that has been proverbial from the time of Harvey, "*Omne vivum ex ovo*."

2. All eggs in the beginning are similar.

3. All eggs develop from a common point and in specific directions.

4. The similarity of an adult to an embryo of a higher type is the result of arrest of development at an earlier stage.

But this proposition must be viewed in connection with the facts embodied in another proposition, viz:

5. The similarity or dissimilarity of the adult to the embryonic condition is partly determined by teleological considerations.

Certainly, in view of these facts, it is permissible to accept this corollary.

The modes of development of animals suggest genetic derivation from few primordial types.

GEOGRAPHICAL DISTRIBUTION.

Reverting to the relations of animals to space, we may embody the facts gained concerning the geographical distribution of animals under the following propositions:

1. The differentiation of faunas is in ratio to the differentiation of areas.

2. The specialization of faunas is in ratio to the isolation of areas.

3. Intermediate areas are characterized by intermediate types.

4. The variability of forms is (*ceteris paribus*) in ratio to the extent of areas.

5. The types now common to remote areas were formerly existent in intermediate areas.

Against one or more of these laws or propositions objections might be urged; but when we take into consideration the geological as well as geographical relations of the several bodies of land and water, and the indications of the length of time during which those relations have existed, such objections are at least very much weakened; and it must be admitted that they have ever been tacitly recognized and accepted by naturalists in explanation of various anomalies of geographical distribution. It is quite true that if living animals were only considered, there would be found to be glaring discrepancies between facts and the present propositions; we would have exceptions without number to the third proposition—that intermediate areas are characterized by intermediate types. But when, taking a view more comprehensive and complete, we revert to the geological record, a vast number of these objections are nullified at once, and we are perfectly authorized in assuming—and naturalists, before the development theory was as prominent as it now is, constantly worked upon this assumption—that the gaps which exist did not always exist. The evidence which may be brought against the proposition is only of a negative character, and the admission of the propositions suggests to us this corollary:

The relations of animals in space suggest community of origin.

GEOLOGICAL DISTRIBUTION.

In geology we will group our facts under four propositions:

1. Groups have had a continuous (*i. e.*, uninterrupted) existence.

2. Groups now distinguished by peculiar characters were preceded by groups more comprehensive, and combining characters non-differentiating and limited to special groups. Such groups are called "synthetic" or "comprehensive" types.

3. The differentiation of living and extinct animals is in ratio to their separation in time.

4. The relations of faunas in time and in space are in inverse ratio to each other.

Against one or more of these propositions objections likewise might be urged, but competent naturalists, whether accepting the development theory or not, would not consider them as unauthorized by facts; and, indeed, some of the most distinguished opponents of the development theory have, in a certain form, not only admitted, but, under different phraseology, urged all of them, and the objections are again, in this case, only negatives. It is true that there are groups whose representatives are separated by more or less wide geological epochs; but I believe I am safe in asserting that there is not one naturalist worthy of the name who would not, without demur, admit that representatives of the group lived in the epochs for which we have found no remains. For example, we have very few remains of mammalia in the older beds, and the older representatives are separated by wide intervals; but who is there that will not admit that the existence of the class has been uninterrupted since its introduction on the globe, and that the absence of representatives is solely due to their mode of life and the obstacles which exist to the preservation of their remains? The evidence against this view is purely negative, and of such a character as to be of the slightest possible value, and which would not be urged by any scientific naturalist as proof against the development theory. We are therefore fully justified in accepting these propositions as the expressions of facts, and as a resultant, or corollary, their deduction.

The relations between animals of the present and the past suggest genetic succession.

In all these propositions you will see that I have been very careful in my presentation of the results. I have never said "these prove," but "these suggest;" and that word is certainly not too strong; I repeat that the propositions themselves are essentially admitted, and naturalists explain anomalies occurring in the several departments under which these propositions are grouped, by referring to the facts which they express. They have never been drawn out exactly in the form in which they are now presented; but they are simply the embodiment of results which have been already attained. I have been extremely careful in eliminating such propositions as might be regarded as exceptional, or against which *positive*

evidence could be brought; so careful, indeed, that in the case of embryology I have even suppressed the proposition that animals of like type undergo like changes, for the reason that in crustaceans, hydroids, and others, we have several instances of groups and species very closely related in the adult condition, passing through quite different stages of growth. But, *en passant*, I may remark that this is no more inconsistent with the theory of development than with the theory of plan.

CONSEQUENCES—SPECIAL CREATION.

Now, let us pause and reflect where we have been brought, if these facts and indications have any meaning, and if so, what that meaning may be. Hitherto we have been dealing with facts, and have traveled in company with advocates and opponents of the development theory. If we now examine these facts with reference to the idea of miraculous intervention or creation, we find no explanation. The utmost that the advocates of a special creation have given in explanation is, that these facts are in accordance with "plan." But what is this plan? It is at most the mere expression of the assemblage and relations of the facts; it is no explanation of the facts themselves. It must be conceded that plan for any wise end must have a purpose; but here we have plan without any evident purpose, for it is not at all obvious what purpose, physiological or otherwise, could be better subserved by this adherence to plan and by these trivial modifications than by the creation of a few special organisms for special ends. We would have, in like manner, imitation without object, and we have this vast amount of unessential modification of the same elements without evident reason, or subservient to any evident advantage. In other words, we have a great and useless expenditure of force and waste of power, and yet one of the beauties of "plan" to some had been the economy of the Creator in the use of means to ends. We should have a series of special creations and subsequent extinctions without apparent aim; such creations to be succeeded by others whose *tout ensemble* would be so little different from the preceding as to suggest no apparent gain. These alone are positive objections to the idea of special creation; for in our arguments in natural theology we assume that the Deity works in a manner analogous to man, without undue expenditure or manifestation of power. The theory of special creation, then, offers us no explanation, or no reason whatever for all these facts. Science demands explanations, and natural explanations, of natural phenomena.

Now we are brought face to face with the alternatives which were presented to us in the beginning of the preceding lecture—whether all the facts of modern science are in accordance with or are opposed to the theory of progressive development. These facts of modern science have been embodied in the propositions submitted. How are the facts in accordance with the development theory? If we assume that all animals have sprung from one or few primordial germs, we should expect to find that they would all exhibit more or less con-

formity to plan; that there would be gradations between them; that as the descendants diverged more and more from the original stock, they would exhibit among themselves proportional differences; and that the earliest in time, or those nearest to the primitive stock, would exhibit less difference, and combine characters distinct in their descendants. All these are found in animals now living, and that have lived in times past. Without repeating the facts that have been already presented, it is enough to say that they are all consistent, and such as would be naturally expected to be found, if all animals had originated in the manner suggested. We have, in all the modern results of science, no facts that militate against the supposition of derivation from a few stocks, but they rather all point in that direction. If, then, we can prove that there is a power of variation inherent in animals, which is analogous to the variations that exist between species and higher groups existent in a state of nature, we shall have the element requisite for the reception of the development theory as a true theory of creation in the highest sense of the word.

VARIABILITY OF ANIMALS.

And now we will briefly question nature, to see whether this variability is existent. We have already seen that it is difficult to find marked distinctions between the various assemblages of animals; that the more perfect our acquaintance with any group becomes, the greater we find to be the extent of variation between its individual members, and the more difficult becomes the task of obtaining characters which differentiate trenchantly the more closely allied forms. This is the cause of the discussions that are constantly engaging the attention of naturalists with respect to the value of groups and the importance of characters; and the reason that naturalists who have access to vast materials are generally more prone to reduce the number of species than those who have comparatively limited material. Let us examine now one of the many forms with which man has interfered, and has subdued and brought into a condition of domestication. For this object we may take the group of dogs; and let us recall that this examination has for its view to ascertain whether the differences existing between the various dogs are analogous to, or of the same character as, those differences which we find between wild representatives of the family.

WILD CANIDÆ.

Let us take, then, the family of Canidæ and its representatives, existing in a wild condition. To save time and to avoid complication, we will simply consider the forms now living, and not even all of these. This family, Canidæ, is a very natural group, composed of representatives agreeing generally in form, which are all more or less similar to the ordinary type of the dog; and the differences existing between them as to form are less than those which distinguish the different races of dogs. In dentition, they agree as to the number of incisors and canine teeth, as well as in the trenchant teeth and the

premolars. They differ, however, in the number of the posterior or true molar teeth, most having two molar teeth in the upper jaw and three in the lower. The dog, the wolves, and jackals agree as to the dentition; the number of toes—having five in the fore and four in the hind feet, and in all other essential characteristics. Together, they form the genus *canis*. The wild species of this genus are distinguished by very slight differences, incomparably less in appearance than those distinctive of the domesticated races of dogs. The foxes agree with the dogs and their congeners in dentition and the number of toes, but are distinguished by eyes adapted more especially for seeing at night—this adaptation being exhibited in the vertical pupils; with this character is also associated a bushy tail. The foxes are themselves divisible into two genera—*Vulpes* and *Urocyon*—which exhibit osteological characters of greater value than those which exist between the red foxes and the true dogs. Very closely related to the foxes, and especially to some African foxes, is a genus called *Otocyon*, which chiefly differs in having one more posterior molar tooth in each jaw; and there are wild forms, *Cuon* and *Cynaliscus*, which are, on the other hand, more nearly related to the dogs, but which are distinguished by the suppression of one or more posterior molars. Such are *Cuon*, which has two posterior molars in each jaw, and *Cynaliscus*, which has one posterior molar in the upper and two in the lower jaw. But all these forms we have been considering agree with the dogs in the number of toes, that is, five toes in the fore feet and four in the hind ones. There is, however, a large canine animal found in southern Africa called *Cynhyena*, which exhibits form and dentition like those of the dog, but which depart from all the other representatives of the family in the possession of four toes in the fore feet as well as in the hind ones; and it is a very interesting fact, which, however, I will only thus allude to, that this animal agrees not only in the number of toes, but also in the pattern of coloration with the hyena, which is found associated with it nearly in the same geographical area, and that this similarity is so strong that the animal was at first considered to be one of the hyenas. We find them, in reviewing the distinctive character of the several groups, that these groups differ in dentition, in osteological characters, in the development of the tail—or more especially of the hair of the tail, in the number of toes, and, it may be added, in the pelage or hair generally.

DOMESTICATED CANIDÆ.

If we now refer to the *races* of dogs, we shall find that there are very numerous forms, and these we may group with some naturalists in six tribes, viz., the wolf-dogs, including the Esquimaux, Newfoundland, and others; the watch and cattle-dogs; the true hounds, including the bloodhounds, pointers, and setters; the curs, including terriers and the Pariah dogs of the East; the mastiffs, including the bulldogs; and, lastly, the greyhounds. Each of these has numerous varieties. The differences

between the greyhounds and the mastiffs, as well as between those and the other forms, are as great as have been made use of by some naturalists for the generic differentiation of various *groups* of mammals; and were they existent in a state of nature, it is more than probable that they would have been long ago differentiated as distinct genera. In form, then, we have differences not only as great, but greater, exhibited between derivatives of a generally admitted common stock—at least generic—as between, not only *species*, but *genera*, existent in a state of nature. And here it may be advisable to recall that although there are some, but excessively few, naturalists who believe in the creation of our domesticated animals as they now are, and solely for the use of man, almost all admit that they are derivatives of a few primitive forms, which are still existent in a wild condition. In dentition there is comparatively little difference between the races of dogs, but there are forms—how constant I am unable to say—which exhibit deviations from the type. One has one more molar in both the upper and lower jaw than the normal number, and thus resembles *Otocyon*; another at least occasionally exhibits only three premolars in the upper and two in the lower jaw, representing the three posterior of the upper and two posterior of the lower molars of the typical dogs, and in the lower jaw there is one posterior molar. In a Turkish form, one deprived of hair also, we find almost all of the molar teeth to be lost, there being only a premolar above and below. These differences in number are greater than those between any of the wild forms, and it must be recalled that it is in number alone that these essentially differ.

The differences between domestic races are analogous to those between wild ones. But it may be urged that the differences in dentition are only casual, and that they are ever monstrosities. As I hinted, I am unable to say how constant or inconstant to the race they may be, although constancy has been claimed, at least in form. As to the objection of monstrosity, it may be replied that any character which is not normal to a type is, more or less, monstrous for it; but what is monstrous for one group is normal for another. And it is not improbable—I would scarcely dare to use a stronger term—that the deviations from a type exhibiting such excessive differences as to be considered, and properly considered, as monstrosities, may be enabled, after a more or less prolonged strife, to perpetuate themselves; and this may account for the fact that there are so many groups between which there are not more decided gradations or connecting links. I, however, offer this as a bare possibility. The wide external differences between the various *races* presupposes, and is, indeed, the result of corresponding differences in the skeleton. Those differences are, however, differences of degree, but yet quite as great as those which exist between the representatives of any natural *genus*, although not as great as those which exist between *Urocyon* and *Vulpes*,

yet quite as great as those between *Vulpes* and *Canis*.

In another of the characters enumerated as differentiating the genera and species of wild *Canidae*—the tail—it is almost superfluous to remark that we have very wide differences. I need only call to your memory the difference between the tails of the Newfoundland dog and of the greyhound. The ears are also notably different, and, as a contrast, we may cite the ears of the Esquimaux dog and the King Charles spaniel; in the former being moderate and erect, in the latter very largely developed, pendant, and covering the sides, and with the muscles atrophied. In the number of toes we likewise find differences, and recalling the fact that there are five toes to the fore and four to the hind feet of the dogs generally, we may cite as an exception the Lassa variety of the mastiff of Thibet, which exhibits five toes in the hind feet as well as in the fore feet. As to the last character mentioned, the character of the pelage or hair, we have all varieties in texture and development in the races of dogs, from the shaggy coat of the Newfoundland and some of the cur dogs to the thin, appressed coat of the typical greyhounds, and the hairless condition of the Turkish dog. It is then demonstrated that all differences in parts and organs which are met with in a state of nature are susceptible of selection and exaggeration by man.

Now, this power of variation being granted, and divergence taking place in all directions, what bounds are we able to set as to the extent of divergence? Objections have been brought forward against the consideration of animals in a state of domestication, and a comparison of the differences existing between the races and those existing between wild species; but I am unable to appreciate the pertinence of such objections. The fact of the modification of the same elements in the domesticated condition and in the wild condition, is presumptive proof of their being induced by analogous or comparable causes. There are indeed differences between natural and artificial selection, but only as to the objects to be gained. In artificial selection, or selection by man, the object in view is utility to man or subservience to his use; in nature, the object is subservience to the use and good of the animal. Man, however, only avails himself of the variations which nature affords, and does not himself cause variation. He selects, but he selects those, however, which might not, and probably would not, be in most cases selected by nature. It is in this respect that natural and artificial selections chiefly differ.

REVERSION TO ORIGINAL FORMS.

It has been urged that as soon as the influence of man is withdrawn, the races which he has cultivated revert to the original condition of the stock whence they descended. Happy in some respects would it be if such were the case; for we should then have the means of deciding, in a very short time, what were the original progenitors of our domesticated forms of animals and plants; as concerning many

forms we are in great doubts as to their origin. Notwithstanding the repeated assertions of many, that domesticated stocks do revert to their original condition so soon, the very fact that we have never been able to ascertain positively the parentage of some of our domesticated animals would serve to show that such reversion does not take place. And there are besides positive proofs against that hypothesis. In illustration, we may allude to the horses and cattle which have been introduced into the Americas. Although horses did exist in the Tertiary period in America, none lived in recent periods until the advent of the Spaniards, who carried them to America. Some of these escaped, and bred, and their progeny increased in vast numbers, especially on the pampas of South America. These, without any interference of man, existing in a wild condition as completely as any of the originally wild animals on the continent, they had all the conditions that would favor reversion to their original stock. It may be even true that the horse on the pampas now exhibits a homogeneous character; and if homogeneity were the test of reversion, it might be impossible to say that that was not a reproduction of the original form. But we have another test for determining the question. On the plains of Asia we have likewise large herds of horses. Call them feral (that is, horses that have escaped from man and propagated), or wild (such as have always existed untamed), as you will, we still have one or several homogeneous races in certain areas. But none of those races agree with the race or races now found on the American plains. If we compare the animal of the Tartarian plain with that of the pampas, we find difference in color as well as in form. The animal of Tartary has a dun color and a barrel-shaped head; that of the South American pampas is of rather a chestnut color, and has a head differing from the Tartarian animal, and is distinguished by other characteristics. Now, if the hypothesis of reversion to the primordial type were true, we should expect to find both of these races exhibiting the same characters.

To account for non-reversion, the argument based upon the influence of climate and external changes which has been brought forward to lessen the weight of this non-reversion is rather an argument in support of the theory of progressive development; for if space is the co-efficient of certain conditions influencing the characteristics of animals, time is another coefficient as valuable. But we must remember the view already referred to, that while man would select animals of certain characteristics, the propagation of those characteristics would not be at all essential to the animal, and might, and doubtless would, in most cases, be rather impediments. In such cases those animals, when the influence and protecting care of man were withdrawn, would either cease to live, or the descendants of such approximating more to the original type, and, consequently, not exhibiting characters thus inconvenient—if I may use this word—would be propagated at the ex-

pense of such as exhibited characters of the immediate progenitor. Animals like the latter, therefore, would very soon die out. This is as might be expected, and is in perfect harmony with the theory of natural selection of Mr. Darwin. And here I may remark that the statements as to reversions of some types are simply absurd. When it is affirmed, for example, that the common domesticated cat, that, becoming feral, it reverts to the type of the common wild cat of Europe or this country, it is evident that an unsupported statement is made, and that the assessor is not acquainted with the fact, that the wild cat and the tame cat belong originally to entirely different species; the tame cat being a descendant of the Egyptian cat, and not of the wild cat of Europe, much less of this country. Many statements have been made as to reversion of animals that will bear the test of criticism as little as does such a statement.

I would again repeat that the difference between natural selection and artificial selection by man, as to time, at least, is one of degree. In nature, the variant forms commingle with the more normal types, and by reason of atavism, the tendency to perpetuate the abnormal form is more or less counterbalanced. In artificial selection, however, the variant form is set aside by man, and its offspring is again selected in ratio to the exhibition of the characters for which the original selection was made, and the aid of man thus rapidly brings into prominence the characters which are desired. Thus a few years enable man to do that which nature, unaided, would require centuries or ages to do.

CONDITIONS OF EXISTENCE.

Without further reference to man's influence, and the objects of his selection, we may consider—as we shall be obliged to be brief—those conditions of existence which in a state of nature exercise an influence analogous to that of man. These we may consider under the head of organic and inorganic. Under inorganic, *climate* may be viewed as one of the chief modifying agents. The influence of this agent is exhibited not only in physiological but in structural characteristics. The bulldog, for example, so noted for its fierceness and boldness in the Northern Hemisphere, in the course of a very few generations is said to degenerate in the tropics into a comparatively cowardly, worthless cur. We all know the difference which the covering of dogs and sheep exhibits in cold and warm countries, and some animals are apparently incapable of withstanding transportation from a cold to a warm climate, or the reverse; and others are either incapable of propagating, or their progeny soon die out. Those forms which should be best adapted to climate, or which could best withstand the changes of climate, would be most apt to be perpetuated. *Station* is analogous to climate, and is a name given to the special position with reference to land or water, or the character of either, which an animal in its faunal area may inhabit. Thus a land animal may have an elevated station, living on the high mountains or on the lowland

plains, on a rocky, a sandy, or a marshy surface; and the aquatic animal may inhabit either the fresh or the salt water, and at various depths and at various bottoms in such waters.

Considering the organic conditions of influence, we may, with the excellent Professor Huxley, divide them into the opponents or helpers; and the opponents may again be divided into those which exert an indirect influence, and which may consequently be called rivals, and those which exercise a direct influence, and which may therefore be called enemies. The helpers may likewise be divided into those which exert an indirect and those which exert a direct influence. Now all of these elements, as well as food, which holds an intermediate rank between the organic and inorganic, have to be considered in determining the conditions which may be favorable or otherwise to the existence of an animal.

It may be well to explain how some of these elements, especially the organic, exert an influence. A rival, for example, would be any animal that would be found in the same country, affecting the same climate, and in the same station, and which would prefer the same food. Such would be a rival in a marked degree. An enemy of course would be one that would prey upon such a one, and select it as the special object of its food, or otherwise war against it. The animal, the greater its strength, the better adapted would it be to combat against and outrival its rival, or to escape from and contend with its enemies. In this connection I may refer to the well-known fact of the rats. It is a familiar fact that in earlier times the black rat prevailed over Europe, and also was common in America, and at that time the so-called Norway, or the common brown rat, was not known in these regions; but now the former has become almost exterminated in most regions, and has been entirely replaced by the Norway rat. These are both species of the same genus, and closely related to each other; and in this instance we probably have not only a rival, but also an actual enemy in the Norway rat as compared with the black rat. Species of the same genus may, however, exist in comparative harmony and without much interference; for while the Norway rat thus drives before it the black rat, with it is found associated the common house-mouse in all regions. Although there is some interference of the one with the other, it is slight.

As an illustration of what is meant by helpers, indirect and direct, for the former we may consider food. For example, a carnivorous animal will feed upon a herbivorous one; and the greater the quantity of herbage upon which the herbivorous animal may feed, the more favorable will be the conditions for the existence and multiplication of that herbivorous animal.

Thus the growth of the plant will be an indirect helper of the carnivorous animal. With regard to the direct helper, one of the best instances that has been given is that of the animals which serve as the hosts of the intes-

tinal worms. Man and the hog, for instance, have the joint honor of supporting the tape-worm in its several conditions of existence; and here we have a case which may be aptly brought forward for the benefit of those who are constantly asserting the adaptation of nature with reference to man. If the tape-worm and the various other intestinal worms which use man as their dwelling-place are of any use to him, it has not yet been discovered; but the use of man and the hog to the tape-worm is very obvious. If we accept, then, the special creation and adaptation theory, we must consider that man and the hog were created for the benefit of the tape-worm.

EVIDENCE IN FAVOR OF DEVELOPMENT.

We have questioned nature, then, in all her departments, and have found that the answers she has given to our inquiries are in accordance with what we might expect were the development theory true. There is no other explanation for the vast number of facts than the theory of genetic connection of the types living in the past with, at the most, a few primordial forms. All the facts that have been adduced are in conformity with such development. We have on the principle of variability that which would explain how these divergences could take place, and on the principle of atavism we have another agent which serves as a check to variability and which preserves the conformity with type. The two are antagonistic to each other. While atavism is conservative and reproduces as nearly as possible in the descendant likeness to the progenitor, variability contends against it, and diversity of the descendant and progenitor is constantly being effected. In the long run, and in the struggle between these two antagonistic principles, variability gains slowly but surely on its opponent atavism.

It would be easy had we only variability to take into consideration to express in a series of propositions the results of that principle, as, for example:

1. The offspring of animals are more or less unlike those of the parents.
2. Differentiation is indeterminate and tends in all directions.
3. Differentiation from the primitive type progressively increases.
4. Time being a factor, there is no necessary limit to the range and extent of variation.

And such facts would lead us to this deduction:

Forms isolated and non-communicating exhibit in their descendants difference in ratio to time and isolation.

The principle of atavism, however, may be regarded as forbidding the enunciation of those propositions as perfectly correct expressions of natural laws.

With the explanation that in the condition of existence we have the causes which influence natural selection, and that it is the view of natural selection of varieties spontaneously arising that constitutes what is called Darwinism, I must test the argument in order to

be enabled to arrive at the theological consequences of the theory.

DEVELOPMENT AND NATURAL THEOLOGY.

The charge of materialism has been brought against this, as it has been by well-meaning but injudicious persons against almost every utterance of science. But is materialism a necessary result of a belief in the development theory? I think not; because it furnishes a clew to the reason why the charge of materialism is so often brought against scientific doctrine. Let me recall the words of a learned divine of the English Church, the Rev. Dr. Frederick Temple, the worthy successor of Arnold of Rugby. He has commented upon and regretted the disposition "to trace the power of God, not in that which is universal, but in that which is individual; not in the laws of nature, but in any apparent interference with those laws; not in the maintenance, but in the creation of the universe." And he who believes in the adherence of Deity to the laws which he has ordained rather than in his interference with and infraction of such laws is forsooth called materialist! The great legislator is distinguished, not by the suitability of the laws which he exacts, but by the infraction of such laws.

I know not how I can better present the anti-materialistic nature of the development theory than in the form of a paraphrase of the arguments of Paley in his *Natural Theology*. That divine, you will remember, takes a watch and considers that its peculiarity and construction exhibit inherent evidence of workmanship and special design on the part of the maker. He enters into a series of arguments in proof thereof. He further takes up the watch and assumes what would be the effect of supposing a power in it of reproducing itself, and what would be the effect of such a discovery on the examiner.

1. "The first effect would be," he says, "to increase his admiration of the contrivance and his conviction of the consummate skill of the contriver.

2. "He would reflect that though the watch before him were in some sense the maker of the watch which was fabricated in the course of its movements, yet it was in a very different sense from that in which a carpenter, for instance, is the maker of a chair.

3. "Though it be now no longer probable that the individual watch which our observer had found was made immediately by the hand of an artificer, yet does not this alteration in any wise affect the influence that an artificer had been originally employed and concerned in the production. The argument from design remains as it was.

4. "Nor is anything gained by running the difficulty farther back, that is, by supposing the watch before us to have been produced from another watch, that from a former, and so on indefinitely. Our going back ever so far brings us no nearer to the least degree of satisfaction upon the subject. Contrivance is still unaccounted for.

5. "Our observer would also reflect that the

maker of the watch before him was in truth and reality the maker of every watch produced from it; there being no difference, except that the latter manifests a more exquisite skill between the making of another watch with his own hands, by the mediation of files, lathes, chisels, etc., and the disposing, fixing, and inserting of these instruments, or of others equivalent to them, in the body of the watch already made in such a manner as to form a new watch in the course of the movements which he had given to the old one. It is only working by one set of tools instead of another."

Now let us apply an analogical mode of reasoning to the development theory.

1. The first effect of our conviction of the truth of the development theory, and that a few primordial types have given birth to all the animals that have existed and do now exist, and that in the beginning provision was made for the adaptation of such primordial animals and their descendants to all the varying conditions of climate, station, and food, would be to increase our admiration of the contrivance and the conviction of the omniscient skill of the contriver.

2. We would reflect that though such animals were, in some sense, the originators of those which sprung from them, that they were not originators as creators.

3. Though it be now no longer probable that the animal forms which we now find were made immediately by a creator, yet does not this in any wise affect the inference that a creator had been originally employed and concerned in their production.

4. Nor is anything gained by running the difficulty farther back, that is, by supposing the animals before us to have been produced from other animals, those from former, and so on indefinitely; our going back ever so far brings us no nearer to the least degree of satisfaction upon the subject.

5. We would also reflect that the creator of the primordial animal was, in truth and reality, the creator of every animal produced from it; there being no difference—except that the latter manifest a more exquisite skill—between the creation of each individual species and the creation of one form which should be generated and propagated by means of the provision of adaptability in the one primordial animal and its descendants. And it may be added, that if ability to create a form capable of reproducing itself is evidence of greater power than the ability to create a form complete in itself, then it must be admitted that the ability to create a form which should be able not only to reproduce itself, but to produce forms capable of adapting themselves to all the varying circumstances which might thereafter arise, is evidence of immeasurably greater power. Indeed, it seems to me that one of the noblest arguments in natural theology might be based upon the development theory. So far from this theory being antagonistic to belief in the Deity and his agency, it rather elevates our conceptions of the Deity, and

omnipotence truly worthy of the name is revealed.

To recur again to Paley's argument, and to that portion in which he demonstrates the watch to be the work of a maker, you may remember that he assumes that an argument might be urged, that the mechanism of the watch was no proof of contrivance, but only a motive to induce the mind to think so, and he expresses the surprise which would be manifested to hear such an argument. With equal surprise would we hear that all the facts that have been made known to us in the various departments of zoology, the development of animals, and their geographical as well as geological distribution, which all point to one result, namely, that all animals have descended from a few primordial forms, is no proof that such was the case, but only a motive to induce the mind to think so. And again, if surprise would be the result of information that the watch was nothing more than the result of the laws of metallic nature, equally meaningless and unsatisfactory is the explanation that all these facts are in accordance with "plan," or the "laws of plan," and involuntarily we may associate such an explanation with the preceding, and connect the plan with some purpose, even if it be to deceive, rather than to entertain the idea of plan without purpose.

It might be expected that, as I have considered the theological aspects of the development theory, I might say something of its relation to the record of Genesis. But the time is too far gone. I would, however, remark that I see no more conflict between the theory of natural selection and the account given of creation in the Bible, than I do between the same account and the theory of special creation, or the facts of zoology, geology, and geographical distribution admitted by all naturalists, whether believers in development or special creation. We may safely leave to the learned divines who have harmonized the truths of science and revealed religion to perform the office in this case, when the truth of the development theory shall be admitted as proved by physical consideration.

Lastly, if we consider the development theory with reference to man himself, so far from being repugnant to our senses or ideas, even admitting our descent from a stock in common with the modern monkeys, does not the thought that we have developed from such an humble origin rather afford us expectations for a more exalted future? for if improvement so great has been possible, what limit shall we assign to future improvement! And may we not with reason hope for descendants of our race in a distant future a condition which shall assimilate them to angels in all except immortality?—for a physical form and immortality are as incompatible with each other as fire and water. I must admit that I can not at all appreciate the reasons for the horror with which many good persons regard their idea of the humble origin supposed. The old adage, that persons like their opposites, and the converse, which I will leave to yourselves to frame,

may help us to understand the sentiment, and still further may we appreciate the reasons therefor in those who insist on believing in the reversion to the original type. But if we acknowledge the differences that do exist between us and the monkeys, and do not insist on reversion, our equanimity need not be disturbed.

INTELLECTUAL UNFOLDINGS OF THE AGE.

[In a "Master's Oration," with the above title, pronounced at the Fourteenth Commencement of the Waynesburg College, by Mr. J. J. Purman, occurred the following emphatic indorsement of Phrenology.]

PASSING from Biblical criticism to the department of the philosophy of mind, I come to notice another prominent intellectual unfolding of the age. Mental philosophers in our day have cast aside the dictum of Locke, that the human mind at infancy is a sheet of white paper on which circumstances write our future characters. A new philosophy of mind, founded in observation and experiment, and arrived at by a diligent and careful induction of thousands of isolated facts, has been given to the world. This philosophy, which owes its origin to Dr. Gall, a native of Austria, after receiving various inappropriate names, is now well known by the expressive and beautiful name of Phrenology. Discovered and promulgated to the world near the close of the last century, it now stands forth as a prominent fact of this century; and is pre-eminently the psychological interpreter of the age. Founded by Dr. Gall, this science—philosophy, perhaps, I should call it—has been greatly advanced and perfected by Dr. Spurzheim and Messrs. Combe in Europe, and by Dr. Charles Caldwell, Andrew Boardman, and Messrs. Fowler and Wells in America. Like the discoveries of Galileo, Harvey, and Newton, the Gallian philosophy was much at first opposed. The Austrian Government commanded Gall to cease lecturing on Phrenology or leave his native city and country. He chose the latter alternative, and was willing to leave home, friends, and an extensive practice, that he might investigate and teach his new discovery. The public prints treated him and his science with supreme ridicule and contempt. *Blackwood's Magazine* called him "an infernal idiot," and added, that "fool and phrenologist are terms as nearly synonymous as can be found in any language." But like Galileo, before the Roman Inquisition, declaring "the world does move," or Luther before the Diet at Worms, affirming, "I can not act otherwise; God be my help!" so Gall, in the face of vituperation, continued sublimely to assert, "This is truth, though at enmity with the philosophy of ages." And like the doctrines of Galileo and Luther, that of Gall has now, in a great measure, overcome all opposition, and its truths are accepted by every capable and candid man who will give it a careful examination. It would, perhaps, be out of place in this connection to give an exposition of the doc-

trines of Phrenology; besides, it would be insulting to the intelligence of this audience to suppose that they are not informed in the leading truths of the science. But I would respectfully but candidly say to those who are accustomed to scoff at Phrenology: You may laugh, but laughter is not wit; you may shut your eyes, but it will not, therefore, be dark; you may raise clouds of dust, but you will merely obstruct your own vision, not extinguish the radiance of truth. Be candid and generous, therefore, and until you have examined the subject in an adequate manner, acknowledge that on what you have not properly investigated you have no right to decide. And to those who love to follow in the wake of great names, permit me merely to add, that the doctrines of Phrenology are indorsed by no less personages than the Hon. Horace Mann, late President of Antioch College, Ohio, where he introduced it as his text-book on mental science, declaring that it was the "guide of philosophy and the handmaid of Christianity;" and by Henry Ward Beecher, who acknowledges that he has stolen his pulpit thunder from the once despised science of Phrenology. But I am not here to defend this science this evening, and will close this branch of my subject by merely adding, that the discovery of Phrenology as the true science of mental phenomena, is now, and must remain, one of the great, unique, and salient facts in the intellectual unfoldings of the present age.

Communications.

Under this head we publish such voluntary contributions as we deem sufficiently interesting or suggestive to merit a place here, but without indulging either the opinions or the alleged facts.

MAN AND WOMAN PHYSICALLY.

MRS. ELIZABETH OAKES SMITH says: "The sexes are fully equal in intellect, in moral sense, and even physique (admitting that women are designed to be more delicately organized), taking the stand-point from the best models, which is the true criterion, all others being exceptional."

Mrs. Smith then equates the physiques of the sexes by putting the excess of woman's delicacy—which is only a compensation in her for her want of physicality—equal to man's excess of every physical element above hers.

Delicacy in this connection is very desirable, very pleasant, and charming indeed. In "the best models" it is one of those things truly that gives her form its beauties of grace, its heavenly loveliness, and makes her the admiration of the world. This it is indeed; while, nevertheless, it subtracts—instead of adding more—just so much from her physically, rendering her so much less capable of doing *physical* things.

Is she, then, in any physical sense man's equal? Can she do physical things as he can? We mean to include the whole range of physical things, from the making and running the steam-engine to the construction and running of the machinery for the manufacture of the finest goods; from the most perfect astronomical telescope to the most discerning microscopic lens; from the most stupendous engineering operations to the most delicate, spirited, and perfect sewing-machines; from Morse's telegraphic utterances to the gentle plings of the Æolian harp.

Undoubtedly in the purpose and end of her creation her physical form, in its delicacy so exquisite and beautiful, is the very best and most perfect it could be. But

we cheerfully and very delicately submit that the greater woman's delicacy the less her equality of physique with man's, and that this very delicacy of hers is to be regarded as her peculiar, and, to man, most acceptable compensation for her want of physical equality.

The editors of the *Herald of Health* say that "men have a larger osseous and muscular development than women, as lords of the material. She represents the spiritual." Now, this is neither here nor there, though designed as a reply to C. Wellington's statement: "In all orders of animals the females are the smaller and weaker; and, its being so designed, shows their inferiority in physique to be in harmony with the design."

Are men, then, lords of the material? Do you mean, my dear sirs, that they are women's superiors in the material? If so, that is just what we mean. In every physical quality there is *more* in man; he is superior (not to say "lord," rather an objectionable term in this connection) in all material, physical qualities.

Delicacy, then, is not an element of the physical; it is only a compensation for its want; as in the highly delicate steel blade, its delicacy may compensate, and even more than compensate, for its want of materiality.

But, pray, what do they mean when they say that "*she represents the spiritual*?" Has this any pertinency in proof that her physical nature is equal to man's? So does the natural sun represent the "Sun of Righteousness." But does this show, or have any tendency to show, any equality of physique between them?

Does it follow, because woman's physique represents the spiritual, that it is equal to his which represents the eternal, or is equal to his, which is acknowledged in their words above to be decidedly more physical than hers, even as lords of the material?

Are not large developments of bone and muscle in well-organized proportion, as is more generally found in men than women, undeniable proofs of man's superior physical nature? Is there any need, any occasion to deny this most manifest truth to give woman her proper place in any and every relation of life?

He is a *disgrace to her cause* who knows no better than to plead for her elevation on the ground of her *physical* equality with man.

There is no such physical equality designed of God, nor existing on earth, nor will there ever be in any order of beings in the universe.

For the reason, first, 'Tis contrary to the philosophy of things. Now, we mean by the *philosophy of things*, the *common sense of things*.

Consider, then, the sun in relation to the planets. It is the great impartorial body of the solar system. Hence it is a larger, nobler, physical existence than all its planetary system, and *needs to be*, as the grand illuminator and life-inspirer of them all.

Again, consider the Great All-Father of the universe, the Imparter of life and being to everything that exists. It is in perfect consonance with reason and philosophy that His spiritual nature should infinitely excel, as it does, every other spiritual existence in the universe. The *giver* of things is greater than the receiver. "It is more blessed to give than to receive."

In harmony, then, with the philosophy of things, as drawn from the analogy of God and his universe, from the sun and his system, from the giver and receiver, Adam, the representative head of our race, should be, as he was, physically his wife's superior. I have no idea that Mrs. Smith, or the editors of the publication mentioned above, in their hearts, question this. Such is God's order of things everywhere, and this order is the certain index of all true philosophy.

For the reason, second, That such physical equality would be most damaging in every family relation.

There are family quarrels enough now. But let woman be man's equal physically, and she, wanting her delicacy, as in that case she doubtless would be, and family feuds would not only be increased a hundred-fold, but they would be very likely to issue in many a "fierce brawl and deadly combat."

And for the reason, third, Our mutual happiness, peace, and prosperity require that the relations of the physical natures of the sexes should be very much as God designed them; and as they are now, except in cases of perversion, man's physicality is every way superior to woman's.

c. w.

THE MISSOURI MAMMOTH BLACKBERRY.

THE MISSOURI MAMMOTH BLACKBERRY.

In their circular, the proprietors say: The annexed cut of this new fruit is not a fair average size, as the extreme dry season, last year, at fruiting time, prevented the filling out to the usual size. They were grown without any extra cultivation—no manure of any kind having been used in their production. For ten years the bush has annually borne fruit; entirely withstanding the severest winters, where the mercury several times has sunk to 28° and 30° below zero. This severe cold, with our sudden changes of climate, has never in the least killed the canes of this berry.

The canes are very strong, with mostly five depressions or grooves, running the whole length of the canes—is beset with but few thorns turning downward. The leaf is of a deep green, with finely serrate edges, not as large as most blackberries, but thick and firm. The flowers are all perfect in themselves, require no fertilizing by any other, are large and full, setting a berry for every bloom.

The first ripe fruit was picked four to six days before any were ripe on Wilson's Early, and continued over six weeks in heavy fruiting; assuming almost an ever-bearing form, carrying up the season to peaches. The fruit is of very large size—much larger than Lawton's largest berries; and has few small or imperfect berries. When black it is ripe, and does not turn red after being picked. The berry is very firm and solid, and has no core whatever in the center; is to the blackberry in rich vinous sweetness what the Delaware is to other native grapes. The fruit stands out promptly upon the plant, and when fully ripe, never drops from the stem; as fruit ripening in July, was picked September 28th, protected by netting from the birds. A single plant, the past

season, bore over 500 berries, bending the large stalk almost to the earth. This blackberry has no form or habit of the Dew-berry; is strongly upright, and none of the canes have a tendency to run out on the ground.

The want of a blackberry that is entirely hardy, of large size, good quality, firm flesh, early and continuing long in bearing, a strong grower and productive, has long been felt by the small-fruit grower. That this berry will fill all these points, and give entire satisfaction, the introducers sincerely believe.

The editor of the *Brookfield Gazette* says of it:

"THE MISSOURI MAMMOTH.—This is the name of a most delicious blackberry. Mr. Thompson brought us a sample of those berries, and we can unhesitatingly say that they are the finest we ever saw. This berry is bound to gain public favor. They are a most prolific bearer, and very hardy. It is almost impossible to size them, as they range from the size of a walnut to that of a hen's egg. This is no exaggeration, as those who have seen them can testify to the truth of our assertion."

[We have not seen this berry. We know nothing more of it than is stated above.—Ed. A. P. J.]

A CORRESPONDENT of the *London Telegraph* writes: "The Emperor lately said in the Prince's presence, 'Loo-loo is so small,' whereupon there arose from the surrounding courtiers a chorus in praise of small people of historical fame (see 'Giants and Dwarfs'), and all the little great men renowned in history were cited as parallels for the Prince, who said, 'I do not know if I shall be like these great men in anything else, but you are quite right, I am like them so far, for I am very short.'"

PERSONAL.

WILLIAM H. SEWARD, Secretary of State, is said to have dissipated the means provided by his father for his collegiate course in one year after he entered Union College; but that he worked his way through the remaining four years and graduated at the head of his class.

DANIEL PRATT, JR., the "Great American Traveler," recently jumped from a ferry-boat into the East River, waving the national flag as he leaped to his fate. He was rescued, and gave as a reason for his mad act that "the public generally did not appreciate genius."

DR. W. T. G. MORTON, a dentist in Boston, was killed by sun-stroke in the city of New York on Wednesday, the 15th of July.

MR. GOLDWIN SMITH, one of the ripest scholars of England, has definitely accepted the chair of Constitutional History at the Cornell University, in Ithaca, Tompkins Co., N. Y. The *Round Table* says: "It is a rare thing for an Englishman of Mr. Goldwin Smith's position thus to expatriate himself, and it will undoubtedly attract a great deal of comment and speculation. As, however, we are to be the gainers by it, criticism on this side the water is likely only to be favorable."

"What They Say."

Here we give space for readers to express, briefly, their views on various topics not provided for in other departments. Statements and opinions—not discussions—will be in order. Be brief.

WHAT PHRENOLOGY HAS DONE FOR ME.—Language has no power to express, and human understanding fails to appreciate in its entirety, the blessings conveyed by the science of Phrenology to the soul, body, and spirit of the earnest seeker after truth.

For me, it has done much more than I can tell. It has given me broader and more reliable views of life, of individual duty and responsibility. It has made straight and smooth to my feet the paths which before were rough and thorny; has leveled many a lofty eminence which, through the dim haze of unenlightened intelligence, seemed utterly inaccessible.

The numerous paradoxical emotions of my own nature, when viewed by the light of science, blend harmoniously as the various tints of the rainbow.

I am no longer self-deceived, but understand, in some measure, the involuntary prompting to the outward act; thereby being enabled to crush the selfish and unworthy, and cherish that which is just and right.

Then, too, by the light of Phrenology, we are enabled to see much that is praiseworthy, where the superficial observer beholds only selfishness or hypocrisy. How often is a conscientious man accused, and convicted too, so far as external apprehensions go, of the basest motives, while his design is pure and innocent, and the result not understood! Many a man is deemed guilty of sins which his whole being would reject, simply because his outward behavior is the criterion by which he is judged, with no knowledge of the prompting motive which actuates him.

Looking upon these things as I have for a few years, man rises from the mire which seemed about to engulf us all, and exhibits the noble likeness of his Creator, which exists in him as the germ and prophecy of a better life. In social relations, a correct understanding of the most irritable sensibilities and the peculiarity of mental combinations enable us to shun the quicksands, when we would bend the stubborn will or quiet the impulsive waywardness of an inconsiderate friend. But above all does the mother need the kind and never-failing beams of this serene yet glorious light to shine upon her checkered pathway, to enliven the gloom and soften the glare of ever-varying experience.

Oh, how I have longed to know more, more of this precious truth, as I gaze in the earnest eyes of little immortals, and feel that upon me rests the great responsibility of their welfare in all coming time! While the instruction to be gained from a knowledge of this science is rich and varied, the amusement is actually unlimited. Who that has the slightest smattering of phrenological knowledge, has not at some time been an unobserved observer of the heads and faces around him, and quietly enjoyed the grotesqueness of the scene, the vivid contrasts, and subdued blending of congenial natures?

The JOURNAL has become to me as one of the necessities of life. And why not? for it is full of wholesome and delicious food—such food as will never induce mental dyspepsia, or deprave the mental taste. Let them who would have their

manhood or womanhood purified and ennobled, study faithfully and practically adopt its instruction. A LADY.

FINDING A SITUATION.—A correspondent writes from Tennessee as follows: What is the use of Phrenology? Some time since a slender youth called upon a carpenter and inquired if he could give him a situation as an apprentice to his business. On being answered negatively, the son of the farmer for whom the carpenter was erecting a dwelling, who happened to know something of Phrenology, propounded a few questions to the young man. He learned that he was an orphan, was willing to attempt any trade which would promise success, and that his education was limited, being confined to reading and writing. The farmer's son advised the young man to consult a phrenologist who lived not far away, and ascertain from him in what pursuit he could best succeed. The advice was adopted. The phrenologist told him that his constitution was not fitted for farming or mechanism, and advised him to seek a situation on the railroad, as he considered him better suited to that than anything else. He applied to the president of the road, secured a good situation, and is now doing admirably. Yet people inquire, what is the use of Phrenology? It was certainly a God-send to this poor, slender, orphan boy, without home, friends, or business. He might otherwise have adopted a heavy, laborious trade, broken down his constitution, become dispirited and discouraged, and gone to an early grave. He is now in a position to which he is adapted physically and mentally; will improve in health and vigor, and render himself useful, successful, and happy. Phrenology is also of great use to the teacher. One whose business it is to train the mind, can hardly do it successfully without knowing the different faculties and their development in his different pupils. Thus he is enabled to appreciate their capabilities, and can bring out those qualities which are too weak, and regulate those which are too strong. To the minister, Phrenology would be of great use, for he deals with the mind and soul of man; and he who understands human nature best, will know best how to lead the froward back to duty and restrain the impetuous; how to encourage the despondent; how to assure the timid, and how to console the depressed and the bereaved.

Phrenology is also of great use to one as an individual, enabling him to see himself as others see him; to understand his weak points; how to strengthen his strong points, and how to use and regulate them to advantage.

Reader, do you understand Phrenology? If you do, use it for the good of yourself and others, and help to spread a knowledge of it among your neighbors. If you do not understand it, you will be more benefited by spending a few leisure hours in its study than in almost any other branch of knowledge. Those who study human nature through Phrenology and Physiology, lay the basis of sound intelligence, usefulness, health, and happiness. A. S. C.

LATE PRESS OPINIONS.—The newspapers rarely mention the PHRENOLOGICAL JOURNAL without warm expressions of approval.

The *New Hampshire Sentinel*, July 23d, says: "The PHRENOLOGICAL JOURNAL for August is replete with genuine entertainment for the million. Those who have

never looked this magazine over have no idea how much valuable and interesting matter it contains."

The Dundee (N. Y.) *Herald* uses the following emphatic language: "The AMERICAN PHRENOLOGICAL JOURNAL is a favorite journal of those who have seen and read its valuable and highly instructive contents; those who have not, could not make a better investment than to subscribe for it."

The New York *Evening Post* says, in allusion to it: "The PHRENOLOGICAL JOURNAL abounds in useful information. It is steadily and deservedly gaining general favor."

The Guthrie *Vedette* remarks of it: "There are magazines of greater literary pretensions, but none of more real worth. Its aim is not only to interest but to instruct and educate the people in those things where the school and college fail."

THOUGHTS OF A SUBSCRIBER.—Books.—Give us a house furnished with books rather than costly and elegant furniture—both if you can, but books at any rate. To spend several days in a friend's house hungry for something to read, while treading on costly carpets, sitting on luxurious chairs, sleeping on down, seems as if one was bribing your body for the sake of cheating the mind. A house without books is but poorly furnished. A book is good company; it is full of conversation without loquacity, and patiently hears objections without answering back.

AN EDUCATED MAN.—An educated man should know, 1st, what sort of a world he is in—its size—the creatures that live in it, and how; 2d, what the world is made of and what may be made of the world; 3d, where he is going—what is the probability of another state of being—its nature, and the kind of preparation necessary for it; 4th, what is best to be done under the circumstances—what are his faculties—how they can be cultivated to insure him success and happiness, and provide the means and disposition to promote the happiness of others. He who knows these things, and has his will properly subdued in the learning of them, is an educated man; and he who knows them not, is not educated, though he could talk all the tongues of Babel.

Literary Notices.

[All works noticed in THE PHRENOLOGICAL JOURNAL may be ordered from this office at prices annexed.]

HEADLAND HOME; or, A Soul's Pilgrimage. By Madame de Lesdernier. New York: James Miller. 12mo. Cloth, pp. 346. Price, \$1.50.

Between reading and writing nowadays, there seems to be but a brief interval. We mean reading and writing for the public; for several well-known authors, of whom one Dickens is not the least, are as well known for their recital ability as for their authorship. Madame de Lesdernier long ago engaged our notice by reason of her fine elocution, and appreciating the transition already intimated, we have looked for a book from her pen. Now we have it, and it purports to be no dreamy speculation, no chimera, no fancy pen up in ink and gum, but a real life-picture—in short, an autobiography. From earliest childhood she pictures many incidents—the leading, guiding incidents of a life—in a style at once clear, pointed, and earnest enough to be real. There is a sprinkling

of egotism in the narratives which imparts much of a personal character, just as *Æneas'*

"—Magna pars cujus fui"—adds considerable relish to Virgil's history of that gentleman.

The amount of variety which the book affords is considerable, and as many of its most pleasing narratives relate to individuals other than the autobiographer, the reader feels more interest in the plot. The book is handsomely printed and embellished in every respect. A good specimen of book-making.

THE MINERAL RESOURCES of the States and Territories West of the Rocky Mountains. Report of J. Ross Browne. And East of the Rocky Mountains, by James W. Taylor. One vol. 8vo, pp. 746. Washington: Government Printing Office.

We are indebted to the politeness of our excellent friend Mr. John T. Hoover, of the United States Survey Office, for a copy of this useful compilation. The document informs the reader where the most important mineral deposits may be found in various parts of the United States.

THE SOUTHERN RURALIST, a neat octavo monthly Journal for the Farm and Fireside, is now in its second volume. Published at \$1.50 a year, by H. A. Swasey, M.D., at Zangipaboa, La.

After stating something of the modes of farming in England, and of the advantages of climate and soil which the South enjoys over Europe and us, the editor goes on to say, and he is right:

The Northern States of the Union—so called—exhibit to us examples of the advantages of diversified labor, sufficient to convince any one not irretrievably bound to his idols, of the fatal error of the one-crop system. There, notwithstanding their long winters, their short summers, and the thousand minor disadvantages which we in the South know nothing about, they are outstripping us in the race for general and individual prosperity, ten to one, and for no other reason under heaven than because, as a farming people, they leave no crop uncultivated, no mine unwrought, no mechanic unpracticed which can in any way conduce to their accumulation of the good things of this world. Hay, grain, and root crops; stock raising, fruit growing, and market gardening; mining, manufactures, and commerce; literature, science, and the fine arts, all are pressed into the service as circumstances, tastes, and capacities may dictate, to make up the grand total of a rapidly increasing prosperity, which has no parallel in the annals of the world!

THIRD ANNUAL REPORT of the National Temperance Society and Publication House. With an Appendix. New York: National Temperance Society and Publication House.

This interesting pamphlet contains a brief review of the progress of Temperance reform in the United States during the past year; a catalogue of the publications of the Society for the year; a full report of the Third Anniversary, held at Cooper Institute May 18th; a letter addressed to the President of the Society by Hon. E. C. Delavan; an account of what the Temperance people are doing in Europe, and a list of the Life Members.

From the statistics furnished in this report, we learn that the retail sales of liquor in the United States reach in a single year the sum of \$1,433,491,865, very nearly one eighth of the entire annual sales of merchandise, including liquors, by wholesale and retail dealers, auctioneers, and brokers; exceeding the total present value of the railroads in the country, and averaging forty-three dollars for every man, woman, and child of the population. This is startling in the extreme. And, think of the misery and crime purchased at so great a cost!

A TALE OF TWO CITIES, and GREAT EXPECTATIONS. By Charles Dickens. With twelve illustrations. Boston: Ticknor & Fields. \$1 50.

Printed on clear thick paper, with marginal rulings, excellent illustrations, and neatly bound in dark blue cloth, the Charles Dickens' edition should sell readily. The different volumes are as near alike as a publisher can well make them.

MARIETTA. By T. A. Trollope. Author of "Gemma," "Tuscany in 1849," etc. Price, \$1 75 in cloth; or \$1 50 in paper. Philadelphia: T. B. Peterson & Brothers.

Novels which contain glimpses of real life, whether in town or country, amid the romantic fastnesses of the wooded mountains, or on the rolling prairies where human nature becomes conspicuous because of its solitude, are to a greater or less extent instructive to the careful reader. Those which proceed from the pen of a keen observer who makes his personal experience the basis and stimulant of his imagination, usually fail not to entertain and instruct. In "Marietta" we find neat sketches of Italian social life and graphic portraits of Italian scenery, written as only one who "has been there" could write them. We are not tied to the insipid thread of a commonplace love story from chapter first to *finis*, but are here and there gratified by careful descriptions of peculiarities of character and landscape. The book belongs to the better class of fictitious literature.

THE SONG CABINET; a new Singing Book for Schools, Academies, Seminaries, and Singing Classes. By C. G. Allen. New York: Ivison, Phinney, Blakeman & Co. Price, 60 cents.

This music book appears to be well adapted to the purposes mentioned in the title. It contains a short preparation for learning the elements of music, besides a large number of songs and hymns. "When the Evening Dews are Falling," "Gently Sighs the Breeze," "The Mountaineer's Song," are among those to which we accord our approving recognition. A cantata, "The School Festival," for School Exhibitions and Concerts, is one of its chief attractions.

WEBB'S WORD METHOD; being also a Key to the Dissected Cards. A new method of teaching reading, founded on nature and reason. By J. Russell Webb. Revised Edition. Detroit: E. B. Smith & Co.

This little manual of instruction for children purports to be a thorough revision of work prepared by the author more than twenty years. Its aim is to teach words rather than letters, and so gradually lead a child to read even before it has, as one may say, mastered the alphabet. We read words by their distinguishable forms. Upon this principle Mr. Webb proceeds to develop his system, using because of their convenience "dissected cards" in connection with the book. Each word, especially if used to designate some familiar object, is described,—the object being to impress upon the infant mind the nature and relation of words. The directions for using the "method" and the "cards," if any intelligent teacher should require directions in applying so simple a system, are clear, and at the same time show the utility of the method. It seems to us that this mode of instructing very young children is vastly superior to the old patience-testing and incongruous alphabetic methods.

GODEY'S LADY'S BOOK for August comes to us rich in engravings and designs. The pattern department is unusually copious. \$3 a year.

WEBSTER'S DICTIONARIES.

The importance of a reliable authority for the orthography and definition of words is not second to any recognized desideratum in the sphere of mental culture. He who would become an accurate scholar in the meaning and relation of words, he who would write and converse gracefully and properly, must assiduously examine the dictionary. Webster's Dictionaries are considered by philologists to be the most reliable for general use. The series of these dictionaries, with the prices for which we can furnish them, postage paid, or by express, is given as follows:

WEBSTER'S PRIMARY SCHOOL DICTIONARY. A Pronouncing Dictionary abridged from the complete work, well adapted for a Text-Book. It is illustrated. 75 cents.

WEBSTER'S COMMON SCHOOL DICTIONARY. A carefully revised work for school uses. With synonyms and useful tables. It is neatly illustrated, so as to make the meaning of many words clear to the pupil. \$1.

WEBSTER'S HIGH SCHOOL DICTIONARY. Abridged from the American Dictionary of Noah Webster, LL.D., with numerous tables, and other useful matter, enlarged and improved, finely illustrated with upward of 300 skillfully engraved woodcuts. \$1 50.

WEBSTER'S ACADEMIC DICTIONARY, for Academies and Seminaries. New edition, with valuable additions and improvements. Finely illustrated. \$2 50.

WEBSTER'S COUNTING HOUSE AND FAMILY DICTIONARY. New edition. Illustrated. In full conformity with the revised Quarto. This volume comprises a copious and careful selection of English words in actual use at the present day, besides a fund of information for business men; tables relating to money, rates of interest, etc., also copiously illustrated. \$3.

WEBSTER'S POCKET DICTIONARY. An abridgment of the American Dictionary, with a list of foreign words, phrases, mottoes, etc., with translations in English. \$1.

WEBSTER'S ARMY AND NAVY POCKET DICTIONARY. A comprehensive volume on fine paper, with pictorial illustrations and colored frontispiece, weighing but four ounces (and embracing a complete Pocket Dictionary of our language), a Dictionary of Military and Naval words, Mottoes of the United States, Flags of principal nations illustrated in colors, etc. \$1.

WEBSTER'S UNABRIDGED DICTIONARY. New illustrated edition, thoroughly revised and much enlarged. It contains over 8,000 fine engravings. It contains 10,000 words and meanings not in other Dictionaries. Quarto. Sheep. \$12 (by express).

WEBSTER'S NATIONAL PICTORIAL DICTIONARY, containing over 600 Pictorial Illustrations. This volume has been prepared on the general principles of the large Dictionary, and with a full use of the materials of that work. It is not designed, however, to take the place of the royal quarto, but to meet the wishes of many who, for convenience or economy, desire a more condensed and less expensive work. Royal octavo. Sheep. \$6 (by express).

THE SOLDIER'S FRIEND has a claim on public notice, not only because of the circumstances attending its origin, but on account of the excellence of its character. Its miscellany is of a refined character, while the numerous incidents of the war with which it abounds are both entertaining and instructive. W. O. Bourne, Editor, New York. \$2 a year.

THE CHURCH UNION now claims to be the largest weekly religious paper in the world! But, neighbors, is the size of a man's head or of a newspaper the measure of merit or of power? or is it quality, culture, and *what they contain?* A blanket sheet stuffed with quack medicine and other advertisements does not add very much to the merits of a family religious newspaper. But we see how it is. The quacks swindle the public through such papers, get their money, and the "Union" folks feel compelled to thus use the devil to serve the Lord. We do not believe it will prove a good investment. Mr. Beecher's sermons are published in the *Church Union*, and much other readable matter.

THE NEW ECLECTIC. A Monthly Magazine of Select Literature. The August number of this new candidate for literary honor contains a copious selection of choice reading. Price, \$4 a year; 40 cents a number. Messrs. Turnbull & Murdoch, editors. New York and Baltimore.

THE COLLEGE COURANT of Yale commences its fourth year in an enlarged form. Verily, its promoters are enterprising. We trust that they will not have occasion to regret their expansion. Alumni of Yale, sustain the *Courant*. \$4 a year, published weekly.

DEMOREST'S MONTHLY MAGAZINE for August fully maintains its standard as a fashion periodical. It contains, besides, elegantly colored plates, marked patterns for practical adaptation. \$3 a year.

GOOD NEWS, No. 1, for July, made a tardy but welcome appearance about the 10th. We do not see why it should not succeed. Its matter is vigorously and hopefully written, and is of the most healthy religious tendency. If it be properly announced, and once gets a fair opening, there can be no doubt about its becoming permanently established. It is a handsome monthly, and only \$2 50 a year. Single numbers may be had for 25 cents. It is clubbed with the *PHRENOLOGICAL JOURNAL* at \$5 for new subscribers.

MESSRS. C. H. DITSON & Co. of this city, representing Oliver Ditson & Co. of Boston, send us the following specimens of new music: "When the Vale of Death Appears." Song and chorus. By N. B. Sargent. Price, 25 cents. "The Widow in the Cottage by the Sea-side." A ballad arranged by C. A. White. 30 cents. "People's Song, Campaign Poetry, and Music." By Converse C. G. Collins. 30 cents. "The Rosebud." Nocturne. By J. W. Turner. 30 cents. "La Belle Héloène." Schottische, arranged for Piano by J. S. Knight. 30 cents. "Orpheus Galop," from Offenbach. Arranged by J. S. Knight. 40 cents.

THE DRUNKARD'S SONG. By John Collins. A four-page tract, with two illustrations, depicting the evils—the horrors—of a drunkard's life, has just been printed. It will be furnished here at \$4 per thousand. A capital thing for gratuitous distribution by temperance societies. Orders may be addressed to this office.

OF CHAMBERS' ENCYCLOPEDIA we have received Part 180 from Messrs. J. B. Lippincott & Co., the American publishers. This work is very near completion, having reached R in the short appendix, which will bring it down to the present time. Price, 25 cents per number.

PETERSON'S Cheap Publications for the Million:

TOM TIDDLER'S GROUND. By Charles Dickens. Price, 25 cents.

RED GAUNTLET. By Sir Walter Scott. Price, 30 cents. T. B. Peterson & Brothers, Philadelphia.

THE LADY'S FRIEND. A monthly magazine of Literature and Fashion. Edited by Mrs. Henry Peterson, 319 Walnut Street, Philadelphia, is well arranged and finely illustrated. Price, \$2 50 a year.

GOOD STORIES.—Part 4 contains: "From Hand to Mouth," "Count Ernest's Home," "Little Peg O'Shaughnessy," "A Shabby Genteel Story," with illustrations. Price, 50 cents. Ticknor & Fields, Publishers, Boston.

STEWART'S LITERARY QUARTERLY MAGAZINE has entered its second volume, and promises to hold on in favor with our Canadian neighbors. Price, in specie, 10 cents a copy. George Stewart, Jr., Editor, St. John, N. B.

New Books.

Notices under this head are of selections from the late issues of the press, and rank among the more valuable for literary merit and substantial information.

ENGLISH LITERATURE OF THE NINETEENTH CENTURY. On the Plan of the Author's Compendium of English Literature, and Supplementary to it. For Advanced Classes and Private Reading. By C. D. Cleveland. New Revised and Enlarged Edition. Cloth, \$2 75.

THE YOUNG MAN'S SETTING OUT IN LIFE. By W. Guest. Cloth, 35 cents.

THE EARTH AND ITS INHABITANTS. Intermediate Geography. Maps and Illustrations. By A. Guyot. Boards, \$1 40.

AMERICAN AGRICULTURAL ANNUAL, 1868. Illustrated. Paper, 50 cents.

LIFE AMONG THE MOHAWKS, AND A MARCH TO THEIR ZION. With a Chapter on the Indians of the Plains and Mountains of the West. By an Officer of the U. S. Army. Cloth, \$1 40.

SOCIAL AND POLITICAL DEPENDENCE OF WOMEN. By Mrs. J. S. Mill. Paper, 60 cents.

OLD FRITZ AND THE NEW ERA. By Mrs. Clara Mundt (Louise Mühlbach). Translated from the German by Peter Langley. Illustrated. Paper, \$1 75.

THE GREAT SOUTHWEST; or, Plain Guide for Emigrants and Capitalists, embracing a Description of the States of Missouri and Kansas, etc., etc.; with Township Map of Missouri and Kansas. By W. Nicely. Cloth, \$1 50.

SKETCHES OF CENTRAL ASIA. Additional Chapters on my Travels, Adventures, and Ethnology of Central Asia. By Arminius Vambéry. Cloth, \$4 25. (London Print.)

THE LIFE OF GEN. U. S. GRANT. By J. S. C. Abbott. Portrait and Illustration. Cloth, \$1 75.

A DISCUSSION ON THE TRINITY, between Rev. W. B. H. Beach, of the Christian Denomination, and Rev. Y. Hickey, Presbyterian Minister, Greenville, N. Y. Cloth, 65 cents.

THE DIVINE TEACHER. Being the recorded Sayings of our Lord Jesus Christ. Cloth, \$1 75.

GENS FROM THE SACRED MINE. 12mo, pp. 194. Cloth, \$2.

A COMMENTARY ON THE HOLY SCRIPTURES. By J. P. Lange and others. The Old Testament. Vol. I.: Genesis. With General Theological and Homiletical Introduction to the Old Testament. By J. P. Lange, D.D. Translated from the German, with Additions, by Prof. T. Lewis, LL.D., and A. Gosman, D.D. Cloth, \$5 50.

LIBERAL VIEWS OF THE MINISTRY IN HARMONY WITH THE BIBLE, PRAYER-BOOK, AND CANON. By Rev. R. Newton, D.D. Paper, 12 cents.

MASONIC BIOGRAPHY AND DICTIONARY, comprising a History of Ancient Masonry, Antiquities of Masonry, etc. By A. Row. Cloth, \$3 40.

VULGARISMS AND OTHER ERRORS OF SPEECH; including a Chapter on Taste, and Examples of Bad Taste. Cloth, \$1 40.

To our Correspondents.

QUESTIONS OF "GENERAL INTEREST" will be answered in this department. We have no space to gratify mere idle curiosity. Questions of personal interest will be promptly answered by letter. If a stamp be enclosed for the return postage. If questions be brief, and distinctly stated, we will respond in the earliest number practicable. As a rule, we receive more than double the number of questions per month for which we have space to answer them in; therefore it is better for all inquirers to inclose the requisite stamp to insure an early reply by letter, if the editor prefers such direct course. Your "BEST THOUGHTS" solicited.

A PERFECT CHURCH.—Why is it that there can't be a church or society founded on the broad basis of the law of nature, the law of God, the law of love, and the Christian religion, as taught in the Bible; that will take in every human being for whom Christ died; regard and treat them as human beings; insure to them temporal life, and where all will sacrifice for the good of all, and all do what they are fit for in body and mind?

Such churches or societies, I believe, would do more good than all the Catholic churches, Protestant churches, Freemasons, and Odd Fellows in existence.

I have sent you these questions for the A. P. J. and for your answer, because I doubt whether any other journal would publish them or answer them.

Ans. The sigh you utter for perfection in human institutions is as old as human misery and human aspiration. That great object has been the aim of all founders of sects, but so long as men are fallible, churches, constitutions, fraternities, or families will not be organized and conducted on a perfect plan and pattern. If men were perfect they would need no law. "Those that are well need not a physician, but those that are sick," and the organization of a church presupposes sin, weakness, necessity for help and healing. We know men who avoid membership in the church because the church is so impure and imperfect; because it lacks wisdom, and its acts are in many respects fallible, faulty, and weak; because its members are imperfect; because they stumble and make blunders and mistakes and live far beneath a high standard of moral and religious life.

As we understand it, the church is a moral hospital. It is not intended as a rendezvous of perfected men and women, but it is a company of persons conscious of fallibility and anxious for help, protection, and co-operation. Freemasonry aimed at an organization which should secure to the sick and the distressed, to the stranger and the man in trouble, assistance from the fraternity, and the signs and

pass-words were designed simply as a means of recognition between members of the fraternity. Odd Fellowship is, we suppose, a diluted form of Freemasonry. All colleges have their secret societies, and they all aim to mitigate or palliate the imperfections of mankind. The founder of the Christian religion said, "I come not to call the righteous, but sinners to repentance." Until men become perfect, they will not act perfectly. They require to be so organized into communities and fraternities, that the wise can instruct the ignorant, the strong defend the weak, and that the wisdom and strength of numbers can be made available to individuals. But whoever expects human nature to be perfect this side of the spirit-world will be greatly mistaken. This life is a position in which imperfection, want of harmonious development, partialism, incompleteness, and unripeness constitute the law or rule, and that which approximates to the perfectly harmonious is the exception. Israel had but one Moses, but one Abraham, but one Joseph, and all their wisdom and goodness were required to guide and direct the rest of the people. To be sure, Moses became angry because the people were so faulty and weak and wicked as to set up a golden image and worship it while he was on the mountain; but Moses got over his complaint and went to work afterward, as it behooves us and you, to work and to mitigate the misery, the faults, and weaknesses, bind up the broken hearts of the poor and wicked; and when that which is imperfect shall give place to that which is higher and better, then shall we "see as we are seen, and know as we are known." Then "all tears shall be wiped from off all faces," and God the Father shall be all in all; until then, let us co-ordinate for the aid of the poor, the weak, and the wayward.

MISSOURI LANDS.—There are land agents in all the principal towns in the West whose addresses may be obtained through post-masters—providing you send stamps to pay for paper and postage. Mr. F. W. Smith, firm of Smith & Law, of Kirksville, Adair Co., Mo., will give any desired information in regard to lands in Central Northeast Missouri. Write him.

CONCENTRATION — CONTROVERSY.—I am a minister, thirty-six years old. Why is it that when I sit down for study, very often I cannot fasten my mind on the theme I wish to investigate; but my mind will think vigorously on irrelevant subjects; generally contending with some imaginary opponent; and yet I try hard to bring my mind down to the subject in hand. I find less difficulty in this direction when writing than when reading, or thinking only.

What is the reason, and the remedy?

Ans. Your Continuity is too small, but your Combativeness being strong, when it is excited, tends to centralize your thoughts on the subject in hand.

BAID HEAD.—One cause is wearing tight hats. Both felt and fur are too close, and cause the head to sweat; this expands or swells the scalp, loosening the hair at the roots, and it soon begins to fall off. Then "tonics" are applied, followed with heating oils, and other preparations of grease, and finally the scalp becomes diseased, and a head of beautiful hair is destroyed. Remedy: keep the head cool, wear straw hats, keep the scalp clean by using soft water and fine toilet soap; and if any hair dressing be used, a very, very little sweet oil is the least objectionable. Ladies seldom become bald, and they do not wear close hats. Their "beautifully" small bonnets are no obstruction to a free circulation.

SPIRIT.—In what part of the human body does the spirit dwell?

Ans. You mean soul, mind, conscience, will, or the spiritual nature, we suppose. The brain is supposed to be the seat of thought, of conscience, and of all the mental operations. Nearly every part of the system, however, has been at one time or another supposed to be the location of the soul. The heart, which has enough to do to circulate the blood, has been regarded more generally than any other part except the brain, as the seat of mind and affection; but an idiot sometimes has as large and strong and healthy a heart as any man in the world. The brain being defective, there seems to be little manifestation of anything but mere animal existence, which seems to indicate that the heart has little to do with mental manifestations, and that the spirit or soul has its seat in the brain.

WIFE GADDING ABOUT.—

My wife seems much inclined to visit her neighbors, oftener, indeed, than is pleasant to me or convenient for me to accompany her. Ought a wife loving her husband to visit when she has plenty to do at home, and when, by remaining at home, she would add greatly to the comfort and happiness of both? How can I change this order of things, and at the same time convince her that I am not too exacting?

Ans. This is a rather large question, unless we can know what kind of people the parties are. She is undoubtedly of a social turn, and her husband, perhaps, is not sufficiently social and companionable to satisfy the claims of her mind. We suggest that the husband spend \$30 a year for newspapers and magazines and for an interest in a good circulating library, and that the time now wasted in gossiping be spent alternately by the wife and husband reading to each other; when she is at work, let the husband read to her evenings; and in less than a year they will have something to talk about and think about which will render it unnecessary for the wife to go abroad for society. Let them make themselves intelligent, and they will become hungry for the reading-hour, and each will learn to feel a new interest in the other.

Nothing is better calculated to cement the affection and increase the attachment of husband and wife than reading in conjunction the thoughts of noble minds. There is nothing like having good thoughts in common to keep alive an interest between parties who are living together. Allow us to say, then, to people who have starved, hungry minds, and nothing to feed them, who are living away from society, month after month and year after year, that they do not know how much they fall to enjoy by having no new channels of thought opened constantly by books and newspapers. We are surprised that husbands and wives can sit contentedly when they have no new ideas to feed their minds. It is said that two men of intelligence were once imprisoned for some political offense. The first year they talked about their own personal history; the second year they talked about what they had read, and communicated all they could; the third year they talked over their hopes; and the fourth year they were silent—they had nothing to talk about; and there are ten thousand men and women who have talked themselves out, and as they read nothing, they have nothing but the little gossiping neighborhood to talk about, and many a poor wife goes out from her home to glean a little of the village gossip to keep her mind from drying up. If men would stop using tobacco and drinking whisky,

and spend some of the money in books, papers, and pictures, they would make their homes intelligent and happy, and would have little occasion to complain of their wives going abroad to gossip, or neglecting their duties at home.

DEAFNESS.—What will cure deafness caused by scrofula?

Ans. Scrofula might cause deafness in many ways, some of which would be incurable. Little success attends any treatment for deafness. A little warm soap-suds or sweet oil put into the ear may afford temporary relief.

Publisher's Department.

TO LECTURERS.—Besides our very large new pictorial poster, 29 by 42 inches, and more than fifty illustrative engravings, including our largest symbolic head, handsomely printed in colors, we have a second size, 12 by 19, also in colors, and with illustrations, which we call Poster No. 2. This is suitable for a window bill, where the larger one could not be conveniently placed. These are printed in blank, and may be used by lecturers who would attract the public attention. No. 2 may be had for \$3 a hundred. Then we have a four-page 12mo circular, three pages of which are occupied by a statement of the utility of Phrenology, testimonials of all the most distinguished men as to the truth and importance of the science; one page of the four is left blank, on which to print special announcements or programmes for courses of lectures in any given place. This "circular" is used as a "hand-bill" to be left at every house in city or village, notifying parties as to all the particulars connected with the proposed lectures—such as subjects and number of lectures, time and place of holding them, terms of admission, etc. Samples of all these posters and circulars will be sent free this office, post-paid, on receipt of 5 cents. Orders for larger quantities will be promptly filled.

A CORRECTION.—Peter Von Cornelius, the eminent artist, died on the 17th of March, 1897, not 1857, as printed in the July number, page 2.

RECOLLECTIONS OF A BOSTON LIFE. is the title of a book about to appear, by Horace Greeley, of the New York Tribune. It is advertised on another page.

GETTING READY.—As soon as the evenings become comfortably cool and somewhat longer, our lecturers will enter the field for the fall and winter campaign. The election should not deter any one from pursuing his high vocation, though the public attention may be divided. We anticipate a "lively time" in all departments. Crops will have been gathered, excursionists and pleasure seekers will have returned to their duties; and all will go about their callings with bodies refreshed and spirits reanimated. We, too, shall come into the work of our choice with energies renewed and zeal rekindled. Book agents, lecturers, examiners, teachers, all will feel the animating influence of a life renewed by the glorious summer sun and the fresh, crisp autumn air. We breathe freer, our blood courses more rapidly through our veins, and our minds keep pace with the new order of things. Let us thank God for the glorious summer and the more glorious autumn.

General Items.

THE FAMILY RECORD—a prospectus of which we printed in our Feb. number—has been published by the author, Dr. Griscom. It is a small quarto of twenty-six pages, including blanks and letter-press. It is claimed, by the author, that it will answer the purpose for which it was gotten up. The prices fixed for it seem very high, if not exorbitant; half bound, \$2 50; cloth, \$3; and in morocco, \$4. As a fancy article on which no real money valuation can be placed, it may be worth to one much more than to another. When we first announced the work, two dollars was to be its price, but as we afterward declined publishing it, we had nothing to do with determining its price.

THE ILLINOIS CHERRY STONER.—Here is a new and useful invention which must have a place by the side of the apple parer, and other household conveniences. But where is Connecticut? Has her mechanical genius departed? This cherry stoner, invented in Illinois, is manufactured by Messrs. Geer & Hutchinson, of Peoria, and sells at \$1 25. The *Scientific American* praises it. The *Chicago Tribune* commends it—and we doubt not it will be adopted by all cherry-growers.

THE MERCANTILE LIBRARY OF SAN FRANCISCO report upward of 24,000 volumes, and the institution is in a flourishing condition.

THE WILMINGTON (Del.) CLASSICAL AND MATHEMATICAL INSTITUTE opens—fall term—on the 6th of this September. Mr. W. A. Reynolds, Principal; Norman O. Lounsbury, Teacher of Theoretical and Applied Mathematics and Chemistry; Wm. H. Cobb, A.B., of Greek, German, and English; R. Henry Davis, Jr., A.B., of Latin, Mathematics, and English; Jules Macheret, A.M., of the University of France, Teacher of French, and Lewis P. Mercer, Teacher of Elocution and English.

MIDDLE GEORGIA.—Having during the last two years contributed to the columns of this JOURNAL several articles on the advantages of Middle Georgia as a field for Northern enterprise, I am still receiving letters of inquiry on the subject addressed to me at my former post-office there. I have not time at command, at present, to answer these letters individually, and wish here merely to say to all my correspondents, that a year's residence among the "Pine Hills" confirmed me in my good opinion of the climate, and satisfied me of the adaptation of the country to fruit culture. The social condition and business prospects of that region are not at present so good as might be wished, but will doubtless improve whenever the political situation shall become more favorable.

Having removed from Georgia to Florida (for reasons entirely personal and of no interest to the public), I very naturally desire to gather around me there, as neighbors and co-workers, as many of the right sort of people as I can, and will therefore cheerfully furnish such information as may be at my command to those who may feel inclined to settle in the "Land of Flow-ers." My permanent address is Box 143, Jacksonville, Florida; but till Nov. 1st, letters may be directed to me here, care of S. R. Wells, Esq., 389 Broadway.

D. H. JACQUES.

NEW YORK, Aug. 8, 1868.

CANADA SCHOOLS.—We have received from a friend in Canada several statistical reports related to the political and educational departments of the New Dominion. The last document, for which he has our thanks, is the "Report of the Superintendent of Education for Lower Canada"—a very comprehensive affair—furnishing the minutest details of the numerous departments of instruction. From it we learn that there are 206,890 pupils in attendance at the schools, which number 3,826, with 4,829 teachers.

WHAT A CLERGYMAN SAYS:

"WATERFORD, N. Y., May 1st, 1868. "The A. P. J. is a decided desideratum on my study table. It is one of the richest monthlies I ever read. It is brimful of practical good things—just such a monthly as makes one think, and somehow does one good all over. Success to you."

"H. C. F."

FOR 1869.—Farmers are now preparing their ground for wheat. They break up prairie and summer fallow preparatory to sowing seed. So we are getting matters in our line ready for the coming year. We have the new ANNUAL OF PHRENOLOGY AND PHYSIOGNOMY well advanced, and it will be published early in the fall.

Our "Professional" Class in Practical Phrenology, for the winter of 1869, is nearly full, and promises to be larger and better than any previous session. We have a beautiful and convenient class-room connected with our cabinet, in which the lectures and dissections will be given. It is well to have everything ready in time, so that there shall be no delay or drawback. The year to come bids fair to be more prosperous than any other since the war. There will be "lively times" in all departments of business. Lecturers, educators, manufacturers, farmers, railroad men, shippers, and the rest, will all have enough to do. Nothing short of another rebellion or an earthquake will interfere with or prevent the steady and onward course of our country. Let us work and wait.

IMPOSTORS, SWINDLERS, QUACKS.—This large class are flourishing "about these days." They fill columns and pages of newspapers with their filthy advertisements, promising to cure "all diseases," and make every one rich who gives them money. It is needless to specify, or to call names, when it is a fact that all the patent medicine vendors are impostors. A sweeping statement, but true nevertheless. A few respectable journals now exclude the swindlers, but only a few. Many publishers are poor and ignorant, others are wicked and mercenary, and will print anything for pay. There are weak clergymen who inconsiderately lend their names to help to sell pills, plasters, and medicated slops for a "consideration," in the shape of a few bottles of bitters. Whiskey and tobacco-loving editors write and publish "puffs" for the same, and the public is deceived. **REMEDY**: Exclude from your houses the entire list of abominations, including the low, vulgar papers that advertise gift concerts, lottery schemes, cheap jewelry, fifty-dollar watches for five dollars, and the entire list of villains who set advertising traps for "indiscreet young men" and unfortunate women. The Anatomical Museum men, Howard Association man, New York Medical University man; all private concerns with big names, and any number of "no-cure-no-pay" hole-in-the-wall establishments along the river and canal

docks, in the slums of cities, such as the La Croix Fanchers, Earls, Freemans, Ryans, O'Briens, Hunters, Nelsons, Richards, Tarrants, Reeves, Learys, Servil, Lewises, Wests, Grindles, Niccolis, Deckers, Seymours, Durants, Thompsons, Powers, Duboys, Kennedys, and the rest, all advertising quacks, who rob and poison the poor victims who fall into their nets. Our duty requires us to expose them, and to warn all to beware!

A GOOD THING.—"He who makes two blades of grass grow where but one grew before, is a public benefactor"—so is he, who, by invention or mechanical device, lessens labor, or facilitates its performance. So much, by way of preface, to the introduction of a new article of stationery which will soon be regarded as indispensable to those who write for the press. We refer to the

NEW STYLES OF WRITING PAPERS, FOR AUTHORS, EDITORS, AND CLERGYMEN.

The inventor of these Papers, long accustomed to write for the press, finding it impossible to procure suitable paper, and a great inconvenience to prepare it; and also observing the difficulties experienced by printers and proof-readers with improperly prepared manuscript, has undertaken (1) to introduce new styles of paper specially adapted to Authors' and Editors' use, and (2) to prepare a set of rules for properly preparing manuscript for the press.

These rules are highly commended by publishers and printers, as they not only give explicit instructions to those who may not be fully acquainted with the requirements of a printing-office, but serve to keep them before the minds of those who appreciate their importance, but neglect their observance. Each box of the Authors' and Contributors' Paper is accompanied by a printed copy of the rules.

Since the manufacture of these Papers has been under consideration, the plan has been submitted to many editors and publishers throughout the country, who have invariably approved of it, and we have been guided by their advice in the size of sheets, width of ruling, etc.

No. 1. AUTHORS' MANUSCRIPT. Size, 6 x 10 inches, with two perforations at the top of the sheet for tying them together in parts or chapters. One of the holes is to be used for the compositors' hook when the copy is set in type. \$3 per room.

No. 2. EDITORS' OR CONTRIBUTORS' MANUSCRIPT. Size, 5 x 10 inches, with one perforation at the top of the sheet designed for the compositors' hook. The first line of ruling being at a distance from the top and the perforation above it, the liability of having the writing torn and defaced is avoided. \$2 50 per room.

No. 3. SERMON NOTE PAPER. Size, 5½ x 9, with two perforations at the side of the sheet for strings to pass through the sermon and the eyeleted cover, tying on the back. The cover may be removed and the sermon preserved by tying. One cover accompanies each box of paper. The cover and paper will lie open without rubbing down. \$3 per room.

The quality of these papers is excellent. They are handsomely ruled—wide lined—and may be ordered in unbroken packages from this Office, to be sent by express, at the above-named prices.

SAMPLE NUMBERS of this JOURNAL—of such as we can spare—will be sent to parties wishing to get up clubs, on receipt of stamps with which to prepay postage. Let every neighbor read a copy.

THE WALTER GRAPE is now being offered to the public for the first time. Its merits have been thoroughly tested, and we believe it has been proved to be one of the best varieties. It is a cross with the Delaware and Diana. Both of these are native, and hardy as well as good varieties; and the WALTER is claimed to be very much superior to either of them. In size and flavor it is said to resemble the Catawba, and ripen earlier than the Hartford Prolific, which makes it now the earliest good variety known. It contains sugar enough to preserve it, and will raise in any dry situation indoors or on the vines. It has not been known to mildew, or the fruit to rot. It was originated by Mr. CATWOOD, of the firm of Ferris & Caywood, Poughkeepsie, N. Y., with whom we have now made arrangements for offering the Walter as premium to clubs for the PHRENOLOGICAL JOURNAL. We offer their different numbers at the following rates:

For 5 new subscribers, at \$3 each, one \$5 Walter grapevine.

For 10 new subscribers, at \$3 each, one \$10, one \$5, and one \$3 vine.

For 20 new subscribers, at \$3 each, one \$10, two \$5, two \$4, and two \$3 vines.

For 25 new subscribers, at \$3 each, two \$10, two \$5, two \$4, and two \$3 vines, or any combination of vines to same amount.

All packages are put up in a careful manner, and forwarded by express direct from the nurseries, and orders are to be filled from there in the order in which they are received. Those sending clubs at once may hope to receive their vines in time to plant this autumn. Others will be furnished next season. Neighbors and friends, by clubbing together, can have the JOURNAL, and at the same time secure the introduction of the Walter in their vicinity. A complete description will be found in the JOURNAL for October, 1867, or a circular will be sent by mail on receipt of stamps. This offer is very liberal, and we believe that many of our subscribers will be glad to avail themselves of this opportunity.

N. B.—The offer in the July number is withdrawn, and this is substituted. Address this office.

SLEEP.—Physicians and philosophers speculate as to the time required for each person to sleep; and as yet no rule has been established. Napoleon said six hours in the twenty-four was enough for him. Others have believed four to be enough. Still others require eight, or more. But our view is this: One may subsist for years on just enough food to keep soul and body together, while a more generous diet would give a more abundant supply of vitality, heat, and life,—just as a little fuel may be made to keep a fire alive without its giving off much warmth. Inadequate sleep is as bad for the nervous system as inadequate food for the body, although it may not tell so potently or so soon on the human economy. Children require more sleep than adults; and *infants ought to sleep half the time*, till three or four years old. They grow and increase their vitality while sleeping; they work it off when awake and in nervous action. It is the height of folly in a mother to permit her child to be disturbed in its sleep for any trivial purpose. Let it sleep and grow all it can. We have too many big-headed, nervous, precocious children. The penalty is, they are cut off in the bud and are consigned to little graves. If we would keep our children with us in this world, we must let them grow and not be in a hurry to educate them into little angels! This is preliminary to a description of a

new invention intended to favor "sweet sleep," by keeping out of our rooms those little pests, mosquitoes. When tired out, and when most in need of perfect rest, the torment of being pierced and bled in every exposed part of the person by those ravenous hordes whose trumpets sound in our ears all the long hours of the night, is not only insufferable, but unnecessary. The cut gives a good outline view of the handy "machine."

Here is what the manufacturers say of it:

This invention is pronounced by competent judges, and those who have tested its merits, to be the simplest and most effective thing of the kind.

It consists of a roller inserted in a groove in transverse rail of upper and

bugs, and mosquitoes, but adds greatly to the comfort of rooms by allowing the upper sash to be lowered and the lower one raised, which is always essential to perfect ventilation. The contrivance is simple, durable, and effective. Its cost is very slight, is easily adjusted, and can be applied to any window, whether actuated by spring or weight.

With this appliance a room can be kept free from insect pests without the costly and smoldering nettings over beds and berths now required, while ample room for the admission and exit of air is afforded.

It will be seen, that while it is adapted to use in hotels and dwellings, it is specially convenient for steamboats, sleeping-cars, etc., adding much to the comfort of the traveling public.

The machine in practical operation can be seen at our office.

Liberal inducements will be afforded to parties desiring to purchase State or County rights, to whom fittings will be furnish-

WARREN'S PATENT AUTOMATIC MOSQUITO BAR. Patented June 30th, 1868.

lower sash. The netting is wound around the roller, one edge being fastened to the frame of the window. On each end of the roller is a pulley, operated by a stationary cord, which is fastened at the top and bottom of the sash on frame. When either sash is closed, no part of the machinery or netting is visible; but when the bottom sash is raised, or the upper sash lowered, the netting fills the space otherwise left open.

For convenience in opening window to adjust outside blinds, the lower edge of netting connected with lower sash is secured by a wire so as to be readily unfastened as desired, and as easily secured again to place.

The chief advantages of this invention may be summed up as follows:

It not only prevents the entrance of flies,

ed at manufacturers' cost price. Address Messrs. WARREN AND Co., 64 Pine Street, New York.

The *Scientific American* says of it: "The contrivance is simple, durable, and effective. It can be applied to any window, whether actuated by spring or weight. Its cost is slight, and its construction does not necessitate the change of appliances according to the season now demanded by the devices in common use."

If the use of this apparatus secures sound and refreshing sleep to a single babe, to an invalid, or to any person even in the best of health, we shall deserve thanks for calling attention to it.

Business.

[Under this head we publish, for a consideration, such matters as rightfully belong to this department. We disclaim responsibility for what may herein appear. Matter will be LEADED, and charged according to the space occupied, at the rate of \$1 a line.]

THE HYGEIAN HOME.—At this establishment all the Water-Cure appliances are given, with the Swedish Movements and Electricity. Send for our circular. Address A. SMITH, M.D., Wernersville, Berks County, Pa.

MRS. E. DE LA VERGNE, M.D., 325 ADELPHI STREET, BROOKLYN.

HYGIENIC CURE, BUFFALO, N. Y.—Compressed Air Baths, Turkish Baths, Electric Baths, and all the appliances of a first-class Cure. Please send for a Circular. Address H. P. BURDICK, M.D., or Mrs. BRYANT BURDICK, M.D., Burdick House, Buffalo, N. Y. tf.

INSTITUTE of Practical Civil Engineering, Surveying, and Drawing, at Tolleston, Ind. For Circular, address A. VANDER NAILLEN. 4t.*

ADVERTISE! ADVERTISE!! The *Carrier Dove*, or Mecklenburg Female College Magazine, is offered to you as an advertising medium. It is a Quarterly Magazine of 48 pages, elegantly printed on fine paper, and issued from Charlotte, N. C., at the low rate of \$1 per annum, in advance.

It goes to the following States of the Union, viz.: Iowa, Connecticut, New York, New Jersey, Pennsylvania, Maryland, Virginia, North Carolina, South Carolina, Georgia, Alabama, Florida, Texas, Tennessee, Kentucky, and Illinois.

It goes into the hands of that very class of persons whom advertisers wish to reach. Its principal circulation is in the Southern States. Rates moderate.

For further information in regard to the Magazine, or in regard to Mecklenburg Female College, send \$1 for one year's subscription to the *Carrier Dove*, or simply correspond with the undersigned, REV. A. G. STACY, 2t. Charlotte, N. C.

SPURZHEIM.—Photographs from Lizar's superb engraving of Spurzheim, from an original drawing by Madame Spurzheim. A magnificent head and face. 4-4 size, \$1; "carte-de-visite" style, 50 cents. S. R. WELLS, 389 Broadway, New York, or JOHN S. D. BRISTOL, Detroit, Mich.

MUSIC—VOCAL AND INSTRUMENTAL.—The undersigned will instruct individuals or classes by the month or the quarter, on favorable terms, at their own residences. She refers to Rev. Dr. G. J. Geer, of St. Timothy's Church, New York. Address MRS. MARY MARCUS, 745 Eighth Avenue, bet. 51st and 52d streets, New York. Aug., tf.

WORKS ON MAN.—For New Illustrated Catalogue of best Books on Physiology, Anatomy, Gymnastics, Dietetics, Physiognomy, Shorthand Writing, Memory, Self-Improvement, Phrenology, and Ethnology, send two stamps to S. R. WELLS, Publisher, No. 389 Broadway, New York. Agents wanted.

Advertisements.

[Announcements for this or the preceding department must reach the publishers by the 1st of the month preceding the date in which they are intended to appear. Terms for advertising, 50 cents a line, or \$50 a column.]

Agents Wanted.—We have four departments in our business:

1. THEOLOGY.
2. BIBLE DEPARTMENT.
3. SUNDAY-SCHOOL DEPARTMENT.
4. Books sold only by AGENTS.

We have just issued a new book, to be sold by Agents only:

THE ORIGIN, BRANCHES, DEPARTMENTS, INSTITUTION, OFFICES, AND MODES OF OPERATION OF THE UNITED STATES GOVERNMENT, by JUDGE WILLIS, of New York.

The *Christian Advocate* and *Journal* of New York says: "We give a hearty welcome to the volume here named, and in the name of the American People render thanks to Judge Willis for preparing it." Judge Reynolds, of Brooklyn, says: "If he could have had such a book before he had access to large libraries, it would have been a great help to him."

We have never had a book that agents sell so well as this one. For particulars, address A. TIBBALS & CO., 37 Park Row, New York.

Eastern Hygeian Home

Florence Heights, N. J. *Special Notice.* Having abundant room, very cheap, and a corps of Physicians and more desirous of curing the sick and teaching the well how to maintain health, we make money by pandering to the race, prejudices, and morbid appetites of the masses of the people,—wishing to advance the true principles of the Hygienic Medical System (so little understood and so shamefully abused, even by those who profess to keep "Water-Cures," "Hygienic Institutes," and to enable the poor as well as the rich to avail themselves of the advantages of the only True Living Art, as well as to remain with us a sufficient length of time not only to recover health, but to become established in a right manner of living,—the proprietors of "Eastern Hygeian Home" are now prepared to receive

ONE HUNDRED NEW PATIENTS on the following terms, after the payment of the entrance fee of \$5:
For One Month... One Dollar per day.
" Two Months... Eighty Cents per day.
" Three Months... Seventy Cents per day.
" Four Months... Sixty Cents per day.
" Five Months... Fifty Cents per day.

This offer, however, is limited to those persons whose net income does not exceed the above rates. It embraces room, board, and all ordinary medical attendance, and will be good to the first hundred applicants.

HYGIENIC FAMILY SCHOOL.—We are prepared to receive One Hundred boys and girls for education in the primary branches. They will also be taught the Light Gymnastics, and have the privilege of occasional Lectures on Physiology, Hygiene, and other instructive subjects.

TERMS—\$30 per month, or \$300 per year. Applicants may address EASTERN HYGEIAN HOME, Florence, N. J., or R. T. TRALL, M.D., No. 95 Sixth Avenue, New York. 1t.

JENKINS' VEST-POCKET LEXICON.

An English Dictionary of all except Familiar Words; including the Principal Scientific and Technical Terms, and Foreign Moneys, Weights, and Measures. Price, in Gilt Morocco, Tuck, \$1; in Leather Gilt, 75 cents. Sent post-paid by S. R. WELLS, New York. tf.

"American School Institute," a Reliable Educational Bureau, Founded 1855.

1. To aid all who seek well-qualified teachers.
2. To represent teachers who desire positions.
3. To give parents information of good schools.
4. To sell, rent, and exchange school properties.

"THE RIGHT TEACHER FOR THE RIGHT PLACE."

Thirteen years' trial has proved the "AMER. SCHOOL INST." a useful and efficient auxiliary in the educational machinery of our country. Its patrons and friends are among the first educational and business men.

Principals, School Officers, and Teachers, should examine the "Teachers' List" whenever they want teachers.

Those who seek positions should fill "Application Form."

TESTIMONY.

"The 'AMER. SCHOOL INST.' is to be regarded as the most reliable and extended of the kind."—Rev. C. V. SPEAR, Principal of the Institute, Pittsfield, Mass.

"Benefits of a 'division of labor' have been conceived and admirably carried out by the 'AMER. SCHOOL INST.'"

—J. TYLER, Ontario Female Sem.

"The Institute has taught me that I may depend upon it when I want teachers."

—BRACKLEY, Bordentown Female Sem., New Jersey.

"I commend it to the entire confidence of the public."

—D. C. VAN NORMAN, LL.D., President of the Institute.

"The Institute is systematically conducted. The proprietors are experienced, and otherwise eminent for their duties."—O. R. WILSON, Principal, White Plains, N. Y.

"I commend the 'AMER. SCHOOL INST.' as the most desirable medium for the selection of teachers and for representing teachers who wish employment."

"The Institute is a great help to those who are seeking teachers will range from which to select, and in that in stating character, there is no humbug."

"The Institute is a great help to those who are seeking teachers will range from which to select, and in that in stating character, there is no humbug."

"The Institute is a great help to those who are seeking teachers will range from which to select, and in that in stating character, there is no humbug."

"The Institute is a great help to those who are seeking teachers will range from which to select, and in that in stating character, there is no humbug."

Robert S. Newton, M.D., Professor of Operative Surgery and Surgical Diseases; Paul W. Allen, M.D., Professor of Theory and Practice of Medicine; William W. Hadley, M.D., Professor of Materia Medica and Therapeutics; James M. Comins, M.D., Professor of Obstetrics and Diseases of Women and Children; Edwin Freeman, M.D., Professor of Descriptive and Surgical Anatomy; J. M. F. Browne, M.D., Professor of Physiology and Pathology; James Day, M.D., Professor of Chemistry and Pharmacy; Frank Tabor, A.M., Professor of Medical Jurisprudence; John H. Fitch, M.D., Demonstrator of Anatomy.

For particulars, apply to PAUL W. ALLEN, M.D., Secretary, College Buildings, 223 East Twenty-sixth Street, New York.

Doty's Washing Machine,

lately much improved—and the new

Universal Clothes Wringer,

improved with *Roswell's Patent Double Cog-wheels*, and the *Patent Stop*, are now unquestionably far superior to any apparatus for washing clothes ever invented, and will save their cost twice a year, by saving labor and clothes.

Those who have used them give testimony as follows:

"We like our machine much; could not be persuaded to do without it, and with the aid of Doty, we feel that we are masters of the position."—Rev. Bishop Scott, M. E. Church.

"It is worth one dollar a week in any family."—N. Y. Tribune.

"In the laundry of my house there is a perpetual thanksgiving on Mondays for the invention of your excellent wringer."—Rev. Theodore L. Cuyler.

"Every week has given it a stronger hold upon the affections of the inmates of the laundry."—New York Observer.

"I heartily commend it to economists of time, money, and contentment."—Rev. Dr. Belknap.

"They save three-fourths of the labor and time, and pay for themselves, both in money and contentment."—New Orleans Picayune.

"Friend Doty—Your last improvement of your Washing Machine is a complete success. I assure you 'our Machine,' after a year's use, is thought more of to-day than ever, and would not be parted with under any circumstances."—Solon Robinson.

PRICES.

Send the retail price, Washer, \$14, extra Wringer, \$9, and we will forward either or both machines, free of freight, to places where no one is selling; and so sure are we they will be liked, that we agree to refund the money if any one wishes to return the machines free of freight, after a month's trial according to directions.

Canvassers with exclusive right of sale make money fast selling them.

Sold by dealers generally, to whom liberal discounts are made.

R. C. BROWNING, Gen. Agent, 11, 22 Cortland Street, New York.

Secret Art of Catching Fish

in any water as fast as you can pull them out, and no humbug. Sent for 20 cents, by Julius Rising, Southwick, Mass. 11.

\$10 to \$20 a Day, Sure, and

no money required in advance. Agents wanted everywhere, male or female, to sell our *Patent Everlasting White Wire Clothes Lines*. Address the AMERICAN WIRE CO., 75 William Street, New York, or 16 Dearborn Street, Chicago. 11.

Edward O. Jenkins, Steam

Book and Job Printer, and Stereotyper, No. 20 North William Street, New York, announces to his friends and the public that his establishment is replete with Presses, Type, and material for the rapid production of every description of printing.

Cheapest Bookstore in the

WORLD.—New Catalogue, No. 18, free. Send a stamp. 100,000 Old and New Books on hand. Immense prices paid for Old Books. LEGGATT BROTHERS, 113 Nassau Street, New York.

The Bartram & Fanton

Elastic Stitch Sewing-Machines. For Family and Manufacturing Purposes.

This Machine was awarded First Premium, American Institute, Prize Medal, Paris Exposition. Principal Office and Salesroom, at Madame Demorest's Emporium of Fashions, No. 638 Broadway, New York.

The Manufacturers of the above Machine believe that, after a careful and thorough examination as to the merits and qualifications of the different kinds of Machines adapted to Family Sewing, they have overcome the faults and imperfections of the many now in the market. The BARTRAM & FANTON MACHINES are pronounced by connoisseurs to be better designed, better finished, more accurate and reliable, with a greater capacity for performing all kinds of Family Sewing than any other Machine ever before offered to the public; and are so perfect and simple in their construction that a novice can operate them with perfect success.

An examination of our Machines will convince the most skeptical that we have produced the *ne plus ultra*

SEWING-MACHINE.

This Machine uses but one thread, and that directly from the *original spool*, making a beautiful stitch, and locking the thread firmly at every stitch. The work requires no fastening off, and dispenses with all the extra machinery that is necessary to operate a two-third machine, which is an important desideratum to all operators.

The design of the BARTRAM & FANTON MACHINE is different from all others. It is so constructed that it is impossible for a lady to soil the work or dress while operating it, or become entangled in the machinery. It will sew equally as well upon one kind of fabric as another, from the finest muslin to the heaviest woolen.

This Machine will make Button-Holes upon thin fabrics, and finish them off complete, which no other machine can accomplish. It has also an attachment for making eyelet-holes.

Each Machine is provided with Castors, and can be readily moved from place to place, yet stand perfectly firm when in use.

It will also *embroider, tuck, quilt, cord, bind, gather, fell, ruffle, braid, and hem*, etc., etc.

Each Machine is provided with a button-hole attachment, gauge, screw-driver, wrench, oil-can, three-quarter doz. needles, etc., and perfect instructions imparted to all purchasers of Machines *free of charge*. Price, \$60.

Every Machine is warranted for one year. Each Machine is so constructed that an attachment for Fancy Embroidery and Eyelet-Holes, Button-Holes, etc., will fit it.

Reliable agents in every city and town. Illustrated circulars mailed free on application. 8t.

Urbana University.

URBANA, CHAMPAIGN CO., OHIO.

(A NEW CHURCH INSTITUTION.)

The Sixteenth Annual Session of this Institution will open on the *First Wednesday* in September, 1868.

Ask for A. A. Constantine's PINE TAR SOAP. Patented March 12, 1867. Beware of worthless imitations, and see that the name of the inventor and the patent is stamped on each cake. Agents wanted. Sample sent, free of postage, on receipt of 50 cents. Address A. A. CONSTANTINE, 43 Ann Street, New York.

American Artisan and Patent RECORD.—New Series.

The *American Artisan*, now in the fourth year of its publication, is a Weekly Journal, devoted to fostering the interests of Artisans and Manufacturers, encouraging the genius of inventors, and protecting the rights of Patentees.

Each number contains numerous original engravings and descriptions of new machinery, etc., both American and Foreign; reliable receipts for use in the field, the workshop, and the household; practical rules for mechanics and advice to farmers; "Mechanical Movements," and other useful lessons for young artisans; the official list of claims of all patents issued weekly from the United States Patent Office; reports of law cases relating to patents, etc.

Each number of the *American Artisan* contains sixteen pages of instructive and interesting reading matter, in which the progress of the arts and sciences is recorded in familiar language. Twenty-six numbers form a handsome half-yearly volume. The columns of the *American Artisan* are rendered attractive by articles from the pens of many talented American writers upon scientific and mechanical subjects.

Terms of subscription: Single copies, by mail, per year, \$2 50 in advance. Single copies, by mail, 6 months, \$1 25 in advance.

The publishers of the *American Artisan* are also extensively engaged as Solicitors of American and Foreign Patents, and will promptly forward to all who desire it, per mail, gratis, a pamphlet, entitled "Important Information for Inventors and Patentees." BROWN, COOMBS & CO.

Proprietors of the *American Artisan*, Mch. 11. No. 189 Broadway, New York.

Good Books by Mail.—Any Book, Magazine, or Newspaper, no matter where or by whom published, may be ordered at Publisher's prices, from S. R. WELLS, 389 Broadway, New York.

NOW IS THE TIME TO SUBSCRIBE

FOR THE

BEST AND CHEAPEST MAGAZINE PUBLISHED.

PACKARD'S MONTHLY,

which has reached its Fourth Number, is already acknowledged one of the leading magazines of the country. It has been more quoted from than any other periodical, having always in employ the best writers of the day, among whom are—

HORACE GREELEY,

JAMES PARTON,

OLIVER DYER,

REV. J. L. CORNING,

ELIHU BURRITT,

GEO. W. BUNGAY,

CHAS. F. BRIGGS,

ALFRED B. STREET,

WM. H. BURLEIGH, etc., etc.

The series of articles by Mr. Dyer, on "The Shady Side of Metropolitan Life," of which two have appeared, entitled,

"THE WICKEDEST MAN IN NEW YORK,"

are creating an immense sensation throughout the country, and doing a vast amount of good by quickening the missionary spirit. The next of the series, entitled,

"THE MAGDALENS OF NEW YORK,"

Shall they have a chance of Salvation?"

will be the most thrilling and truthful article ever published, throwing a glare of light upon the awful wickedness and degradation of this great city in connection with one of its chief evils.

The back numbers of the magazine can be furnished to a few subscribers. Those who apply first will be first served.

Remember that this live magazine is furnished at the unprecedentedly low rate of

ONE DOLLAR A YEAR.

SINGLE COPIES, FIFTEEN CENTS.

Address,

S. R. Wells

Hall's Great Geological Chart.

Size 6 ft. 6 in. by 5 ft., finely engraved and colored, exhibits the order of successive strata of rocks and the characteristic fossils which have given the key to this arrangement.

It gives the appearance of a section were made from the surface toward the center of the earth, exposing the edges of the different layers. It is, in fact, such representation as may be seen in the banks of many rivers, as the Niagara, or in high rocky cliffs of lake or ocean shores, only it is much more extended.

This beautiful Chart was prepared by Professor Hall, that it might render a study so delightful in itself, and so practically useful, more extensively introduced, and more easily understood.

Only a limited number were produced from the lithographic stones. The subscribers have for sale a few of them, fresh and perfect.

Price, Mounted on Cloth and Rollers, \$18; wholesale price to Teachers, \$12.

Key to Hall's Geological Chart, \$1.

J. W. SCHERMERHORN & CO., 14 Bond Street, New York.

Electro Vital—Dr. Jerome

KIDDER'S Highest Premium Electro-Medical Apparatus, warranted greater magnetic power of any called magnetic.

The patent labels of the United States, England, and France are on the machine itself, as the law requires for all genuine patented districts.

"The best yet devised in any country for the treatment of disease."—Dr. Hammond, late Surgeon-General U. S. A.

Caution.—The latest improved bears the patent labels of 1860 and 1866.

Address DR. J. KIDDER,

478 Broadway, New York.

tf.

The Woman's Medical College

OF THE NEW YORK INFIRMARY, 125 Second Avenue, will open November 3d.

For announcement apply to Dr. E. BLACKWELL, Secretary of the Faculty.

ESTABLISHED 1861.

THE GREAT AMERICAN TEA COMPANY

RECEIVE THEIR TEAS BY THE CARGO

FROM THE BEST TEA DISTRICTS OF

CHINA AND JAPAN,

AND SELL THEM IN QUANTITIES TO SUIT CUSTOMERS

AT CARGO PRICES.

The Company have selected the following kinds from their stock, which they recommend to meet the wants of clubs. They are sold at cargo prices, the same as the Company sell them in New York, as the list of prices will show.

PRICE LIST OF TEAS.

OOLONG (Black), 70c., 80c., 90c., best \$1 per lb.
 MIXED (Green and Black), 70c., 80c., 90c., best \$1 per lb.
 ENGLISH BREAKFAST (Black), 80c., 90c., \$1, \$1 10, best \$1 20 per lb.
 IMPERIAL (Green), 80c., 90c., \$1, \$1 10, best \$1 25 per lb.
 YOUNG HYSOON (Green), 80c., 90c., \$1, \$1 10, best \$1 25 per lb.
 UNCOLORED JAPAN 90c., \$1, \$1 10, best \$1 25 per lb.
 GUNPOWDER (Green), \$1 25, best \$1 50 per lb.

COFFEE ROASTED AND GROUND DAILY.

GROUND COFFEE, 20c., 25c., 30c., 35c., best 40c. per lb. Hotels, Saloons, Boarding-house keepers, and Families who use large quantities of Coffee, can economize in that article by using our FRENCH BREAKFAST AND DINNER COFFEE, which we sell at the low price of 30c. per pound, and warrant to give perfect satisfaction. ROASTED (Unground), 30c., 35c., best 40c. per lb. GREEN (Unroasted), 25c., 30c., 35c., best 35c. per lb.

Parties sending club or other orders for less than \$30, had better send a Post-office draft or money with their orders, to save the expense of collections by Express, but larger orders we will forward by express, to "collect on delivery."

Hereafter we will send a complimentary package to the party getting up the club. Our profits are small, but we will be as liberal as we can afford. We send no complimentary packages for clubs of less than \$30.

Parties getting their Teas of us may confidently rely upon getting them pure and fresh, as they come direct from the Custom-House stores to our warehouses.

We warrant all the goods we sell to give entire satisfaction. If they are not satisfactory, they can be returned, at our expense, within thirty days, and have the money refunded.

N. B.—Inhabitants of villages and towns where a large number reside, by *clubbing* together, can reduce the cost of their Teas and Coffee about one-third (besides the Express charges), by sending directly to "The Great American Tea Company."

CAUTION.—As many parties in this city and elsewhere are imitating our name and manner of doing business, we hope our friends will be particular to address their letters to our principal warehouses, "Nos. 31, 33, 35, & 37 Vesey Street; Post-office Box, 5643, New York City." Attention to this will avoid mistakes.

WANTED—AGENTS—

\$75 to \$200 per month, everywhere, male and female, to introduce the GENUINE IMPROVED COMMON SENSE FAMILY SEWING MACHINE. This Machine will stitch, hem, fell, tuck, quilt, cord, bind, braid, and embroider in a most superior manner. Price, only \$18. Fully warranted for five years.

We will pay \$1000 for any machine that will sew a stronger, more beautiful, or more elastic seam than ours. It makes the "Elastic Lock Stitch." Every second stitch can be cut, and still the cloth can not be pulled apart without tearing it. We pay Agents from \$75 to \$200 per month and expenses, or a commission from which twice that amount can be made.—Address SECOMB & CO., PITTSBURGH, PA., or BOSTON, MASS.

CAUTION.—Do not be imposed upon by other parties palming off worthless cast-iron machines, under the same name or otherwise. Ours is the only genuine and really practical cheap machine manufactured.

Books by Return Mail.

Any Book, Map, Chart, Portrait, Album, Magazine, or Paper, sent "by return of first Post," at Publishers' Prices. All works on Phrenology, Phonography, Hydropathy, Anatomy, Medicine, Mechanics, Dictionaries, Gazetteers, Encyclopedias, and on the Natural Sciences. Address S. R. WELLS, No. 389 Broadway, N. Y.

AGENTS WANTED.

Autobiography of Horace

GREELEY. Publishers' Announcement: The undersigned have nearly ready, and are about to issue, by subscription, Horace Greeley's "Recollections of a Busy Life," in a handsome octavo volume, of over 600 pages, well printed, on fine paper, illustrated with an admirable steel portrait of Mr. Greeley, and with pictures of his various homes, in early and later life, together with a beautiful portrait of Margaret Fuller, engraved by Linton. Originally published in the New York Ledger, these interesting papers have been revised, and in part rewritten, by the author, with much additional matter, concerning Politics, Reconstruction, Jefferson Davis, etc., which make it one of the rarest and most readable books of the day.

Mr. Greeley has said of it: "I shall never write anything else into which I shall put so much of myself, my experiences, notions, convictions, and modes of thought, as these *Recollections*. I give, with small reserve, my mental history."

The book embraces views of early New England settlement, the author's own youthful life, education, apprenticeship, adventures, professional and political reminiscences, experience in Congress, newspaper life in New York, and much useful talk about farms and farming. It is a peculiarly entertaining and valuable work,—a look behind the scenes during an important period of the country's history.

Price, in extra cloth, \$3 50; in sheep, \$4 50; in half morocco, \$5.

Applications for Agencies received. Exclusive Territory given.

J. B. FORD & CO., 164 Nassau St., Printing-House Square, New York.

A LIBRARY FOR LECTURERS,

SPEAKERS, AND OTHERS.—Every Lawyer, Clergyman, Senator, Congressman, Teacher, Debater, Student, etc., who desires to be informed and posted on the Rules and Regulations which Govern Public Bodies, as well as those who desire the best books on the art of Public Speaking, should provide himself with the following small library:

The indispensable Hand Book.....\$2 25
 The Art of Extensive Speaking.....2 00
 The Right Word in the Right Place.....75
 The American Debater.....2 00
 The Exhibition Speaker.....1 50
 The Manual of Parliamentary Practice.....1 25
 Dwyer on Elocution.....1 00
 First Lessons in Composition.....1 25

We will send one copy each by first express on receipt of \$10; or separately, by mail, post-paid, at the prices annexed.

THE CHINESE IN CALIFORNIA.

The influx of the Chinese to California has been so great during the last five years, that they have begun to exercise no little influence on the political affairs of the "Golden State," and now deserve a more extended notice than we have before thought proper to accord them. It is estimated that there are about 65,000 of those singular people in California, about one seventh of the entire population of the State. The number of women among these is very small comparatively, there being but about 5,000, whose social position is very low and degraded.

Nearly every calling known to Americans has its "Celestial" representative, who for industry and thrift can scarcely be excelled by the enterprising American and European residents of California. We find employed on the Western section of the Union Pacific Railroad upward of 12,000 Chinamen, whose industry has been well spoken of by the managers of the railroad construction. Twelve thousand or more are employed on farms, in gardens, or as house servants. In the last-mentioned capacity, although they insist in doing things in their own fashion, they are highly esteemed. In washing and cooking, while their methods are peculiar, and in many respects most amusing, they can not be surpassed in the excellence of the results produced by the best European domestics. It may be remarked here, that in all the different capacities mentioned, or to be mentioned, the men do the work. Chinamen cook, wash, clean, and perform all the services incident to a household. As domestics, however, they are not altogether reliable, because of one peculiarity—they are fond of change; and when the whim takes them, they will suddenly leave master or mistress, though it may be at a most unfortunate juncture. It is simply, "I go—me no like—say no more—good-bye."

The tobacco business of the Pacific States is almost exclusively in the hands of the Chinese. The enterprise of these people in that line of traffic is evinced by the numbers met with in Northern cities who have their stores or stands in the most frequented thoroughfares.

Of the mechanic class, including those who are regularly engaged, and those who pick up odd jobs and do anything they can find to do, there are probably not less than 10,000. These are chiefly residents of the cities, and are strikingly apt in acquiring a knowledge of a trade. The woolen mills are chiefly stocked with them, and they are also employed to a large extent as laborers on new buildings. In commerce and general trade about 6,000 are engaged, some of whom have accumulated considerable property. As business men, they show much enterprise and tact; in fact, are said to compare well in shrewd bargaining with the proverbial Yankee or the close Dutchman.

Our illustration, fig. 1, represents the well-to-do Chino-Californian merchant. There is in his appearance as much of easy, satisfied com-

fort as can be well represented in an engraving. Fig. 2 represents a younger man, also of the merchant class, but an out-of-door operator. He has to some extent Americanized himself by the adoption of trousers and blouse.

FIG. 1.—MERCHANT.

The great mass of the ordinary grade of Chinamen is found in the mining districts, where they busy themselves in the "diggings," or "set up" as washermen, gardeners, and ser-

FIG. 2.—BROKER.

vants. Upward of 25,000 are estimated to be thus employed.

There are about 1,000 who practice as physicians. Many of these exhibit much skill in ascertaining the condition of a patient and the

location of an internal disease. In judging the pulse they try both wrists. Their mode of treatment is far inferior to the enlightened medical systems of the present day, yet considering their primitive notions, the "Celestial" physicians do remarkably well.

Society with them is anything but good. They huddle together in very small rooms, the women appearing to be specially related to no particular men. Abroad among the American residents, they preserve a quiet and deferential demeanor. They preserve their national fondness for shows and amusements; in fact, a theater in San Francisco is supported by them.

Some attention is paid to the education of their children in schools, where the English language is the chief element of instruction. There are also several hospitals, under the management of companies or corporations organized for the purpose,—such are the See-Up, the Quy-Sheon-Tong, and the Lack-Sheon companies.

Companies or associations are also formed for taking care of the sick within certain districts of country, and for shipping the dead to their native land.

The custom of sending the dead to China is with the California Chinese a sacred obligation. They believe that, at the resurrection, when Josh comes for their families, they must all be with them to enter the better land, and that those unlucky persons whose bones lie far from their friends are likely to be left behind, the spoil of the evil spirit. Once in three years the remains of the dead are shipped in boxes. Sometimes the collection awaiting transportation amounts to several hundred. It is said that the cost of sending these bodies is nearly one hundred dollars each. Very few women are thus sent back.

They usually have large funerals, on which occasion a feast is spread for the company. Hogs, goats, chickens, cakes, and fruit constitute a variety which is usually well patronized by the sorrowful friends of the departed. A funeral service is performed by a priest, who waves a yellow gourd and chants a dismal dirge. Music of the harsh and noisy national type is also an accompaniment of the service.

It can not be expected that the Chinese will exert much influence on political affairs so long as they so tenaciously cling to the ancient customs and exclusive notions of their native country. As they are, if rightly managed, they may be made conducive to the material growth and prosperity of the Pacific States.

THE PHRENOLOGICAL JOURNAL AND LIFE ILLUSTRATED.

Is devoted to The Science of Man, in all its branches, including PHRENOLOGY, PHYSIOLOGY, PSYCHOLOGY, ETHNOLOGY, SOCIOLOGY, etc. It furnishes a guide in Choosing a Pursuit, and in judging of the dispositions of those around us, by all the known external "Signs of Character."

Published monthly, \$3 a year in advance. Clubs of ten or more, \$2 each. Sample numbers, 30 cents. Now is the time to subscribe. A new volume began with the July number. Supplied by Booksellers and Newsmen everywhere.

Man, know thyself. All wisdom centers there;
To none man seems ignoble, but to man.—Young.

CHARLES DARWIN, THE EMINENT NATURALIST.

This organization is most strongly pronounced in its leading characteristics; it scarcely needs an experienced physiognomist to read it. The towering crown indicates positiveness, self-reliance, decision, independence. Intellectually, we would regard him as the ready observer, the facile inquirer, the keen investigator. His well-marked reflective organs evince the close and profound analyst rather than the merely speculative thinker; the weigher and adapter of facts rather than the theorist. He is no subtle, plausible reasoner; he has little sympathy for those who spin fine webs of sophistry on mere assumptions; he demands facts before

hypotheses, substantial premises before ratiocination. He must be one of the hardest of men to influence when one would win him over to a baseless theory or a weak cause. In fine, his appreciation of mere probability is very slight; his organ of mere belief is very weak.

We can not give him credit for much Veneration, Hope, or Spirituality, and his lack of these organs tends to the sharpening of his practical and utilitarian views of things. He is an earnest, bold, and steady worker in whatever field of analytical examination his eminently scientific mind may choose to delve in. Be-

sides, his temperamental intensity stimulating his naturally persistent disposition, leads him to dig to the very bottom of, and thoroughly sift, the subject of his consideration. He aims at the basilar facts of a doctrine, and can not be satisfied of its truth without them.

He is ambitious in no small degree, but it is an ambition *sui generis*; he would please himself by acquiring all the knowledge that is to be had, seen, and known on a subject which has excited in him an active interest. Having satisfied himself, having disposed of his many doubts, he fears not the world's

PORTRAIT OF CHARLES DARWIN, THE NATURALIST.

rejection, though he expects its approval of the results he has procured.

His will-power and executive energy are somewhat stronger than his bodily vitality, although there is a good degree of wiry endurance in his physical constitution; therefore he needs to be watchful lest he should break down from excessive mental application. He should appreciate the utility of moderation if he would be successful to the utmost in his attempts to develop the schemes which may command his study and investigation.

In brief, it may be said that this remarkable man owes his fame to the following conditions: first, a tough, wiry, and enduring physiology; second, a large-sized and active brain, well cultivated by severe discipline and thorough education; third, excellent powers of observation; fourth, untiring application; fifth, immense perseverance. There is industry, quickness of perception, will, push, ambition, and thoroughness; hence, a name, fame, success, fortune.

BIOGRAPHY.

CHARLES ROBERT DARWIN, born on the 12th of February, 1809, at Shrewsbury, England, can claim a prominent place among those men of science who have endeavored to solve, though we can not say satisfactorily, the still unsettled question of the origin of species—whether the present vegetable and animal species upon the earth have their origin in as many original types and were created in a manner mysterious in the highest degree, or were gradually developed from a single original individuality or species, whose successive generations gradually assumed new forms and produced more highly developed species. The first view is that generally known as the Biblical one; while the latter, known as the "development theory," has found favor with many modern naturalists. This latter view has been adopted by Darwin, and put forth in several remarkable works; but the theory is not a new one. De Lamarck, in 1809, and Geoffrey St. Hilaire, in 1828, and others, had denied the existence of permanent species, and asserted that organic beings, under the influence of new conditions of life, had gradually merged from one species into another from the earliest geological ages. In illustration, it was said that the neck of an animal, when it was continually necessary to keep it stretched out, would finally become longer; and the result would be, by-and-by, a perfectly new animal species; in such a manner had the giraffe attained to its present long neck, through seeking its sustenance from the branches of the tall palm.

Darwin carried his observations much farther than his predecessors, however; and during a voyage round the world, commenced in 1831,

when he was twenty-two years of age, with Captain Fitzroy, of the "Beagle," he took the opportunity to compare especially the species of vegetable and animal life found on the South Sea islands and on the coast of South America. He brought to the task a thorough scientific education, received in the University of Edinburgh, and subsequently in Christ's College, Cambridge.

Darwin's observations and comparisons during his voyage on the "Beagle" led him to the conclusion, that not only the different flora and fauna stand in a special relation to each other, but that also certain transmutations in animal and vegetable species had taken place in consequence of transplantation and other causes; and that the same process, under similar conditions, must continually be working in other portions of the earth. These phenomena formed the awakening hint for a train of further researches and experiments, in order to endeavor to bring forward proofs for his theory before making it public. It was not until the year 1859 that he considered his system ripe for publication, when "The Origin of Species" made its appearance—a work which created a very general and lasting interest in the public mind. He had corresponded and conferred with naturalists, "fanciers," and breeders, in order to increase his means of observation, and had collected together innumerable facts, upon which he based his reasonings. These were thoroughly elaborated in his work, and the "Darwinian theory" of development at once exerted a powerful influence upon the scientific world. We will give concisely the main points of this theory. They have been already discussed at some length in the published lectures of Dr. Gill, in recent numbers of the JOURNAL.

All living and already extinct organisms, all plants and animals can, according to Darwin's view, be considered as the members of one great family whose branches are connected together by natural descent. He finds the correctness of this view declared in the history of the development of individual organized beings; also in the numerous gaps in the broken series of extinct plants and animals still to be filled out; further, in the peculiar geographical distribution of former and present living related plants and animals in individual portions of our earth; and, finally, in the changes that constantly occur under our own observation among many species of animals and plants, and the so-called "variation process." It is especially in the last relation, through the observations of many naturalists, and through Darwin's more systematically pursued researches, that we are made acquainted with the conditions and influences through which it is asserted nature effects her transformations into ever-new species of plants and animals. And this methodical explanation of the process of transmutation is the essence of the collected theory which, as a whole, is called "Darwinism."

The descendants of a plant or of an animal always differ in individual characteristics as

well from their progenitors as from each other, in a greater or less degree. Such deviations are the more noticeable if these progenitors have been previously transported to new outward conditions of life. Sometimes the change is seen in the form and figure, but first appears in a stronger and sharper degree in the third or a still later generation. On the basis of this phenomenon, descendants with wholly peculiar properties can be produced from seed-plants, according to "selection." If, for example, a plant produces single blossoms which differ from those of the mother-plant in certain peculiarities, it is possible, by using the seeds of such blossoms in transplantation, to produce descendants with exactly the same peculiarities. If we continue this "selection" with plants and animals through a number of generations, we finally produce a variety which differs from its forefathers in essential characteristics. On the continued "selection" from individual species rests, as is well known, the practice of the principle of breeding. From these isolated facts Darwin proceeds to wider observations and results.

The variability of species is a chief assertion of the theory. The deviations from the peculiarities of the organic stem, appearing in plants and animals, have sometimes a special importance for the existence of the new organism; for many deviations give to the cion, under certain relationships, a greater prominence over its parental and related individuals by reason of its existence and capacity for transplantation. For example, a slender frame would serve, under certain outward relations, to reach nourishment-serving booty easier; greater power of rapidity in the feet or wings would aid the flight before enemies; or a special coloring of the surface would render the individual less recognizable by its enemies. In short, the varieties thus made profitable, would, in the "struggle for existence," go through the world much easier; sustain themselves with less trouble; better undergo transplantation, and be better calculated to transmit their profitable characteristics to their progeny in an increased degree over those cions of their progenitors and their generations which have already lost such characteristics. By confining propagation between individuals possessing such peculiarities, those peculiarities may be made permanent, and thus new varieties may be brought into existence. By rejecting or destroying all inferior individuals, and permitting propagation by the superior alone, the offspring attains a higher development. Nature herself chooses the more favored individuals, just as is done in our economy and horticulture by making selection in breeding. Darwin calls this preference of nature "natural selection," and thus expresses it:

"As many more individuals are born than can possibly survive, and as consequently there is a frequently recurring struggle for existence, it follows that any being, if it varies, however slightly, in any manner profitable to itself, under the complex, sometimes varying, conditions of life, will have a better chance of surviv-

ing, and thus be naturally selected. From the strong principle of inheritance, any selected variety will tend to propagate its new and modified form."

His theory of the history of living creation may be rendered in the following words: If the outward conditions surrounding an organism be changed, those varieties whose existence are favored by this altered condition, support and extend themselves, while the others pine and disappear. But it is self-evident that an uncommon long period of time is necessary in order to produce, in the descendants, not merely varieties, but perfectly new species through the continual addition of many small deviations from generation to generation. The history of the earth indicates that the period of this development was of vast duration. The influence of the law of transformation upon organic life within this period was exerted in a very gradual way. From the simple groundwork, the cell, the imperfect and lowest organisms of the animal and vegetable kingdom appeared through the changes of posterity. And according to the manifold conditions of life under which these organisms were placed in different localities, by-and-by, the developed form arose. Then, while a greater part of the less favorably formed creatures sank under these changed relations, the more favored, through gradually transforming, descendants proceeded to the highest development. But, Darwin adds, if it has taken hundreds of thousands of years to effect a transformation in species of plants and animals, man must not expect to see the completed work of this law of development in the transmutation of a species effected immediately before his own eyes.

In opposition to this view, Agassiz adduces the fact that the fox and wolf, under all their altered conditions of life, are still the same; and says that the outward circumstances can not therefore be considered as causes of the difference in organized creatures. Many other naturalists oppose Darwin with the theory of the invariability and unchangeability of species.

In order to prove more definitely how far "selection" exerts an influence upon the variation of species, Darwin studied the process by which varieties are produced among domesticated animals and plants. The result of his industry has lately appeared under the title of "The Variation of Animals and Plants under a Condition of Domestication," a work which has created fully as much interest as his earlier one, to which it forms a supplement. If we must concede [it is asserted] that organized beings present varieties in a natural condition; that their organization is, to a certain extent, plastic; and that, as Darwin goes on to prove, many animals and plants have undergone important changes through domestication, and that man himself has developed entirely new, strongly marked, and strictly hereditary races, it must be conceded, further, that *species* can arise also in a natural condition. The question still unsettled, and which Darwin promises to

answer in a future work, is, In what way were these varieties transformed into real species?

Darwin's literary labors, besides his well-known works on species, are quite important. His earlier writings consist of records of his experience, and of the geological and physiological results of his travels and observations. Among these are the "Voyages of a Naturalist," and "Journal of Researches into the Geology and Natural History of the various Countries visited by H. M. S. Beagle," first published, in 1839, as the third part of Fitzroy's account of the voyage around the world made by the "Beagle," and published separately in 1845. In 1840-1845 the geological results of the voyage were published by Owen and others, to which Darwin wrote the Introduction. He wrote numerous papers on the islands of Polynesia and Australia, published in the Proceedings of the London Geological Society. In the sphere of geology he treated of the Formation and Extension of Coral Reefs; then of Examinations on Volcanoes (in 1845), Geological Examinations in South America (1846), and many essays. The results of his most complete experiments and analyses in the botanic sphere are contained in his work on the "Movements of Climbing Plants;" but his work of the most extraordinary scientific ability is his "Monograph of the Family Cirripedia," published 1851-4, by the Royal Society of London.

Since 1842, Mr. Darwin has been prevented from the continuous prosecution of his studies by severe bodily affliction, and has repeatedly been compelled to suspend his literary activity. He now resides at his country-seat near Bromley, Kent, amid happy relationship. He married, in 1839, Miss Emma Wedgwood; and now is a county magistrate. Mr. Darwin's reputation is of course very extended; but his influence is probably strongest in Germany, where he has received many honors from the most influential scientific societies. He has also had distinguishing honors conferred upon him by his own countrymen.

BRIDGING THE GREAT RIVERS.—It is only within a few years that the project of bridging the Mississippi, or any of the larger tributaries, has been thought at all feasible. But the public have lately acquired a passion for bridges. A bridge over the Ohio was completed a little over a year ago, at Steubenville. A bridge at Wheeling, to connect the Baltimore and Ohio and Central Ohio railways, was built some years ago. A third bridge is under way at Parkersburg, to connect the West Virginia and the Marietta and Cincinnati railroads. A fourth bridge has just been completed at Cincinnati, at a cost of \$1,750,000. A fifth bridge is projected, at Louisville. In addition to those built and projected over the Ohio, the largest tributary of the Mississippi, the great "Father of Waters" itself is to be bridged at Dubuque, Galena, and possibly at St. Louis. We live in a fast age. The people can not wait "to be ferried over the stream," but prefer to walk over it hastily and "dry shod."—*Industrial Gazette.*

VANITY vs. PRIDE.

THE difference between pride and vanity consists in this, that the former is an extravagant opinion of our own worthiness; the latter is an inordinate desire that others should share that opinion. When we are proud, we think too much of ourselves; when we are vain, we want our neighbor to think too much of us. Pride is the melancholy mood, vanity the playful craziness of self-love run mad. Pride is feared, but scarcely despised by men; vanity is treated with ridicule and contempt, for in pride there is always something strong, and in vanity something weak. The workings of pride, too, are above the reach of vulgar natures; but vanity is easily detected, and there is nothing that pleases a vain creature so much as the opportunity of laughing at another vainer than himself.

It is not wrong nor improper that we should maintain a decent self-respect, and hold a just and true estimate of our powers and capabilities. In like manner, it is not wrong to have a proper deference to the opinion of other men, and a desire to stand well with those among whom we live. The first Christians were advised so to live that they might have a favorable testimony from those who were outside. The desire to please our superiors, neighbors, and friends is a legitimate stimulus to exertion, and we naturally crave the judgment of bystanders on our performances, so that we may correct our faults, if we have not been entirely successful, or, if successful, we may enjoy the meed of approbation to which we feel that we are honestly entitled.

But if the desire for approbation is not kept within bounds, it runs into vanity, and becomes a source of weakness and unhappiness in the soul. The mind gradually loses sight of God, and of the great motive which should guide and sanctify all our actions, namely—the love of God and our eternal salvation. We get to live on human applause, and we do not feel the inward peace and satisfaction that spring from a consciousness of having fulfilled our duty in a proper manner. We become jealous of the success of others, envious of the praise awarded them, and angry at our failure to gratify and astonish our new masters. In this manner the eccentric little passion of vainglory is gradually converted into a scourge that chafes and vexes us continually, by falling upon the raw place of excited and uneasy self-conceit. There is perhaps no passion that so often punishes its own folly as vanity. The stronger it grows, the more certainly is it doomed to disappointment.

Vanity is sometimes supposed to be confined to women and children, to classes of persons, in fact, from which we do not expect proofs of lofty principle and dignified self-command. And yet men are very often as vain of their appearance, and of the impression they produce upon others, as woman is of her beauty, her accomplishments, or her jewelry and costly dresses. Men of rare gifts and distinguished

ability are liable to mar their undeniable merit by exhibitions of almost juvenile vanity. It is a strange and yet a true fact, that even men of genius, men destined to live forever in the literary or military annals of their country, have been noted for affectation and self-conceit,—for demonstrations, in short, that prove the morbid desire to be noticed, admired, and made much of by their fellow-men. How necessary, then, it must be for persons of ordinary virtue and strength to guard against the insidious inroads of this dangerous enemy of spiritual improvement.

It is not necessary to run into eccentricity or rudeness in order to avoid the imputation of vanity. The good Christian is not the man to put on an assumed and forced exterior. He is guileless and unaffected. He is at his ease because he has nothing to conceal. He does not fear the judgments and opinions of the world, nor does he swerve from the path of duty to win its admiration or applause. At the same time, he does not wantonly brave and insult it, for such conduct would turn men away from virtue, rather than draw them gently to its practice.—*Rev. Dr. Cummings.*

WHO ARE THE YANKEES? AND WHAT?

BY ONE OF THEM.

[CONTINUED FROM SEPTEMBER NUMBER.]

BUT are we to believe that all the Yankees—all the New-Englanders, that is, are of this type? and no better than they should be? Are they not among the hardiest and most enterprising people on the face of the earth? What says Edmund Burke? and among the most ingenious, persevering, and successful, in whatever they undertake? Just look at their steady growth, at their prodigious accumulations of wealth and comfort. Read the statistics, the records of the Patent Office, the manufacturing returns, the history of commerce, of the fisheries, of the lumber-trade, of ship building and navigation, and then look about you and see if you can find any other people to be compared with them for energy, thrift, self-reliance, and—self-righteousness. They constantly remind you of the Old Brabanters in their palmiest day, of the unconquerable Swiss, and of Italy when she was crowded with merchant princes and all the rest of the world was tributary to her; of England, after her institutions had taken deep root, and she began to flourish as a manufacturing power; of the Scotch, in their conscientiousness, and zeal, and thrift; being born Franklins most of them, and believing to the last that a penny saved is twopence earned; as they believe in the multiplication table, or the Trinity.

But are they, after all, a kind-hearted, religious people? or only Dissenters, Intolerants and Malignants? Look at their churches and their charities. Call to mind what their Revolutionary fathers achieved by land and sea; what they did in the last rebellion—may it be the last!—what they are doing now for the pro-

motion of peace on earth and good-will to man—black or white—bond or free.

"Quite a good-lookin' man," said a large dealer on Kilby Street, in reply to somebody who was recommending a country trader—"but is he *pious*?"

"None to hurt," was the reply. And the sales were made.

And probably the same thing might be said of most New-Englanders—in business; notwithstanding their alleged biogtry and fanaticism, and their want of charity in matters of opinion, for although not disposed to give all their goods to feed the poor, they are liberal enough in gifts, and their charity is unbounded. Look at the doings of the Sanitary Commission, and at their labors and toils and sufferings for the soldiery.

Or step with me into the Patent Office at Washington, and you will see an amount of evidence absolutely astonishing—evidence of ingenuity and contrivance and foresight, and presumption, which no people on earth could ever hope to match. It were no greater extravagance to say, that, if you will give a native Yankee a jack-knife and a shingle, or a bit of soft pine, you will find that you have set him up in business, and that he will be sure to whittle out a livelihood—cutting his own fodder all the way through; and this too, while others born outside of Yankeedom, are waiting for a chance, or "for something to turn up."

It is generally acknowledged that a real genuine live Yankee can turn his hand to anything, and though a Jack of all trades, he is far from being good at none. Over sea, they understand this, and I myself, have been appealed to on all possible matters; and once I remember, to cure a smoking chimney, by no less a personage than Mr. John Mill, father of John Stuart Mill, and by Mrs. Sarah Austin; as if I were a professional chimney doctor, and the seventh son of a seventh son; and when I suggested a narrowing of the draft, by nailing a strip of zinc over it, which I afterward learned was successful, there was a general outcry of admiration; "but there!" said Mrs. Austin, "what else could we expect? and what did I tell you?" Nor could I persuade them that we Yankees were not intuitive engineers, natural philosophers, or mechanics, though I acknowledged that our whole life was a course of experiment from first to last; and that we are obliged, most of us, to learn a little of everything and make the most of it.

There is another national characteristic, which prevails throughout New England, in most of the Middle States, and occasionally in the South and West. You can hardly find a man who has followed the business of his father, to say nothing of his grandfather, and earlier progenitors; or hardly any man who has followed the same business for any length of time. Our ministers of the Gospel become lawyers—and lawyers preachers, while the bar is constantly replenished by broken merchants, naval officers, like Lord Erskine and Ogden Hoffman, or people who have grown tired of laying

bricks, or shoving the foreplane, and want to ride in a gig and be better dressed, like the professionals—God help them!—or ambitious young men who hope to be provided for at last, by marriage or politics; while you have but to turn your head anywhere, at any time, to find brokers, insurance agents, editors, confectioners, provision-dealers, wholesale merchants and retailers constantly interchanging their business, while in China they never change for a thousand generations, and in England a change of business would always be hurtful, and generally fatal, to a man's character. You may see in the Strand at this moment perhaps, a large sign bearing this inscription—A. B.—Bug Destroyers to Her Majesty, which has been there ever since the days of Queen Anne.

"My dear sir," said I to Jeremy Bentham, one day while he was pooh-poohing over the editorials of a paper which a secretary was reading aloud to him—"why do you take the paper? why don't you stop it? Every day you complain of it, and scold about it, and every day you take it in, and have it read to you, as if it were part of your breakfast." "Why do I take it, man alive! why, my father before me took it; and the paper is a property." Of course, there was no more to be said. Being a "property," the subscribers were also a "property," and having been read by the father, how could the son help reading it?

That the Chinese make better fans, and chess men, and perforated spider-net balls, one without another, for doing as their fathers did, and with the same tools, generation after generation; that the Spartans had better shields and spears and other weapons of war, by confining the manufacture to a class by themselves, may be conceded as probable, if not certain. But Colt's revolver and the Springfield, or Enfield rifle would never have been guessed out—or whittled out—by a Lacedemonian or a Chinese.

All our greatest discoveries, all our surprising inventions have been owing to this fact—that no man here is obliged to follow the business of a progenitor, or to stick to any kind of business, pursuit, or profession for life, or after he gets tired of it; that he never loses caste, or character, by a change of occupation, and, at the worst, is only thought rather changeable, or a little too adventurous, or visionary, till he gets established, or, at least, well under way, and then he is greeted on every hand with cheers, and complimented for his enterprise and boldness, and passes for a fellow who knows a thing or two, and has no idea of rusting out, or settling on his lees. Hence failures with us are nothing, and a change of business less than nothing. At my elbow there sits a man who was brought up on a farm—went into the dry goods business—migrated to Baltimore—then took up the trade of smelting iron—failed—came North once more, and went into the Western produce line where he has made a handsome fortune. A little farther off stands another; who thirty years ago kept a small country store, came to Portland, enlarged his business, bought land on the outskirts of the city, established a sugar-house—lost a small

fortune before he succeeded; but persevered nevertheless, until he owns a thirtieth part of the whole city, and is worth millions. Here is another, who was born and bred a retail dry goods shopkeeper; went into the law; became a judge, and now, having returned to the bar, is pursuing his profession—with success; another, who kept a milliner's shop for his wife, entered the profession, became Associate Justice of our Supreme Court, and after awhile withdrew to become our Postmaster, and to follow the law in a somewhat lower sphere. At least five-and-twenty members of the same bar have withdrawn wholly from the profession, and gone into other business, here, as lumber-dealers, or dealers in Western produce, or managing agents of some factory, or building corporation, and there, as bank presidents, or railroad, or insurance agents. And this in large portions of our country, and especially throughout New England, has got to be so common, as to be characteristic. With no other people on earth was it ever so.

Let us now return to the Patent Office at Washington for a few minutes. A large proportion of all these contrivances are of Yankee origin. But, if you examine them, you will be pretty sure to find, *first*, a strange, and oftentimes an astonishing ignorance of the first principles in mechanics; and of all that has ever been done, or printed, or published, on the object had in view by the inventor; and next, something that no thorough-bred, well-educated mechanic would ever have thought of. Our inventors are constantly undertaking what, if they were better acquainted with first principles, they would be ashamed of. Our greatest discoveries and happiest are the result, not of our learning, nor of our knowledge and scientific attainments, but of our ignorance and presumption. If we knew more, we should venture less. Let us give an illustration. Our card-making machine was taken to Paris. A committee of the Institute was appointed to examine and report. They did so, and reported it was *impossible*. Yet no one pretended to say that it had not done all it had promised. Nevertheless, they being scientific men, *savans*, the machine was declared an impossibility. And so it was to all but the inventor, and to those who believed in him without knowing why, for the same reason that they believed in their own eyes and ears.

Let us now take one of these Yankee adventurers, a born mechanic, a millwright, like Oliver Evans, or an engineer, like Robert Fulton, and put him through. You see him standing on the borders of the great Erie Canal, watching the boats on their way to New York, and wondering why steam is never applied to canal navigation, while it is doing so much for our rivers and seas, doubling and trebling our commercial capital, wherever time is money, and swift exchanges are the measure of profit. Near him loiters a well-dressed, gentlemanly-looking stranger, with whom he enters into conversation. "Why on airth, mister," says the Yankee, "don't they hitch on a steam engyne,

to them air boats, and drive her through, at the rate of ten miles an hour, instead of leavin' 'em to plow through, like so many mud turtles?"

Whereupon the polite stranger says, "Oh—ah—a—allow me, my good friend—the fact is a—a—a—that the laws of hydraulics and hydrostatics a—a—a—are all against you;" and then he goes on to give his reasons, having already demonstrated at Liverpool and Bristol, the utter impossibility of ocean navigation by steam—though a Yankee steamer was actually on her way up the Mediterranean before he had got through—the best of which amounts to this, namely, that canal navigation by steam would be an impossibility, because of the *wash* and consequent injury to the walls, if the speed were increased.

"Wal, Mr.—what may I call your name?"

"Lardner, sir, Dr. Lardner—perhaps you may have heard of me in connection with this subject?"

"Can't say I have; but that's no fault o' yourn. My name is Tibbets, Jeremiah C. Tibbets—now, I don't understand anything about your—what d'ye call 'ems—hydro—hydrav—"

"Hydrostatics and hydraulics—the laws that govern fluids."

"Jess so—I see—but I happen to be very busy jess now, and haven't no time to look into the laws you mention, but I'll tell you what I can do, and will do—if I can't cipher, I can whittle her out, and that I will do, afore I'm a month older, hit or miss." And home he goes on a swinging trot, and loses no time in rigging up a bread-tray with a coffee-mill and a chafing-dish perhaps, and launches the "consarn" as he calls it, upon a frog pond just back o' the house. Well, *et muove*, as Galileo said—*it moves*—and that's enough to begin with. And then he goes to work afresh, and builds a covered boat, and puts in a wooden boiler, and a paddle or screw—no matter which, nor whose patent he infringes, and goes round with a hat, and takes out a patent forthwith, or at least lodges a caveat, on tick; and after a while you hear of him, a long way off standing on the bank of a canal, just where he stood a twelvemonth before, when the "*fast idee*" entered his head. Right before him lies a newly finished, handsomely painted canal boat, with a steam boiler, engine, and screw, just beginning to whiten the water, and moving at the rate of say six miles an hour, as he tries to keep up with her on the tow-path. At last he stops all out of breath, and while rubbing his hands and slapping his thighs, he looks up, and sees almost within reach of his arm, that very individual, Dr. Dionysius Lardner, with whom he had the talk already mentioned.

"Wal! I declare!" says our Connecticut Yankee; "if there aint the very gentleman I saw here a twelvemonth ago! Wal, mister—what do you say now? What did I tell ye? I've whittled her out, you see, jess as I told ye I would."

The Doctor is overwhelmed with a astonishment. "Can it be possible!" he exclaims. "Why!—she is making five miles an hour!"

"Nearer six, I should say."

"And what is very strange, instead of increasing the wash, and thereby endangering the walls of the canal, she seems to be lifted out of the water by her increased momentum, so that the wash is actually diminished!"

"Jess so!" says our friend Tibbets.

"But, my dear sir," continues the Doctor, not quite willing to give up, "the law of hydrostatics and hydraulics—a—a—a like that of the Medes and Persians—a—a—which altereth not—is altogether against your theory."

"Theory! I haint got no theory; and I know as little now as I knew when I first saw you, about your hydro—hydrav—"

"Hydrostatics and hydraulics."

"Jess so!—to be sure—and all I can say is, that I have whittled her out, leaving it for others to understand how 'twas done."

"Certainly, my dear sir—a—a—very true, as you say; but the fact is a—a—a that in my calculation, I overlooked one element, or rather did not foresee the result of a new composition of forces, which—a—a—a is now demonstrated by experiment."

"Can't help that," says the Yankee, with a puzzled expression. "All I know is that I have whittled her out, and there she goes!"

Now this I take to be a very fair illustration of our Yankee character. If we knew more, we should undertake less. If the supposititious inventor had known as much as Dr. Lardner, about the laws which govern fluids, he never would have tried to navigate the Erie Canal by steam. With the Yankee, therefore, it is ignorance and self-reliance, or downright headlong presumption that leads to discovery—not scientific research or attainment. He never *infers* a safety lamp, like Sir Humphrey Davy. Hence, most of his wonderful discoveries are accidents.

One of our most ingenious New-Englanders, the late Mr. Perkins of Newburyport, inventor of the nail machine and bank-note engraver, went to London, where, instead of printing bank-notes and transferring plates, he entered into the manufacture of copper cylinders for calico printing with the same machinery, and established a business he had never thought of. And so, too, when he undertook to improve the steam engine, and got so far as to satisfy *himself* that he could throw a ton of metal from Dover to Calais—all he needed being a material of sufficient strength or toughness for the gun—he was not thinking of steam artillery, but of tanning leather by steam, of forcing the tannin through the pores in an exhausted receiver. The steam artillery was an afterthought, and resulted in nothing to his advantage, after the experiment made by Wellington and his whole staff, in Hyde Park, when the heavy bullets rattled against a row of iron targets, like a tropical hail storm in harvest—enough to sweep an army from the field of battle in a few minutes.

Unfortunately, for his reputation, our friend Perkins had overlooked, or misunderstood, some of the plainest laws that govern here; and while he knew too much of some things, which he had thought over and weighed, and meas-

ured for himself and verified, until he was almost afraid to move, he knew too little of the hidden laws that are ever waiting to be found out and dragged forth, under the name of exceptions and anomalies, and ended by sticking fast for life, hitting what he never aimed at, and missing what he had set his heart on.

And so it is with most of our inventions, and with not a few of our improvements in legislation, finance, and war. The Yankees are credited with all that are worth mentioning, as if they had all originated with the New-Englanders. Let them be ascribed to Americans, if you will, to our country at large, and not to a section.

For example. When Scott is ordered to Mexico, he sits down and makes a requisition for troops and supplies and munitions of war on the most economical calculation. The War Department cuts him down, and leaves him to invade a mighty empire, crowded with experienced soldiers, under an excellent leader, when he has to fight his way from Vera Cruz to Mexico, and carry all before him, with only eight thousand men—every battle, after he had cut loose from his supplies, being for life or death, and a single defeat would have been fatal to the expedition, and with Santa Anna's temper, quite certain to result in a general massacre. And when Sherman breaking away from the established rules of war—as some of our inexperienced generals wanted to do at the battle of Germantown, where the whole American army was stopped by Chew's house and a platoon or two of infantry, because it had been a maxim with the great Frederick and Prince Eugene and Marlboro' never to leave a fortified post behind you in an enemy's country—swept over the whole South in a whirlwind of fire, without caring for his base, or even trying to maintain his communications—all these achievements go to the credit of Brother Jonathan over sea—to the *Sectional* Yankee that is, instead of being scored to the *National* Yankee. But enough. As with our soldiers and captains, our discoverers and inventors, so is it with our statesmen and our orators, our poets and our lawgivers. They are all Yankees abroad, and even our sewing machines, our telegraphs, our pianos, our yachts, and our racers, are only *Yankees* wonders—and never *American*. This ought not to be, and must not be. Honor to whom honor is due. Let the Yankees have all they are entitled to—and Americans the rest.

P. S. If our friends over sea have never happened to meet with a live Yankee, unexaggerated, uncaricatured, let them recall Robert Owen of Lanark, the great reformer, with his solemn, quiet enthusiasm, steadfast belief in himself, and lank, wiry, angular build; or Walter Coulson, formerly editor of the *Globe*—either would pass for a native Yankee in the heart of New England. J. N.

To make success sure, base thy efforts on well-ascertained acts, and trust no uncertainty, however flattering.—*Dortnay*.

MY CREED.

BY J. G. WHITTIER.

I HOLD that Christian grace abounds
Where charity is seen; that when
We climb to heaven, 'tis on the rounds
Of love to men.

I hold all else named piety
A selfish scheme, a vain pretense;
Where center is not, can there be
Circumference?

This I moreover hold, and dare
Affirm where'er my rhyme may go:
Whatever things be sweet or fair,
Love makes them so;

Whether it be the lullabies
That charm to rest the nestling bird,
Or that sweet confidence of sighs,
And blushes without word;

Whether the dazzling and the flush
Of softly sumptuous garden bowers,
Or by some cabin door, or bush
Of ragged flowers.

'Tis not the wide phylactery,
Nor stubborn fast, or stated prayers,
That make us saints; we judge the tree
By what it bears.

And when a man can live apart
From work, on theologic trust,
I know the blood about his heart
Is dry as dust.

DOES AFFECTION SPRING FROM THE HEART?

THIS question is propounded by a reader of the JOURNAL. We find in the phraseology of the Scripture, "From the heart proceedeth evil thoughts." The word "heart," as thus used, we do not regard as referring to that physical organ which we call the heart, but as referring to a central source of life from which the thoughts spring—the interior man, the inner sentiments—something more than mere physical organism. For many generations men have spoken of the heart as the seat of *love* and the seat of *hatred*. The Scripture saith, "As he thinketh in his heart, so is he" (Prov. xxiii. 7); so that, in a literal sense, the heart would seem to think as well as to manifest affections. We do not suppose that the heart has any more to do with the affections than do the liver, the lungs, the stomach, or the kidneys. But you will then ask, Why does the Bible use these terms? Permit me to ask another question, Why does the Bible use the term "bowels of mercy?" "His bowels did yearn on his brother" (Gen. xliii. 30); "Bowels yearned on her son" (Job xxx. 27); "My bowels were moved for him" (Cant. v. 4); "My bowels are troubled for him" (Jer. xxxi. 20); "Put on bowels of mercies" (Col. iii. 12). See also Phil. i. 8; *Ib.* ii. 1; Phile. i. 7; xii. 20; 1 John iii. 17.

The world has at times said that pity came from the bowels; at other times that the heart was the seat of all the affections; and the Scriptural phraseology is, therefore, put in the language of the people, according to their understanding of the subject. Moral truth is

illustrated by the common thoughts and opinions of men, on the same principle that the sun is spoken of as rising and setting, as if the sun, moon, and stars were made solely for this earth. In the Scriptural account of the creation it is said that "God made two great lights;" "And he made the stars also;" and it is spoken of as if they were made especially for this earth. On the same principle it might just as well be said that this earth was made as a resting-place to accommodate a single mustard-seed.

In Scripture times there was no idea entertained by men that the earth was a ball—that it revolved on its axis, or that stars were suns and centers of other systems. It is hardly five hundred years since anybody supposed that one could sail around the world. And in the time of Columbus it was seriously discussed by the wise men of Spain that if, by any means, one should sail over the earth's edge or side, no wind or tide could ever drive him back again, he having sailed down on the west side. But to the point.

Investigations have been made which show that the brain is the seat of all the mental emotions, all the affections and propensities, all the intellectual powers, and all the moral sentiments; and that the organ called the heart simply circulates the blood. When that becomes disordered, the intellect, the affections, and the moral sentiments are not at all affected thereby; and the most driving idiot and the meanest malefactor may have as fine a development of the heart, and as healthy an organic condition of the heart, as any philosopher or poet in the world. Many a philosopher and many a poet has exemplified all the splendor of intellect and the ripest of affections and sentiments, while the literal heart was seriously diseased, deranged, and finally ended in death; but that fatal disease of the heart existed without clouding the intellect or blunting the affections. If, then, an idiot has a good heart and a poor brain, and the philosopher has a good brain and may have a poor heart, it would seem to indicate that the difference existing between the idiot and the man of talent was in the brain and not in the heart. Let the brain be invaded by inflammation, by congestion, or impaired by a blow, and the most gifted individual is changed into a maniac; the lips of virgin innocence, by reason of such derangement, may utter the most revolting obscenity and the most horrible blasphemy. Let the brain be healed, and the lips of the virtuous then utter only sentiments of purity and religious truth.

If the brain be the organ of mind, it is the organ of all the mental powers, of all that loves and hates, that hopes and fears, that aspires and yearns, that thinks and reasons, that imagines and appreciates. Any part of the system, except the brain, may be diseased without seriously affecting any of the mental forces; but if that be affected, no matter what health and vigor may exist in all the other merely physical organs, the mind staggers, and the manifestation of affection and love is perverted, or, for the time being, obliterated.

SELF-CULTURE.—No. 2.

BY MRS. LAURA E. LYMAN.

SUPPOSING the student to have laid carefully and well the foundation stones of his structure of education, and become well versed in reading, writing, spelling, grammar, and arithmetic, he naturally aspires to conquer larger domains and make wider acquisitions. The broad fields of literature invite him to enter; the scroll of the mighty past unfolds in lines stretching far back to remote ages. Science crowned with stars beckons him to take her hand; and she will lead him through the heavens above and the earth beneath, revealing to his astonished and delighted vision mysteries and wonders without end. Philosophy with charming voice woos him to walk in the shady groves of the Academy and listen to her cadences.

"—musical as is Apollo's lute."

He will find that of "making books there is no end,"—of reading them there is none. Some things he must be content to be ignorant of.

"Art is long, and time is fleeting."

Suppose he decides upon a course of historical reading: Where shall he begin? In the first place let him have correct general ideas as to the great periods of history, so that when his mind runs back through the records of the past he may pause at certain mile-stones which mark the flow of time. "Blair's Chronology," a little book used in some of our schools, he will find very convenient and valuable for reference. It contains within the compass of a hundred or two small pages a summary of the chief events of history. Let the ten periods into which ancient and modern history are each divided be committed to memory, with the dates of their beginning and end.

Or, the Bible may be used as a standard of chronology; and as from Abraham to Christ the periods of Jewish history naturally divide into five hundred years each, it will be easy to pass from sacred to parallel profane history. Omitting the odd numbers, the chronology of the Old Testament stands thus:

Abraham	2000 B.C.
Moses	1500 "
Solomon	1000 "
2d Temple rebuilt	500 "

BIRTH OF CHRIST.

Between Abraham and Moses come in the splendor of the Egyptian monarchy, and the probable era of the Pyramids. Nearly cotemporaneous with Moses was Cecrops, first king of Athens, and Cadmus, who brought letters into Greece. Just before Moses died the Olympic games were founded, which mark an important date in Grecian history. Coming down to Solomon, we pass the Argonautic expedition, 1268 B.C., and the Fall of Troy, 1184 B.C. Homer lived and sung about a hundred years after Solomon. Ahab, king of Israel, and Dido, who founded Carthage, 878 B.C., were cotemporaneous. About a hundred years later Hezekiah, king of Judah, Isaiah the prophet, and Romulus, who founded Rome, 752 B.C., were cotemporaneous.

Coming down to the destruction of Jerusalem by Nebuchadnezzar, and the Babylonish

Captivity, we are brought to the period of the culminating glory of the Babylonish empire; and near the close of the Captivity we find the star of Darius, king of Media, in the ascendant, and later, that of Cyrus, king of Persia. From the rebuilding of the second temple, the interest of history centers in Greece first, then in Macedonia, and then in Rome. At the battle of Marathon, 490 B.C., begins the era of Greek supremacy and splendor. Within a hundred years subsequent live Aristides, Socrates, Herodotus, Pericles, Alcibiades, and Plato. As the star of Grecian glory declines from the zenith, that of Macedon rises. Philip and Alexander reign and conquer, and Macedonia enjoys a brief ascendant. Tyre is destroyed, India invaded, and Alexander dies.

Rome begins to absorb all nations and all interest in herself. The three Punic wars end with the fall of Carthage, 146 B.C. Forty-six years after Julius Cæsar is born, and Rome, under him and his successors, becomes mistress of the world.

Now occurs an event which is destined to revolutionize all history: Christ is born. During the three hundred years succeeding, ten persecutions of Christians occur, resulting in the spread of the new religion, the overthrow of paganism, till, finally, under Constantine, Christianity becomes the official religion of the Roman empire, 325 A.C. Its decline and fall, and the destruction of Rome by the barbarians, mark the close of ancient and the beginning of modern history, 455 A.C.

Reducing this to a chronological table, it would stand thus:

SACRED HISTORY. B.C.	COTEMPORANEOUS HISTORY. B.C.
1996 Abraham born.	1856 Kingdom of Argos established.
1706 Israel goes into Egypt.	1550 Cecrops, first king of Athens.
1571 Moses born.	1493 Cadmus brings letters to Greece.
1491 Israel goes out of Egypt.	1453 Olympic Games founded.
1451 Moses dies.	1268 Argonautic Expedition.
1171 Samuel born.	1184 Fall of Troy.
1000 Dedication of Solomon's Temple.	900 Homer lived.
897 Ahab died.	878 Carthage founded by Dido.
726 Hezekiah reigned and Isaiah prophesied.	752 Rome founded.
588 Destruction of Jerusalem by Nebuchadnezzar.	606 Destruction of Nineveh.
515 2d Temple finished.	594 Solon, Archon of Athens.
387 Malachi prophesied.	559 Cyrus founds the Persian empire.
	510 Rome a republic. The Tarquins expelled.
	490 Battle of Marathon.
	468 Socrates born.
	453 Cincinnatus, Dictator at Rome.
	356 Alexander the Great born.
	146 Carthage falls.
	44 Julius Cæsar assassinated.

Let this or some similar plan of historical reading be pursued, so as not to leave the mind confused with a mass of facts and dates, but enriched with a connected and well-digested knowledge of what it has been studying. The most valuable book of reference in these readings is Lavoisin's Historical Atlas; but it is a rare book, and to be found only in old and large libraries. Let the student have an atlas ever at hand, and fix every geographical point in his memory by constant reference to it. It is an excellent plan, also, to have paper and

pencil close by, and note down prominent events with their dates, and such lessons as seem to be taught by them. Thus only will wisdom result from the knowledge acquired. It is not the number of histories one has read that is to be considered, but rather the amount and value of the information derived from their reading. Do not pass from one chapter to another, or from one book to another, until there is a clear and distinct impression of what you have read left upon your mind. Rehearse to yourself, or note upon paper, the readings of each day, after the manner of a recitation.

In modern history the attention will first be drawn to the incursions and settlements of the barbarous nations that overran Europe. Then the rise and progress of the Saracenic power. This is succeeded by the age of chivalry in Europe, commencing at the battle of Roncesvalles in 778. The rise of Charlemagne and of the Papal power are the next points of interest; and thence we pass to England under Alfred the Great. Shortly after come the Crusades, and the rise of the Turkish power. Here is the middle of the dark ages.

The invention of the printing press, the discovery of America, the revival of learning, the dawn of the Reformation under Luther inaugurate a new era, and history revolves around certain great characters as centers. From this time European history, surveyed from the Christian and Protestant stand-point, may be divided into three periods:

I. Saxon and German nations in the north resist Catholic aggression combined with Spanish and Austrian ambition. This period commences with Charles V. and Luther, and ends with "the Thirty Years' War." The antagonistic spirits are:

Charles V.	Luther.
Philip II.	Marice of Saxony.
Grenville.	William the Silent.
Alva.	vs. Maurice, his son.
Alexander of Parma.	Queen Elizabeth.
Tilly.	Henry of Navarre.
Wallenstein.	Gustavus Adolphus.

RESULTS.—Charles V. flies from Germany. Protestantism becomes national. The Dutch republic rises. The Armada is wrecked, Philip weakened, and Spain becomes insignificant.

II. Catholic aggression combined with French ambition threaten Protestantism. Both again rebuked.

Louis XIV.	William of Orange.
Turenne.	vs. Marlborough.
Condé.	Eugene.

RESULTS.—France defeated. James II. abdicates. England becomes firmly Protestant. Louis leaves France no larger than he found it, and greatly in debt.

III. Infidel France threatens Christendom.

Voltaire.	Burke.
Robespierre.	vs. Nelson.
Napoleon.	Wellington.
	Divine Providence.

RESULTS.—French philosophy repudiated. Napoleon banished to St. Helena. France bounded by the Rhine and Pyrenees. Long peace in Europe.

With some such mapping out as this, let readings in modern history be conducted. Thus only will it be made to realize to the student the fine definition of "Philosophy teaching by example."

INFIDELITY.

In the light, yet not it seeing,
Blazed on by a hidden sun,
This the skeptic's mental being—
He who will the clear truth shun.

Is there joy in unbelieving?
Is there calm in stern distrust?
Can one rest while self-deceiving,
Rest while aiding the unjust?
No; there is no joy in living
While uncertain broods the heart;
Peace, the white-winged, knows no dwelling
In the soul that doubts apart.
Be not doubtful, but believing;
Pillow Faith upon thy breast;
She will give thee solace, cheering,—
She confer sweet inner rest.

H. S. D.

"CONSCIENTIOUSNESS AND ITS FUNCTIONS."

No other development of science or human wisdom, brought forth during the past century, has thrown such a flood of light on religion and metaphysics as Phrenology. At first, its teaching was hailed by the enemies of revealed religion as a sure harbinger of the overthrow of Christianity, some Phrenological professors taking special pains to present the two systems in juxtaposition. Latterly a better spirit or understanding seems to prevail, and the new Science of Mind aims to be like most of the others, "a handmaid to religion." This is as it should be. But it is remarkable that the article under the above head, in one of the numbers of the PHRENOLOGICAL JOURNAL, seems to claim more authority for revelation than ever justly belonged to it—to wit, that it is practically an "infallible guide."

The article in question is luminous with moral and scientific truth; but is any rule of life, *handled and interpreted by fallible man*, infallible? I think not. The phrases "fallible" and "infallible," as used by theologians, had their origin at the Reformation; the Romanists claiming that grace for the Pope, or the Church; and the Protestants affirming that the Bible authoritatively decided all disputes in religion and morals. In a discussion of mere science and metaphysics, "infallibility" has no place. The author of the article under consideration has handsomely disposed both of "the unerring-guide" and "the fitness-of-things" theories; but he has left the subject in as great uncertainty as before, by predicating the following propositions:

"We have shown that neither metaphysics nor Phrenology can give us an infallible guide for Conscientiousness, and as we can find infallibility in the Word of God, we must necessarily rely upon that for infallibility."

"As to undertaking to alter, amend, or reject any portion of that revelation which our Creator has so kindly bestowed on us, it would be inexcusable to harbor the thought for a moment. What would be the use of the Lord's giving us an infallible standard, if every man could reject, alter, amend, or pervert according to his own views of propriety?"

The appropriate answer to these pretensions of "infallibility" is found in the following conclusive sentence in the same article:

"Why is it, then, if we have an infallible standard in revelation, do we have such a great diversity of opinion as to what is right or wrong?"

But is not "the Word of God an infallible rule in faith and practice," as most Protestant formulas teach? Certainly, so far as the mind of the Spirit has been correctly apprehended and given by the translators, and men embrace it, it is such. But as long as weak, erring man is incapable of fully understanding the truth, and is swayed by passion, prejudice, and ignorance, so long will the Bible fail in practice to be such a rule. It must never be forgotten, moreover, that the essence of all law is in construction or interpretation. A man's conscientious belief, as to religious truth, is in all cases determined by his apprehension of the meaning of the divine authority. Thus the aggregate faculties of man must ever set in judgment as to what is essential truth. This difficulty can never be removed; and thus if Deity Himself were ruling us, in invisible power upon the earth, there is no probability that our wisdom and obedience would be more nearly perfect than they are. Is man, then, left without an authoritative rule, and is he incapable of arriving at a certainty in morals? By no means. *The Word of God as interpreted by the Spirit* (in the mind of its reader) is, in all essentials, sufficient. The Word must be subjected, however, to the crucible of right reason aided as above, and so guided by it we can hardly err. Conscience is a blind instinct, and can only be truly enlightened as above.

The value of Phrenology is largely shown in its demonstrating that every man has a modicum of free-will to improve the faculties given him; or, in other words, a little moral garden, attached to his earthy tenement for his cultivation; beyond that, his endowment and consequent life are determined by the "decrees" of Providence.

If the views here advanced be true, how important it is that the consciences of all should be correctly trained, for "out of the heart [or conscience] are the issues of life!" M. A.

PROPRIETY.—Merriment at a funeral, or in the hour of worship, is not only disgusting, but painfully abhorrent to all our kind and respectful feelings. There is a simple and beautiful propriety, pleasing to all, which gives grace to the manners, beauty to the person, sweetness to the disposition, and loveliness to the whole being, which all should strive to possess. It is to be neither too gay nor too grave, —too gleesome nor too sad; nor either of these at improper places. It is to be mirthful, without being silly; joyous, without being foolish; sober, without being desponding; to speak plainly, without giving offense; be grave, without casting a shadow over others. In fine, it is to be just what everybody loves and nobody dislikes, and just what makes us and others happy. This is propriety; and those who possess this richest flowering virtue of the soul, which breathes ambrosial sweetness along every walk of life, get the credit of possessing its counterpart, that rare quality of character honored everywhere, humbly christened "common sense," universally acknowledged to be the best of all sense.—*Hopes and Helps.*

On Physiology.

A knowledge of the structure and functions of the human body should guide us in all our investigations of the various phenomena of life.—*Chester.*

My people are destroyed for lack of knowledge.—*Ezek. iv. 6.*

ADDRESS TO A JUG OF RUM.

(FIRST PUBLISHED IN 1815.)

"HERE, only by a cork contriv'd,
And slender walls of earthen mold,
In all the pomp of death repose
The seeds of many a bloody nose;
The chattering tongue, the horrid oath;
The first for fighting nothing loth;
The passions which no word can tame,
That burst like sulphur into flame;
The nose carbuncled, glowing red;
The bloated eye, the broken head;
The tree that bears a deadly fruit
Of murder, maiming, and dispute.
Assaults that innocence assails;
The images of gloomy jails;
The giddy thought on mischief bent;
The midnight hour in riot spent;
All these within this jug appear,
And Jack the hangman in the rear."

ALCOHOL.

ITS EFFECTS ON THE NERVOUS SYSTEM.

THE Greek root of the word intoxicate means poison. Whoever says a man is intoxicated, says he is poisoned. And it is true. Give a part of a glass of ordinary spirits to a child three or four years old, and the child is in twenty minutes in a congestion fit, and probably dies. It operates precisely like strychnine, arsenic, or any other deadly drug. Commence by giving a child a thimbleful at a time, and gradually increase the amount, and you may indurate him so that he will swallow as much at a time as would kill him at first. You may begin with any other poison, and do the same thing. Our physical framework is constructed with reference to this, to enable it to stand a large amount of any deadly substance. There is nothing peculiar in this action of alcohol. There is nothing in this but the universal law that all poisons destroy the susceptibility of the human frame.

Why does a man like to drink liquor? Not because it has a good taste, but because it exhilarates his nervous system. The man takes his first glass of liquor. It goes to his stomach. Now, there is not a single human stomach, nor that of any animal ever created on this earth, that ever did or can digest a drop of alcohol. The moment it falls into the stomach every vital organ recognizes the presence of a deadly enemy. It is precisely as if a lion were thrown into a cage of tigers, and every tiger were to recognize the lion as his deadly enemy. The stomach can not digest it, and it can not remain. All the organs assist in throwing it off, and that great struggle of every vital organ to rid the stomach of this poison is the very thing which the perverted senses recognize as *exhilaration*! If a man, standing on the moon, could have a telescope of sufficient power to enable him to view

objects on the earth, and could have looked upon us during the late civil war, and have seen, dimly through the glass, the movements of immense bodies of men, he would have said, "This nation has an immense population; there is a tremendous outpouring of the people; this nation is in a state of extraordinary prosperity." Precisely so the man's sensorial, the point where the nerves of sense concentrate, recognizes, in this desperate effort of the vital organs to get rid of an enemy, a sense of strength and exhilaration in place of the languor and feebleness he felt just before. But in a little while, when Nature has, by all her efforts, disposed of this poison, the man sinks down to his former condition, and a great deal below it. Nature has made her superior struggle; she has got rid of the poison; but she has tired herself in the effort. The next time Nature makes the same struggle, but she has not the same strength. The second glass does not make the man feel so good. The more a man drinks, the more he has to drink to attain a certain condition. He has to take more and more. Nature turns constantly to rid herself of it, and by-and-by becomes tired out and gives it up. There are men who are not very perceptibly affected by liquor. It does not make them drunk. It does not hurt them, they say. But it does hurt them. I never knew a man who drank a good deal without becoming intoxicated, whom liquor did not kill fast. And for physiological reasons. If a man will take poison, it is better to get rid of it than to keep it in the system. Drunkenness is one of God's infinite mercies, sent to help poor, mistaken, human beings to get rid of the consequences of their iniquity.

What we should do depends largely upon what we are able to do. It is not easy to fly in the face of public opinion. Laws will, after all, be merely a reflection of the moral condition of the people. They will always be a little better, but not much better. If you should say that no one in the country should do a bad thing, it would be useless, because human nature, in the development to which we have reached, would not sustain such a law. Public sentiment is advancing. It does not allow men to make a parade of vices which were once tolerated. The time will come when men will not be licensed to sell alcoholic liquors, when grogshops will be where gambling-houses are now, out of sight.—HORACE GREELEY in *Herald of Health*.

[Yes, public sentiment is advancing. Common schools, Sunday-schools, and other schools are elevating the moral standard of society, and the time is near when, in this country, drunkenness will be regarded with the disgust it deserves. To day, the nations of the earth are suffering from the poisons of alcohol, opium, and tobacco. But, thank God, the better portion—the women—are tolerably free from the disease. It is in them and in the right training of the rising generation that we hope. Let us try to save the children from the poisons.—ED. A. P. J.]

AMONG THE ORANGE GROVES.

FLORIDA AS A WINTER RESORT AND AS A HOME.

In addition to its large and increasing influx of permanent settlers, Florida is every winter attracting thousands of health and pleasure seekers from the North, and a great deal of interest attaches to whatever relates to this wonderful semi-tropical region.

Having spent the last winter and the larger portion of the summer here, and fully decided to make it my future home, I will give the reader some facts, mostly the results of my own personal observation and experience, in relation to its climate, soil, and productions. I will leave out of view in this sketch the northern tier of counties bordering on Georgia and Alabama, which partake of the climate and other characteristics of those States, and need not be described here.

Passing south of the thirtieth parallel of latitude, we enter the true Floridian zone. Here the climate assumes an almost tropical character, and the seasons differ radically from those of every other portion of the Union. A trade-wind, an alternate land and sea breeze, a dry and a wet season, and great uniformity of temperature throughout the year, are its prominent characteristics. The Gulf Stream, here flowing close to the coast, brings us the warmth of equatorial seas and the perpetual verdure and bloom of the tropics.

The changes of the seasons, as recognized farther north, are here scarcely perceptible. Even in mid-winter one sees around him only verdure and flowers. Most of the trees are in full leaf; the grass is green and fresh; the fragrant yellow jasmine hangs its wreaths of golden bloom overhead; the houstonia and the violet nestle everywhere underfoot; and a thousand birds warble in the myrtle thickets or among the shining leaves of the live oak and the magnolia.

In fact, of winter, properly speaking, there is none south of Jacksonville. What is called by that name closely resembles that brief season of autumnal relenting known at the North as Indian summer, except that the skies are clearer and bluer. The atmosphere is dry and elastic; very little rain falls; and cloudless days are often continuous for weeks.

The average temperature of January last, on the banks of the St. John's River a few miles south of Jacksonville, was about 70°. February was a little cooler, with some frost and one or two chilly northeast storms. We had also some rough winds from the northwest, which made an overcoat comfortable during a portion of the day. Such weather, however, was the exception, and fine balmy days the rule. Wild flowers could be gathered at any time in the "pine openings," and the songsters of the grove did not forsake us. I have forgotten the average temperature of this month, but think it was about 62°.

One might suppose that where there is no winter, there can properly be no spring; but even in Florida this season brings with it softer airs, and breathes new life into the half-sleep-

ing vegetation of field and forest. The deciduous trees—the hickory, the maple, the sweet gum, the cypress, and the black jack—put on their new robes of fresh verdure, contrasting finely with the darker green of the pine, the live oak, the magnolia, and the orange; and flowers of every hue make gay both open field and shady grove.

The true summer is as brief in Florida as farther north. The continuation of the highest temperature, which is less perceptible here than in the Carolinas or Georgia, is only during one fourth of the year. The remaining three fourths, namely, from September to June, is unlike anything known in northern climates, but resembles spring more than autumn or winter, and the weather during nearly the whole time is incomparably delightful, the only exception being the rough and chilly winds which occasionally blow from the northwest. These are, I presume, the "northers" of Texas greatly modified and softened by their overland journey southeastward.

The comparative coolness of the summer in Florida, contrary to the commonly received notion, is as marked a characteristic as the mildness of the winter. The thermometer ranges higher in New York or Boston than at St. Augustine or Tampa. The mean average temperature of last June—and June is the hottest month of the year in the South—was 80°; and at New Smyrna, on the Atlantic coast, near the twenty-ninth parallel of latitude, the average temperature of the summer is 82°, and of the whole year 72°. *The nights are invariably cool in all parts of the State.*

The comparative coolness of the summer in Florida, especially on the peninsula, is owing, in a great measure, to its position between two seas. From the east it is fanned by the cool and bracing breezes of the Atlantic, and from the west by the balmy but refreshing airs of the Gulf of Mexico, both of which are distinctly felt at the center of the State, across which they seem to chase each other back and forth.

The rainy season commences about the 1st of July, and continues till the middle of September, during which time it rains more or less nearly every day, but seldom all day. The showers generally commence about one o'clock P.M., and are entirely over before six o'clock. They are accompanied by heavy thunder and the most vivid lightning. The nights and mornings during this season are clear and cool. The remainder of the year, though called the dry season, is not without a moderate quantity of rain. In the latitude of Jacksonville, and farther north, the rainy season is irregular, the tropical influences which cause it being less strongly felt there than farther south.

In reference to the healthfulness of Florida in summer, differences of opinion exist. Careful observation and inquiry lead me to the conclusion, however, that no State in the Union is more healthful. There are unhealthy localities, as in every other extensive region, and, as in all new countries, the opening of the forest and the breaking up of the soil en-

gender more or less malaria and give rise, in constitutions duly prepared, by a bad diet and unhealthful habits generally, for the germination of the seeds of disease, to bilious and remittent fevers; but these, for reasons which I can not now go out of my way to explain, are of the mildest type, and rarely prove fatal. With the exception of these, scarcely any disease exists. The healthfulness of the climate in winter is proverbial.

Some people have an idea that Florida is one great swamp, with here and there a patch of dry land arising, island-like, out of it. Others, on the contrary, picture it as a region of sand-hills and "pine-barrens; while the fact is, it is one of the most beautiful and fertile of all the Southern States, and has less swamp land than almost any other, either North or South.

The lands of Florida are mainly of three kinds—Pine lands, Hammock lands, and Swamp lands. The pine lands are variable in quality, some tracts being very rich and others very poor; but, in the main, they are light, sandy, and only moderately fertile. The forest growth (long leaved pine) is very sparse, and the ground is covered with a luxuriant crop of grass, affording excellent and never-failing pasturage; for the grass of Florida is never killed by winter frosts or seared by summer drouth.

Hammock lands are of two kinds, high and low. High hammocks are formed of fine vegetable mold mixed with a sandy loam and resting on a subsoil of clay, marl, or limestone. They are covered with a heavy growth of live oak, hickory, water oak, sweet gum, magnolia, and other hard-wood trees, and are for general purposes the most desirable lands in Florida, producing all the crops of the country in great abundance and with comparatively little labor. The low hammocks are lower and moister, have a soil of greater tenacity than the high hammocks, and are still more fertile; but some of them require draining, and all are more difficult to clear and break up, which renders them less desirable for a person of moderate capital. Their forest growth is similar to that of the high hammocks, but heavier.

The hammock lands are generally found in small tracts interspersed among the pine lands, and both must generally be bought together. In some parts of the State, however, as for instance in Alachua, Marion, and Hernando counties, they exist in larger bodies.

The swamp lands are intrinsically the most valuable of all, but as they require a heavy outlay of capital in clearing and draining, they are in little demand. Their fertility is unsurpassed if not unequaled, and once thoroughly prepared they produce immense crops. Four hogsheds of sugar to the acre, in one instance at least, has been produced on this kind of land (near New Smyrna), while the best lands in Louisiana produce scarcely more than one.

No other State in the Union is susceptible of so great a variety of vegetable productions as Florida. Corn, rye, oats, Irish potatoes, beans, peas, cabbages, turnips—in short, all the common crops of the North—grow here to per-

fection side by side with the sugar-cane, rice, Sea Island cotton, arrow root, cassava, sweet potatoes, indigo, Sisal hemp, benne, and many other tropical and semi-tropical plants. Of fruits, we have the peach, the plum, the persimmon, the pawpaw, the fig, the olive, the guava, the pomegranate, the orange, the lemon, the lime, the banana, and, in the southern portion of the State, the pine-apple and cocoa-nut.

Florida now offers a fine field for Northern enterprise. Men with small means, if they possess pluck, energy, and perseverance, can perhaps do better here than anywhere else. Land is cheap, the climate favorable, there are no long winters to provide for, and the necessities of life are easily produced. On the St. John's River, and especially in the neighborhood of Jacksonville, market gardening is becoming a leading pursuit, the produce being shipped to New York. Fruit growing—peaches, grapes, and oranges—will pay largely, particularly the last named.

Sugar-cane, to which the climate is much better adapted than that of Louisiana, is on the whole the safest if not the most profitable crop, where suitable land can be obtained. It matures here as perfectly as in Cuba, and a plantation requires renewing only once in ten or twelve years, whereas in Louisiana the plant is necessarily treated as an annual. Two hogsheds of sugar to the acre is not an uncommon yield, and this may be greatly increased by manuring and thorough cultivation.

But there are drawbacks here as well as elsewhere, among which are: the lack of the social and educational advantages existing in the older States; the scarcity and untrustworthy character of labor; the high prices of nearly everything except land and lumber, which the new settler is necessitated to buy; and the large admixture of the negro element in the population, and the consequent insecurity of all movable property. This is the most serious obstacle the settler encounters, and is sometimes truly discouraging. Nothing is safe from the thieving propensities of the Freedmen, unless it can be locked up or carefully watched and guarded. I make this statement with regret, but my obligations to those who may look to this article for a trustworthy statement of the disadvantages as well as the advantages of Florida seems to require it. The re-establishment of civil government, and the enforcement of the laws which should follow, will, it is hoped, partially remedy this evil, as well as many others.

The other drawbacks I have mentioned are temporary in their character, and will of course gradually disappear.

Persons going to Florida to look for a farm with the purpose of settling on it at once, can not go too soon after the 1st of October. Preparations for the next season's crops should be commenced in the fall. Families should take a good supply of clothing suitable for the climate, and the necessary furniture and farming implements. Such provisions as will not spoil by keeping may also profitably be purchased at the North. These last remarks may

not apply, however, to persons going from the West by a long overland route, where the expense of transportation would be too great.

Those having merely pleasure in view can of course take their own time, but they will find the autumn a delightful season for excursions, hunting, fishing, etc. Game and fish, and especially the latter, are abundant and excellent everywhere.

Invalids should not delay till too late in the season if they desire to get the full benefit of the climate. Go early in the fall—that is, soon after the 1st of October, if you can. The transition will not then be so great from the coolness of the North to the warmth of the South.

Formerly St. Augustine was almost the only resort of invalids in Florida. The "Ancient City" is still much frequented, but the St. John's country from Jacksonville southward is quite as favorable to health in the winter, and has far greater attractions. It is now getting its full share of visitors. It is decidedly the region for the sportsman, whom a fine steamer will take up the magnificent St. John's River into the depths of the tropical wilderness, where game and fish are so plentiful that the most truthful tales of hunting and fishing there have the air of fables.

Jacksonville, on the St. John's, is the common point of departure for all parts of the State. The fare from New York by steamer, at present, is \$30; by rail a little more, and by sailing vessel much less. The emigrant will do well to look about in the neighborhood of Jacksonville, and consider carefully the advantages and disadvantages of that locality before deciding upon the place for a home. Unimproved land can be had within five miles of town at from \$1 25 to \$20 per acre. The latter price is for land bordering on the river. One mile from the river, equally good land can be bought for \$5 per acre, and perhaps for less. Improved places, with good dwellings, inclosed fields, orange groves, etc., are held at comparatively high figures. Some beautiful places of this sort may be found on the St. John's River.

Jacksonville itself is a beautiful little city of some 6,000 inhabitants, literally embowered in orange groves and evergreen oaks; and, strange to say—it being a Southern city, and the present being "after-the-war"-times—is thriving in business and growing rapidly in extent and population. Northern capital, energy, and enterprise tell the story. A majority of the people, both in the town and in the neighboring country, are from the North and West. We have steamers twice or three times a week between this place and Savannah and Charleston, with the promise of direct steam communication with New York at an early day. With its outlook upon one of the finest rivers in the world—here from one to two miles wide—its delicious climate, and its unsurpassed commercial advantages, the "City of Oaks" is destined to become an important and populous place. Its orange groves, when

loaded with fruit, present a magnificent appearance, some of the trees being perfect pyramids of green and gold.

The hotels of Jacksonville are plain, unpretending houses; but the traveler may count upon a plenty to eat, and a disposition on the part of their proprietors to do the best they can to promote his comfort.

I intended to say something of orange culture—its pleasures and profits—but I have already overrun the space I had allotted to myself and must close, hoping that I have at least imparted some useful information in regard to an interesting and little known region of country.

D. H. JACQUES.

GLEN EVERGREEN (Jacksonville P. O.), FLA.

HOW TO TRAVEL,

BY RAIL, RIVER, OR SEA.

"EXPERIENCE is a good teacher." One who would learn the most of a country through which he is to pass, should *first* read the best guide-books, study the maps, and thus obtain a general outline. Then, when on the ground, personal observation completes the work. A stupid boor may go around the world, by land and sea, and really know very little more than when he started. Why? Because he is ignorant. But if educated, he sees its geology, botany, natural history, and ethnology, and he can *describe* what he sees. A mere vacant looker takes in nothing but vapor and space. Suppose, for example, a stranger wishes to "see the sights" on our noble Hudson, *alias* the North River. If he reads the guide and examines the map he is prepared to appreciate its *historical* interests, which lie thick along its shores, from Staten Island to Troy. Without these aids he will, of course, see stretched out before him some of the most beautiful and sublime scenery in North America. But he may have, at the same time, authentic descriptions of all the celebrated places—such as Forts Washington and Lee, the Palisades, Spuyten Duyvel, Yonkers, Hastings, Tarrytown, Irvington, Dobbs' Ferry, Piermont, Nyack, Sing Sing, Peekskill, West Point, St. Anthony's Nose, Newburg, Poughkeepsie, Catskill, Hudson, Greenbush, and Albany—places familiar enough to Americans, but only heard of by foreigners. Let the same course be pursued in traveling by rail, and one may form a tolerable judgment of the country through which he passes.

LUGGAGE.—We prefer this term to that of baggage. Most persons carry too much. It is a great care and a greater incumbrance. Here experience comes in to warn the weak ones. Plan your trip. Fix on the time it will take. Pack only *necessary* garments. Look to comfort rather than to show. Travel by rail or river by day, when you *can*—by night, when you *must*.

EATING, DRINKING, STUFFING.—Like children without judgment, for the want of something to do, many who travel eat early, much, often, and stuff all the time. The stomach,

unused to this abuse, gives up in despair, and constipation, dyspepsia, headache, nervousness, and sleeplessness are the penalties for such transgressions. Reader, did you ever ride in a smoking car? Did you ever notice the puddles of tobacco spittle all along between the seats? These are evidences of our taste, culture, refinement, and high civilization! Ladies are said—now and then one—to enjoy the rich perfumes of the fragrant weed, and thus encourage their lovers or husbands to do their best at smoking and spitting. To us, the thing is an unmitigated nuisance.

POLITENESS.—A single ticket is construed, by selfish persons, to entitle the holder to a double seat, and on taking possession he proceeds to store his freight, consisting of cane, umbrella, carpet bag, over-coat, shawls, straps, and other rigging. He then seats himself in the middle, and is soon wrapped in the arms of Morpheus, or is absorbed in the last sensation novel. Delicate ladies may pass and repass in search of a seat, but our fellow-traveler, or traveling *fellow*, neither sees nor hears them, till the gruff conductor roars out, "Make room there for this lady!" Then, with a groan and a grunt, the "*gentleman*" puts his things under his seat and grudgingly moves along.

THE WINDOWS.—Dust, soot, sparks, bad air, wind, or rain are inseparable from railway travel. And no two are agreed as to how we may best avoid the nuisances. One must have the windows open or he suffocates; another must have them shut, or the cinders will put out his eyes; one is gouty, and one is phthisicky; one is corpulent and hot, another is thin and cold. These are some of the *infe-licitities* which will, we may hope, be got rid of as we progress in railway improvements. Already splendid and spacious cars are being constructed for the great Pacific Railway, with state-rooms, saloons, kitchens, sleeping berths, and all the necessities to make a passage as pleasant and as comfortable as a sea voyage in a first-class steamer. Those roads and lines which provide the best accommodations—like the best hotels—will get the most patronage, and the most fame and gratitude.

AT SEA.—Here is a place for the largest display of agreeableness. If one is benevolently disposed, and sociable withal, he will become popular with all on board. Music, recitations, speeches, lectures, gymnastic exercises, and indeed anything entertaining, may be indulged in, by passengers and crew, when on the bounding sea. One soon tires of state-room solitude, and remains in the cabin only during meal times and stormy weather. He is out on deck watching the waves, the clouds, the ships when passing, the seagulls when on the coast, porpoises and whales, icebergs, and other objects. If sensible, the passenger will make the acquaintance of old seamen, and learn from them about life at sea. He must keep his conceit and vanity to himself. Modesty and real worth will be seen and appre-

ciated. Keep out of the way of the waiters and sailors. Observe all the rules of the ship, and make no more trouble than is absolutely necessary. If possessed of the right spirit, good motives, good habits, with a hopeful, courageous, trusting nature, one may travel to the ends of the earth without accident, sickness, or loss. But if one *wishes* to be a nuisance—and it comes natural to some—he may easily make himself such, and meet with mishaps and losses on all sides. He who would make a successful voyage or tour must "conform" and bear in mind that tritest of sayings, "When among Romans, do as Romans do."

BASE-BALL STAINED.

BASE-BALL has fallen. Yes, the "national game" has become degraded. It is a pity that our young men can not have a game of an elevated, manly, heroic character! It is a pity that just now, when the good results of base-ball play are beginning to show themselves in the vigorous health and muscular frames of many of its promoters, that it should be made a subject for gambling. At certain match games which were played recently, as we are informed by the daily papers, "large amounts of money changed hands," among the spectators. A noted New York club is said to have "sold" the result of a match by "permitting" their adversaries to outscore them, and that in consequence a great many sanguine betters on the superiority of the New York club lost heavily, having offered large odds. Such nefarious dealings can not but excite the indignation of the honest and the grief of the good. At the race-course, in the "sample room," in the bagnio, where there are a thousand low and groveling incentives to immorality, we expect to find betting, gaming, or swindling; but on the base-ball ground, where muscle meets muscle in friendly controversy, and all the hard knocks are given or intended to be given the senseless, swooping ball, and where the noblest of our youth may engage for healthful pastime—for a pastime it should be always made, and not *severe* labor, as in too many instances—we expect to find only good-humored emulation among the players, and friendly sympathy among the lookers-on, with nothing of a "fancy" character. If a game like base-ball can not be maintained without impure, coarse, and vicious adjuncts, better that it be at once dropped from the list of social pastimes, lest too many of our youth, from being lovers of healthful muscular activity, become involved in the meshes of vice and moral degradation. "Barked" shins and broken fingers may be easily mended, but a disfigured reputation may never be entirely repaired. Once more, abandon the bat, boys, if you can not keep it pure.

THE surest road to health, say what they will, Is never to suppose we shall be ill; Most of those evils we poor mortals know, From doctors and imagination flow.

THE TURKOMAN TRIBES.

"God created Turkestan and its inhabitants in his wrath," said a native of Central Asia to Arminius Vambéry, the celebrated Hungarian Orientalist; "for as long as the bitter, saline taste of their springs exist, so long will the heart of the Turkoman be full of anger and malice."

This well describes the character of those nomadic tribes inhabiting the portion of Central Asia extending southward from the Caspian Sea to Afghanistan, and from the borders of Persia to Bokhara in the east, whose chief occupation is to descend suddenly, like the sand-storm of their own deserts, upon the cultivated lands of their neighbors, or to attack and plunder the richly-laden caravans as they move across their territory. Attention has lately been directed toward these peculiar people by the researches of Vambéry among them while disguised as a pilgrim dervish, and what he furnishes is, in fact, the only reliable modern source of information that we have upon the subject. Nearly every traveler who had previously ventured into their territory had been mercilessly slaughtered, and Vambéry adopted the only method that could possibly have proved successful.

The Turkoman has played a very important part in Central Asiatic history, and, indeed, in European civilization. He has furnished the foundation upon which the present Turkish empire is built. He forms the Turko-Tartaric branch of the great Turanian race, who, ever since their advent in history, have been occupied in bloody expeditions and terrible conquests. His nature has not changed for a thousand years; he is still the tented barbarian, content to live upon the spoils wrested from his more industrious neighbors; still, in a great measure, "a wild man, his hand is against every man, and consequently every man's hand is against him." His pastime has always been war; his fierce animal nature has never been curbed; he may have been conquered, but civilization has made no impression upon him. He is still content to look with his piercing eyes and immense perceptive across the boundless sand waste, to watch patiently for the wealth-laden caravan, and to indulge his nature in excesses of which he alone is capable. He is still a rude child of nature, gratified with appeasing his own

passions and subject to all his superstitions. He gazes with excited awe at the fata morgana, as it suddenly hangs out its heavenly splendors in the air. In it he sees similitudes of cities, towers, castles, caravans, and horsemen engaged in deadly combat, and gigantic shapes, which disappear and again come forth in other parts of the heavens. This alone strikes him with terror, for he thinks these are the ghosts of murdered victims and ravaged cities still hanging in the aerial regions.

A TURKOMAN CHIEF.

HIS CHARACTER—THE ROBBER.

"Robbers" would indeed be the most expressive title which we could apply to the Turkoman. "The life of a Turkoman," says Pritchard, "is passed in the most reckless plunder;" and how could we better describe his race than by presenting the picture of him as he is found—simply as a marauder—making continual descents upon his Persian or Afghanistan neighbors, or robbing the pas-

toral tribes that eke out a scanty subsistence by keeping herds and flocks upon the green oases of the desert. He recognizes the Persian as a lawful slave when he can get him, and it is against this people that his energy is mostly directed; for he knows that he can sell each captive he gets for from twenty to twenty-five pounds sterling. The raids of the Turkomen upon the tents of their unsuspecting enemies are generally made at midnight. They make one, two, or even three assaults,

and seldom are repulsed. Indeed, they appear to be as courageous as they are cruel, and it not infrequently happens that a single Turkoman secures as many as four or five prisoners. The terrified Persian will, sometimes, seeing the hopelessness of further resistance, throw himself down upon the ground before his captor and ask for the chains with which to be bound. In 1861 five thousand Turkomans are said to have nearly annihilated a Persian army of twenty-two thousand strong.

When the Turkoman has once secured his prisoner, he has no qualms of conscience in regard to his disposal. If he can not take him along, he drives a stake into the sand and fastens him there to die. But this is too great a loss. If he can not find room for him on the saddle, he drives him before him under the burning sun.

Vambéry relates an instance of the cruelty exercised by these people toward their slaves. In the court-yard of the Khan of Khiva, the capital of the State, he saw three hundred Persian prisoners of war, clothed in rags, and half dead through fear and hunger. They were placed in two divisions; in one, those who had not yet reached forty years of age, and who could be sold, or presented as slaves, and in the other, those who, by reason of their rank as leaders, or of age, had been sentenced to be hanged. The former were fastened together with great iron rings around their necks, in lots of from ten to fifteen, and

were driven off northward to be sold, while the gray-bearded old warriors waited for the executioner. "I saw close beside me," Vambéry says, "eight old men deposited in a row, with their backs upon the sand; their limbs were bound. Presently the executioner came along, and placing his knee upon the breast of each in turn, gouged out both the eyes of his victims, and wiped his blood-stained knife upon the beards of the dying men. The scene

was appalling, as the poor victims, now released from their bonds, groped moaningly around with their hands, attempting vainly to stand, and in their efforts dashing against each other with their eyeless heads!" But these atrocities do not always go unpunished. The reprisals of the Persians are equally as sudden, and hundreds of Turkoman prisoners are yearly brought into Teheran, the capital.

The chief of these Turkoman robbing expeditions is always selected for his cunning and skill; and he is obeyed only so long as he is successful. These nomads themselves will acknowledge no head. "We are a people without a head," they say; "we are all equal; with us is every man a king;" and, accordingly, they have hardly a shadow of government. When not engaged in these pillaging excursions, the Turkoman gives himself up to a merely sensuous life, smoking, and relating his wild and reckless adventures to his friends.

It is during this time, too, that he attends to his devotions, although profit and tradition have far more influence upon him than the Koran. The Persians, too, are followers of Mohammed, but of a different sect, and their mutual hate is perfect. The Turkoman considers the Persian a "heretic," in fact, and therefore feels justified in making him a slave. But Vambéry thought that he would treat his Sunnite neighbors in just the same way. The Afghanistsans are Sunnites, yet he plunders them as often as is convenient. Vambéry once asked a robber, celebrated for his devoutness, how he could sell his religious brother, the Sunnite, as a slave. Has not the "Prophet" ordered that every Mussulman is free? The man answered with indifference: "The Koran, the Book of God, is certainly more noble than man; yet men bought and sold it for pieces of gold. Yea, what wilt thou more? Joseph the son of Jacob was a prophet, and he was sold!" Such is his character in brief!

TURKOMAN WOMEN.

Let us turn to the more attractive picture of the young Turkoman woman, as she appears in her native costume. Up to the age of sixteen she is not allowed to work. The period of youth is her holiday; her troubles and privations begin only with marriage. Now, she has almost perfect freedom, and can go from tent to tent, and even to the neighboring tribes, without the least fear of molestation. Her person is

sacred; for the transgression of either sex is followed by immediate punishment. Her dress consists of a red silk skirt, tied around her waist with a silken sash. She wears always a profusion of ornaments—generally of massive silver—bracelets, rings for the neck, ear, and nose, and amulets, which hang down like the badge of a European order. Her skin is exceedingly fair, almost white; her hair is short and thick, and therefore she interweaves with it a long string of goat's hair, which she

TURKOMAN GIRL IN HOLIDAY COSTUME.

profusely ornaments with little silver or glass beads. These, when she walks, make a very pleasant jingle, which always accompanies her. Indeed, a love of this "jingle" appears to be a national failing. Vambéry quaintly remarks that the man, too, is fond of pretty "clatter;" he will either deck his wife or his horse with these little balls, or otherwise rob a Persian slave and decorate him with chains; but "a clatter he must have."

COURTSHIP AND MARRIAGE.

Courtship and marriage take place at about the age just mentioned. Previous to that period the young girl does not veil her face, and the suitor may gaze upon her just as long as he chooses. All outside matters relating to marriage are "fixed" by her relations or female friends, who arrange the dowry, while the *mollah* seals the contract and appoints a lucky day for the wedding. On that day the tent is made to present an extraordinary clean

appearance, and is decked with carpets, silks, and feathers. The bridegroom usually makes his appearance about mid-day; but if they are both poor he does not come until evening, and no guests are then invited. The mother, sisters, relations, and friends of the bride provide themselves with as many articles of silver as possible; these they place upon three or four camels, with silks and carpets, and, mounting, proceed to the tent of the bride. The men, in the mean time, form two groups; one follows behind the female party, while the other, mounted and armed as if ready for a robbing expedition, precede, riding in full career up to the door of the bride's tent, where they fire off their muskets. Then follow speeches and counter-speeches; the female relatives are determined not to give her up, while the men, on the other hand, are as determined to possess her. But finally she is willingly captured; and the men who have come on foot stand outside the door, holding the corners of a large carpet. The bride is at last brought out, laid gently upon the carpet, and the men then run with their burden in all haste to the camels. Their flight is protected by the mounted horsemen against the female relatives of the bride, who run after the carpet-carriers and assault them with clods of earth. It is understood, among themselves, that as soon as the flying party reach the camels the pursuit shall cease. Then the bride makes her appearance; a woman attendant immediately covers her face with a veil, and the procession takes its departure for the marriage-tent. If on the road she pass by a dwelling-tent, or meet people, she removes the veil, that they may see her face. Before the marriage-tent the collected crowd cheer and hurrah as loudly as they can, while the children are treated to pastry or other delicacies. Through this assembly the bride is brought into the tent, where she must sit,

away in the background, with her back to the door, receiving visitors and the greetings that flow in upon her, but only from the women. The men are compelled to stay outside until the feast begins.

In the tent the bride remains for fully two weeks, when she is taken to the tent of the bridegroom's parents, where she remains a year, or even eighteen months, receiving only now and then a visit from her future lord. During this time the parents are responsible in every way for her good conduct. At the expiration of the prescribed period she is transferred, on a richly-ornamented camel, to her husband's tent, where she remains. With the poor there is not so much to do about the matter.

Although polygamy is not very prevalent with the Turkoman, still he can marry more than one wife if he chooses, but properly he should provide a separate tent for each one. However, two wives often do live in the same tent. He also takes the beautiful black-haired Persian slaves that he captures to his home. With the married women the veil is universally worn, and should a stranger pay a visit to the family-tent, he is required always to give notice of his approach at the door, in order that the women may have time to draw their veils down over their faces. She is then expected to wait upon him and offer him food, and speak to him only in a subdued tone. Under this treatment her youthful beauty soon departs. Mr. Fraser, an English writer, says, that in old age "most of them are extremely ugly, haggard, and withered; the elder ones are particularly frightful." He, too, admits their beauty in youth.

THEIR RACIAL CHARACTERISTICS.

It is somewhat difficult to determine accurately the characteristic features of the Turkomans considered as a race. The different tribes are undoubtedly of the same origin, but the individual representatives present strong deviations, both in the form of the skull and the features. M. Blocqueville, who was for fourteen months a prisoner among them, describes them as of medium size, being well proportioned, but of no particularly strong muscular development. The skin is white but unhealthy in its appearance; the face is round; the cheek-bones are prominent, and the skull is very broad and thick. The eyes are "almond-shaped," quick and intelligent; the nose is small and slightly turning upward; the hair is of a bronze hue. The pure Tartar physiognomy is only found where the people do not undertake robbing expeditions, and therefore have not introduced the black-haired slaves into their tents. Sir William Burns, an English traveler, was struck with their resemblance to the Tartar features, adding that "the skull of the Turkoman is like to that of a Chinese."

Considered from a phrenological stand-point, he is simply a human animal, energetic, impulsive, and variable; lymphatic in temperament, nevertheless passionate and excitable; and when he is aroused, it is for destruction.

The width of the brain in the basilar region is enormous, and when we consider that Combativeness and Destructiveness constitute this breadth, we are not surprised at his ferocity. He obeys merely the instincts of the animal man. His flat face and snub nose indicate his low and undeveloped intellect, while the flatness of the coronal region declares his want of both the religious and the higher moral sentiments. They have excelled in their courage and cruelty, but never in literature and science. They have conquered, but have always been absorbed by the conquered in the process. But, fortunately, their rude rule is now apparently at an end. The progress of the Russians to the shores of the Caspian Sea has already checked them northward,—the British in India bar their way south. Still, they have the Persians for their eastern neighbors, but their importance as a people is gone. Their occupation as marauders, which they have pursued uninterruptedly since their descent from among the Mongolian tribes of northern China, will probably soon be wrested from them. The civilization of Europe is already drawing its lines more and more closely around them, and they will either have to succumb to its influences or be exterminated in the process of resistance.

[The Turkomans number, it is computed, a million souls. The number of their tents is estimated at two hundred thousand. How many slaves this estimate includes is unknown, but in Khiva, their capital, alone these number forty thousand.]

GONE BEFORE.

THERE'S a beautiful face in the silent air,
Which follows me ever and near,
With smiling eyes and amber hair,
With voiceless lips, yet with breath of prayer
That I feel, but can not hear.

The dimpled hand, and ringlet of gold,
Lie low in a marble sleep;
I stretch my arms for the clasp of old,
But the empty air is strangely cold,
And my vigil alone I keep.

There's a sinless brow with a radiant crown
And a cross laid down in the dust;
There's a smile where never a shade comes now,
And tears no more from those dear eyes flow,
So sweet in their innocent trust.

Ah, well! and summer is coming again,
Singing her same old song;
But, oh! it sounds like a sob of pain,
As its floats in the sunshine and the rain,
O'er hearts of the world's great throng.

There's a beautiful region above the skies,
And I long to reach its shore,
For I know I shall find my treasure there,
The laughing eyes and amber air
Of the loved one gone before.

S. A. K.

FRIENDLY ADVICE.—There is as much difference between the counsel that a friend giveth, and that a man giveth himself, as there is between the counsel of a friend and of a flatterer; for there is no such flatterer as is a man's self, and there is no such remedy against flattery of a man's self, as the liberty of a friend.—Bacon.

Our Social Relations.

Domestic happiness, thou only bites
Of paradise that has survived the fall!
Thou art the nurse of virtue. In thine arms
She smiles, appearing as in truth she is,
Heav'n-born, and destined to the skies again.—Camp.

WOMAN, AND THE WOMAN'S CLUB.

BY MRS. GEORGE WASHINGTON WYLLIS.

THE Woman's Club forms just at present a rather prominent topic of discussion. Everybody has something to say for or against it—most generally the latter; and we don't pretend to be any more taciturn than our neighbors.

"A club is no place for women?" Well, then, what sort of a place is it for men? If it is such a very dreadful institution, what do the husbands and fathers and brothers of these presumptuous females mean by their adhesion to "New York," "Century," and "Athenaeum" clubs?

Women have ceased to be treated like children—to have knives and scissors taken away from them, lest they should cut their precious fingers—to have their pills administered in sugar-coats, and their bread-and-milk weakened with hot water. If you make a sweeping assertion now, you must give some good, fair, square reason for it. And we have yet to hear the sufficient reason for "putting down" this Woman's Club business.

"Women ought to stay at home." Yes, if they want to become miserable dyspeptic creatures, dwarfed alike in mind and body, getting all their ideas at second-hand, and taking their exercise up and down stairs at the heels of a platoon of babies! Whether is worse for them to promenade Broadway, staring senselessly at the fashions, or to rally round a sort of social center, where they can interchange ideas with others of their own sex, and escape, temporarily at least, from the intolerable monotony of daily household care?

"Women ought to be satisfied with the sphere of home." So they ought. "Man ought to be satisfied with a good dinner;" but, for pity's sake, is he supposed never to want anything more? If a woman can learn to be a better housekeeper, a truer companion, a more intelligent mother, in the atmosphere of a Woman's Club, ought it not to be encouraged?

There is neither sense nor justice in the tirades of the day about "womanly women." A woman, according to our theory, is most womanly when she is most perfectly and completely developed! If you want kitchen girls, say so; if you want housekeepers, nurses, seamstresses, say so; but don't weave such a network of wordy meshes about the simple fact that you want women to wait on you, to minister to your whims, and to be generally subservient to your majesty of manhood! If you are actually so selfish, you have no business to be ashamed of it!

And furthermore, why don't you tell us frankly what you mean by your allusions to "Amazons," "blue-stockings," and "strong-

mindful females?" Does the Woman's Club necessarily consist of these elements, and these alone? You see you are talking about what you don't know anything!

"Women don't discuss anything but dress!" As long as dress forms a part of their daily life and duty, it is perfectly proper that it should be discussed. Perpetual motion, the authorship of "Junius," and the election franchise are doubtless very interesting topics, but who expects people to talk about them forever?

If, under the existing *régime*, men are driven to hotel reading-rooms, to the columns of the newspaper, and to lectures, for intellectual companionship, as they say they are, it is high time that Women's Clubs were organized to lay the foundation for a more intelligent womanhood! Why should there not be a place where women can meet to educate their brains as well as their fingers—a place where all the topics of the day can be canvassed—where new books are talked of, as well as new fashions—where the troublesome domestic problems which make housekeeping yet an unresolved science can be thoroughly discussed and united action taken? Croquet and archery are very well in their place, as far as they go, but life is not all play, and something must be done in the dull rainy days that come to us all. There are very few so self-reliant, so all-accomplished, that they can afford to do without the suggestions and aids of a Woman's Club.

It is the novelty of the thing, after all, that makes it obnoxious to men. Once let it be well established—let them see that it works good instead of evil to the women that sit under their hearths and brighten their homes, and they will be as delighted with it as children with a new toy!

What are our female academies, seminaries, and institutes but Women's Clubs? Education does not end when a girl graduates at eighteen; it rather commences. For our part, we bid the new-born institution a hearty and cordial welcome. It has got to weather through the various weaknesses and trials to which all new-born institutions are liable—it must cut its teeth one by one with great tribulation—it must burn its fingers and cut its hands, and have "hairsbreadth 'scapes" just so often, but we hope to live to see it a thriving fact yet!

So, scold away, Messrs. Editors and mankind in general; the Woman's Club will prove itself above all such petty hindrances!

AN APPEAL.

BY FRANCES L. KEELER.

FELLOW-MORTALS! do not linger
Weeping o'er what might have been;
Progress points with jeweled finger
To the battles yet to win.
Yes, to-day Life's conflict rages,
And we need not turn the leaves
Backward through the book of Ages
For the lesson that it gives.
There are wrongs that must be righted,
Even in this land of ours;
There are other lands benighted,
Yet to feel Truth's sacred showers.
Let us toil to heal the nations,
Waiting for the dawning, when
We shall read in deeds and actions—
"Peace on earth, good-will to men."

AN AMERICAN DRESS.

BY JENNY JUNE.

We are not among the advocates of a uniform style of dress for our American women, uniformity being inconsistent with diversity of tastes, ideas, habits, and feelings, and American women are about the last persons in the world to consent to adopt a costume which would give no latitude to taste or fancy.

Gratification of tastes, however, and variety in style, color, and material, are not at all incompatible with the adoption by the majority of the American women of the simple "walking suit," which for the past year has steadily gained ground with all classes of American society. No such desideratum has ever before been achieved in fashion as this simple, convenient, out-door dress proves to be.

In a climate variable; in neighborhoods somewhat unsettled; among women, simple, independent, yet refined and tasteful in their habits, a *ready*, convenient, out-door dress, approximating as closely as possible to that of a man, without being at all masculine, was just what was needed; and that such a boon should have been conferred by fashion, that has had to answer for so many follies and vagaries, seems almost too good to be true. As we have said before, it affords plenty of scope for taste and fancy, but it provides, at the same time, a simple, effective, inexpensive costume, which can be adapted to all the changes of weather and climate with the least possible trouble; and if sensible American women everywhere do not eagerly embrace the opportunity, adopt the "walking dress," and make it a permanent institution, they deserve to be subjected to all the vagaries of unreasonable and capricious French milliners for the rest of their natural lives.

When the walking dress was first introduced it was very short, and properly called the "short" walking dress. To be becoming, it was supposed necessary to make it short and fanciful, pretty for young girls, but entirely unsuited to ladies more advanced and of matronly character.

There was an idea in it, however, and sensible women were not slow to perceive it. Why not cut the plain, gored skirt a few inches longer? Why not complete the suit by a useful, simple *sac*, without the lappets, double skirts, furbelows, and pendants?—and the thing was done.

Now, I am not condemning the ornamental walking dress. I consider a street dress that clears the ground, and that does not require a huge mass of skirts or whalebone to support it, something to be thankful for in itself, and am quite willing that individuals should exercise their own taste, judgment, or want of judgment, in getting it up; but fanciful designs and elaborate trimming require professional aid, besides creating a necessity for continual change and novelty; and what I want to impress most distinctly upon the minds of the intelligent American women who read the

PHRENOLOGICAL JOURNAL, and have other things to do than consulting fashion plates, that in the "walking suit" they have now just what they require,—a complete and convenient dress, which even in the simplest material looks lady-like, and can be rendered, by unanimous consent, superior to any caprice of fashion.

— The *sac* should be cut plain, and loose for the sake of convenience, and simplicity in making, and also because it affords the opportunity of putting in a loose lining of flannel to increase the warmth, or of wearing with it a loose flannel *sac* for the same purpose, which can be worn, or not, at pleasure. This is an incalculable advantage in our climate, which changes so suddenly from the heat of the tropics to the freezing temperature of an ice-bound latitude, and which varies so much in the different sections of the same territory.

A sensible out-door dress might endure for all time, or at least for one generation of time; sashes, frills, fringes, bows, cuttings in here, or roundings out there, must necessarily live only the butterfly's life, and die the butterfly's death.

WHAT THE AMERICAN WALKING DRESS SHOULD BE MADE OF.

One great advantage of the suit is, that it looks well in almost any plain material; but to be serviceable, it ought always to be made of a fabric that will stand exposure, that will either wash or that can be cleaned, and that does not shrink or change color from being "caught" in the rain. Pure mohair alpaca is one of the very best materials for the purpose, but it is not warm enough for winter in a cold climate. Cloth is excellent, however, and there was a ribbed material, speckled like the cloths for men's wear, introduced here last winter, under the name of "Exposition" cloth, which formed a most beautiful and durable winter fabric for suits.

Scotch tweed cloths, all-wool ribbed poplins, and empress cloths are all good for suits, and much cheaper in the long run than light mixtures of cotton and wool, that look shabby after the first month of wear, and scarcely pay for the time and thread used in making them up.

Women to whom utility and economy of time, labor, and money are objects, will find it beneficial to take an idea from the system employed in making clothing for men. Men can not sew, they can not be employed all the time in altering and changing their garments, and they are constantly engaged in active out-door labor. Clothing, therefore, so far as they are concerned, has been reduced to a science. Cloth in winter, linen in summer, are the staples, and serve their purpose exceedingly well.

Now, without reducing ourselves to that absolute standard of usefulness and simplicity, why could not the great body of American women take an idea from it, and endeavor to unite in their out-door dress the advantages

which heretofore men have almost exclusively enjoyed?

One of the difficulties to be met at the outset is the habit which the mass of women have of expending the maximum sum upon their one or two party or handsome dresses, and making anything, old or new, answer for every-day wear, in which, after all, they are seen all the time. I do not mean to be understood here as recommending silks, satins, or velvets for walking dresses, though I have no objections to persons using them who can afford it; but I do counsel those whose means are limited, to care less for the quality of a silk which they only wear once in a while, and more for the real excellence of the dresses they depend upon for active service.

Our national fault in dress, manufactures, and many other things, is a tendency to substitute an imitation for a *real* article, on the plea that it looks "just as well." It may look just as well for a day, or a week, or a month, but its innate meanness and falsity soon betray themselves. It does not last, it does not retain its beauty, and soon loses its use. It would be infinitely better to have paid a little more in the beginning, and had something whose genuine excellence would have made it a beauty and a joy forever.

DRESS AND CHANGE OF SEASON.

The main thing, of course, is to secure a material which for winter wear combines in as high a degree as possible lightness and warmth. There is, then, the possibility of lining the *sac* or pelisse with flannel, or of wearing a loose flannel *sac* under the one belonging to the suit. In addition to this, care should be exercised in regard to the under-clothing. Women do wear knitted merino vests in winter to a great extent; but instead of their cotton, or cotton-flannel drawers, they might advantageously wear the knitted merino drawers worn by men, which fit so much more closely and hold the warmth so much better than the loose, sometimes half open cotton article.

With a light, warm, all-wool flannel skirt, a "Boulevard" worn over the hoops, added to her substantial walking dress, the most delicate woman would find protection enough even in the coldest weather, and if more were needed for extra cold or storms, the tartan, or water-proof wrap, would abundantly afford it.

I mention the "Boulevard" skirt particularly in this connection, because its simple, gored shape, without plaits, its warmth and lightness, its durability and power of resistance, qualify it eminently for the position of the favorite American winter walking skirt. I have seen the whole process by which they are manufactured, the wool they are made of, the different operations (precisely like those of making felt hats) by which the loose fiber becomes the firm, compact, solid cloth, and I know they are as good as they profess to be.

Furs have grown very expensive of late years, but, excepting the muff, there is no necessity for furs in conjunction with a proper

winter dress, and even this could be made of the same material as the suit, and simply trimmed with fur—an economical idea which fashion sanctions.

WINTER WALKING OUTFIT.

A comfortable walking outfit, therefore, for winter wear, would consist of merino vest and drawers, added to the usual chemise, a flannel skirt, a small, covered hooped skirt, a gored "Boulevard" skirt, a dark walking suit, the *sac* or pelisse lined with flannel, and, if liked, bonnet and muff of the same material as the dress, trimmed with narrow bands of fur. The whole suit might, indeed, be trimmed in this way at an exceedingly moderate cost, and would form a complete walking costume, whose good taste and good sense would attract attention even upon Broadway, and commend it to the intelligence and judgment of women everywhere.

The secret of effect in dress lies in preserving the unities. Make the tone of your toilette uniform, especially out of doors, where color and contrast become mixed and confused, but rarely blend happily with their surroundings.

Suppose your walking suit to be of gray, dark green, blue, or brown cloth, choose narrow bordering of fur to match, or gray or black Astrachan, but not bordering of any high color or flimsy stuff, which would cheapen the appearance of your fabric—better have no trimming at all.

A complete winter dress of the kind indicated, underclothing and all, would, if made at home, cost less than fifty dollars.

PRESENT FASHIONS.

I have not pretended in this sketch to give the latest fashions, but simply endeavored to unite the prevailing fashions to use and economy.

A more fashionable garment, for instance, this fall than the *sac* will be the pelisse, cut in to the figure, buttoned in a diagonal line down the front and belted in at the waist. It is prettier and more stylish than the loose *sac*, but for that reason would not suit half so many ladies as a plainer design.

An outside garment, fitted to the figure, requires care and skill in making and an elegant person to properly display it. A simpler style was therefore preferred, which every lady who reads these lines can adapt to her own sense of the true, the beautiful, and the useful.

SILENT TEACHERS.

"WHAT! another flower, Tom? is not your window-sill full already?"

"They don't eat nor drink, bless 'em, and it does me and my wife good to look at 'em."

It was but a passing bit of conversation that I heard, and yet it set me thinking. The man with the flower-pot in his arm was a rough—no, I shall not say "rough"—he was a sturdy son of toil, and I was amused to hear his fervent blessing on his flowers. His acquaintance, who had expressed surprise at another flower in Tom's possession, had pulled a short

pipe out of his mouth when he spoke; and no doubt his love for tobacco cost him much more than Tom's love of flowers. Then as to the gain. The smoker would gain a dry, hot mouth, a foul breath, yellow teeth, sallow skin, dull eyes, drowsiness, and headache—that's what his pipe would do for him, even if he did not drink. But Tom with the flower would refresh his eyes with its bloom, and his smell with its sweetness, and he would adorn his window with its beauty, and gladden his wife and his children by bringing them such a pretty gift. What innocent delight would they all feel in looking at it! And more than all that, they would learn something from the flower. It would tell them of the wisdom and love of God; how he sent these beautiful flowers into the world to please the eye of man:

"To comfort man, to whisper hope
Whene'er his faith grows dim,
For who so careth for the flowers,
Will much more care for him."

I think flowers teach neatness and order. The wife and children like to have a clean room, so that the flower, in its purity and grace, may not shame them. And then, too, a poor man likes to feel that he has an ornament in his dwelling similar to that which a rich man chooses as the best embellishment of his drawing-room. The cottage and the mansion differ very much in structure and in furniture; not one article of furniture may at all resemble the other, but a pretty flower, carefully watered and tended, often blooms as well in a cottage as in a palace window.—*British Workman*.

ELIZA POTTER,

THE UNION NURSE IN SOUTHERN HOSPITALS.

THIS lady is evidently blessed with an excellent constitution and abundant vitality. She ought to live a hundred years, and doubtless would, if she lived in a prudent manner and escaped accidents. She has inherited a good deal of her father's nature—his will-power, courage, energy, and thoroughness, besides considerable ambition, a fair share of pride, a strong will, and a disposition to finish what she begins. She appreciates greatness and eminence; reverences whatever is good, high, and noble.

Hope is not a very strongly marked organ; she depends more on what she can do herself than what can be done for her; and if she makes a promise, generally puts in a condition, "If the weather be favorable," "if my health is good," "if nothing intervene to render it impossible," "I will do so and so if I can;" consequently she is regarded as a woman of her word, for if she fails to accomplish anything, she has always a proviso to help her out. She has a sympathy which

is easily turned to those who are in trouble, and it matters little whether they are of her own nation, or color, or creed, or way of thinking: it is enough for her to know that the child is in danger—she would rescue it first, and ask questions about it afterward.

She is an accurate reader of character; strangers seem luminous or transparent to her; her first judgments of nearly everything are her best, and she generally acts on them. Her percepts are large; her mind takes in all surrounding knowledge and remembers facts, places, faces, and experiences with remarkable clearness. Fortunately she has body enough to support her brain, so that there is a healthy vigor of mental action.

Language is sufficient to enable her to talk and write well. She would have become a good mathematician if properly trained in that direction; she would do well also in business; as a good manager, she is much above the average of women; can influence people; she can bring circumstances into form, so that they will conspire to produce desired results; she has the strong elements which understand conditions, as a machinist understands the wheel within a wheel of his work.

She appreciates property; would enjoy the pursuit of business by which money is made, and she would be able to manage large affairs well, because she has the power of swaying the minds of others, and magnetizing people, as it were. Her social nature is strong; she thinks everything of her friends, and never forgets them. Those qualities which constitute the fond and affectionate mother, the true friend and loving wife, are eminently hers. Being properly mated, she would love her husband better than anybody else; her next strongest love would be for a child; the next for her mother; and the rest of the human race come in in one grand class under the head of benevolence.

She is frank and truthful; some people do not tell lies, but they seldom speak the plain truth; there is a sort of reserve that leads them to hide the facts, but she inclines to utter the truth heartily and earnestly; she does not believe in crooked, disguised statements, but speaks what she thinks and feels, and takes the consequences. She is more cautious in conduct

PORTRAIT OF ELIZA POTTER.

than in speaking. More Secretiveness would be of advantage. Her force of character and perseverance render her earnest, and with her good judgment she is eminently successful in her sphere of activity.

BIOGRAPHY.

The heroism, devotion, and self-sacrifice of the loyal women of the South have never been fully appreciated. Many women, in other sections of the country, labored patiently and unremittingly for the soldiers, or contributed and forwarded such hospital stores as they needed; other women watched faithfully and tenderly the fever-stricken or sorely wounded soldier, enduring for his sake the hardships and privations of camp or hospital life, though reared in elegant and luxurious homes; but the loyal Southern women did all this, and in addition encountered, with unfaltering spirit, the contempt and abuse of nearly all their previous associates and professed friends, and oftentimes malignant persecution for their unwavering adherence to the national cause. One of the noblest of these heroic spirits is the subject of our sketch.

Mrs. Potter was born in the north of Ireland, of Scottish parents, and came to this country when about thirteen years of age. She married and settled in Charleston before she was fifteen. The early education she had received from her wealthy and intelligent parents, added to much natural quickness of intellect and a sparkling wit, made her one of the most attractive and graceful of the ladies of the Southern metropolis. She was early called to sorrow, and in the very prime of womanhood found herself a widow with a group of young but interesting children looking to her as their only earthly friend and protector. Some years later she was again married, very happily, to Mr. Lorenzo T. Potter, for thirty years past a prominent and wealthy merchant of Charleston, though a native of Providence, R. I. Few families were more pleasantly and delightfully situated than Mr. Potter's prior to the war. Their affection for each other and for

their children was strong and abiding, yet not injudicious; and the younger members of the family grew up amiable, dutiful, and possessed of all those graces which could delight the hearts of their parents. The tastes of all were simple, but their hospitality was boundless, and their piety and large-hearted liberality so well known, that they were universally beloved and honored. Mr. Potter was an enterprising and public-spirited citizen, and to him Charleston was indebted for many public improvements which had facilitated commerce and increased the value of property. So marked had been his efforts for the public good, that he had more than once received the thanks of the municipal government for his services to the city. In his long business career he had been very successful, and at the time of the secession of South Carolina possessed an ample competence. His wife, too, was well known for her personal sympathy with the sick and suffering; in the repeated visitations of yellow fever to which Charleston had been subjected, she had again and again fearlessly braved the pestilence, and remained in the hot and fever-stricken city to minister to those who were smitten by the disease.

When the demagogues of the South resolved upon secession as the remedy for their fancied ills, Charleston was the hot-bed from which the measures of secession first matured; and so rampant were its principles there, that he was a bold man and a brave one who dared to avow his opposition to it. The number of such men in Charleston was very few, but among them none was more decided and outspoken than Mr. Potter. He could not well leave the city, but it was clearly understood from the beginning to the end of the secession movement that he had no sympathy with it, and that he submitted to the rule of the revolutionists only on compulsion. His wife and children were as decided in their loyalty as the husband and father. Mrs. Potter, availing herself of her foreign birth, sought British protection, and avowed herself, for the sake of retaining greater liberty, a subject of Queen Victoria. For a little time after the war commenced, the only service they could render to the Union cause was to bear patiently the taunts of the secessionists, and manifest quietly their regard for the national flag.

But the time came soon for more decided action. In the autumn of 1861 a few sick and wounded Union prisoners reached Charleston. Mrs. Potter at once sought them out and ministered to their necessities, and was gratified to be the means of their restoration to health. A season of family affliction followed, culminating in the death of their eldest daughter, a sweet and devotedly pious young lady, whose loss was deeply felt by the mother, who, in the defection of many professed friends, had felt that she could lean upon this daughter, and confide in her in the time of trial which was coming; but so peaceful and happy was her death, that the parents could only feel that she was taken from the evil to come. Early in June, 1862, occurred the disastrous and ill-

conducted battle of James Island, in which the Union forces lost more than four hundred prisoners, the greater part of them wounded. These were brought into Charleston, and there exposed to much cruelty and indignity. The poor fellows were stripped of their clothing, many of them being left entirely nude, and exposed with their gaping and undressed wounds to the torture of the numberless insects of that semi-tropical climate; the only hospital vouchsafed to them was a filthy negro mart and the negro kitchens adjacent; and they were thrown upon the ground without beds, straw, blankets, or any covering, to suffer, groan, and die; scanty, filthy, and loathsome food and drink were furnished them; the most degraded wretches in the city assigned as nurses to them, and the brutality with which they were treated was almost incredible. The surgeon in charge avowed many times a day his wish that they were all dead, and his determination to finish them as soon as possible, and his assistants and nurses but echoed the sentiment. It was into this den of misery that Mrs. Potter resolved to penetrate, in the hope of being able to do something for the relief of the poor fellows who had so gallantly, yet so unhappily for themselves, fought for their country and their flag. She encountered the most strenuous opposition, both from the military authorities and the surgeon; was at first positively forbidden to attempt to go to the hospital, but by the exercise of a woman's skillful diplomacy, by promises of assistance and bribes, she was at last enabled to enter the so-called hospital. She had provided herself with such cordials, clothing, and other appliances as she could bring in a first visit; and accompanied by her eldest son, a boy of fifteen, she entered the place. Such a scene of wretchedness she had never before witnessed. After ministering to the poor fellows so far as she was allowed, Mrs. Potter applied to the surgeon to be appointed a nurse in this hospital. He at first refused, saying, truly enough, that it was not a fit place for a lady, but finally, on her assuring him that she would require no wages and rations, he consented, though still protesting that the place was not a fit one for her. She entered upon her duties, but was constantly thwarted and harassed by the low creatures who had been employed as nurses. They utterly refused to wash any clothing for the wounded men; and after she had supplied them with beds, bedding, and clothing, she found that in order to retain these for them, she must hire them washed herself. She expended over eleven hundred dollars in this work, and in spite of all obstacles finally succeeded in making this wretched place a more cleanly and better arranged hospital than any in Charleston, the rebel surgeon taking, meantime, all the credit of it to himself. "This," he would say to the medical inspectors, "is the way I keep my hospital." More than once he was censured by the rebel authorities for making the prisoners so comfortable. No Union soldier was suffered to want for anything which Mrs. Potter could obtain, let the cost be

what it might. She procured for them tropical fruits, even when oranges cost ten dollars each in Confederate money, and finally sent her orders to Nassau, New Providence, accompanied by the gold, running the blockade to procure oranges, lemons, and limes for her soldiers. Her bedding, the accumulation of years of the liberal housekeeping of the South, was drawn upon, till it, as well as the contributions of a few friends, was exhausted. Cotton and linen were purchased in quantities, and made up by her own hands and those of her servants, for the wounded prisoners. Those Union soldiers who were fortunate enough to escape from the prisons of Charleston, were aided and sheltered at her home; and one poor fellow for twenty-two months was one of her wards ere he could make good his escape.

Before the wounded prisoners from James' Island could get away or be exchanged, a fresh influx came from other battle-fields and engagements, and with brief intervals of sickness, or the overwhelming grief of the loss of children, she maintained her noble work till the surrender of Charleston, in March, 1865.

In this glorious but trying labor she expended of her own means about twenty thousand dollars in money, besides the liberal contributions from the few loyal citizens, and quantities of family and household stores of her own. Her husband, who was indefatigable in his labors for the Union soldiers, in supplying them with money, in arranging for their exchange, and in visiting them at the other points where they were confined, and in bribing Confederate officers to show them kindness, disbursed more than twice this amount, and periled his life more than once. But the sacrifice of money and of time was of little account (though Mr. Potter's large fortune melted away under the destructive attacks of rebel and Union armies) compared with the constant persecution to which they were both subjected. From the first outbreak of hostilities they were almost wholly isolated, the numerous professed friends of Mrs. Potter shunning her on account of her Unionism, as if her house was infected with the plague. Many ladies (?), and some who afterward professed to have been ardent Unionists during the whole period of the war, carefully drew aside their skirts when they met her, and with nose uplifted, and words and gestures of scorn, proclaimed their hatred and contempt of her. Even the fences and walls of her dwelling were frequently covered at night with obscene and ribald abuse of her for her services to Union soldiers. Twice she was threatened with a summons to the headquarters of Beauregard for "giving aid and comfort to the enemy." Sending her outside the rebel lines was twice discussed, and only negatived because they feared she knew too much, and because the yellow fever being expected, she was known to be too good and fearless a nurse in that terrible scourge to be spared.

But worse than all other trials and persecutions was the death of her eldest son, who had been her attendant and helper in her hospital duties. He was a boy of rare maturity and

judgment, of sweet and patient temper, and of ardent piety. Early in the war he had received from some friend a present of a beautiful Union flag, and as the exhibition of it would only excite malice, he requested his mother to preserve it for him till the time should come when it might again wave over a loyal city. She consented. He was a pupil of the high school of the city, and was expecting to graduate there, and enter college in the ensuing autumn (1863). Some of the boys in the school ascertained that he owned this flag, and demanded that he should surrender it to them, to be trodden on and destroyed. He refused, and they declared that if he did not, they would whip him within an inch of his life. He told his mother of their threats, but expressed his determination to suffer the beating, if need be, but not to give up the flag. She encouraged him to endure, but not to yield. Some two or three weeks later he came home and sent for her to come to his room. His tender flesh had been fearfully lacerated by the cruel blows of the young ruffians, but he uttered no complaint. "I could bear this well enough, mother," he said, "but I can not bear that they should use such abusive language about you as they do." "It does not hurt me, my son," was her reply; "our Master was reviled more bitterly than we are. You, my son, are not the first sufferer for our national flag; but if you can help it, please do not let your father know of this, for he has all he can bear already." "I will not, mother," was the brave reply; "but the boys say they will finish me next time, if I do not give up the flag." "I do not believe they will trouble you again, my son, but we will take what measures we can to prevent it." His vacation was just at hand, and Mrs. Potter endeavored to prevent his being brought in contact with these young ruffians, who were as malignant as their fathers. Three weeks passed, and her son had only to go to the high school building to obtain his diploma, and would not then be exposed further to their attacks. But the young villains were lying in wait for him, and on the porch of the high school building, one of them called his attention to something at a distance, when, by a blow from an unseen hand, he was felled to the ground, and in an almost senseless condition was afterward brought home. The brain was seriously injured, but he was conscious for a time, and with the near prospect of delirium and death, he conversed calmly with his mother of his own hopes and of the future trials to which she would be exposed. He bade her not to be discouraged in laboring for the soldiers, and predicted, with a lofty faith, the glorious termination of the struggle. He was asked if he knew who had struck the fatal blow; he replied that he did, but he preferred not to give his name, and the secret died with him. Typhoid fever set in, and after months of suffering he died. His mother was for a time completely overwhelmed by this terrible stroke, but she roused herself to her work of mercy, and summoning all her strength, left

her sick bed to minister again to the wounded Union prisoners. Her ministrations to the suffering at this time are remembered, by those of them who recovered and were restored to their homes, with the deepest gratitude. Never had she been more faithful in her care for their wants, or more gentle and tender in her inquiries after their spiritual welfare. To the dying she spoke words of comfort and cheer, and received from them messages to their friends at the North, which she transmitted with the most careful promptness whenever opportunity offered. Though a great sorrow lay upon her heart, she avoided weeping in the presence of the wounded men, lest she should depress their spirits. Among the thousands who have been under her care, there are very many who still survive, and to whom her name will ever be precious for her disinterested labors in their behalf. To them in their wretchedness and gloom she seemed an angel of mercy, and under her cheering words and tender care hope revived, and they felt that they were not utterly friendless.

Aside from the perils to which she was exposed by her work for the soldiers, there were others hard to bear, but inevitable in her situation. Their beautiful but unpretending home was situated nearly midway between the two points at which the fire of the Swamp Angel and the other large guns of Gilmore's siege batteries was directed. All their outbuildings were injured, and some of them destroyed by the shells; and during the twenty-two months in which the city was under fire, many a weary night was spent in watching the direction of the shells, and she and her family were distressed by the fear that by some shell striking their house, they might be mangled so as to be unable to aid each other; and they well knew that in such a case they might pass days of agony before any one would come to their relief. But from this calamity God mercifully preserved them.

Mrs. Potter's devotion to the national cause did not cease with the war. To the great majority of Union prisoners dying of wounds or sickness in Southern hospitals, the most distressing thought connected with death was, that they should be forgotten; that in the flush of final victory, all remembrance even of their names, and of the fact that they had laid down their lives for their country, would be effaced. This apprehension Mrs. Potter, with true patriotic feeling, sought to relieve. She promised the dying that they should not be forgotten; that if her life were spared, a monument such as they merited should be erected near the city where they gave up their lives; and that if she died before this could be accomplished, she would leave it as a sacred charge to her children.

Nobly has she striven to fulfill this solemn pledge. Contributing largely from the wreck of her once ample fortune, she has also obtained the contributions of other friends of the noble dead in Charleston, New York, Brooklyn, and elsewhere. She has procured a noble

granite monument, twenty-two and a half feet in height, which in the spring of 1868 was placed in the most conspicuous part of the National Cemetery at Hilton Head, and upon it are inscribed the names and record of three hundred and eleven of the heroic souls who passed from the prison-house of Charleston to their eternal rest, and whose bodies repose in that consecrated place of burial.

In all our records of self-sacrifice by the women of America, we know of none surpassing, in all particulars, the labors which have been briefly chronicled. Yet, with a modesty which is one of the highest attributes of true merit, Mrs. Potter declares that she believes it was mainly selfishness after all. She never could endure the sight of physical suffering without trying to relieve it, and she would have been, she avers, perfectly wretched, if she had not endeavored to make these poor fellows comfortable. We could wish that there were more such selfishness in the world.

OUR "GAL."

[We find this "good bit" of reading in the *Maryland Farmer*, and transfer it to our columns with the assurance that our domestic readers will thoroughly enjoy it.]

I MUST write it; if nobody ever reads a line of it, I must, while it is all new and fresh in my mind, write out the history of the last two weeks, and the description of "our gal," as Harry calls her.

Our gal first made her appearance in the house two weeks ago last Monday, and I hailed her broad face and stout figure with most hearty welcome. Little did I realize—but to begin at the beginning. I was, I am a very young housekeeper, yet theoretically I do know something of the arts and sciences thereunto appertaining. I was married about two years ago; but we have always boarded until now, and when I started in my pretty house, with two good girls, and everything new, I fancied clock-work would be a mere wandering vagrant compared with the regularity of my proceedings.

"Twas on a Sunday morning," as the song says, that my troubles began. I was dressing for church, when my chamber-maid came up with a rueful countenance.

"If you please, Mrs. Harvey, I'm going."

"Going!" I exclaimed. "Where?"

"To leave, ma'am. Home. I've got a spell of neuralgia coming on, and I'm going home to lay by."

"But you can lie down here if you are sick."

"Well, ma'am, I ain't to say sick, exactly, but I'm fixing for a turn."

"A turn?"

"Yes. I have neuralgia in spells, and I always feel 'em coming."

Words were vain. Go she would, and go she did. I went into the kitchen to explain to the cook that she must do double duty for a time. She was a perfect termagant, and to my utter amazement she wheeled round with the cry—

"Gone! Jane gone! Will you get another girl?"

"Certainly."

"To-day?"

"How can I get a girl on Sunday?"

"And to-morrow is wash day! Well, I'm not going to stay to do all the work. You'll either get another girl early to-morrow or I'll leave!"

"You'll leave now, in the shortest space of time it takes to go from here to the door," cried Harry from the sitting-room, where he had overheard us.

With many insolent speeches she departed, and inconvenient as it was, I was glad to see her go.

Of course there was no church, and I began to get dinner. Harry, like a masculine angel as he was, took off his coat and came down to help me, with an assurance that he actually could not sit still and hear the cook use the tone she did one instant longer. It was a merry day. Harry raked the fire till his glossy brown curls were powdered with gray, which premature sign of age was produced, he assured me, by "care, and not the weight of years." He peeled potatoes so beautifully that they were about as big as bullets, after he had taken off the skin an inch thick all round. Pies were the only article of cookery with which I was particularly acquainted, so I made a meat pie, two apple pies, and short-cake for supper, which we ate with the dinner at six o'clock. It was late enough when we cleared up, but at last all was done but one thing. Harry was in the bath-room refreshing himself, when I discovered that the coal was all gone. I hated to call him down, for he had worked hard all day, so I took the scuttle and went down in the cellar myself, laughing to think how he would scold when he knew it. I am a weak woman, and not very strong, but I filled the big scuttle, and tugging away with both hands, started up stairs.

I was at the top, my labor nearly over, when somehow, I can not tell how, I lost my balance. I reeled over, and the heavy thing came with me, down to the bottom of the stairs. I felt it crushing my foot. I heard Harry's call, and then fainted. I know now, though I did not then, how he lifted me in his strong arms, and carried me up stairs, and the touch of the cold water which he poured over me is the next thing I remember. As soon as I was conscious and able to speak, I let him go for the doctor, lamenting that mother and Lou were both out of town for the summer.

Well, well; it was a weary night; no time to scold, Harry said, so he petted, nursed, and tended me, till my heart ached with its fullness of love and gratitude. Morning found me, my fractured ankle in a box, lying helpless in bed, and Harry promised to send me a girl immediately. So, after this long prelude, I come to "our gal." Oh! I must tell you how Harry made me a slice of buttered toast for breakfast by buttering the bread on both sides and then toasting it.

It was about nine o'clock when my new girl came. Harry had given her a dead-latch key, so she entered and came up to my door. Her

knock was the first peculiarity that startled me one rap, loud as a pistol-shot, and as abrupt.

"Come in!"

With a sweep the door flew back, and in the space stood my new acquisition. Stop a moment! I must describe her. She was very tall, very robust, and very ugly. Her thick hair grew low on her forehead, and her complexion was uniformly red. Her features were very large, and her mouth full of (her only beauty) white, even teeth. Still, the face was far from stupid. The mouth, though large, was flexible and expressive, and the big black eyes promised intelligence. But oh! how can I describe her "ways," as Harry calls them? She stood for an instant perfectly motionless, then she swept down in a low and really not ungraceful courtesy.

"Madam," she said in a deep voice, "your most obedient."

"You are—" I said, questionably—

"Your humble servant."

This was not "getting on" a bit; so I said—

"You are the girl Mr. Harvey sent from the Intelligence Office?"

"I am that woman," she said, with a flourish of her shawl; "and here is my certificate of merit;" and she took a paper from her pocket. Advancing with a long step, a stop, another step and stop, until she reached my bedside, she handed me the paper with a low bow, and then stepping back three steps she stood waiting for me to read it, with hands clasped and drooping, and her head bent as if it were her death-warrant.

It was a well-written, properly-worded note from her former mistress, certifying that she was honest and capable, and I really had no choice but to keep her, so I told her to find her room, lay off her bonnet, and then come to me again. I was half afraid of her. She was not drunk, with those clear black eyes shining so brightly, but her manner actually savored of insanity. However, I was helpless, and then—Harry would come as early as he could, and I could endure to wait.

"Tell me your name," I said, as she came in with the stride and stop.

"My name is Mary," she said, in a tone so deep that it seemed to come from the very toes of her gaiters.

"Well, Mary, first put the room in order before the doctor comes."

Oh, if words could only picture that scene! Fancy this tall, large, ugly woman, armed (I use the word in its full sense) with a duster, charging at the furniture as if she were stabbing her mortal enemy to the heart. She stuck the comb into the brush as if she were saying "Die, traitor!" and piled up the books as if they were fagots for a funeral flame. She gave the curtains a sweep with her hands as if she were putting back tapestry for a royal procession, and dashed the chairs down in their places like a magnificent bandit spurning a tyrant in his power.

But when she came to the invalid she was gentle, almost caressing in her manner, propping me up comfortably, making the bed at once

easy and handsome, and arranging my hair and dress with a perfect perception of my sore condition. And when she dashed out of the room, I forgave the air with which she returned and presented a tray to me for the sake of its contents. Such delicious tea and toast, and such perfection of poached eggs, were an apology for an eccentricity of manner. I was thinking gratefully of my own comfort and watching her hang up my clothes in the closet in her own style, when the door-bell rang. Like lightning she closed the closet door, caught up the tray, and rushed down stairs. From my open door I could hear the following conversation, which I must say rather astonished even me, already prepared for any eccentricity.

Dr. Holbrook was my visitor, and of course his first question was—

"How is Mrs. Harvey this morning?"

In a voice that was the concentrated essence of about one dozen tragedies my extraordinary servant replied—

"What man art thou?"

"Is the woman crazy?" cried the doctor.

"Lay not that flattering unctious to your soul!" cried Mary.

"I'm—yes—" said the doctor, musingly; then in his own cheery, brisk tones he added: "you are the new servant, I suppose?"

"Sir, I will serve my mistress till chill death shall part us from each other."

"H'm. Well now, in plain English, go tell her I am here."

"I go, and it is done!" was the reply, and with the slow stride and halt I heard her cross the entry. She was soon at my door. "Madam, the doctor waits!" she said, standing with one arm out in a grand attitude.

"Let him come up," I said, choking with laughter.

She went down again.

"Sir, from my mistress I have lately come, to bid you welcome, and implore you to ascend. She waits within yon chamber for your coming."

Is it to be wondered at that the doctor found his patient in perfect convulsions of laughter, or that he joined her in her merriment?

"Where did you find that treasure?" he asked.

"Harry sent her from the office."

"Stage-struck evidently, though where she picked up the fifth-cut-actress manner remains to be seen."

The professional part of his visit over, the doctor stayed for a chat. We were warmly discussing the news of the day, when—whew! the door flew open, and in stalked Mary, and announced, with a swing of her arm—

"The butcher, madam!"

I saw the doctor's eyes twinkle, but he began to write in his memorandum-book with intense gravity.

"Well, Mary," I said, "he is not waiting?"

"The dinner waits!" she replied. "Shall I prepare the viands as my own judgment shall direct, or will your inclination dictate to me?"

"Cook them as you will, but have a good dinner for Mr. Harvey at two o'clock."

"Between the strokes 'twill wait his appetite." And with another sweeping courtesy she left the room, the door, as usual after her exit, standing wide open.

She was as good as her word. Without any orders from me, she took it for granted that Harry would dine up stairs, and set the table in my room. I was beginning to let my keen sense of the ludicrous triumph over pain and weariness, and I watched her, strangling the laugh till she was down stairs. To see her stab the potatoes and behead the celery was a perfect treat, and the air of a martyr preparing poison, with which she poured out the water, was perfect. Harry was evidently prepared for fun, for he watched her as keenly as I did.

Not one mouthful would she bring to me, till she had made it as dainty as could be; mashing my potatoes with the movement of a saint crushing vipers, and buttering my bread in a manner that fairly transformed the knife into a dagger. Yet the moment she brought it to me, all the affectation dropped, and no mother could have been more naturally tender. Evidently, with all her nonsense, she was kind-hearted.

It took but one day to find we had secured a perfect treasure. Her cooking was exquisite enough for the palate of an epicure; she was neat to a nicety, and I soon found her punctual and trustworthy. Her attentions to myself were touching in their watchful kindness. Sometimes, when the pain was very severe, and I could only lie suffering and helpless, her large hands would smooth my hair softly, and her voice became almost musical in its low murmurings of "Poor child! poor little child!" I think her large, strong frame, and consciousness of physical superiority to me in my tiny form and helpless state, roused all the motherly tenderness in her nature, and she lavished it upon me freely.

I often questioned her about her former places, and discovered to my utter amazement that she never was in a theater, never saw or read a play, and was entirely innocent of novel reading.

I had become so used to her manner, and no longer feared she was insane, when one evening my gravity gave way utterly, and for the first time I laughed in her face. She had been arranging my bed and self for the night, and was just leaving the room, holding in one hand an empty pitcher, and in the other my wrapper. Suddenly a drunken man in the street called out, with a yell that really was startling, though by no means mysterious. Like a flash, Mary struck an attitude. One foot advanced, her body thrown slightly forward, the pitcher held out, and the wrapper waved aloft, she cried out in a voice of perfect terror—

"Gracious heavings! What hideous screams is those?"

Gravity was gone. I fairly screamed with laughter, and her motionless attitude and wondering face only increased the fun.

"Go down, Mary, or you will kill me!" I gasped at last.

To see her brandish a dust-brush would strike terror to the heart of the most daring spider; and no words of mine can describe the frantic energy with which she punches pillows, or the grim satisfaction on her face at the expiring agonies of a spot of dirt she rubs out of existence. The funniest part of all is her perfect unconsciousness of doing anything out of the way.

Harry found out the explanation. She had lived for ten years with a retired actress and actor, who wished to bury the knowledge of their past life, and who never mentioned the stage. Retaining in private life the attitudes and tones of their old profession, they had made it a kind of sport to burlesque the passions they so often imitated, and poor Mary had unconsciously fallen into the habit of copying their peculiarities. When they left for Europe, she found her way into the Intelligence Office, where Harry secured her. Long, long may she remain "Our Gal."

DR MEYER, the pianist, wears exceptionally large and shocking bad hats; and when he lost one in Connecticut, in despair of procuring another of the proper size, his manager telegraphed back to have the missing article forwarded. The answer came back as follows: "Down express train met hat lying on the track two miles east of New Haven. Mistook it for the depot, and ran in. Engineer discovered error, and backed out. Freight train dispatched to remove the establishment, and shall forward it in sections as requested."

PORTRAIT OF MADAME ARABELLA GODDARD, THE ENGLISH PIANIST.

MADAME ARABELLA GODDARD, THE ENGLISH PIANIST.

As is generally the case with eminent musicians, this lady possesses an admirable physical organization (if the portrait here given be a faithful representation). A large, closely-knit frame, well filled out with elastic tissue, should supply abundantly those mechanical and temperament-

al aids which her vocation requires for its successful prosecution. The motive temperament is well indicated, and ministers its forceful elements to her character and work.

She is evidently a woman of ardent feeling, affection, and sympathy. She is impulsive emotionally, and we doubt not as active and earnest in the accomplishment of whatever she undertakes as she is impulsive.

Her domestic feelings and inclinations are evidently very influential. Home and its interior ties, friends and personal associations in general, are of great importance to her. The favor and encouragement of those she loves is an earnest of success to her in all of her new undertakings.

She is hopeful and vivacious, yet quite

sensitive to depreciative criticism, although censure stimulates her to more earnest and positive effort to contravene its influence. She has little vanity, and when she would shine she takes care that none of her plumes are borrowed.

BIOGRAPHY.

MADAME GODDARD was born at St. Servan, near St. Malo, in France, January 12, 1836. At a very early age she evinced extraordinary musical ability; and when but a little more than four years old she appeared before an audience in a charitable concert at St. Servan, and performed successfully a fantasia on themes from Mozart's Don Juan. Her parents wishing to procure for her the best musical instruction removed to Paris. There she enjoyed the tutorage of Kalkbrenner for four years; after which she accompanied her parents to London, and continued her studies in England under the direction of Mr. Anderson, pianist to the Queen. She also enjoyed the instructions of Herr Kuhe and Thalberg, while those great instrumentalists resided in London. Having finished her pupilage, Madame Goddard made her first public *début*, when about fourteen years of age, in a grand concert at her Majesty's Theater, London, and was received with marked favor as being a piano-forte impresario.

She performs remarkably well at sight, and possesses a retentive memory of whatever musical compositions attract her notice. Her

execution is also brilliant and effective, the most intricate and rapid music being readily mastered by her mobile fingers.

Devoting herself almost entirely to performances in England, where her name is familiar in every household, she has achieved wealth and reputation. Unlike other eminent musicians, she has made no foreign tours, but finds in the land of her adoption all the exercise of her talent in public and private life as she can conveniently respond to.

NEW YORK, OCTOBER, 1868.

"If I might give a short hint to an impartial writer, it would be to tell him his fate. If he resolved to venture upon the dangerous precipice of telling unbiased truth, let him proclaim war with mankind—neither to give nor to take quarter. If he tells the crimes of great men, they fall upon him with the iron hands of the law; if he tells them of virtues, when they have any, then the mob attacks him with slander. But if he regards truth, let him expect martyrdom on both sides, and then he may go on fearless, and this is the course I take myself."—*De Jure*.

SAMUEL R. WELLS, 339 Broadway, New York.

THE USE OF DISCIPLINE.

WE may liken the undisciplined human being to unhewn marble in the quarry; and the disciplined human being to the excavated, chiseled marble polished and set upon a pedestal, where its stately beauty impresses every beholder. Again; these two conditions may be compared to gold in the rough ore, and refined gold, beautifully chased and made useful. It is no less marble or gold in the one case than in the other; the man undisciplined is no less a human being than the most refined and cultivated. Man *undisciplined* is simply a savage. Man thoroughly disciplined is civilized, and in the way to appreciate all that ennobles his race. Look at nearly half the full-grown men we meet. What great, coarse, awkward, uncouth creatures! See how they shuffle, shuffle, shuffle along in life, instead of walking boldly and uprightly forward! And how untidy they are! Look at their unclean teeth; smell their foul breath! How little above the brute they seem! and yet they were created in the image of God, with immortal souls, capable of culture to any conceivable extent. From lack of discipline, they are only rudimental men. Animals of one species, without reason, moral sense, or religion, are alike; and so far as original organization goes, so is the family of man. Each member has the same number of bones, muscles, nerves, and faculties. They are alike in all the senses, differing only in degree of culture, development, and discipline. But no degree of culture will change the nature or species of brutes such as dogs, horses, and lions; they remain animal only, with limited capacities—instinct without reason—while man is susceptible of almost unlimited culture, development and reach of mind, soul, or spirit. Man's brain is

a house three stories high, while that of the animal is only a basement. But it is DISCIPLINE which calls out, quickens, and develops all his faculties and powers. Without discipline, he is an unwieldy human block; as nature formed him, almost useless. What is it that makes the difference between the teacher and the pupil? It is not size of body, nor necessarily a difference of age; it is not in sense nor in faculty; it is not altogether in temperament; but it is in culture and discipline of the one, and the want of it in the other. It is discipline of the whole mind which enables one person to play on a musical instrument, to invent, imitate, and to do something of everything; and it is the absence of discipline which prevents others from doing precisely the same thing. So in all the various callings, all the professions and pursuits in life.

To illustrate the point still further: Take two boys,—brothers; permit one to grow up without restraint, direction, or discipline, as far too many street boys in our cities and villages are permitted to do, and what is the result? On reaching manhood, he is a coarse, ignorant, selfish, impudent, quarrelsome, obstinate, revengeful loafer. He is notorious only for vagabond proclivities; and if he escapes the jail, prison, and the gallows, he remains on the low plane of his animal propensities, performing some menial service, like cleaning spittoons, living from hand to mouth, and winding up his career "way down below." When he dies, a nuisance is abated. The other, similarly constituted, born of the same parents, under the same circumstances, endowed with similar tendencies and proclivities, if placed under good influence, properly restrained, wisely directed, and well educated, thoroughly disciplined, enjoys in his youth almost a charmed life, and on attaining manhood, at once takes his place among intelligent, respectable, and honorable men; filling his position with credit, living a useful life, and establishing a reputation for justice, kindness, and religion. He is a pillar of strength in goodness. All who know him delight to trust him, and his whole life inclines in the same direction which in early youth he was *taught* to go. To him life has been active, industrious, earnest, useful, successful. Departing, he is lamented and mourned by all who

knew him. *He* was law-abiding; the other was lawless. The one was a low, scoffing skeptic; the other, a cultivated Christian gentleman. The one complained constantly of his unfortunate lot, charging his destitution and short-comings upon Satan, not seeming to realize that the fault was in great part his own. The other accepted seeming calamities as possible blessings in disguise, remembering that "the Lord chasteneth whom he loveth," thus weaning him from merely worldly affairs and reconciling him to the will of Heaven. We need not pursue the subject further. It must be clear to all that the importance of the most thorough discipline, early and late, can not be overrated or magnified; while the want of it precipitates its miserable victim into the poor-house, the asylum, the prison, and the potter's-field.

MORAL: Parents owe to their children this: if they can bestow neither wealth nor honor, they can at least give them that discipline which is of such incomparable importance. They can teach them self-denial, the regulation of their passions, and habits of industry; they can stimulate their application, and encourage perseverance, economy, kindness, justice, devotion, and good-will. It is not necessary to resort to violence. In such education, kindness with firmness is more potent than chains, locks, or whips. As God is merciful to us; as He chastens us with the rod of His spirit, so parents may chasten their children; and *this* is the kind of correction and the discipline we commend.

DRINK.

A LATE State Temperance Convention presented in its report the following official records of applications for entry into the Inebriates' Asylum of New York. There has been a newspaper denial of its correctness, but whether or not it was official, we do not know. Here is the statement:

Clergymen.....	29	Physicians.....	25
Judges.....	8	Gentlemen.....	240
Merchants.....	340		

Thirty-nine drunken clergymen! Or even *one* single drunken clergyman! Of what denominations? Eight drunken judges! Or even one drunken judge! Of what weight would be their or his judgment? Three hundred and forty drunken merchants! Or even one

drunken merchant! Were they liquor dealers? Two hundred and twenty-six drunken physicians! Or even one drunken physician! who have poisoned both their patients and themselves. They administer to the sick, beer, porter, ale, wine, whisky, rum, gin, brandy, and bitters. Two hundred and forty drunken gentlemen! Or one drunken gentleman! We do not believe it. A "gentleman" is not a drunkard; he is simply what he is. But you say when clergymen, physicians, and judges get drunk, why not "gentlemen" also? "Sauce for the goose," etc. Then, is it not notorious that some of our legislators, our representatives, our senators, and even our Presidents, get drunk? Then why may not merchants drink? Why not everybody? Let us see why not. We could give twenty good reasons; but *one* is enough. Because "THE DRUNKARD shall not INHERIT THE KINGDOM OF GOD."* He is an outcast. He is bad. A fallen human wreck. But he *may* be reclaimed. Aye, so may the dead be raised, and other miracles performed. But it takes more than man to do it. Is it not easier to *prevent* disease and drunkenness than to *cure* it? *Perverted* priests and clergymen call the vile alcoholic mixture "a good creature of God," and drink it. Weak or wicked doctors guzzle it themselves, and give it to their confiding but silly patients, and it only hastens their exit to heaven or to hell.

Our whisky-drinking law *makers* are constantly making law *breakers*. They are a low, bad set, and ought to be hurled from the places they disgrace. It is a crying shame that any other than temperance men should be put in *any* place of trust. Evil, and only evil, comes of liquor-drinking legislators. Think of a drunken Congressman! A drunken President! May God put it into the minds of the people to choose *only* temperance men, honest men, virtuous men, intelligent men, to serve us. If we fail in this we shall have good cause to fear for the perpetuity of our institutions. It is intemperance that is lowering the tone of public morals and corrupting all our legislation. Let us stop it, and pray God that we may save our institutions, our nation, our bodies, and our souls.

* 1 Cor. vi. 10.

NOT GOING TO SMASH.

THERE are large numbers of bad men in and out of public offices. Those who are in, desire to remain in; and the "outs" will cry down the Government, cry down the currency, and try to make many simpletons believe that the whole country is going into immediate bankruptcy, unless those in office be turned out and the more hungry ones let in. "Loaves and fishes" are the cause of much political contention. We have seen notorious bullies, boxers, prize-fighters, gamblers, and drunkards elected to offices of honor and trust. We have seen persons without education, without moral principle, without any of the requisite qualifications for statesmanship, made members of our State Legislatures and of our national Congress,—men lawless, dishonest, drunken vagabonds, making laws for American citizens! Can there be any wonder that the course of events will not run smooth? that bribery and corruption may be seen in all departments? We realize and we deplore these facts. We call the attention of well-disposed men, lovers of their country, to contemplate the truth. We ask them, for the sake of our children, our future, and ourselves, that they correct these evils. If we will, we can choose sober, righteous men to serve us. We can choose intelligent, honorable men, moral and religious men. We appeal to no clique, no party, no sect; we appeal to all intelligent, temperate, self-regulating, patriotic, moral and religious citizens. Reader, are *you* of this class? If not, will you not come over on the right side—the side of God and humanity? There are two sides to every question. One side is right, the other wrong. Why not choose the right? Do not tamper with policy or expedients, but stand up for the right, and God will take care of consequences. He was a statesman who said, "I had rather be right than be President." He is a false, bad man who favors injustice, oppression, and the rule of the wicked. Let us vote for those only whom we can trust.

Here is a statement of our finances, which is far more hopeful than has been represented by parties in interest. It is from one of the commercial journals of this city.

THE NATIONAL ACCOUNT.

So much has been said and written about the corrupt and extravagant manner in which the Federal Government has been administered during the last year or two, that it is pleasant to meet with facts and figures, from official sources, which must go far to correct erroneous impressions in this connection. In view of the fact that the present Administration has been compelled not only to carry an immense burden bequeathed by the rebellion, but to close up the confused accounts, restore civil order through a vast region devastated and unsettled by the conflict, and repel assaults upon the public credit, we were not prepared for so satisfactory an exhibit of the receipts and expenditures of the Government for the fiscal year just closed, as that furnished by Special Commissioner Wells, of the Treasury Department. From this exhibit we give the more important figures, as follows:

RECEIPTS.

The national receipts of revenue, from all sources, for the fiscal year ending June 30, 1868, were substantially as follows:

Customs (gold).....	\$168,500,000
Internal Revenue (currency).....	193,000,000
Miscellaneous (currency).....	47,000,000
Public Lands and Direct Tax (currency)....	2,800,000
Total	\$406,300,000

EXPENDITURES.

The expenditures of the Government on account of interest on the public debt, for the fiscal year ending June 30, 1868, was \$141,635-551 18. The aggregate expenditures of the several departments of the Government for the same period, were \$229,914,874 56, making a total expenditure for the fiscal year, ending June 30, 1868, of \$371,550,325, and leaving an estimated surplus of receipts over expenditures of \$34,749,777.

REDUCTION OF TAXATION.

The amount of taxes abated or repealed since the close of the war has been estimated as follows:

By Act of July 13, 1866.....	\$60,000,000
By Act of March 2, 1867.....	40,000,000
By Act of Feb. 3, 1868 (exemption of raw cotton).....	23,769,000
By Act of March 31.....	44,500,000
Total	\$167,269,000

Since July, 1865, furthermore, the additional tax of 5 per cent. on incomes in excess of 5,000 has been repealed, and the exemption on all incomes has been increased from \$600 to \$1,000. The taxation formerly imposed on the gross receipts accruing from the transportation of merchandise, has also been entirely removed. Co-incident with the above reduction of taxation, or from the 31st of August, 1865, to the 30th of June, 1868, the aggregate of the national indebtedness, including cash in the Treasury, exhibits a reduction, in round numbers, of \$250,000,000. On this statement of the debt, the reduction of the interest, calculated at 6 per centum, would be \$15,000,000 annually.

Thus, heavy as the expenditures have been during the last year, they have not only been met by the ordinary revenues of Government, without a resort to loans, but after somewhat reducing the principal of the debt, an estimated surplus of nearly thirty-five millions of dollars was left. Leaving out the interest on the debt, and the pensions and bounties of soldiers and sailors, which are, as a matter of course, inevitable, the difference between the expenditure of the present administration and that of the peace administration immediately preceding the war, is not proportionately as great as the difference in the population of the country at the two periods, or the changed conditions of the nation would seem to warrant.

Congress might have accomplished something more than it has accomplished, during the last year or two, to relieve the public of burdens which have become extremely onerous; but despite of its shortcomings, we have an abiding faith that wiser counsels will prevail, and that measures based upon honesty and justice will be evoked, after the excitement of the Presidential campaign shall have passed away. There is nothing in our political traditions, or our relations with other nations, which can ever make it necessary to maintain a large and costly military establishment in times of quiet and profound peace; nor is there any reason why, from being a dead weight upon the Government, the Southern States, with no great incumbrances upon them, with their social and labor relations adapting themselves to the emergency, and with a belt of the most productive soil which this continent affords, should not soon contribute their full share to the requirements

of the General Government. And we believe they will, as soon as fierce partisan warfare shall give place to an era of good feeling, thus admitting of the co-operation of Northern capital and labor, which alone are necessary for the development of resources, in order to place the Southern States again firmly on their feet.

WORKING FOR MONEY.

THE statement that "the laborer is worthy of his hire" is not only trite, but it is also Scriptural; and he who ignores this principle is not only *unwise* but *UNJUST*. If "the wages of sin is death," the wages of honest toil is bread and life. Money simply represents labor performed, or property of some sort. He who produces nothing and *earns* nothing, does no good in the world; he simply lives on the earnings of others; is worse than a drone in the great human hive. Any institution or order of society which stigmatizes honest labor as degrading, or as something to be avoided, carries its own curse with it. "For this we commanded you, that if any would not work, neither should he eat." So said St. Paul. There are idle and disorderly persons among us who "work not at all, but are busybodies." Such should be exhorted and induced to earn their own living. It is energizing and ennobling to *earn* the wherewith to develop our faculties, clothe our bodies, contribute to the unfortunate, build school-houses, churches, public libraries, industrial institutes, asylums, hospitals, and the like. For every dollar a man invests in any of these he feels the richer in all the attributes of a true and noble manhood. Oh, the blessing of giving! And the way to obtain the blessing is to *earn* it. The poor weak-willed, self-indulgent do-nothings never have anything to give, except what they beg from the more industrious and enterprising. They don't know, poor things, what they were created for. So far, to them, life has been in vain. They wait for some thrifty person to take them up and carry them into sweet Elysian fields, where they may dwell in luxurious idleness. What husbands and fathers, what wives and mothers, such worthless creatures make!

Reader, do you remember the first dime or dollar you ever earned? *Why* do you remember it? Because of the *satisfaction* it produced. *You earned it*. It was the result of your own personal exertion. It was yours, and a part of you. It was your first taste of liberty, independence, power. What a luxury! What a stimulant! How all-engaging! The idea of wealth becomes absorbing. Is there no short road to riches? Tell, O tell me how to make money quickly! Ah, here is the danger. If the parent failed to teach his child something of the true *uses* of money; if he permitted him to become a warped money-lover for its own sake—a money-worshiper—through inordinate acquisitiveness, he will just as certainly become a mean, selfish, sordid miser, a gambler, or a thief! Money is to be desired only as a *means*, and it is so much better to earn than

to inherit it. "Easily obtained, as easily lost," is the rule.

Begging comes of poverty and low natures. A dignified, manly man "would rather starve than beg," while imported paupers take to begging as ducks take to water. *They* are *born* to it. It is the result of monarchical institutions, wherein the few own all the land, monopolize all the water, rule and control the labor. It is cruel slavery, under another name—subjects—and produces the "class" denominated peasants.

Here, in America, we grow no human fungus. Those we have are either imported direct, or they are the immediate offspring of such. They compose our whisky rings, our "Dead Rabbits," "Short Boys," "Plug Uglies," and other villainous, vagabond classes. Our dance-houses, streets, poor-houses, and prisons swarm with them. They are human wharf rats, baggage smashers, thieves, burglars, robbers, murderers. They work from compulsion—never from choice. In their own country they were kept at the point of starvation, having no hopeful prospects to encourage them, and they became the poor creatures we see. Here they may earn money, accumulate a competency, and, with industry and "temperate habits," get ahead in the world. And they do. Consider the millions of dollars sent by laborers, from America, to relatives in the "Old Country." Here they can make and save money. Here they can secure houses of their own, and put their children in a way to be educated, elevated, and placed on a rising scale. Let whisky and tobacco alone; buy good books and read them; join a temperance society; come under religious influences; and the course of each one will be "onward and upward."

But there are *higher* considerations than working for money. Riches do *not* secure happiness. He alone grows in the excellences of God's grace who rises above the love of money and develops the higher faculties and sentiments. It is the exercise of these which brings peace. One must be honest, kindly, honorable, forgiving, trusting, and godly if he would stand on the *highest* human plane. Riches, honor, ambition, love of art, poetry, music, home, and even the social affections, must *all* be subordinated to the moral, spiritual, religious sense. It must be God first, humanity next, and worldly affairs last. He who earns or acquires the most money, like the man with the most talents, will be held all the more accountable for its right use. Man may not live to himself alone. Great riches and great talents are great powers, and when rightly used bring happiness to all; but when prostituted to base purposes, only sink their possessor in the esteem of his fellows, and bring ruin on those who participate in their use. The money of the gambler curses all who use it in that way. Our study should be, to know the real value of money, and to use it wisely; to understand our own abilities, and to exercise them for the good of mankind; to learn the laws of our being, and obey them; to find out the will of God, and do it.

GEOLOGY NO SCIENCE.

THE Rev. Robert Patterson, D.D., is writing a series of articles in the *Family Treasure*—a handsome monthly, published in Cincinnati—on Physiology, Phrenology, Geology, etc., in which he tells his readers what he "doesn't know" and what he "doesn't believe." He takes the *negative* of every question, as naturally as another takes the affirmative. He will not admit anything to be true which *he* doesn't understand. We did this reverend doctor of divinity—some men are woefully misplaced in this world—the honor to show him up in our August number. But here he is again, scolding away as glibly as ever. This time he is after the geologists, with a sharp stick. He says "geological theories can never rise above the rank of notions." Then he goes on to state what can not be done, what men *can not* know; as for example, "Geologists have no knowledge of the facts essential to the erection of a science of geology." Again: "The profound ignorance out of whose abysses geological theories arise, is well exhibited by the most learned of the physical geographers, Humboldt." "No materials exist for framing any history of the geological periods." "Geology, as defined by its professors, is a science impossible to short-lived mortals." Yes, but may not the present generation profit by the teachings of those who have gone before? and may not future generations take hold where the present leave off, and thus augment the sum-total of this and other kinds of knowledge? On this very point he says:

This is by no means possible. The co-ordination and comparison of all the facts must be the work of a single mind capacious enough to contain them all. The fair face of nature can not be reflected truly in a mirror composed of a thousand fragments. But the question at present is one of facts, not of future possibilities. Have geologists now any such accumulation of facts as would warrant the construction of the science of the structure of the earth? Have they examined, or even seen the strata whose formations they describe? Is it even possible for mortal man to achieve what they allege their science demands?

Alas! science of such a vast subject is impossible, and our geological authorities ought certainly to acknowledge the impossibility, and refrain from making such enormous demands upon the credulity of the people. They should reflect that common sense [We wonder what *he* means by "common sense"] sees as far into a millstone as philosophy. Its conclusion upon reading the enormous pretensions of geologists, and comparing them with their very slender performances, probably will be, not that geologists have procured a lease of life of antediluvian longevity, nor that they have attained to a systematical omniscience, but that the utmost they can boast is a very superficial second-hand knowledge of a very small part of the earth's surface, and a very cursory glance at a much smaller part of it. This is all that even the first-class geologists—Miller, or Murchison, or Lyell, or Dana, or Agassiz—can produce as the materials for a science; all the rest is mere assumption—scientific poetry, if you will, but not science. Geology would rank well as a department of mythology.

So, *down* with geology, and *up* with Patterson. He has smashed all their fine theories, and remains what he is, the iconoclast of the natural sciences.

OUR LIST OF PREMIUMS.

In addition to a monthly magazine, which is richly worth its price, we now offer to those who may send us new subscriptions, valuable and useful premiums. As this JOURNAL is essentially useful and substantial in its general character, so the premiums named are of a useful and substantial sort. Many, to be sure, lay claim to the character of ornamental, but their decoration is but an attractive accessory to their utility. We offer no worthless frippery—no mean “pinchbeck ware” or “sham jewelry;” but appreciating more highly the mental tone of our readers, we invite their consideration to a short programme, which is thought to include things adapted to the tastes and wants of every well-ordered household and of every right-minded individual. As regards the liberal terms we make in this “premium business,” we invite comparison with other magazine inducements.

TABLE OF PREMIUMS.

Names of Articles.	Cash Value.	No. Sub's. at \$2 ea.
1. Piano, Steinway or Weber, 7 octave. \$650 00....	350	
2. Parlor Organ, Mason & Hamlin or Berry, 5 octave.....	170 00....	100
3. Choice Library, your selection at publishers' rates.....	100 00....	70
4. Metropolitan Organ, Mason & Hamlin, 5 octave.....	130 00....	60
5. Gold Hunting-case Watch, American Watch Co.'s best.....	125 00....	60
6. Choice Library, your selection.....	75 00....	50
7. Chambers' Encyclopedia, new, 10 vols.....	45 00....	30
8. Silver Hunting Watch, American Watch Co.'s best.....	60 00....	30
9. Sewing Machine, Weed's new style.....	60 00....	25
10. Sewing Machine, Wheeler & Wilson's.....	55 00....	20
11. Chest of Tools, 75 pieces.....	40 00....	25
12. Library, your choice.....	30 00....	25
13. Lange's Commentaries, any 3 vols.....	15 00....	10
14. Doty's Washing Machine.....	14 00....	10
15. Irving's "Belles Lettres Works," 8 vols.....	14 00....	9
16. Rosewood Writing Desk, furnished.....	12 00....	9
17. Webster's Illust'd Quarto Dictionary.....	12 00....	9
18. Irving's Life of Washington, 5 vols.....	12 50....	8
19. Mitchell's General Atlas, folio.....	10 00....	8
20. Student's Set of Phren'! Works.....	10 00....	7
21. Universal Clothes Wringer.....	9 00....	7
22. "Bruen Cloth Plate," for Sewing Machines.....	10 00....	6
23. Stereoscope, Rosewood, 12 fine views.....	7 00....	6
24. New Physiognomy, Illustrated.....	5 00....	4

26. Hand-Book—How to Write, Talk, Behave, and Do Business.....	2 25....	2
27. Life in the West, new.....	2 00....	2

Our own books may be substituted in all cases for any other premium, if preferred.

The articles enumerated are the best of their several kinds. The “Belles Lettres” set of Irving comprises “Knickerbocker,” “Tales of a Traveler,” “Wolfert’s Roost,” “Crayon Miscellany,” “Bracebridge Hall,” “Alhambra,” “Oliver Goldsmith,” “Sketch Book,” all elegantly bound.

Persons wishing our own publications instead of the promiscuous choice offered, will be permitted to select for themselves from our fullest catalogues. In this connection, we would say that lists of any number of *new* subscribers exceeding ten will entitle the sender to a liberal selection from our catalogue.

As we offer premiums for *new* subscribers, it may seem an injustice to present subscribers who may intend to renew their interest, if we do not exhibit some liberality toward them; therefore we say that each present subscriber who sends us a new name with his or her own (inclosing, of course, the requisite \$6), will receive the valuable hand-book, “The Right Word in the Right Place,” or the illustrated “Pope’s Essay on Man,” which sells for \$1. We also offer the same premium to persons who subscribe to the JOURNAL for two years in advance at the regular rate.

In the general competition for premiums, *two* old subscribers will be counted as *one* new subscriber, and the premiums awarded accordingly to parties sending us lists at the full rate.

The “New Encyclopedia” (Chambers’) offered is a handsome octavo edition, finely illustrated, and beyond peradventure one of the most valuable works of the kind extant.

It is scarcely necessary to say that the pianos and parlor organs on our list are acknowledged among the best manufactured in the world.

The Mason and Hamlin cabinet organ offered as premium No. 2 is a five octave double reed instrument with four stops, having their new and very valuable improvements introduced this season, viz., “Mason & Hamlin’s Improved Vox Humana,” and “Monroe’s Improved Reeds.”

The Bruen cloth plate is a valuable contrivance for embroidering on sewing-machines. When attached to Wheeler & Wilson’s, it makes the Grover & Baker stitch, a desideratum in embroidery by machine.

Who will have these premiums? They are freely offered to all, and will be promptly sent to the parties entitled to them.

Clubs may be made up of subscribers residing at one or a hundred different post-offices.

REMITTANCES should be made in post-office orders, bank checks, or drafts payable to the order of S. R. WELLS, New York.

THE COMING ANNUAL.

OUR ANNUAL for 1869 is now in press, and will soon be ready for general circulation. We have striven to make it valuable as an instrument of good by introducing fresh, original articles of a practical bearing on all the leading interests of the times. As our Annuals from year to year have steadily improved in quality and grown in public favor, we have experienced no apprehensions lest our efforts at a still further improvement in that of 1869 should not meet with a cordial welcome and a liberal patronage.

Among the more prominent articles which will enliven its pages are the following: The True Basis of Education found in the Constitution of Man; Eminent American Clergymen, a group of seven, representing as many different denominations; How to Study Faces; Mirthfulness; Food Makes the Man; Temperament in Cattle; The English Miner; Power of Example; Uses of Culture; American Wit; Victor

Cousin, the French Philosopher; Dry Bones; Hepworth Dixon; Wilkie Collins; Rev. Dr. Cummings, the Prophetic Man. The number of illustrations is large, some single articles embodying half a dozen or more illustrations; the portraits, especially, are carefully engraved, and form an important feature in the work. In character, quality and price, we are satisfied the Annual for 1869 will sustain a favorable comparison with any like publication of the day.

FOR NEXT YEAR!

It seems rather early to put out announcements for the year 1869; but “time flies,” and we must *fly* to keep up. In the present number of the A. P. J. we give a list of PREMIUMS, the value of which will make it worth while to work for them. It has given us real pleasure to send out beautiful pianos, melodeons, sewing machines, and whole libraries of books to all parts of the country.

THE BEST. None but the *best* articles of their kind are sent; *i. e.*, nothing second-hand, cheap, or inferior is ever sent by us. We aim to secure the *best of the kind* in every instance.

At first we hesitated about offering watches, fearing we could not secure good time-keepers, and that disappointments would sometimes occur. But we have arranged with the manufacturers; and are enabled to offer two sizes—for gentlemen and for ladies—silver and gold hunting cases of a beautiful pattern, and warranted accurate time-keepers.

Other premiums in the list will be appreciated by those who need them. We frankly admit that our object is to increase the circulation of this JOURNAL. We give the profits in premiums to those who do the work and forward us the subscribers.

THE JOURNAL will be richly worth its *full price* to every subscriber. It is now a good time to *begin* to form clubs for 1869. “An early bird,” etc., you know.

TRUE NOBLENES lies in a deep and pure generosity of the soul. Even common humanity pities the wretched. Ordinary attainments in the Christian life may induce men to labor even for the conversion of souls. Such labor may move side by side with many of the elements of littleness. A great sermon may come out of a heart largely swayed by small ambitions, which would redden or pale with pain at another’s praise. A deed may be generous only to be called so. A man may be soft and yielding only the better and the more certainly to cover himself with the praise of his friends. True nobleness, in addition to high impulses and breadth of aim, must be unselfish; it must follow in the right cause even where a personal adversary leads; it must be able to smile from the very heart at the success of a rival; it must not feel itself the poorer for another’s riches, nor the meaner for another’s exaltation. Such generosity is serenity; it is heavenly sweetness; it is at once royal and lowly; it is divine charity, and, therefore, liberty—the perfect law of liberty, “blessed in its deed.”

**JOHN LAIRD,
THE BRITISH SHIP-BUILDER.**

THE mental-motive temperament predominates in this organization. The body is long and slim, the head and face are the same, and there is evidently more mental activity than physical vitality, a condition likely to render one nervous, restless, and impatient. He is disposed to sympathize more with troubled waters than with those at rest; to stir up and agitate, simply from the love of agitation. There is no peace in that countenance; it is expressive of a hungry, ambitious, excitable mind. He needs, greatly needs, the modifying influences of more physical vitality—a bodily condition more in keeping with the English type.

There is little warmth or geniality here, but much will, temper, and personality; he would be cold and authoritative rather than warm and gentle.

As to his capabilities. So far as management is concerned, there can be no doubt that he would be far more efficient in selfish enterprises than in missionary work, at home or abroad. He looks more like a feelingless schoolmaster than like a statesman, more like one who would seek to realize his own personal desires than to contribute voluntarily to the happiness of others. In short, it is the face of a cold, calculating, criticising, fault-finding, nervous, proud-spirited, willful, and opinionated man. He may be missed—will he be mourned?—when he dies. He would evidently have made a sharp lawyer; something of a soldier; a capital driver or overseer, as he is good at scheming and projecting; but not a popular captain or hotel keeper; not a self-sacrificing friend like John Howard or Father Mathew; not a laborer in the interest of the unfortunate, but one who would turn every opportunity to his own personal advantage. To him, the world is a great goose, made for him to pluck. And he has little or no compunction; we doubt if he ever confesses himself what he evidently is—a miserable sinner.

Such a temperament and disposition needs looking after. Children so constituted are apt to give much trouble by their pesky natures, and it is quite unsafe to leave them unrestrained; they need careful watching, lest they get in-

to mischief and bring trouble upon the entire family.

BIOGRAPHY.

Now that the claims of the United States on England, for damages sustained during the war by the operations of rebel privateers alleged to have been built, armed, and equipped in English docks, are being urged, it is proper for us to furnish our readers with some account of the man who was conspicuously connected with the construction of "rebel rams" and ironclads.

John Laird, Esq., the present Member of Parliament for Birkenhead, England, was born in Greenock, Scotland, in the year 1805. He received his education at the Royal Institution, Liverpool, and early devoted himself to commercial pursuits.

John Laird has been connected with steam navigation since 1821, his father having been one of the originators of the St. George's Steam Packet Company and the Dublin Steam Navigation Company, formed at that time. His

PORTRAIT OF JOHN LAIRD.

father, William Laird, commenced the Birkenhead Ironworks in 1824, and the first iron vessel built at these works was in 1829. But iron ship-building did not make any great progress for ten years or more after that date. Shipowners were loth to adopt iron vessels, and great difficulty was experienced in persuading even enterprising men to embark in the then almost new invention. In 1839, however, the English Admiralty ordered the first iron steam vessel for her Majesty's service from Mr. Laird, and since that time iron vessels have grown more and more into favor.

It was at the Birkenhead Ironworks that the first iron vessels for the United States, for the River Indus, for the Nile, Euphrates, Tigris, and other important rivers of the East, were built. The first steam-frigate ever constructed for the British Admiralty was also built there—the Birkenhead, of 1,400 tons and 560 horsepower. From 1829 to the present time, nearly

four hundred vessels, of a total gross tonnage of upward of 150,000 tons, have been constructed at Laird's establishment.

From two to three thousand men are continually employed there, and a large number of vessels are constantly in process of construction. A portion of the immense works are set apart for engine and boiler making, where a large number of marine engines are built, of sizes varying from 80 to 450 horsepower.

The town of Birkenhead, which lies across the River Mersey, opposite Liverpool, of which it is really a suburb, owes much of its prosperity to the success of Mr. Laird as a ship-builder. Birkenhead is to Liverpool what Brooklyn is to New York, and has grown rapidly in extent and population. In 1821 it had a population of only 200; in 1831, 2,569; in 1841, of 8,223; and in 1861, numbered 36,000 inhabitants.

The Birkenhead docks were first projected by William, the father of John Laird, in 1827; but the corporation of Liverpool having purchased all the property, to prevent the carrying out of his plans, no progress was made until 1844, when the commissioners of Birkenhead brought a bill into the English Parliament for constructing docks at Wallasey Pool. Many difficulties attended this scheme, but in 1857 Parliament decided to amalgamate the docks on both sides of the river in one trust, called the Mersey Docks and Harbor Board, giving power to the Government to nominate four members of that board. Mr. J. Laird was the first appointed by Government, and has continued in office since the Act came into force.

The first Act for forming a local body for managing the affairs of Birkenhead was passed in 1833. Mr. J. Laird was one of the commissioners named under that Act, and he has occupied the post of chairman of the commission, with the exception of a very short time, ever since.

Mr. Laird is a Deputy-Lieutenant and magistrate for the county of Chester, a member of the council of the National Rifle Association, and Deputy-Chairman of the County of Chester Rifle Association. He has taken an active part in the volunteer movement since its start in 1859, and has three artillery companies formed among his workmen, consisting of 70 men in each company, or 210 in all, his eldest son and partner, Mr. William Laird, jun., being Captain Commandant.

In 1861, Mr. Laird was elected Member of Parliament for Birkenhead, being the first representative sent from that place to the House of Commons.

DR. GALL'S WORKS.—We are receiving many thanks for the suggestion published in the June number relative to the republication of the complete works of the founder of Phrenology—not enough subscribers, however, to warrant the great outlay. It will require at least one thousand subscribers, at \$10 each, to warrant us in undertaking the enterprise.

MR. MILL AND PHRENOLOGY.

[We were recently shown a letter addressed by Mr. Andrew Boardman to an English friend who is on intimate terms with John Stuart Mill, from which we have been permitted to extract the following.]

I WATCHED with much interest the struggle to elect Mr. Mill to Parliament, and was gratified at the success which you had so much at heart, for I have for him profound respect, and yet I have not read anything for a long time at which I felt more hurt than I did on reading his contemptuous remarks on Phrenology in his article on the Positive Philosophy of Auguste Comte in the *Westminster Review*. Of course I do not object to Mr. Mill not believing in Phrenology. If it be true, it is to him a misfortune not to know it. My objection is to the tone and spirit of his remarks: "And what organon for the study of the moral and intellectual functions does M. Comte offer in lieu of the direct mental observation which he repudiates. We are almost ashamed to say that it is Phrenology." This is very like an invitation by Mr. Mill to his readers to join him in a contemptuous sneer, and coming from such a man will inflict a severe wound on a number of highly intellectual and most sincere men than the attacks of a whole mob of writers such as once howled through *Blackwood's* pages the cry of "infernal idiots."

In his work on Liberty, Mr. Mill says it would be well if one person would honestly point out to another that he thinks him in fault without being considered unmannerly or presuming. Relying on this, I should, if I had the honor of being acquainted with Mr. Mill, be likely to say to him, "Allow me to say to you, that in writing thus of Phrenology you are in fault. I take the liberty of expressing my opinion, that you have never read the works of Gall, for I believe that no such man as you could rise from reading them with any other conviction than that he was a keen and cautious observer, a profound thinker, and an honest, earnest, painstaking man, whose labors and conclusions ought never to be mentioned in any but courteous and respectful language. In the next place, you do not allege or say anything from which it may be inferred that you have investigated the question whether there is such relation between specific mental manifestations and the development of particular parts of the brain as to warrant the belief that the brain is a congeries of organs, each organ having a specific intellectual or emotional function. Now, if you have not made such investigation, can you justify yourself in treating contemptuously the convictions of such men as Gall, Spurzheim, Combe, Broussais, Caldwell, Vimont, Ellis, Hunter, Gregory, Otto, and others, who say they have carefully and laboriously investigated the subject, and have found that such relation does exist. I submit, too, for your consideration, whether, independently of its claims as the true physiology of the brain, a system ought to be so slightly treated of which so high an authority as Archbishop Whately said it 'employs a metaphysical nomenclature far more logical, accurate,

and convenient than Locke, Stewart, and other writers of their schools.' But beyond all this, I must express the conviction, not only that you have not investigated the subject, but that you have not attentively read any work of authority on the subject. I found my conviction on this: You attribute to Phrenology the rejection of the observation of internal consciousness; now, no warrant for such statement can be found in any such work. The necessity of psychological observation is in all such works insisted on in connection with careful observation of the development of the brain. It is the phrenologists' method of discovering and proving the relation between mental manifestation and cerebral development. You have, therefore, committed the grave fault of misrepresenting Phrenology, and then sneering at it. Pray, do you not concede that the brain is the organ of the mind? If so, then are not its organization and mode of action among the most important of problems? and are not those persons who devote themselves in a careful, truth-loving spirit to the solution of those problems worthy of respectful consideration?"

Such would be my language to Mr. Mill if our relations were such as to allow me to address him, and in saying this to him I should have in view but one object, that of leading his own just mind to consider candidly the weight due to what I have said, that the remarks might influence his course for the future.

THE UNIVERSITY OF MICHIGAN.

THE UNIVERSITY OF MICHIGAN is situated in Ann Arbor, on the Michigan Central Railway, 37 miles west of Detroit. There are three main Departments of the University, as follows: the Department of Science, Literature, and the Arts; the Department of Medicine and Surgery; the Department of Law.

THE DEPARTMENT OF SCIENCE, LITERATURE, AND THE ARTS is devoted to general instruction and discipline. The studies are arranged so as to constitute six courses of study, as follows: the Classical Course, the First Scientific Course, the Second Scientific Course, the Latin and Scientific Course, the Course in Civil Engineering, the Course in Mining Engineering. The Degrees conferred for these courses respectively are, for the first, A.B.; for the second, third, and fourth, B.S.; for the fifth, C.E.; and for the last, M.E. Students who do not wish to pursue either of the above courses, if they are prepared to enter the University, may pursue selected studies, for such a length of time as they may choose. Those who desire it may pursue a special course in Analytical Chemistry, having regular work in the Laboratory.

THE DEPARTMENT OF MEDICINE AND SURGERY presents all the advantages of a fully furnished and first-class Medical School. The instruction is carried on mostly by lectures, and the students are enabled, by availing themselves of the advantages presented, to compose the theses and pass the examinations which

are to test their scholarship and prove them worthy of graduating as Doctors of Medicine.

THE DEPARTMENT OF LAW presents all the facilities that can be desired in a Law School of the highest character.

The number of students during the year closing July 1st, 1868, was as follows: Department of Science, Literature, and the Arts, 418; Department of Medicine and Surgery, 418; Department of Law, 387. Total, 1,223. The number of graduates during the year was as follows: Bachelor of Arts, 34; Bachelor of Science, 5; Civil Engineer, 11; Mining Engineer, 6; Master of Arts, 14; Master of Science, 2; Doctor of Medicine, 80; Bachelor of Laws, 152. Total, 304.

The fund of the University is derived from the sale of lands granted by Congress to the State for that purpose, from which the salaries of the Professors are paid, and hence the charges made to students are very small. It has an excellent library, a medical museum, a museum of natural history, minerals, geology, and the fine arts,—all accessible to the students.

EXPENSES.

The only charges made by the University are: to residents in Michigan, an admission fee of ten dollars; to those who come from other States or countries, an admission fee of twenty-five dollars; and to every student an annual payment of ten dollars. The admission fee is paid but once, and entitles the student to the privileges of permanent membership in any Department of the University.

There are no dormitories and no commons connected with the University. Students obtain board and lodging in private families. Clubs are also formed by which the price of board is much reduced. The usual price paid for board in private families, during the past year, has varied from \$3 to \$6 a week. In the Medical Department a fee of \$5 is assessed for the use of the Dissecting Room to those who avail themselves of its advantages. No graduation fee is required, except \$3 to pay the actual expense of the parchment.

ADMISSION.

Each candidate for admission shall exhibit to the Faculty satisfactory evidence of a good moral and intellectual character, a good English education, including a proper knowledge of the English language, and a respectable acquaintance with its literature, and with the art of composition; a fair knowledge of the natural sciences, and at least of the more elementary mathematics, including the chief elements of algebra and geometry, and such a knowledge of the Latin language as will enable him to read current prescriptions, and appreciate the technical language of the natural sciences and of medicine.

MEDICINE.

[As to the controversy between the Allopathic and the Homeopathic systems of practice we have nothing to do. Each individual is at liberty to select for himself, when ill, the mode of treatment he prefers. He may indulge in

large doses, little doses, or no doses at all. We are frank to confess we like the latter mode the best. Here is what the Michigan University authorities say for themselves:]

In consequence of an Act of the Legislature of Michigan at its last session, granting aid to the University on the condition that a Professor of Homeopathy should be introduced into the Medical Department, much agitation and annoyance have been experienced by its friends; but the Faculty are now happy to announce to the medical profession and all the friends of legitimate medicine, that the Board of Regents, who control the University, at a recent meeting resolved, with but a single dissenting vote, that under no circumstances should such professor be introduced into the Medical College at Ann Arbor; and the Supreme Court of the State having since decided that all previous action of the Board making provision for the establishment of a School of Homeopathy at another place is not a compliance of the law, and such action thus becoming null and void, the Faculty are enabled to assure the profession that the *Medical Department of the University of Michigan is entirely free from the remotest connection with Homeopathy*—that its curriculum will not be changed, and that it will remain, as heretofore, unaffected by any form of irregular teaching or practice.

[Still, Homeopathy, Hydropathy, Eclecticism, and other schools, have their adherents. In America we have no *established* sect in religion nor in medicine; all sects and all schools are free to worship and to practice as they please.

The Michigan University is doing a grand work for the West, and we wish it the best possible success. Each State throughout the Union should follow this example and establish a University. Those who are influential in this great and good work will deserve well of the present and future generations. New York is justly proud of her EZRA CORNELL, whose name is sure to be numbered among the BENEFACTORS of the race. Give Americans education, with which to direct their energy and enterprise, and they will set the world ahead.]

WHAT IS GENIUS?

BY VIRGINIA MADISON.

IN the world's history—through all the six thousand years of its existence—there have been comparatively very few of those singularly precious characters that all men acknowledge great.

Human greatness, humanly considered, is at best but little more than a relative term, and wholly dependent upon relative consideration. Passion and prejudice have very much greater control over the estimate of men and events than reason and judgment.

"Some men are born great; some achieve greatness; And some have greatness thrust upon them," is one of those truisms of Shakspeare which takes in effect the form of a proverb, and if considered proverbial, must give rise to the question, "What is genius?"

Is it talent? Almost every man is possessed of some peculiar talent which, if properly exercised, he may turn to account; and we have the authority of Holy Writ to prove that man

is held responsible for the cultivation and improvement of his talent or talents; but this general bestowal of mental efficiency is not what is usually regarded as genius. It has been said that "genius is labor," by which perhaps is understood the education of the talent which may develop genius. But this interpretation sadly clips the wing of that rare inspiration whose flight, "like the eagle's," is far above the clouds, and whose eyes are not blinded by gazing on the sun, and puts entirely to flight the almost universally conceded belief, that genius, in the literal and positive acceptation of the term, is an inherent, eccentric, extraordinary excellence bestowed by nature, and intended to illustrate the wisdom of nature's God in his dispositions and dispensations to men.

It is true, genius may exist and fail of recognition, unless to excite ridicule or suspicions of insanity. It may exist undiscovered beneath the veil of modesty or the weight of unfortunate or unhappy circumstances. It may exist and, if unexerted or uncultivated, be as useless for good as the "light under the bushel;" or it may gleam with the fitful and erratic flash of the meteor, and leave no trace by which to mark its track upon the firmament of mind. But where genius is developed with the energy which will break all bonds, it rises upon the mental horizon in planetary splendor, and around its possessor feeble satellites revolve and borrow brightness. Genius, like the comet laughing to scorn the established order of intellectual attainment, sometimes astonishes the earth as it mounts to Fame's zenith, and pales and hides feeble stars in the glorious effulgence with which it sweeps across the firmament. Genius, then, is sometimes greatness, but greatness is not consequently genius.

USE OF THE PERCEPTIVES.—Not long ago the Canal Bank of New Orleans was robbed of \$50,000. The skill and ingenuity of the detectives in discovering the robber was really wonderful. On visiting the bank soon after the robbery, they judged that the thief must be a tall man with long arms, to have taken the money from the spot where it had been deposited; and on a minute examination of the lower edge of the railing, upon which he must have stepped, they discovered the imprint of a tack. Hence they argued that the man evidently had worn a machine-made shoe or boot, as in these a steel tack or rivet is always driven about the center or just beyond the shank. The detectives immediately devoted themselves to the study of feet, hoping to catch a glimpse of a sole of a boot with a protruding tack. They sought long and vainly. At length one day in the City Hotel they observed a large man sitting in the reading-room with one foot on his knee, and endeavoring to bend down a tack in his boot with his pen-knife. He was tall, long-armed, and a tack protruded from his boot! It was but the work of a moment to arrest the man. He turned pale, and being taken to the police-office confessed his guilt.

FALLING ASLEEP.

BY MRS. WILKINSON.

WATCHING shadows coming, going,
Deeper here, and yonder thinner,
Softly creeping
As they go—
Flitting, creeping
To and fro
O'er the pale light's ghostly glimmer,
To and fro,
To and fro,
Like the toiling of the spinner.
Weird-like visions, how we see them!
Half-forgotten yesterdays
Passing, pause,
And pass again;
Come and go,
And come again
In a pale and dreamy haze,
Less and less,
Less and less,
Swallowed up in nothingness!

CALIFORNIA "SOME PUMPKINS."

WE always liked California—her soft climate and rich soil; her cattle and horses; her rocks, ravines, big trees, and waterfalls! Her gold is rich; her silver is bright, and her grain is good. Now that we of the East are about to become near neighbors with her of the West, we are ready to sing praises to her mountains, and to her men, women, and children. Why not?

There, roses bloom in the open air at all seasons; grapes, oranges, figs, and olives grow in profusion, and all the products of the temperate zone are raised in crops scarcely paralleled elsewhere. The Sierra Nevada contains some of the finest scenery in the world, and the admirers of the Alps will soon be rushing westward to behold Mount Shasta, 14,440 feet high, and towering 7,000 feet above surrounding peaks, making as striking an object as the Matterhorn at Zermatt, which is about the same altitude and rises but 4,000 feet above the range about it. But in these American Alps, Mount Whitney equals in height Mont Blanc, lifting itself 15,000 feet, while it is surrounded by one hundred peaks, all above 13,000! And what can Europe show by the side of the Yo Semite Valley, with its perpendicular walls of 4,400 feet? In this grand range are the deposits of gold which have already yielded \$850,000,000. But gold is not now the chief product of California, the yield being at present but \$25,000,000 per year, which was equaled in value last year by the wheat crop, the exported surplus of which amounted to \$18,000,000! The wool clip, too, amounted to 9,500,000 lbs. Mining is no longer the sole or characteristic occupation, but agriculture and manufactures receive equal attention, and the mining itself is carried on in a fixed, scientific manner, so that the State has now a permanent population, and in two years past has added twenty per cent. to its taxable property. In educational and religious respects similar progress is making. There are 238 newspapers and periodicals

published in the State, of which 28 are issued daily, and 7 are in foreign languages, one being in Chinese and one in Russian. San Francisco has now, including a transient population always large, 133,000 inhabitants.

Chicago is no longer on the borders of the West. She must look out for her laurels. Alaska is thawing, China and Japan are opening, San Francisco is rising! Hoorah!

Communications.

Under this head we publish such voluntary contributions as we deem sufficiently interesting or suggestive to merit a place here, but without indulging either the opinions or the alleged facts.

THE WANING STAR.

Thou twinkling orb, with ray serene,
Attendant on the day's decline,
No more shalt thou in heaven be seen,
For thou hast ceased at length to shine.

Long time hast thou in glory shone,
With clear and undiminished light;
And now the allotted task is done,
Art passing calmly out of sight.

Yet brighter far than e'er before,
E'en at the last thou seem'st to burn;
Ere yet the light thy radii pour,
Shall to its native Source return.

Adieu! thou fading star, adieu!
Thou art an emblem of mankind;
The living soul departs from view,
And leaves a darkened speck* behind.

REV. E. R. LATTA.

THE BIBLE AND NATURE. THEIR INTERPRETATION.

BY W. H. MULLER, M.D.

THE word of revelation and the works of creation are intimately connected, and while the former is opened by spiritual science, or the knowledge of God and the human soul in its relations toward the countless forms of goodness and truth, or of evil and falsity into which it may mold itself, the latter, or the works of creation, are opened by natural science, or the knowledge of all the objects in the natural world, and of the things pertaining to man's merely temporal nature.

But it may be asked, "What constitutes this connection, or in what does it consist?"

To this we reply, that this connection between the book of revelation and the book of creation consists in a similarity or parallelism in the following points, viz.:

The possession of a common origin.
The possession of a common constitution or method of formation.

The possession of a common symbolism which reveals spiritual events in natural or literal objects and events.

First, then, they are connected by a common origin. God is the author of both. Second, they are connected by a common method of construction, each having the same fundamental characteristics; and by this we mean, that when God creates a world, a plant, an animal, or inspires the composition of a written word, each of these different creations being a product of the same Divine Mind must necessarily bear the impress of that single mind; as God can not go contrary to Himself, there must be a unity, a oneness of method, by which any divine work may always be known. Now mind, whether it be divine or human, consists of three fundamental and mental elements, love, wisdom, power; that is, we love, we know, and we do. The human mind can do no less,—God himself can do no more. These three prin-

ciples or faculties go to make up that mysterious and wonderful activity we call mind. That this is so, no one can for a moment doubt. Every one loves his life, and the thousand things that minister to his life and enjoyment. Then, out of these manifold loves are born the thoughts. Every one thinks only about that which he loves, or of that which opposes and threatens his love. Next, all the power that he has proceeds as the third element, from his love and his knowledge conjointly. Extinguish one's desire for anything and he ceases to think about it; the knowledge he had concerning it fades out of memory, and no effort is put forth, no power is exerted. Here, then, is the eternal trinity in unity, in things, seen everywhere and in everything, because it exists primarily in God, the source of all existence.

But again; if mind is thus always threefold, it follows that in every product of mind, each of the three principles of which that mind is composed—love, wisdom, power—*must show itself in the thing produced*. Love seeks some end to be attained (conjunction with its object). It requires knowledge or wisdom to see the means to attain that end, and finally puts forth power to use those means and accomplish its wished-for result. Thus love, wisdom, power, in God or man, go forth *from end by means, to result*; and in every work also of God or man these three things co-exist, and may be traced.

Now, if God inspires a book, written in human language, or if He creates a world and peoples it with living creatures, these three elements of His own mind, of His own nature, must, it is evident, be stamped upon each and all of these productions, vividly and brightly in proportion to the capacity of the thing produced, to reflect this its three-fold origin. For this reason we say that the word of revelation and the works of creation are intimately allied and connected by a common constitution or method of production, which is ever threefold.

A few examples of this great fact can not fail, we think, to render this very plain. Every created thing is threefold, and in this way, viz.:

It has, 1st. Its own peculiar and individual essence, inmost nature, or quality. 2d. It has a peculiar form, that clothes and covers the essence, as the body clothes the soul. 3d. It has a peculiar influence, emanation, or operation, the joint product of its essence and form, and which affects whatever is susceptible to and comes within reach of that influence.

Thus every mineral has its own essence or essential nature. Arsenic has a poisonous soul or essence; this is clothed with the white crystalline form known as arsenic, and when swallowed its influence causes death. Every plant has its essence or interior nature clothed with a form that perfectly corresponds with it. A pine-tree has a different soul or essential nature from that of an apple-tree, and it therefore appears under a different outward form; and the aroma and influence diffused into the surrounding air, and which flows from its peculiar essence and containing structural form, differs also from that of the apple or any other kind of tree. The tea leaf, and coffee berry are striking and familiar examples of remarkable and subtle qualities embodied in vegetable organisms, and producing effects upon the human system. An apple owes its form and tenure, its chemical composition and structure, to the essential quality or essence which resides within it; while its flavor, odor, etc., result from the interior quality and form (i. e., structure) together. If there were no interior apple essence, or quality, or soul (call it what you will), there would be no interior force to attract the particles of air and soil, and mold them into an apple. As the human soul forms around itself the human body, and shapes it in harmony and correspondence with its own character, giving it also all the power to move and act, so every created thing, whether mineral, plant, or animal, has within itself an interior force or energy, invisible and intangible, having its roots in the ever present yet unseen spiritual world, and in God the only fountain of it.

To bring the argument home to himself, the reader may trace this three-fold omnipresence in his own consciousness. Whatever he desires strongly he will think about, and what he thinks much about he will be apt to talk about. This no one will deny. The thoughts, then, are born from the love, and the speech springs from the thoughts; and not only does the speech spring from and

embody the thoughts, but the tone of voice also, in the speech, reveals the earnestness, fear, hope, or other phase of the emotion that sways the mind at the time. Here we have the three elements, the love, the thought, and the speech, the last containing the second, and the second the first, as end, cause, and effect, or essence, form, and act. It is only by the third thing, the speech, or act, that the desire and thoughts accomplish anything. It is only by means of this third, or operative element, which is always the joint product of the essence and form, that these two exert their power.

Now if the Bible is the word of God, if God is its author, must it not of necessity possess and exhibit this same three-fold character? Most assuredly. Could it be of divine origin if it did not possess this three-fold nature? Why do we know that a horse was made by God, and not by man? It is because it is alive, and moves, and does what no man-made automaton could do. It carries the proof of its divine workmanship in itself, and needs not the majority votes of a learned council to settle the fact that it is God-made. If, then, the Bible be of divine origin, it must likewise carry the evidence of this origin within itself, just as the living animal does. This it is found to do most convincingly; and the disclosure of this great fact, and the means of its ample proof, have come at a most opportune period of the world's history, when throughout Christendom men are throwing off the restraints proper to an infantile and immature stage of intellectual life, and refusing to bow blindly to human authority in matters both secular and religious. If the Scriptures, then, be of divine origin, they, just like a mineral, a plant, an animal, a human being, *must* be of this three-fold nature. They, too, must have an interior essence, an outer form, and a proceeding operation or active influence.

The essence or interior quality and life of the Scriptures is their spiritual sense. Their outer form is the literal sense which clothes and contains the spiritual sense, as the body contains and clothes the soul.

While the effect produced by reading them in a proper frame of mind is, owing to the influence that proceeds from them, to lift the thoughts and feelings from earthly things to heavenly, this influence or operation is as diverse as the characters of those who read them; for the Scriptures are a grand reservoir of spiritual food, adapted to all states and mental conditions; they are like the blood of the body, from whence the most diverse organs and tissues derive their nourishment; or like the common herbage of the earth, from whence the most diverse animals draw their food. This, then, is the argument *a priori* for the three-fold character of the Scriptures.

And we have, meeting and supporting this argument, *a priori*, the argument from experience, or *a posteriori*. We find that theory is verified by fact; for the spiritual sense, within the literal sense of Scripture, has been found to exist, and has been laid open so unmistakably that thousands would as soon deny their own existence as that of this inner meaning of Scripture. To them this spiritual sense thus laid open lends its own evidence of its divine origin. It carries the proof of its truth in itself, just as does Euclid's Elements of Geometry. The latter does not rest upon human authority, but forces conviction upon any one who will give its problems the requisite attention; and with regard to the inner sense of Scripture, the case is precisely analogous to all who come to the investigation with unprejudiced minds.

To these arguments from theory and from experience we may add the following consideration, viz.: That if the Scriptures possess no such internal, spiritual sense, and if their sole divinity lies in the literal sense, then we have the undeniable facts—1st. That the statements of this literal sense are often opposed to well-known and firmly established scientific facts. 2d. That it is often in contradiction to itself. 3d. That a very large part of this literal sense is utterly unintelligible. 4th. That if the Bible possesses nothing beyond the literal sense, it is, in that case, a so-called divine work, which is without the stamp of divinity. It is a form without an essence—a body without a soul; and when we have comprehended what we can of its literal sense, or surface sense, there is nothing to be looked for beneath it; while in even the humblest plant or animal, the deeper we penetrate from the surface the more multiplied are the wonders that

* It is stated that a star, after having shone with unusual brilliancy for about an hour, lost its light, and only a darkened speck remained.

reveal themselves to the observer. As he passes from the merely mechanical form and structure of a tree to its physiological, and then to its central, animating principle, he is led at every step to a higher order of phenomena. And if he would show why the vital principle of an apple-tree differs from that of a peach or plum tree, he must look further than its apparent and tangible properties. If, then, to reach the essential nature or very existence and life of a mere plant or animal we must pass through successive outer coverings first, how much more must it be the case with the Word of God, in which the intense brightness of the divine love and wisdom is veiled over by the literal sense, and thus accommodated, as by a cloud, to the feeblest mental eye or understanding, while the interior glory is opened gradually, in proportion as man's capacity to understand or see spiritual things is opened by the avoidance of evil and the cultivation of good affections?

Again; if God is the author, center, and life of the Bible, as is rightly held by all Christians, and if, nevertheless, this divine word has only a literal, outward, or surface sense as is also maintained, with no far richer spiritual sense beneath, then, of course, it is only a hollow shell with not even as much pith and substance within as the lushest garden weed. But how can the popular theology hold God to be the author and center of the Bible, and yet maintain that it has only a literal sense? The two ideas are utterly antagonistic. One of them *must* be surrendered. If God is the author of the Scriptures, they flow from Him as their central life, and He must fill them brimful with Himself. Therefore this literal sense—this literal history of Jewish events, etc., *must* be full of divine things—of divine meaning—that does not appear manifestly in the letter. And therefore, also, just as depth beyond depth of the marvels of the natural creation opens up to the ardent student of nature, in proportion as his intellectual eye is opened by the study and love of nature, so likewise are depths beyond depths of the marvels of revelation—of the world of spiritual things, opened to the spiritually-minded student of the Bible in proportion as his eye for spiritual truth is opened by the *love* of God—or as he approaches the divine center by likeness of character. To all this must be added the fact, that a thousand questions may be asked of the theology that denies an internal sense to the Bible, for which it has not a word of reply; but which are answered in a most wonderful, rational, and perfectly satisfactory manner by that internal sense, the key to unlock which is the law of correspondence between spiritual and natural things.

In its summing up, then, this connection between the Word and the works of God in outward creation is shown as follows:

1st. They are connected through God their common author. 2d. They are connected through the common three-fold structure or constitution which we have described—common to mineral, plant, animal, man himself—and the Scriptures; to everything in the natural or spiritual worlds, and for the sole reason that God, the source and author of all things, is Himself of a three-fold nature, and must of necessity impart this trinity in unity to all His productions. 3d. They are connected by a common symbolizing of spiritual things, by and in nature.

The literal sense of the Bible is but the outward clothing of an inward spiritual sense; so also the outward forms and phenomena of creation, in mineral, plant, or animal, are in like manner only the symbols of more interior qualities; the deepest and most central of which is something spiritual; that is, something in the mind of God or man, of which such mineral, plant, or animal is the material embodiment, and without which spiritual element as its center and very life, it could have no existence. All created things, then, have a spiritual significance, just as the Bible history of Joseph and his brethren, or that of the journeyings and wars of the Israelites, have their spiritual import. Whether we actually behold outward objects and transpiring events, or whether we read of them in a certain order in the Bible, their spiritual import is and must be ever the same, according to the eternal law of correspondence between things of mind and things of matter, or nature. The mountain, river, tree, and horse that help to form the landscape, and that which one contemplates from his

window, have precisely the same symbolical or representative meaning that they have when the words mountain, river, tree, horse are met with in the Bible; and as already stated, the men of ancient times, before the knowledge of correspondence between spiritual and natural things was lost (it is now being restored), could interpret the meaning of every natural object, and profit by the instruction.

Sounds are the souls or inner things of words; ideas are the souls of the sounds; and emotions the souls of ideas. Here are three steps inward from the outer covering—from dead forms of letters and words—to unlock even the literal sense of anything written.

In any product of human skill—a painting, a statue, a work of architecture—whatever its merits, they lie all upon the surface. But in a living man—in an actual landscape—the outer surface is but a covering to countless wonders within. If man has a spiritual nature; if he has spiritual thoughts and affections that are far above his merely natural ones, as heaven is above the earth, then we say he can not stop in the literal sense of Scripture, but must of sheer necessity continue this unlocking process—must continue to pass from lower to higher, from outer to inner revealings of divine truths, just as long as the soul with its affections and intelligence develops upward. This is not theory; it is fact, as solid as mathematics.

THE BROKEN HARP.

BELOVED harp! what baleful spell
Has stole away thy magic charm?
Thou once could'st make this rapt heart swell
With love and hope and pleasure warm.
But now, alas! thy living strings
To my quick touch respond no more;
This eager hand no music brings
From thy still chords, so sweet before.

No more awakes thy olden strain.
The tearful years have snatched away
The bliss of youth, and ne'er again
Can I of love or friendship play;
The smile of joy that, fading, died;
The dust of hope, that, crumbled, sleeps;
Their echoes faint in thee abide,
Nor wake when my hand o'er thee sweeps.

Farewell, sweet harp! Each former thing
I deemed so fair is ashes now;
Of mournful themes I can not sing,
But weep the tears of utter woe.
Farewell, sweet harp! Now, from thee, too,
I must forever, ever part:
Oh, what a world! Adieu, adieu!
I leave thee with a breaking heart.

BENJAMIN G. RICE.

FRIENDSHIP, NORTH AND SOUTH.

AMERICUS, GA.

EDITOR OF THE A. P. J.: *Dear Sir and Brother*—You will observe that I address you as Brother. I do not know that we are Brother members of the Church, Brother Sons of Temperance, Brother Odd-Fellows, or Brother Masons; but we are Brother believers in the great and good science of Phrenology, which harmonizes with the Holy Scriptures, and which teaches us to love and do good unto all of our fellow-men.

We of the South and you of the North should all be Brethren, not only in name but in feeling. For four long years we had the spirit of war and of hatred. We should now cultivate the spirit of peace and of brotherly love. I see in a late JOURNAL that you propose "a statesman for President instead of a military man." To which I say Amen. We want now a man for President who is governed by the spirit of Christianity, and whose delight it would be to see our country living in peace and prosperity. Let us all then encourage this spirit, and inculcate it upon the family as the mainspring of its peculiar joys. Let its language be made to old and young "familiar as household words." Teach it to the school, as a lesson never to be unlearned, as an indispensable part of both youthful and manly enjoyment, and as an

important preparation for active life. Urge it upon the Sabbath scholar, and imbue the opening minds of the rising generation with that lovely wisdom whose "ways are ways of pleasantness, and all her paths are peace." Commend it to the neighbor as the secret of happy intercourse with those about him. Cultivate it in the Church as an imperative obligation, and an essential part of its piety and prosperity.

By the employment of these and other means we should *aim steadfastly at the goal of national peace*, and let our sympathies extend so widely as to embrace the globe, and let our views of duty and faith in God animate us to every effort toward abolishing the curse of war.

We should elect for our *rulers and legislators* men who love peace. We should select for our ministers of the Gospel the "peace-maker," for "How beautiful upon the mountains are the feet of him that bringeth good tidings—that *publisheth peace*!" We should subscribe for and encourage newspapers and magazines that are in favor of peace.

If we would avoid contention, let us obey from the heart that "royal law" which will forestall it with holy, tender sympathies. If we would be happy, let us foster those kind dispositions and sweet affections whose absence is misery, but whose presence is delight. These are the dispositions and feelings that I would cherish toward my brethren of the North, and which I would be glad to know prevailed throughout all sections of our great country. May the Lord hasten the time when that angels' song, which was sung at the birth of Jesus, after having been drowned for centuries in the harsh clamors of human strife, be again heard and echoed by every heart: "*Gloria to God in the highest; on earth peace, good-will toward men.*"

Fraternally and truly yours, ALEXANDER KING.

EXTRA-MATERIALISM.

THE solemn and dogmatical manner in which the modern German school of materialistic philosophers (so called) assume the non-immortality of mind, on the supposed logical basis that the *observed* forces of nature, inherent in matter—the known co-existing forces necessarily inseparable from matter—are the ultimate cause of all things, without the primal impressment of an intelligent creative cause for the government of those laws controlling matter, is unfortunately gaining many inconsiderate adherents. I say unfortunately, as such dogmatic doctrine needlessly saps, or attempts to destroy, our cherished hopes of a continued and progressive being beyond this life, as well as our happy and rational belief in a re-union of affections formed here; and also exerts a demoralizing influence upon this life in the thus assumed absence of responsibility to a higher Power for acts performed here. Such doctrine also involves that particular mental blankness associated with the idea that there is no intelligent Power above that of arrogant human nature, which, with all other animals, is thus made to appear to be the mere product of material forces, necessarily as unfeeling as they must be blind in action, having no possible design; whereas natural results are all evidently the effects of design.

It seems to be assumed by these modern philosophers that the forces of nature are adequate to the production of all that exists, including mind. As the inevitable results of the inherent attributes of matter, they attribute to heat, light, electricity, actinism, and such other known forces, the sole moving causes, or motive powers, of all grades of mind and forms of matter. These existing powers, in action, we acknowledge as the *direct* medium in aggregation and dissolution of all forms of matter, but not as the ultimate or primal cause of such effects, which necessarily lies in the infinitude of successive causes as well as successive results, immeasurably back of and beyond those immediately detected causes, as they appear to finite comprehension. To every cause there is an antecedent cause, retrospectively repeated, back to the ultimate or primal cause of all, which is doubtless a creative, intelligent, and designing energy, far beyond our ken. We can no more detect the ultimate cause than we can the ultimate results, even in the divisibility of matter; or comprehend unlimited space.

The infinitude of things, as well as of space, can not

be embraced by the finite. Nature to us is seen through the finite comprehension only, and thus we blindly limit the forces in operation to such of them as we can take cognizance of, and, necessarily, those forces and results would appear the same to us as the all effective, whether they were the ultimate and only existing forces, from known causes, or not; whereas, every force must have a cause, and every cause an indefinite number of preceding causes, back of and producing those we take cognizance of. Present science may attribute to fifty original simple elements all present combinations; whereas future science may reduce that number to one half, as the only *detected* physical origin of all things, as far as scientists can yet foresee. Some of the recently assumed original simple elements are already considered modifications by combination, as ozone is now thought to be a particular electric state of oxygen—the changed estimate of potash, soda, etc.; thus we can neither grasp all the causes or all the results.

While it is incomprehensible that matter is, of itself, adequate to the adaptation to future wants (always pre-coding) of contemplated existences, as they have relatively come upon the stage of existence in successive developments, it is wholly impossible that such forces, left to the blind, uncalculating action of matter upon matter (so long as the same is undirected), with whatever tangible attributes we may assign them, should produce intelligence, perception, reason, and will. Here we evidently rise to the dignity of the consciousness of a great First Cause, "least understood," the ultimate origin of all—the Great Unknown to finite minds except in our consciousness of his being, and his self-evident attributes of infinite power, wisdom, and beneficence, as displayed in nature.

For finite minds to limit causes to the perceived is, necessarily, presumptuously wrong, as every cause must have had a cause, as far as we can grasp the idea, to infinity; just as we take cognizance of infinite space by overlapping successive boundaries.

Science, too, is not so far advanced, as yet, and probably never will be, when we can say this or that is a simple element, uncombined; any more than we can presume to detect the ultimate atoms of matter; and until we can detect every such atom, in any apparently simple element, we can not say that atoms from another element are not combined with it to form a compound substance.

All such dogmatic attempts are simply audacious, serving only to display our ignorance of the infinite, in extent, divisibility, combination, duration, forces, and their causes, as well as origin of intelligence and its destiny.

It appears to me very evident that all of this new extreme materialism is built on the unreasoning false hypothesis that all things owe their origin to *observed* forces, proceeding from *known* causes, without the intervention or impress of an intelligent First Cause; thus losing sight of the essential facts, that causes and their forces are not limited to the *observed*, but necessarily are preceded by an indefinite number of operating causes, far beyond our ken, which may thus center in and emanate from the great unknown intelligent First Cause of all, so far as philosophy can detect, and which the apparent forethought in observed phenomena warrant us in maintaining. Thus we may take comfort, that even as these *short-sighted* extremists acknowledge that all matter and all forces are alike indestructible, we may infer that the comparatively important characteristics of *mind* forces too are indestructible; and not as they assume, in their falsely based edifice, that its greatest ornament, the mind, is a mere function or quality of a part of its furniture, disappearing, or annihilated, with the changed form of such furniture. It is a little singular that in the changed forms of such, *i. e.*, the death and decay of our bodies, while they claim their permanence in some other form and place, the same may not be admitted for the mind force, simply because they choose to style it a mere function of brain, which is a pet hypothesis with them; whereas the only known functions of the brain are to receive and concentrate nerve impressions from the senses, for the use of the mind to weave into tangible expression; thus conclusively evidencing the *independent* thought of this *master-working mind* upon the body it temporarily occupies.

Some modern philosophers seriously discuss time and

space in relation to entity or non-entity, subjectively or objectively; as if time, which merely comprehends duration, and space, simply unlimited area, can be thus treated; even to prove that they are not either, is simply sophistry, not rising to the dignity of a semblance of argument.

Everything in life has doubtless resulted from primordial germs, impressed with formulative laws by an intelligent Creator, adequate, in immense lapse of time, to the production of all existing varieties, without the necessity of direct individual creations; thus in the highest degree embracing the Darwinian theory of development, which origin and results no philosophy can gainsay.

CHAS. E. TOWNSEND.

LOOUST VALLEY, QUEENS CO., N. Y.

"MAN IN THE IMAGE OF GOD."

A WRITER, in the February number of the A. P. J. says it is "infinitely impossible" that man should be "the image of God" in any sense.

In assuming this position he not only condemns Prof. Agassiz, but our standard religious writers. He also disputes our lexicographers!

He bases his argument on two propositions: 1st. "The term 'Image of God' can not consistently be understood as God's spiritual image."

2d. "Image is exclusively a material, or resemblance of material form."

By reasoning from these propositions, he can, doubtless, make the term "Image of God" appear very absurd. But his propositions are sustained neither by fact nor argument.

The second (which we will examine first) is in direct contradiction to the definition given by Webster, viz.: "Image, * * * 7. An idea, a conception, a picture drawn by fancy."

"Imagination, * * * 2. Conception, image in the mind, idea." Who ever saw a "material" idea, or conception; a "material" image in the mind?

By his "exclusively material" definition of image, Mr. T. only confuses the whole subject.

We have to refer only to those religious writers who speak from high authority, to show that his first proposition is equally groundless. He claims that "It is idle for any to assume that the phrase 'image of God,' has reference to God's spiritual image."

The only reason he gives for his assumption is, "because such perversion of language has no meaning which can elevate to it the modern conception of Deity."

But if our dictionaries are to be regarded, it is not "a perversion of language," but a legitimate expression. The "modern conception of Deity" must be quite heathenish in his estimation, if it can not be elevated above a material image of God, simply the conception of idolaters. We can say with more propriety, that it is idle for any to assume that the passage had reference to the "material" image of God, "as such language" has no meaning which can elevate it to the modern, or even the *ancient Jewish* "conception of Deity."

But by reference to the passage in Genesis, we find that man was to subdue the earth and "have dominion over every living thing." He was constituted lord of the world. In this sense he could be considered the image of God.

We find in 2 Cor. iii. 18, "But we, beholding as in a glass the glory of the Lord, are changed into the same image from glory to glory, as by the spirit of the Lord." Does this refer to the "material" or spiritual image of God? And in Col. i. 15, "Who is the image of the invisible God." Must this passage "necessarily" refer to God's "material image?"

Let us notice one more proposition of his. "If God is infinite, and man finite, then God is infinitely beyond man, so that comparison is infinitely impossible." To illustrate, let us apply the proposition to tangible existence. If the sun is, approximately, infinitely superior to the spark of a glow-worm, then comparison between the two is approximately infinitely impossible.

Who does not see that the immense disparity does not in the least affect the possibility of such a comparison.

In conclusion, if Mr. T. supposes that spiritual existences come within the province of "material" science, let him measure, weigh, or calculate the amount of a man's wisdom or happiness by it.

A. D. HARRIS.

PRESENTIMENT.

I TOUCH the lyre to-day, and, lo,
The strain it gravely gives me back
Falls measured on the air, and slow—
Its notes are all elegiac.
The day without is summer bright,
The birds sing clear, the flowers are fair;
But as the darkness is the light,
When ill lurks in her secret lair.
As if cold metal bound my head,
And chains my feet forbade to fly,
I sit within a nameless dread—
In gloom hangs low my morning sky.
A something fearful 'waits me here;
To it I haste, though I would stay;
I feel, but can not see it clear,
And can not chide my fears away.

MARIE S. L.

PERSONAL.

WHERE ARE THEY?—Mr. E. D. STARK, once a photographic writer, then lecturer and practical phrenologist, is now settled, and practicing law in Cleveland, Ohio.—Mr. D. G. DERBY, originally from the East, has taken up his abode in Missouri. He continues to lecture and examine at all seasons, except during the summer.—Dr. J. M. WETTING, having acquired a competency lecturing on Physiology and Phrenology, is permanently settled in Syracuse. He owns a block of buildings there, including the largest public hall in the town.—Mr. C. J. HAMILTON, formerly connected with our office, both as reporter and examiner, is largely engaged in real estate and in the practice of law in Chicago. We have heard his name proposed for a seat in the State Legislature. He is every way adapted to the place,—intelligent, honest, temperate, industrious, and enterprising. He is still unmarried,—his only fault.—Mr. JOHN L. CAPEN is doing a useful work in practical Phrenology at 722 Chestnut Street, Philadelphia.—Mr. D. P. BUTLER, of Boston, has gone into the Lifting Cure, on quite an extensive scale. He is doing nothing in Phrenology at present, and that field is unoccupied.—Mr. C. S. POWERS is at home, in Minnesota. He will probably soon enter upon a fall and winter campaign in the West.

OUR FORMER STUDENTS NOW IN THE FIELD.—We receive encouraging letters, and occasionally visits, from our former students; and we bespeak for them, wherever they may be, the kind consideration of our friends; they are worthy, and will do no discredit to themselves, or to the cause they advocate.

Mr. DUNCAN MACDONALD, of Michigan, writes cheerfully, and is expecting to engage this autumn in the lecturing field. Hitherto he has been quite successful.—Mr. JOSEPH MILLS, of Ohio, writes us that his heart is in the cause, and he aims to place Phrenology on high Christian ground.—Mr. J. C. MERFIELD contemplates spending the fall and winter in western Pennsylvania, Ohio, or Canada.—Mr. PRICE, of Iowa, has been laboring in Pennsylvania since last winter, with marked success. He lectures in the Welsh language to his native countrymen, and in English to those who understand English.—Mr. H. W. EVANS, of Pittston, Pa., also a Welshman, has been very successful, especially in presenting Phrenology to Welsh citizens of the States of Pennsylvania and New York.—Mr. PIERCE, of Connecticut, contemplates entering the field this autumn for a winter's campaign.—Mr. AYRES is at present in Michigan, and we hear a good account of him.—Mr. HARKER, of Pennsylvania, intends to visit some of the Southern States soon, and we wish him much success.—Mr. DODGE, in a recent trip through Connecticut, met with flattering success in most places.—Mr. HUMPHRIES, of South Carolina, will spend the winter in the Southern States. He is well spoken of as a gentleman, and we doubt not he will give a good account of himself wherever he goes.

And so we hear from various members of previous classes, and not only from them, but of them. We trust they will keep us advised as to their location and movements, and we will keep the public advised.

A CHANGE.—The man who now pays the largest income tax in Newburyport, Mass., began life by working in the Newburyport *Herald* office for two dollars and a half a week.

"What They Say."

Here we give space for readers to express, briefly, their views on various topics not provided for in other departments. Statements and opinions—not discussions—will be in order. Be brief.

PROGRESSION.—Though wars have not yet ceased, we can see the Christianizing and humanizing effects of progress. And we are warranted in supposing that the time will surely come "when the sword shall be beaten into the plowshare, and the spear into the pruning-hook." Indeed, the Holy Scriptures abound with prophecy of that glorious era of universal peace and holiness. There is a superintending Providence, an Omnipresent Activity, which, like the strong undercurrent of a mighty river, is conducting us to the certain issue—the glorious realization of prophetic vision and lofty aspiration. Yes, the doctrine of the millennium, so often, perhaps, misunderstood, is founded on the wisdom of God revealed in the Prophets, and demonstrated by the great law of Universal Progression. All things were made under this law, and are upheld by it. Yes, all things, from the invisible *animalcula* in our food and drink, up to the invisible archangel of the skies, are the subjects of this divine law.

We aver, then, without fear of successful contradiction, that man was not created and placed here simply for trial or probation, but for progression. Probation is incident to the greater law—trial is one of the means of our progress or improvement. God's purpose is not to try a man, to see whether he will do, for this he already knows, but to develop the individual responsibility and capacities of the soul. Man was created for endless progression in the heavens of everlasting love. If we discover that progress is a law of nature, have we any authority for thinking the law will ever become annulled? If not, what endless prospects present themselves to the aspiring soul! The more we unveil the mysteries of nature, the more we discover the germs of good, and the more we feel that our own globe will one day become the abode of divine order, and then will God's will be done on earth as it is in heaven. Will Jesus' prayer ever be answered? We believe it will, for so he teaches us to believe. Let us, then, trust that voice within us, which has ever caused its accents of peace and harmony to be heard in the midst of those appalling discords and that frightful amount of misery which man's ignorance has realized all over the globe. The vivifying sunbeam, the smiling sky, the limpid brook, the verdant turf, the perfume of flowers—all the infinite and unceasing kindnesses of Nature, deny that horrible malediction which desponding man has imagined weighs upon his terrestrial and celestial abodes. How can we help to bring on this good time? "By resolving to do nothing against, but everything for the kingdom of heaven on earth. Happiness for all being the object, let every action during the day spring from such well-conceived and well-developed thoughts as lead to its attainment. In the evening retire—at peace with yourself—at peace with the divine principles of universal love and wisdom. Be instructed by the past, and by all it has brought you. Be thankful for the present, and for all its blessings. Be hopeful for the future, and for all it promises to bring you. Observe these rules, and the harmonies and the angels of Father-God will be with you, and

'peace on earth and good-will toward man' be realized."

REV. H. C. FISKE.

TALKING WOMEN.—Here is a "communication" on the subject which we submit without comment.

MR. EDITOR: In the August number of your JOURNAL is the query—May women talk in public?—with your reply; the reading of which suggested to my mind another query that I would like to have answered: Is there any truth in the reputation that women have always received from men, namely, that of being great talkers? or is it a mere slander of the opposite sex, who, being greater talkers than women, are thereby enabled to keep it alive? If you reply that women are greater talkers than men, I would ask if that fact does not imply their better adaptedness to speak and to teach. If God has thus set the seal of their fitness or "aptness to communicate," is it not worse than arrogance for men to "fly in the face of fact," and say that woman may not speak in public? or do they fear the contrast if their sisters are allowed equal opportunities with themselves?

The August number of *Godey's Lady's Book* has something on this subject, of which the following is an extract:

"LADIES' TALK.—They have a readiness of resource which enables them to say the very thing that is most right at the very moment when it is most wanted. This abundance of ideas and quickness of fancy with which women are for the most part so well endowed, leads, then, in certain cases, to all sorts of good and wholesome results."

WHAT IT LEADS TO.—Our efforts are encouraged, from time to time, by the receipt of a frank acknowledgment like this: "My Dear Sir—I inclose \$3, for which please continue the JOURNAL another year. I should feel it a hardship indeed to do without it for a single month. Through its influence, I have been led to quit the use of tobacco; and I find that I have gained greatly in health, and in the saving of money, by so doing. Since I relinquished the habit, I have felt myself more and more a man. Thinking it would not be uninteresting to you, I would say that by giving up smoking I have saved at least \$110, sufficient to pay over thirty-six subscriptions to your JOURNAL. With my experience sustaining my opinion, I think it very surprising that tobacco smokers do not consider the injury they are doing themselves, and the expense they are at, in continuing this unworthy habit, and I am sure that if they viewed the matter in a proper light, they would be led, like myself, to abandon it. I am sure that very few of the readers of the JOURNAL can continue in a habit so pernicious. Truly yours, J. G. V."

A PLACE TO VISIT IN NEW YORK.—The editor of the *Essex Banner*, Mass., did us the honor to go over our premises not long ago, and thus alludes to his visit in his paper:

Let not our friends fail to call at the Phrenological Rooms, 389 Broadway. Here may be found many works—books—of great value, and when purchased with a direct reference to the needs and aims of the buyers, they are of incalculable value. By the science of Phrenology, man is enabled to know himself, to correct his errors, to strengthen his weak points, and to give a right bias to his efforts in life.

THE PHRENOLOGICAL JOURNAL is full of sage, popular, and humorous pieces, profusely illustrated. Our friend Wells is a wise and good teacher. We must agree, however, to disagree on theological matters. We don't believe "Phre-

nology is commissioned by God to show men their mental and moral constitutions."—Rev. J. P. Newman, in the *New Orleans Advocate*.

Ah, my dear Dr. Newman, do you not know what will become of "unbelievers?" Besides, suppose you know something which another does not know. Is your knowledge to be offset by his ignorance? When intelligent men know the truths whereof they affirm, mere belief for or against can not alter the facts. Here are our claims. The brain is the organ of the mind, as heart, lungs, stomach, etc., are organs of the body, and each performs its special function. The shape, size, and quality of each part indicate its strength and character. Man has a body and a brain. God made both. It is ours to find out all we can of the use or abuse of all the parts. Each part reveals something; hand, foot, trunk, head, face, etc. We study all together, and if you will join our private class in January next, we will engage to convince you that Phrenology, in connection with its collateral sciences, is "commissioned by God to show men their mental and moral constitutions," as no other system, science, or theory now known to man shows them.

LIFE IN THE SOUTH SEA ISLANDS.—A lady sends us the following from the Rocky Mountains. She has long been a reader of this JOURNAL, and is active in extending its circulation wherever she can. Here is an extract from her letter:

I am a widow, sixty-five years old. I have been in the Mormon Church more than thirty years. I have passed through hardships and sufferings almost beyond endurance. I have had a deep experience. I was two years on a mission to the South Sea Islands with my husband and four daughters. I have a journal of fifty years' experience. Many incidents in my life, I believe, would be encouraging to a worn spirit and sorrowful heart. I have trusted in God and been delivered in times of trouble. It seems to be your prerogative to write about the great ones of the earth; perhaps your great liberality would induce you to write something about little folks, even Mormons, or Latter Day Saints.

This lady kindly offers to give us an account of her experiences among the South Sea Islanders, and believing it would be entirely new to the readers of this JOURNAL, we are disposed to give the lady a hearing, and our readers something of life from a new place and new point of view. Let us have the South Sea Islanders.

THE PHRENOLOGICAL JOURNAL is plain in precept, practical in doctrine, and spicy, withal.—*Hastings (N. Y.) Gazette*.

We esteem the PHRENOLOGICAL JOURNAL as among the richest and most valuable of our exchanges. As a definer of man—the physical, mental, and moral man—we are acquainted with none better.—*Kentucky Intelligencer*, Louisville.

THE ILLUSTRATED PHRENOLOGICAL JOURNAL is one of the finest specimens of magazine literature and art that we have seen.—*Catholic Telegraph*.

THE Methodist Recorder, of Ohio, says of the PHRENOLOGICAL JOURNAL: "There is no periodical that comes to our office which displays more ability in its 'make up' than this. Its views, however, on many subjects are often in direct opposition to our own."

[Now we can not see wherein its views are not in accordance with the truth, and, in the main, with those of the *Recorder*. Specify, please specify, Mr. Editor, wherein we are not agreed; we stand ready to correct all errors. Will the *Recorder* do the same?]

Literary Notices.

[All works noticed in THE PHRENOLOGICAL JOURNAL may be ordered from this office, at prices annexed.]

EXPLORATIONS OF THE NILE

TRIBUTARIES OF ABYSSINIA. The Sources, Supply, and Overflow of the Nile; the Country, People, Customs, etc., interspersed with highly exciting Adventures of the Author among Elephants, Lions, Buffaloes, Hippopotami, Rhinoceroses, etc.; accompanied by Expert Native Sword Hunters. Illustrated. By Sir S. W. Baker, M.A., F.R.G.S., Gold Medalist of the Royal Geographical Society; Author of the "Albert N'Yanza Great Basin of the Nile," "Eight Years' Wanderings in Ceylon," "The Rifle and the Hound in Ceylon," etc., etc. With a Supplementary Sketch relative to the Captivity and Release of English Subjects, and the Career of the late Emperor Theodore. By Rev. W. L. Gage. Hartford. Published by O. D. Case & Co. 1884.

We copy the title of this superb work in full, as the best statement we can make of its objects. As to its literary and scientific merits, we can not speak too emphatically. No other writer of equal scholarship has ever explored that wonderful country. The author and his wife, Lady Baker, traveled on camels and horses, living in tents, and subsisting on game for several years in Africa, and now give us an elaborate and highly interesting account of its mountains, forests, lakes, rivers, fish, birds, reptiles, animals, soils, and productions.

The book describes the peculiarities and modes of life of many of the African tribes, and also the habits of the lion, the elephant, the giraffe, the hippopotamus, rhinoceros, ostrich, etc., and the methods of hunting and capturing them. The work contains upward of 600 octavo pages, on fine paper, clear, large type, illustrated with full-page engravings printed on tinted paper, and the whole substantially bound in fancy muslin. It is gotten up in excellent style, by one of the most enterprising and extensive book-publishing houses in America. The work is sold only by subscription. The recent passage of arms between England and Abyssinia is discussed; and the character of Theodore, late king of the Abyssinians, described, with a frank impartiality. \$3 50 to \$5.

MODERN WOMEN, and What

is Said of Them. A Reprint of a series of Articles in the *Saturday Review*. With an Introduction by Mrs. Lucia Gilbert Calhoun. N. Y.: J. S. Redfield, Publisher. Order from this office.

The articles collected in this convenient form are known by the following titles: The Girl of the Period; Foolish Virgins; Little Women; Pinchbeck; Feminine Affections; Ideal Women; Woman and the World; Unequal Marriages; Husband Hunting; Perils of "Paying Attention;" Women's Heroines; Interference; Plain Girls; A Word for Female Vanity; The Abuse of Match-Making; Feminine Influence; Pigeons; Ambitious Wives; Platonic Woman; Man and his Master; The Goose and the Gander; Engagements; Woman in Orders; Woman and her Critics; Mistress and Maid, or Dress and Undress; Aesthetic Woman; What is Woman's Work? Papal Woman; Modern Mothers; Priesthood of Woman; The Future of Woman; La Femme Passée; The Fading Flower; Costume and its Morals; Pretty Preachers; Spoiled Women.

In one volume, 12mo, handsomely printed and bound in cloth, beveled edges. Price, \$2.

ISLAND OF THE GIANT FAIRIES.

By Jas. Challen. Philadelphia: Howard Challen.

A light, tripping little poem, with a measure as graceful as the soft ripple of fairy wings. It doubtless intends to commemorate the island of Mackinaw, known in the Indian tongue as the "Island of the Giant Fairies." For those acquainted with that region the poem will have a lively interest.

LOOMIS'S MUSICAL JOURNAL.

Devoted to the Interests of the Musical Profession, Masonic Fraternity, and Odd Fellowship. Monthly, \$1 a year. New Haven, Conn.

What natural relationship there can be between music and Masonry we are not informed. Certain it is, Mr. Loomis is making a very cheap and interesting periodical. His second volume was commenced on the 1st of August.

Here is a paragraph which he quotes in favor of Masonry:

"Within the folds of this far-spreading organization are united all the races of man—Caucasians, Mongolians, Malaysians, and Indians [what about the Negro? why not include him?]; here, on the common basis of charity, meet men of all creeds—Christians, Jews, Mohammedans, and all sects and religions. An institution of this kind, it appears to us, breathes the very spirit of Christianity, which is a love that would embrace all the human race."

[But will not Christianity itself do all this? Are Masonry and Christianity synonymous terms? May one be a good Christian and not be a Mason? Will one grow in knowledge, wisdom, justice, industry, prudence, purity, temperance, and grace, by becoming a Mason *without* Christianity?]

JOURNAL OF THE SPECIAL CONVENTION OF THE PROTESTANT EPISCOPAL CHURCH IN THE DIOCESE OF VERMONT, FOR THE ELECTION OF A BISHOP. Held in St. Paul's Church, Burlington, March 11, 1868.

We are indebted to Mr. Thomas H. Canfield, the Secretary of the Convention, for a copy of its very interesting proceedings. At this convention, Rev. William H. A. Bissell, D.D., of Geneva, N. Y., was unanimously elected to fill the Episcopate made vacant by the recent death of the distinguished Bishop Hopkins.

PORTRAIT GALLERY. 3 vols.

Leipzig: J. J. Weber.
The "Portrait Gallery" contains the portraits of most of the distinguished statesmen, theologians, philosophers, scientific men, explorers, warriors, authors, poets, artists, etc., etc., of modern times, selected by Mr. Weber from his *Illustrirte Zeitung*. The portraits are engraved in the finest style of German art, each being accompanied by a succinct biography. The single number at hand contains Princesses of Wales, N. P. Banks, B. F. Butler, von Cornelius, King of Greece, King of Bayern, Carlotta Patti, Ernest Renan, W. M. Thackeray, and many others.

MINNESOTA DAS CENTRAL

GEHIEBT NORD AMERIKAS. In seiner Hauptverhält nissen dargestellt. By Edward Pels. Leipzig: J. J. Weber. 1868.

This useful work is intended more especially as a hand-book for Germans about to emigrate to America. It gives a brief history of the State, its advantages as a place of settlement, its climate, wealth, future, etc. The natural beauties of Minnesota scenery are represented in six well-engraved woodcuts—of Taylor's Falls, Fort Snelling, St. Anthony's Falls, the Minnehaha Falls in Summer and Winter, and the Silver Cascade below St. Anthony's Falls. We commend it to the notice of our German readers.

HAUSSCHATZ DER LÄNDER UND VOLKSKUNDE.

By Alexander Schoppe. Leipzig: J. J. Weber. 15 numbers.

This treasury of Geography and Ethnology is the collected pictures from all the new literature which portrays "land and people," as they exist to-day in all parts of the globe. It is a remarkable work, and one worthy the attention of our readers. To give an idea of it we may mention that in describing the Chinese, the compiler has selected his material from four different sources. Thus, R. Andrée gives us the Character of the Chinese; E. R. Huc, the Freedom of the Chinese, the Chinese as Merchants, Social Life; R. V. Scherzer and E. R. Huc, a Chinese Banquet; E. R. Huc, Chinese Architecture, Floating Islands, Chinese Women, Decay of Morals and Poverty, and so on through the Opium-Eaters, Tea-Drinkers, Religions, Temples, Priests, etc., etc. Each country is treated in this thorough manner.

The work is now passing through a new and improved edition. The engravings, of which the work will contain upward of one hundred and fifty, are finely executed.

THE SCRIPTURAL CLAIMS OF

TOTAL ABSTINENCE. By Newman Hall, LL.B. 18mo, pp. 68. Price, 15 cents—richly worth \$5. New York: J. N. Stearns, publisher.

Of all the good things this well-meaning writer and speaker ever did, we know of nothing *better* than this.

OUTLINES OF THE UNITED STATES GOVERNMENT: Its Origin, Branches, Departments, Institutions, Officers, and Modes of Operation.

By Anson Willis. New York: N. Tibbals.

We are of opinion that much of the misapprehension, contention, and confusion existing among the masses of the American people on political subjects is due to the widely-prevailing ignorance of the actual character and spirit of our Government. Very few of the rampant, loud-mouthed politicians, who seek to lead, are well informed on national matters, and do not make much effort to post themselves up in the details. One of the essentials to the maintenance of our Government and institutions obviously is, a correct knowledge of the principles involved in them and the nature of their operation; yet how few there are of the professedly intelligent who possess this correct knowledge! This lamentable truth should stimulate inquiry, especially on the part of the rising generation that will soon be called to take an active part in affairs of great moment. Mr. Willis' book is most opportune, and should be generally read. It is written with clearness, and in a style of acceptable brevity. The book is valuable as a work for reference.

PHRENOLOGISCHE BILDER.

Zur Naturlehre des menschlichen Geistes und deren Anwendung auf Wissenschaft und Leben. By Gustav Scheve. Second enlarged and improved edition: Part IV. Die Phrenologie in der Anwendung. Leipzig: J. J. Weber.

We have received from Mr. Weber this installment of Dr. Scheve's Phrenological Pictures, entitled "Phrenology in its Applications" to Religion, the Right of Punishment, Education, Plastic Art, Politics, etc. The three former parts treat as follows: I. Phrenology in Outline; II. Phrenology and Psychology; III. Phrenology and Medicine. The appendix of German literature on Phrenology is especially valuable. Taken together, the four parts form one of the best works on Phrenology in the German language we have yet seen, and we will give a more extended notice on the receipt of the remaining volumes. We can supply the work at a cost of \$10.

LITTLE DORRIT. By Charles Dickens.

With eight Illustrations. Boston: Ticknor & Fields. 12mo. Cloth, \$1 50.

Another volume of the "Charles Dickens' Edition," and fully up to the standard in style and finish.

ANDREW DOUGLAS. A Temperance Tale.

By the author of "Madeline," and "Harry and his Dog." 18mo, pp. 233. Price, 75 cents. New York: National Temperance Society, J. N. Stearns, 173 William Street, Agent.

Just the thing for a Sunday-school library, or for the family. Lads who read this, and who remember it, will be less liable to become dissipated. It is strengthening to one's moral nature.

HANS BREITMANN'S PARTY.

With other Ballads. Philadelphia: T. B. Peterson & Brothers. 50 cents.

This humorous collection of rhymes in a melody of Teutonic-English has already acquired much notoriety. The valorous Breitmann in arms and out of arms is very graphically and laughably described. One verse must serve to illustrate our notice of the book:

Hans Breitmann gife a barty,
We all cot troonk ash bigs,
I put mine mont to a parrel of blier,
Und emptied it up mit a schwiga.
Und denn I giesed Madilda Yane,
Und she sleg me on the kop,
Und de company fited mit dapple-lecks
Dill de coohustable made oos shtop.
The humor is certainly as original as rich.

THE LIVES OF GRANT AND COLFAX.

Peterson's Campaign Edition. Price, \$1 in cloth; or 75 cents in paper. T. B. Peterson & Brothers, Philadelphia.

THE LIFE OF HON. SCHUYLER COLFAX.

By Rev. A. Y. Moore, of South Bend, Indiana. With a life-like Steel Portrait. 18mo. Cloth, \$1 50. Philadelphia: T. B. Peterson & Brothers.

At this exciting period in American history, probably no subject will engage so earnestly the attentive consideration of reading Americans as the antecedents of the men proposed by their respective political adherents for the chief public offices of the nation. It were well that the truth were told now, and no seductive inventions in the way of biography palmed off on the people to influence their choice at the polls. There are leading spirits in political circles who appear to possess no conscientious scruples whatever in their zeal and industry for partisan ends. With tongue and pen they scatter libel and calumny to depreciate the character and injure the prospects of those opposed politically to themselves; while they are equally fertile in fabricating attractive and blandishing accounts for the benefit of their favorite "banner men." Early in the field to perform their important part of the "electioneering" enterprise are so-called biographical sketches of the much-talked-of Presidential nominees, some of which are not altogether free from the serious objections of exaggeration and falsehood. The volumes named at the head of our notice, especially the first, take rank among "campaign" literature, but do not appear to be very "loud" in their eulogy of their men. The early history of General Grant is very briefly glanced at, while his connection with the late war is described with considerable detail—that detail being made up chiefly of compilations from dispatches and reports without effort on the part of the biographer to laud or extenuate. This is fair. Mr. Colfax is but briefly sketched in the "campaign edition," but in the extended biography of Rev. Mr. Moore, we find all the elaboration desired. This work largely embodies the most noticeable editorials, letters, and speeches

of Mr. Colfax as well as many incidents of his unprofessional and unofficial career. The work has the approval of Mr. Colfax, although not revised by him.

MR. FREDERICK BLUME, of 1125 Broadway, New York, has recently issued the following new music: The Eye that Brightens when I Come. A Ballad. Music by Daniel Godfrey, 30 cents. The White Rose. Galop. By N. Sledle, 35 cents. The Hillside. Galop. By George Bayer, 35 cents.

PUTNAM'S MONTHLY MAGAZINE is reaping "golden opinions" at home and abroad, and, we trust, its full share of "greenbacks." Among all the monthlies, this high-toned journal is second to none in literary merit. The Putnams of the Magazine are as distinguished for their enterprise, taste, culture, and refinement as their great namesake the wolf-killer of Connecticut was for courage and patriotism during the war for American independence. The terms are \$4 a year;—or, Putnam and the PHRENOLOGICAL together, for \$6.

LIPPINCOTT'S MAGAZINE has reached the ninth number of its second volume. It is succeeding. Generally well written—though on the wrong side of the tobacco question—and always beautifully printed, it is a credit to the Quaker City, and to American literature. If it is younger than the *Atlantic*, *Harper's Magazine*, *The Galaxy*, and *Putnam's Monthly*, it is not less vigorous or promising. One thing is certain,—it is issued by one of the leading publishing houses in America, and can not fail. \$4 a year,—or Lippincott and the PHRENOLOGICAL, \$6.

MUSIC.—Mr. A. R. Beers sends us "Ye Sons of Columbia, rekindle the fire." Music by E. G. Spinning. 30 cents. New York: W. A. Pond & Co.

THE PRAIRIE FARMER has enlarged its form, and is now a handsome eight-page folio, with new type, printed in Chicago at \$2 a year, by the *Prairie Farmer* company. We should suppose such a journal as this would have, among the *live* farmers of the great West, an immense circulation.

New Books.

Notices under this head are of selections from the late issues of the press, and rank among the more valuable for literary merit and substantial information.

QUANTITIES AND MEASUREMENTS. How to Calculate and Take them in Bricklayers', Masons', Plasterers', Plumbers', Painters', Paper-Hangers', Gliders', Smiths', Carpenters', and Joiners' Work. With Rules for Abstracting, etc. By A. C. Beaton. 1 vol. 8vo, cloth. Price, 50 cents.

THE MANAGEMENT OF HEALTH. A Manual of Home and Personal Hygiene; being Practical Hints on Air, Light, and Ventilation, Exercise, Diet, and Clothing, Rest, Sleep, and Mental Discipline, Bathing and Therapeutics. By James Baird, B.A. In 1 vol. 12mo, limp cloth. Price, 50 cents.

FOURTEEN WEEKS IN ASTRONOMY. By J. Dorman Steele. 1 vol. 12mo. Cloth, \$1 40.

THE FRESH AND SALT WATER AQUARIUM. With eleven Colored Illustrations. By Rev. J. G. Wood. 90 cents.

GORTHE AND SCHILLER. An Historical Novel. By Louisa Muhlbach. 8vo. Cloth. Illustrated, \$2 25.

THE LOST CAUSE REGAINED. By E. A. Pollard. Cloth, \$1 75.

LIVES AND DEEDS WORTH KNOWING ABOUT. By Rev. W. F. Stevenson. 8vo. \$1 75.

MECHANICS' COMPANION. By Peter Richardson. 1 vol., small 8vo. Cloth, \$2 25.

THE STUDENT'S SCRIPTURE HISTORY. The New Testament History. Edited by William Smith, LL.D. 12mo, with Maps and Woodcuts. \$2 25.

GRANT AND COLFAX. The Lives of Gen. U. S. Grant and S. Colfax. Portraits and Illustrations. Paper, 85 cents; cloth, \$1 15.

THE SERVANTS OF THE STOMACH. By Jean Macé. Translated from the French. Cloth, \$2.

AMERICAN WATCHMAKER AND JEWELER. By J. P. Stelle. 16mo, pp. 62. Paper, 30 cents.

FAMILIAR QUOTATIONS: being an Attempt to Trace to their Sources, Passages and Phrases in Common Use. By J. Bartlett. Fifth edition. Cloth, \$3 40.

THE BEAUTY OF HOLINESS. Illustrated by 2,000 Reflective Passages from the Sacred Writings. By the editor of "Truth Illustrated by Great Authors." Fifth edition. Cloth, \$1 75.

TODD'S COUNTRY HOMES, and How to Save Money; How to Build Neat and Cheap Cottages, etc., etc. Also, a Business Directory. By Sereno Edwards Todd, of the New York Times. 12mo. Cloth, \$1 50. This interesting volume will be noticed more at length in the next JOURNAL.

Go our Correspondents.

QUESTIONS OF "GENERAL INTEREST" will be answered in this department. We have no space to gratify mere idle curiosity. Questions of personal interest will be promptly answered by letter, if a stamp be enclosed for the return postage. If questions be brief, and distinctly stated, we will respond in the earliest number practicable. As a rule, we receive more than double the number of questions per month for which we have space to answer them in; therefore it is better for all inquirers to inclose the requisite stamp to insure an early reply by letter, if the editor prefers such direct course. Your "BEST THOUGHTS" solicited.

RAILROAD TRAVEL.—The following "rules on the road" are based upon legal decisions, and ought to be universally known. The courts have decided that applicants for tickets on railroads can be ejected from the cars if they do not offer the exact amount of their fare. Conductors are not bound to make change. All railroad tickets are good until used; conditions, "good for this day only," or other admitting time of genuineness, are of no account. Passengers who lose their tickets can be ejected from the cars unless they purchase a second one. Passengers are bound to observe decorum in the cars, and are obliged to comply with all reasonable demands to show their tickets. Standing on the platform, or otherwise violating the rules of the company, renders a person liable to be put off the train. No person has a right to monopolize more seats than he has paid for; and any article left in the seat while the owner is temporarily absent, entitles him to his seat on his return.

A QUANDARY.—In a family of my acquaintance a new book was accidentally blotted with ink—writing ink.

I would like to know how the stains can be removed without injuring the print and paper.

Ans. We know of nothing that will accomplish the desired object. The acid property of writing ink gives it the quality of permanence for which it is esteemed. The ink ordinarily used in printing does not sink into the paper like writing ink, and may be removed quite readily. Writing ink, unless it be of the specially indelible kind, may be removed by chemical agents from paper with a smooth or glazed surface without materially injuring the paper; but ordinary book paper is of a spongy texture, so that the removal of the ink would most likely involve the destruction of the paper. Blue ink is chiefly made from Prussian blue, and is less influenced than black ink by physical causes, *i. e.*, chemical agents have a less effect upon it.

CONJURATION.—Would you be so kind as to inform me if there is such an art as that of *Psychomancy*, and can it be acquired by practice? Can it be in such a degree acquired that I could instantly arrest the attention of any person that I desire to become acquainted with? How can it be acquired? Have you any books relating to it, and that will show the *modus operandi*?
Ans. No. There is nothing in it. The "Library of Mesmerism and Psychology" gives all the information in regard to the whole matter of fascination, charming, and of such influences as come under the head of "Psychomancy." There is no end to the pretensions of ignorant quacks who get their living by deception and fraud. All that is known to be true on animal or human magnetism and its *modus operandi* is contained in the work referred to.

EXPENSE OF A COLLEGE EDUCATION.—What is the expense of obtaining a college education? Can a man of fair talent and a good English education make Phrenology profitable as a profession?

Ans. The expense of a collegiate education differs in different localities, the tuition being higher in some institutions than in others, and the price of board and room being more or less, according to the place. In the city of New York it costs more for board, room rent, etc., than it would cost in some of the rural districts. In order to enter college, considerable preparation is necessary. Say two years' study at an academy, even after one has what would be called a good English education. A full collegiate course occupies four years, and the tuition will average from \$75 to \$100 per year, and board, say \$4 a week, or \$208 a year, and then there are incidental expenses besides. The books for the whole academic and collegiate course will cost probably \$100. In some places one may go through college for twelve hundred dollars; in other places it will cost fifteen hundred dollars. This, of course, is exclusive of the clothing and the time of the student.

In regard to Phrenology, it is very proper for one who follows it as a profession to be a thorough classical and scientific scholar, though it is not absolutely necessary, any more than it is for a physician, a lawyer, or a clergyman. Classical learning does much to give polish and mental culture to a physician; but one who has a good English education can be a physician or a phrenologist, and secure respectability and success. Two hundred dollars will furnish tuition, books, and board for a phrenological student, and give him a small but neat outfit on which to commence business. The profit to be derived from pursuing it as a profession will depend greatly upon the talent of the man, and

also upon the amount of knowledge and culture he possesses on the subject. Those who are qualified by natural endowment and proper instruction, can do as well as they could in law, in medicine, in engineering, and better than men average in mercantile pursuits. The phrenological profession has a tendency to cultivate the man, to train his faculties, and to keep him growing as a human being.

POEMS BY McDONALD CLARK.

—Can any one furnish us with a copy of McDonald Clark's poem, in full, which contains the couplet—

"When twilight lets her curtain down,
And pins it with a star?"

NEGRO DEVELOPMENT.—If the radical defect of the negro is a want of due nervous development (page 63, A. P. J., August), why need that portion of the colored race among us who have ample development of the anterior and coronal regions of the brain possess seemingly inferior qualities and abilities to the white race with similar development and formation throughout?

Ans. When you find a negro with a cerebral development equal to the average white man, and with a temperamental organization also equal to the white man's, there will be found in that negro as much mental capacity as in the white man. There will be no *seeming* of equality, but a *real* equality. A marked difference between the white and black races exists in their respective temperaments.

IS HE A QUACK?—An invalid lady correspondent writes us from the South, to inquire if a certain person in Philadelphia, who styles himself Dr. Young, and who advertises "Preventive Powders," etc., is a quack? In reply, we answer *yes*. He is not only a quack, but a low, filthy fellow, whose influence is all bad. He is even worse than his neighbor of the so-called "Howard Association"—a private concern used to trap "indiscreet young men." We repeat, *all* these advertising "No-cure-no-pay" doctors are low, bad men, who rob, poison, or defile all they touch.

STUDYING FRENCH.—The following works will enable one to study French with facility:

Ahn's French Method. With Pronunciation. \$1 50.

Ollendorff's French Grammar. \$2.

De Fivas' Elementary French Reader. \$1 15.

Surenne's French and English Dictionary. \$1 75.

Surenne's Manual and Traveler's Companion. \$1 40.

IS THE NEGRO A MAN?

"There is a lawyer in our vicinity who makes stump speeches, and wields a great influence among the baser sort of people; and among the many falsehoods he utters is one that the negro is not a man, and he tells his hearers that Fowler & Wells support him in his theory."

Ans. Whoever asserts that Fowler & Wells do not regard the negro as a man is, to say the least, laboring under an unmitigated error. We are not alone in the opinion that some races of men stand higher than others in the scale of intelligence and power. The Chinese, the Japanese, the American Indians are not equal to the English, the French, the German, the Italian, and other branches of the Caucasian family. But the negro is undoubtedly, in this country, superior to the Indian in some respects. He has less force, less pride and will-power than the Indian, but quite as much intelligence, and a great deal more of the moral and religious elements in his composition. He

readily comes into the habits of civilization, while the Indian will not work, lays up no property, and lives from hand to mouth. History gives us specimens of full-blooded negroes who have stood forth the peers of able white men. Touissant l'Ouverture was the peer of the best men of his age; and there are men in Baltimore and in Charleston as black as the above lawyer's lies, who know how to manage business and can make their hundreds of thousands of dollars. We fancy that anything less than a man would not be able to do this. But any man who says the negro is not a man is either a knave or fool, or a cross between the two, and does not deserve the confidence of the lowest clodhopper. We pity the audience who could believe such statements. Doubtless the negroes in this country and in other countries have less intellectual brain than white men. The same is true of the Chinese and the American Indian, and the same is true of the lower ranges of our own white population.

"INSANITY."

—In a family, if one of the parents has been slightly affected with insanity, is it probable that the children will be similarly affected, and should they discard the idea of marriage on that account? If they were to become insane, at what age would the symptoms be likely to appear? Can the hereditary influence be overcome by a good constitution and correct habits?

Ans. It depends much upon the cause of insanity. Some people have no predisposition to this infirmity, but simply a susceptibility to nervous excitement; some persons become light-headed or aberrated if their digestive system gets out of order; others, if their reproductive system is deranged; others if they have depressed conditions of ambition or are troubled in property matters. Each has his source of excitability, and the result, though it is in general denominated insanity, is as different as the faculties through which it is manifested. A mother may be insane from some special cause, and her children not inherit the tendency at all. Where, for several generations, insanity has been cropping out in a family, it would not be a safe count on exemption from the malady. In a family, six out of ten might escape, but the chances would be against them. There are many more insane people in the world than is generally supposed; perhaps there are not more than five real solid sane persons in fifty, and not more than one in a hundred who would show such marked eccentricity as to awaken general suspicion of his insanity. Probably three fourths of the insanity of this age originates in an abnormal use of the faculties; the straining of all the powers in the pursuit of wealth, in the pursuit of education, and the greedy grasping for advancement, are prolific sources of mental breaking-down; and the bad habits, the stimulants, tobacco, the lust which abounds, tend to unhinge the minds of persons in a frightful degree. Temperance in the use of all things allowable, and abstinence from others, a calm trust in Providence and active religious sympathy, free from bigotry, intolerance, and superstition, have a wonderful effect in raising the mind above morbid conditions. Ambitious passions, exercised under the whip and spur of intemperate habits, make shipwreck of mental soundness, by overburdening the parts through which the mind acts, and our surprise is excited by the endurance shown by men in retaining their senses so long, notwithstanding the excesses into which they plunge.

BOOKS—PRICES.—We can send by mail, post-paid, a copy of "Roget's Thesaurus," for \$2; "Crabbe's Synonyms," \$2 50.

VEGETATING INSECT.—Is there any truth in the statement of there being an insect called *abishero*, which on being put in the ground the legs take root and the body puts forth leaves and becomes a plant of a yard in height?

Ans. We never heard the statement before, and should not have believed it if we had heard it.

FACULTIES FIRST DEVELOPED.—What faculties of the mind are first developed?

Ans. The first faculty called into action is alimentiveness; second, those of perception.

ARTIST.—What phrenological organs are required to make a good artist?

Ans. All that are required to make a good mechanic, and imagination added. In other words, large perceptive, large Constructiveness, Imitation, and Ideality, and as much of the manly and the moral qualities as may be, with a fine temperament, and an earnest and somewhat enthusiastic nature.

TOO MUCH FLESH.—Reading your Answers to Correspondents in the July number, has suggested to me the idea of applying to you for advice on the opposite subject, viz.: of decreasing weight, or how to make a fleshy person lean without absolutely injuring the health. I drink nothing at meals except water, and eat very little meat or greasy diet. If you will please give me a few hints on this subject, I shall be very grateful for the information. Please answer this in your very next JOURNAL, and oblige one of your most devoted friends and readers.

Ans. For a full discussion of this question, see "Our Annual of Phrenology and Physiognomy—combined—" under the title of Fat Folks and Lean Folks. 60 cents.

Publisher's Department.

THE SIZE AND PRICE OF THIS JOURNAL—QUESTION.—We desire the opinion of our readers as to the future of the A. P. J. First. It now has forty quarto pages a month, and rates at \$3 a year. Shall we reduce its size and its price one third, making it \$2 instead of \$3? or, shall we keep up both its present size and price?

Second. What of its shape? Shall we continue it in its present quarto form, or shall we change it to an octavo magazine? Its earlier volumes—up to 1860—were in the usual octavo shape. The present quarto began in 1861.

We wish to confer with those interested, and to adopt that plan which shall seem the most desirable to all concerned. Our object is to make the JOURNAL subservient the interests of the cause to which it is devoted; disseminating, widely as possible, all that is true and useful in our God-given science.

When writing to this office, readers will confer a favor by giving us their views in brief. No change will be made in the present volume or during the present year. There is time enough to consider the subject for 1869. Reader, what say you?

NOT IN TIME.—We frequently receive advertisements for this JOURNAL entirely too late for insertion in the current number. We repeat what has been already announced, that our JOURNAL goes to press

a month in advance of its date; all excepting the cover, which follows immediately thereafter, being then complete; and to insure insertion, announcements must reach us at least five weeks previous to the time they are expected to appear.

SPEAK IN TIME.—We would again call attention to the WALTER GRAPEVINES, which we are enabled to offer as premiums. For five new subscribers, at \$3 each, we will give one of the \$5 vines. Our friends in city or country can club together, and by placing the vine in the hands of one of their number to propagate, may each secure vines the following season. For a full and complete description, and list of rates at which we supply this valuable Grapevine, see August number of the JOURNAL.

A SPECIAL PREMIUM.—We offer as a special premium for a club of forty new subscribers to the PHRENOLOGICAL JOURNAL, at \$3 each, a copy of the NEW AMERICAN CYCLOPEDIA, which comprises sixteen large octavo volumes of 800 pages each. Price, \$80, net cash.

The important work contains an inexhaustible fund of accurate and practical information on Art and Science in all their branches, including Mechanics, Mathematics, Astronomy, Philosophy, Chemistry, and Physiology; on Agriculture, Commerce, and Manufactures; on Religion, Law, Medicine, and Theology; on Biography and History, Geography and Ethnology; on Political Economy, the Trades, Inventions, and Politics; on Domestic Economy, Architecture, Statistics, the Things of Common Life, and General Literature. The work is a library in itself; opening to the student and general reader the whole field of knowledge.

No American library can be said to be complete without a work of this kind. Here is an excellent opportunity for those who do not feel able to purchase the work to secure it at the cost of comparatively little time and trouble. A club of forty ought to be made up in every village. If several persons choose to combine their efforts and secure the club together, they may do so, and own the Encyclopedia in common. Such a work is a real necessity in every neighborhood, second only to a large library.

MR. LODGE, of New Jersey, again places us under obligations for the skulls of a dog and a cat, which now grace our museum. Accessions are constantly being made by thoughtful friends, who have our thanks.

General Items.

BOSTON ONE HUNDRED YEARS AGO.—Mr. Alfred L. Sewell, the very enterprising publisher of *The Little Corporal* of Chicago, Illinois, has republished Paul Revere's Picture Map; which is worthy a place in the portfolio of every American. The editor says:

The name of PAUL REVERE is one of the most honorable connected with the first scenes of the Revolutionary War. He was one of the famous Boston Tea Party, and in many ways rendered signal service to the Colonies in their efforts to rid themselves of British tyranny. Paul Revere was a silversmith, and engraved some of the first pictures ever made in America. One of these was made in 1763, just one hundred years ago, and is a view of eight ships of war, landing British troops in Boston Harbor, for the purpose of "supporting ye dignity of Britain, and chastising ye insolence of America." Its size is 10 by 15 inches, besides the margin, and there are only two or three copies of it known to be in this country.

We lately paid fifty dollars for one of these copies of this curious, old picture, and have just published a fac-simile of it, for the benefit of *The Corporal's* children.

"MORE MYSTERY."—"The Pendulum Oracle." This is the name given to a new toy advertised in all the papers, and in the A. P. J. among the rest. Those familiar with "Bonaparte's Oraculum" may guess the character of this. It is a piece of circular pasteboard, printed with words, figures, etc., accompanied with a little wooden ball, with a string and a ring. The "oracle" is placed on a table, the ball held over it, and in answer to such questions as may be put, the ball is expected to swing toward a certain word or figure. For example, if the age of one present be asked, the ball will move toward the figures, from 1 to 30. Or, if it relate to marriage, and the question be put, "When will he propose?" the ball is expected to move to the name of the month—be it anywhere from January to December; and so on to the end. That it will furnish a dollar's worth of amusement in a company of young people there can be no doubt.

It is believed that the South, where good crops have been secured, will afford good fields for competent lecturers and examiners. There are no practical phrenologists at present in California, nor in any of the new Territories.

SKULLS FROM THE ROCKY MOUNTAINS.—The artist, Mr. J. A. Kuhn, now sketching at Port Townsend, Washington Territory, promises us a few rare specimens of crania from that far-off region. Mr. K. will also bring a portfolio well filled with photographic views of the magnificent scenery abounding in that wonderful country.

NEW YORK MEDICAL COLLEGE FOR WOMEN.—The sixth annual session of this institution will commence the first Monday in November next, at their new building, corner of Twelfth Street and Second Avenue. Dispensary at the same place.

SWEET HONEY FROM "NEAR THE LAKE."—While men hoe and plant, mow and reap; and while women cook, wash, and dress,

"The little busy bee
Improves each shining hour,
And gathers honey all the day
From every opening flower."

And then we sinners take it away from them! Where is the justice in that? Not to moralize more on the point, we are in truth bound to confess that we like honey! especially that clear, white sort in the comb, made on white clover blossoms, lilies, and roses—such as we received from our friend George C. Turner, of Fair Haven, Cayuga County, N. Y., close to Lake Ontario. Why, the honey itself is as fragrant as the richest nosegay; and its flavor! we can compare it to nothing but itself. And this makes us wonder why every farmer doesn't keep bees; cultivate orchard fruits, sow clover, etc., on which the bees could live, grow fat, and lay up a lot of sweetening for winter. It is easier to grow honey than butter. Then why not?

LONG LIFE.—There lives at Whiting Bay, Island of Arran, Scotland, a centenarian who was a companion of

Robert Burns. His name is Ebenezer Baillie, and he is a native of Dalrymple, near Ayr. He was born May 7, 1767, thus making him 101 years and three months old. When a boy he was at school and slept in the same bed with the poet; his brother, a tailor, also made clothes for him, and the two amused themselves writing verses together. Ebenezer came to Arran eighty years ago as a weaver, but farmed a little, and in summer employed himself at the herring fishing. He worked at weaving till he was ninety years of age. For the last six years he has mostly been confined to bed, but the other day he was sufficiently well to sit on a chair and have his likeness taken by a photographer. His faculties, we are told, are all sound; and, as he is intelligent and has a correct memory, he can talk freely of events which happened ninety years ago. He has a large and well-built head, has been a temperately living man, and, notwithstanding his great age, has the appearance of living for some time yet.

"Temperate living." There is great significance in those words. Our modes of living have much to do with prolonging or shortening our lives. Most men—young and old—we meet are sick. One thinks it necessary to use cod-liver oil, another bitters, another tobacco, porter, "peach pits," and so forth. Nearly all do one way or another. Hence they must be sick.]

THE METHODIST.—"a National Religious Newspaper." What is the meaning of this sub-title, "National?" Are we to have, in America, a national religion? and that, of the *Methodist* persuasion? Our readers may find the prospectus on another page, and judge as well as we; but we take it to mean that the *Methodist* newspaper intends to occupy a broader field than that of the official *Methodist* press. All official *Methodist* papers are local in circulation, representing certain patronizing Conferences. It is expected that each journal will confine active efforts, so far as circulation is concerned, to its own immediate field. The *Methodist* aims to be more than local both in circulation and the character of its contents, adapting itself to the Methodists of the whole country. In other words, it is designed to be the central organ of the Methodist Episcopal Church, and yet so entirely catholic in its spirit as to adapt it to all Christian people of whatever name.

The paper is ever fresh, crisp, and comprehensive. Sermons—every week—by Henry Ward Beecher, Newman Hall, or by their own bishops and ministers, are given. It is nicely printed, and every way worthy the very liberal patronage it already enjoys. We hope all our readers will inclose a two-cent stamp to the publisher, and ask for a sample copy, after which, if they approve, they may subscribe.

It will be seen that all those subscribing now or at any time previous to the 1st of the next year, will receive the paper for the balance of this year free, thus giving those who subscribe now, fifteen months at the price of one year's subscription.

THE ROUND TABLE.—Among all the literary weekly newspapers published in this country, the *Round Table* stands at the head. Its writers are educated men; and if they did not sometimes walk "on stilts," they would make a more popular, if not so scholarly, journal. Authors, preachers, artists, book and magazine publishers, and literary men generally, patronize the *Round Table*. This journal is fashioned after the best European models, and is the most creditable specimen of newspaper typography published in this city or country. Of its politics, science, and religion it must speak for itself. Specimens will be sent in accordance with advertised terms.

LIFE INSURANCE.

WHAT is its use? The American philosopher, Benjamin Franklin, is reported to have said, "A Policy of Life Assurance is the cheapest and safest mode of making a certain provision for one's family." Lord Lyndhurst said: "A Policy of Life Assurance is always an evidence of prudent forethought; no man with a dependent family is free from reproach if not assured." Professor De Morgan said: "There is nothing in the commercial world which approaches even remotely to the security of a well established and prudently managed Life Assurance Company." Henry Ward Beecher said: "Once the question was, 'Can a Christian man rightfully seek Life Insurance?' Now the question is, 'Can a Christian man justify himself in neglecting such a duty?'" Elizar Wright said: "As population, intelligence, and refinement advance, Life Insurance must become a more essential part of the social fabric."

Where one has no family to provide for,—if he be a MAN, he ought to have a family—he may have relatives whom he would be glad to benefit. Or he may wish to endow a school, a college, or found a public library, a church, or a public park. Is there a man who has no desire to do some permanent good in the world?—some act for which he may be kindly remembered? Here is the way to do it. Take out a paid-up Life Policy and make it over to the person, relatives, or charity you would establish and perpetuate. The cost is moderate—the benefit great.

But in what company shall we insure? That is a matter for each to decide for himself. Of late there are springing up companies of "specialists." In London there is a 'Quaker Life Insurance Company, in which only "Friends" can be insured. In New York we have a company managed by, and in the interests of, Methodists Israelites being excluded from certain fire insurance companies, will, we presume, establish Jewish companies, and shut out Christians. Why not? Why not "birds of a feather" together here as elsewhere? And now we have a HOMEOPATHIC Mutual Life Insurance Company—see advertisement—in which all who are treated, when ill, according to Hahnemann, can be insured at a lower rate. This, we learn, is the case in England.

The New York Homeopathic Life Insurance Company is founded upon two prominent ideas, namely: 1st. That the adoption of what is called the Homeopathic practice in medicine may be safely relied upon to lengthen human life, and thus diminish the amount necessary to be charged for insuring a life at a given age. 2d. That it is not necessary to a safe and legitimate Life Insurance business to follow the custom now generally prevalent, of charging for premiums a sum confessedly higher than is required to insure the risk assumed, with a view to returning the overplus in the form of dividends.

Persons curious to know the creeds of all the various schools of medicine, Allopathic, Homeopathic, Hydropathic, Eclectic, Thompsonian, Magnetic, Mesmeric, Herolic, and the rest, may find a complete history of them all in the "Illustrated Hydropathic Encyclopedia," published at this office, price \$4 50, post-paid.

Here is what Dr. James Johnson says of medicines and of the experimenters: "I declare it to be my most conscientious opinion, that if there were not a single physician, or surgeon, or apothecary, or man-midwife, or chemist, or druggist, or drug in the world, there would be less MORTALITY among mankind than there is now."

On the 4th of May, 1863, the Surgeon-General of the Army of the United States ordered *colored and tartar emetic* to be struck from the list of army supplies.

Dr. John Forbes, physician to Queen Victoria, says, that "Nature often cures in spite of the doctor," and adds, "things have come to such a pitch that they must mend or end."

According to Dr. Routh (a distinguished physician), the statistics of diseases treated homeopathically and allopathically are as follows:

	Deaths under	
	Homeopathy.	Allopathy.
Inflammation of the lungs	5 in 100	23 in 100
Dysentery	3 " 100	22 " 100
Pleurisy	3 " 100	13 " 100
Inflammation of the bowels	3 " 100	13 " 100

Of the correctness of this table we know nothing. But, if true, we should agree with Doctors Johnson and Forbes, that the *little* medicines given by the homeopaths are less fatal than the larger doses given by other schools. But why not get up a company by the rules of which *no* drug medicines are to be given? Would it not put the death rate still lower? Here is a chance for the hydropaths or water-cure doctors.

HERE ARE THE KINDS OF INSURANCE OFFERED BY THE H. M. L. I. CO.—They issue all the approved forms of Policies, with provisions rendering them non-forfeitable for failure to pay premium, or surrender of the Policies within ninety days.

POLICY FOR LIFE.—This is a policy on what is called the "ordinary life plan," by which the Company agrees to pay a certain sum at the death of the assured, on condition that he shall pay the Company annually while he lives, a certain sum by way of premium. This was the first, and for a long time the only plan of Life Insurance.

TEN-YEAR LIFE POLICY.—By this plan the assured pays all his premium in ten years, and then has no more to pay—the Policy being payable at his death. This is the favorite policy.

ORDINARY ENDOWMENT.—This Policy promises to pay the assured himself a certain sum of money at an age agreed upon, or to any person designated by him, in case he dies before reaching such age, on condition of receiving a certain sum in premium during every year of his life, until the time appointed for the payment of the Policy.

TEN-YEAR ENDOWMENT.—This Policy is the same as the last, except that, like the ten-

year Life Policy, it provides that the premium shall be *all paid in ten years*, however long the time before the Policy becomes payable.

TERM POLICY.—This table provides for cases where a party desires to secure another for a loan or a credit, expecting to terminate the obligation within a given time. It insures for one or seven years, those being the terms which experience shows to be generally required in such cases, etc.

Now, we shall not oppose this enterprise. On the contrary, we wish it success. We see in it something educational. It will tend, so far as it goes, to dissuade people from killing themselves by drugging and dosing.

If any of the benevolent readers of the PHRENOLOGICAL JOURNAL choose to take out a Life Insurance Policy for \$5,000, \$10,000, \$20,000, or for \$100,000, and will assign the same to the Phrenological Society, it would be cheerfully accepted, and, at the proper time, the funds would go toward establishing an institution whose usefulness promises to be coequal with man's necessities. Let us have it.

Business.

[Under this head we publish, for a consideration, such matters as rightfully belong to this department. We disclaim responsibility for what may herein appear. Matter will be LEADED, and charged according to the space occupied, at the rate of \$1 a line.]

THE HYGEIAN HOME.—At this establishment all the Water-Cure appliances are given, with the Swedish Movements and Electricity. Send for our circular. Address A. SMITH, M.D., Wernersville, Berks County, Pa.

HYGIENIC CURE, BUFFALO, N. Y.—Compressed Air Baths, Turkish Baths, Electric Baths, and all the appliances of a first-class Cure. Please send for a Circular. Address H. P. BURDICK, M.D., or Mrs. BRYANT BURDICK, M.D., Burdick House, Buffalo, N. Y. tf.

SPURZHEIM.—Photographs from Lizar's superb engraving of Spurzheim, from an original drawing by Madame Spurzheim. A magnificent head and face. 4-4 size, \$1; "carte-de-visite" style, 50 cents.

S. R. WELLS, 389 Broadway, New York, or JOHN S. D. BRISTOL, Detroit, Mich.

WORKS ON MAN.—For New Illustrated Catalogue of best Books on Physiology, Anatomy, Gymnastics, Dietetics, Physiognomy, Shorthand Writing, Memory, Self-Improvement, Phrenology, and Ethnology, send two stamps to S. R. WELLS, Publisher, No. 389 Broadway, New York. Agents wanted.

SOMETHING NEW TO LECTURERS.—We have for sale a large poster, 29 by 43 inches, with more than fifty illustrative engravings, including our largest symbolical head, handsomely printed in colors, at \$12 per hundred copies; also a smaller size, which we call pictorial poster No. 2, and may be had at \$3 a hundred. These are particularly recommended to Lecturers, being printed with blank spaces for inserting the name of a lecturer and the date and place of his lectures. These posters are handsome, and well calculated to attract the public attention. They will save lecturers much time and money, by rendering it unnecessary for them to get up bills in each town as heretofore.

Besides these posters, we have an excellent circular of THREE 12mo pages, containing a statement of the UTILITY OF PHRENOLOGY, with the TESTIMONIALS of distinguished men as to its truth and importance. With these three pages may be printed another page, giving a PROGRAMME of lectures to be given in any particular place. This circular of three pages—the fourth in blank—can be furnished at \$5 per thousand; or, if the programme be printed here with the other three pages, it may be had complete at \$3 50 per thousand. Samples of the posters and circular will be sent from this office, post-paid, on receipt of 30 cents, and orders for large quantities will be promptly filled by S. R. WELLS, 389 Broadway, New York.

MRS. E. DE LA VERGNE, M.D., 825 ADELPHI STREET, BROOKLYN.

MUSIC—VOCAL AND INSTRUMENTAL.—The undersigned will instruct individuals or classes by the month or the quarter, on favorable terms, at their own residences. She refers to Rev. Dr. G. J. Geer, of St. Timothy's Church, New York. Address MRS. MARY MARCUS, 745 Eighth Avenue, bet. 51st and 52d streets, New York. Aug., tf.

MORE MYSTERY.

PLANCHETTE OUTDONE.

THE PENDULUM ORACLE!

MOVES FOR EVERYBODY!

Answers any question AT ONCE. Will tell your inmost thoughts, and astonish as well as amuse all who consult it!

PRICE ONE DOLLAR.

To be had at retail of SCHIFFER & CO., 713 Broadway.

Trade supplied by WALTON VAN LOAN, 111 William Street, New York.

Advertisements.

[Announcements for this or the preceding department must reach the publishers by the 1st of the month preceding the date in which they are intended to appear. Terms for advertising, 50 cents a line, or \$50 a column.]

Webster's School Dictionary.

ARIES. New Editions. Illustrated. This popular Series is very justly regarded as the only National standard authority in ORTHOGRAPHY, DEFINITIONS, and PRONUNCIATIONS.

Webster's Primary School Dictionary. This work may be used as a textbook for teaching Spelling.

Webster's Common School Dictionary. With the improvements made this book can now be advantageously used as a text-book for systematic instruction in Spelling. The illustrations have been selected with care, and with a view to usefulness rather than mere ornament.

Webster's High School Dictionary. In the hands of an accomplished teacher, this volume may be made highly useful in Schools, since it furnishes material for a valuable course of exercises on words, including their orthography, pronunciation, definition, composition, syllabication, and the like.

Webster's Academic Dictionary. New Edition, with valuable additions and improvements; a most valuable text-book for systematic instruction in the English Language. Finely Illustrated.

Webster's Counting House and Family Dictionary. With important additions, improvements, and appropriate illustrations.

Webster's Pocket Dictionary. Webster's Army and Navy Dictionary. By Capt. E. C. BOYNTON, of West Point Military Academy.

A NATIONAL RELIGIOUS NEWSPAPER.

FREE TO THE END OF THIS YEAR

TO

ALL NEW SUBSCRIBERS.

THE METHODIST;

AN EIGHT-PAGE WEEKLY, RELIGIOUS AND LITERARY.

PUBLISHED IN THE CITY OF NEW YORK.

This Journal has now entered upon its Ninth year of highly successful publication. Its course has been such as to win the approbation, not only of the denomination whose name it bears, but of all Christian people of whatever name or sect. It commands the best Literary ability of the

METHODIST EPISCOPAL CHURCH,

and represents loyally and courageously its various interests as well as the great Religious interests of the age. It circulates a pure Literature, furnishes Religious Intelligence from the various departments of the Church; has an able Foreign and Home Correspondence, and aims to cultivate a spirit of unity among all Christian Churches.

THE METHODIST is and ever has been the uncompromising Advocate of

LAY REPRESENTATION IN THE GENERAL CONFERENCE.

As a FAMILY PAPER this Journal has no superior and very few equals; its various departments being made up with reference to the wants of all, from the eldest down to the little folks.

REV. GEORGE R. CROOKS, D.D.,

assisted by the following able corps of

Editorial Contributors:

REV. ABEL STEVENS, LL.D., REV. JOHN MCCLINTOCK, D.D.,
REV. B. H. NADAL, D.D., REV. H. B. RIDGAWAY, D.D.,
REV. T. M. EDDY, D.D., REV. JAMES M. FREEMAN, A.M.,
PROF. A. J. SCHEM.

BISHOP SIMPSON will hereafter be a frequent contributor.

The Sermon Department

is a leading feature of the paper, and is alone worth many times its subscription price. It furnishes a fresh Sermon every week, from representative Clergymen, both of our own and other Evangelical Churches, among whom are the

Bishops and other Ministers of the Methodist Episcopal Church: and REV. HENRY WARD BEECHER, Pastor of Plymouth Church, Brooklyn.

EXPERIENCED WRITERS contribute to the various Special Departments of the paper, rendering it one of the most original, thorough, and comprehensive Periodicals of the day.

In typographical appearance THE METHODIST is unrivaled. It is printed on good paper, from the clearest of type, and is paged and indexed, for filing and binding.

The News Department is under the supervision of an Editor who makes it a specialty; so that the reader gets the latest, most carefully arranged, and reliable account of the current events, both Religious and Secular, of the stirring times in which we live.

The Children's Department contains a fresh story every week, written expressly for it.

The Financial, Commercial, Mercantile, and Agricultural Columns are crowded with invaluable information for business men, mechanics, manufacturers, and farmers.

Altogether, as a religious and literary weekly newspaper, THE METHODIST has been pronounced, by disinterested judges, to be without a superior. Its visits to any family will pay back its price, to every careful reader, a hundred-fold.

OPINIONS OF THE PRESS.

The following are a few of the many notices which THE METHODIST has recently received from the press. We have cut out every notice that we found in our exchanges, and, in again looking over the selection, it gives us great pleasure to see that there is not one among the notices that dissents from the opinion expressed by the following:

From the New York Tribune.

THE METHODIST has long been in the first rank of the religious journals of our country.

From the Buffalo (M. E.) Christian Advocate.

No religious paper of this country in spirit, appearance, in great ability, excels it, while but few will compare with it at all. Money and genius combined, and both dispensed without stint, are just what place THE METHODIST among the leading Christian papers of the day. We care not how wide becomes its circulation, for wherever it is known and read, friendly influences and good results will follow.

From the New York Independent.

There is no more readable paper upon our exchange-list than our neighbor, THE METHODIST. Its selections are made with excellent judgment, it has an extensive and interesting correspondence, it has a literary department, provides well for the children, and furnishes financial and commercial reports like ourselves. The editorial page is marked by able writing, and always sides with justice in the vital questions of these times. We wish it continued success.

From the New York Evening Post.

THE METHODIST is one of the very best of the religious weeklies of this country.

From the Rutland (Vt.) Herald.

THE METHODIST, published in New York by an association of gentlemen, is not only the ablest and best conducted paper of the denomination whose name it bears, but is really one of the best and most spirited and thoroughly edited papers among the religious periodicals in the country. Its literary merits are certainly excelled by none. It reaches many families outside of its own denomination on account of its catholic spirit, as well as on account of its stories for young folks.

From the Western Methodist Protestant.

It is conducted with marked ability, and is one of the best, if not the very best Methodist paper received at this office.

From the American Presbyterian.

Among our entire list of exchanges none is more welcome to our table than THE METHODIST. As a religious and literary newspaper, it is a desirable visitant to any household.

From the Religious Telescope (United Brethren in Christ).

It is one among the few papers on our long exchange-list which we read carefully every week. It has a variety, fullness, and completeness rarely found in a newspaper.

From the Witness, Indianapolis (Baptist).

It is conducted with rare ability, is especially rich in foreign intelligence—in short, is one of the best and most readable of our exchanges.

From the Round Table.

THE METHODIST is one of the best, if not the very best, religious journals in this country.

TERMS—To Mail Subscribers, Two Dollars and Fifty Cents per Year, in advance. Postage prepaid at the Post-office where received, Twenty Cents per year. Fifty Cents additional served by Carrier in New York city.

☞ Any one sending THREE SUBSCRIBERS and \$7 50, will receive a FOURTH copy free for one year.

☞ Those subscribing now for next Year receive the remainder of this Year free.

☞ Liberal cash Commissions or Premiums allowed to Agents canvassing for Subscribers.

Specimen copies and circulars sent free on application.

ENGLISH BREAKFAST (Black), 80c., 90c., \$1, \$1 10, best \$1 20 per lb.
IMPERIAL (Green), 80c., 90c., \$1, \$1 10, best \$1 25 per lb.
YOUNG HYSON (Green), 80c., 90c., \$1, \$1 10, best \$1 25 per lb.
UNCOLORED JAPAN 90c., \$1, \$1 10, best \$1 25 per lb.
GUNPOWDER (Green), \$1 25, best \$1 50 per lb.

COFFEE ROASTED AND GROUND DAILY.

GROUND COFFEE, 20c., 25c., 30c., 35c., best 40c. per lb. Hotels, Saloons, Boarding-house keepers, and Families who use large quantities of Coffee, can economize in that article by using our FRENCH BREAKFAST AND DINNER COFFEE, which we sell at the low price of 30c. per pound, and warrant to give perfect satisfaction. ROASTED (Unground), 30c., 35c., best 40c. per lb. GREEN (Unroasted), 25c., 30c., 35c., best 35c. per lb.

Parties sending club or other orders for less than \$30, had better send a Post-office draft or money with their orders, to save the expense of collections by Express, but larger orders we will forward by express, to "collect on delivery."

Hereafter we will send a complimentary package to the party getting up the club. Our profits are small, but we will be as liberal as we can afford. We send no complimentary packages for clubs of less than \$30.

Parties getting their Teas of us may confidently rely upon getting them pure and fresh, as they come direct from the Custom-House stores to our warehouses.

We warrant all the goods we sell to give entire satisfaction. If they are not satisfactory, they can be returned, at our expense, within thirty days, and have the money refunded.

N. B.—Inhabitants of villages and towns where a large number reside, by *clubbing* together, can reduce the cost of their Teas and Coffee about one-third (besides the Express charges), by sending directly to "The Great American Tea Company."

CAUTION.—As many parties in this city and elsewhere are imitating our name and manner of doing business, we hope our friends will be particular to address their letters to our principal warehouses, "No. 31, 33, 35, & 37 Vesey Street; Post-office Box, 5643, New York City." Attention to this will avoid mistakes.

Edward O. Jenkins, Steam

Book and Job Printer, and Stereotyper, No. 20 North William Street, New York, announces to his friends and the public that his establishment is replete with Presses, Type, and material for the rapid production of every description of printing.

Jenkins' Vest-Pocket Lex-

icon. An English Dictionary of all except Familiar Words; including the Principal Scientific and Technical Terms, and Foreign Money, Weights, and Measures. Price, in Gilt Morocco, Tuck, \$1; in Leather Gilt, 75 cents. Sent post-paid by S. R. WELLS, New York.

CEEDINGS OF THE SIXTH NATIONAL TEMPERANCE CONVENTION, held at Cleveland, Ohio, containing the papers presented, speeches delivered, resolutions and reports adopted, question drawer, etc. Sent by mail, post-paid, for 25 cents, by S. R. WELLS, Publisher, 389 Broadway, N. Y.

\$200 Per Month sure, and

no money required in advance. Agents wanted everywhere, male or female, to sell our *Patent Everlasting White Wire Clothes Lines*. Address AMERICAN WIRE CO., 75 William Street, N. Y., or 16 Dearborn Street, Chicago, Ill. Oct. 1t.

Wanted.—Agents in every

town to sell A. A. Constantine's Persian Healing or Pine Tar Soap. Send 50 cents for sample and terms. Peddlers sell from their carts two to six gross a week. We PAY OUR AGENTS. Address, A. A. CONSTANTINE & CO., Oct. 1t. 43 Ann Street, New York.

A Practical Homeopathic

TREATISE on the Diseases of Women and Children; intended for Intelligent Heads of Families and Students in Medicine. By HENRY MINTON, M.D. Price, cloth, \$3; sheep, \$4. Sent by mail, post-paid, by S. R. WELLS, 389 Broadway, New York.

The Bartram & Fanton

Elastic Stitch Sewing-MACHINES. For Family and Manufacturing Purposes. This Machine was awarded First Premium, American Institute, Erie Medal, Paris Exposition. Principal Office and Salesroom, at Madame Demorest's Emporium of Fashions, No. 838 Broadway, New York.

The Manufacturers of the above Machine believe that, after a careful and thorough examination as to the merits and qualifications of the different kinds of Machines adapted to Family Sewing, they have overcome the faults and imperfections of the many now in the market. The BARTRAM & FANTON MACHINES are pronounced by connoisseurs to be better designed, better finished, more accurate and reliable, with a greater capacity for performing all kinds of Family Sewing than any other Machine ever before offered to the public; and are so perfect and simple in their construction that a novice can operate them with perfect success.

An examination of our Machines will convince the most skeptical that we have produced the *ne plus ultra*

SEWING-MACHINE.

This Machine uses but one thread, and that directly from the *original spool*, making a beautiful stitch, and locking the thread firmly at every stitch. The work requires no fastening off, and dispenses with all the extra machinery that is necessary to operate a two-thread machine, which is an important desideratum to all operators.

The design of the BARTRAM & FANTON MACHINE is different from all others. It is so constructed that it is impossible for a lady to soil the work or dress while operating it, or become entangled in the machinery. It will sew equally as well upon one kind of fabric as another, from the finest muslin to the heaviest woolen.

This Machine will make Button-Holes upon thin fabrics, and finish them off completely, which no other machine can accomplish. It has also an *attachment for making eyelet-holes*.

Each Machine is provided with Castors, and can be readily moved from place to place, yet stand perfectly firm when in use. It will also *embroider, tuck, quilt, cord, bind, gather, fell, ruffle, braid, and hem*, etc., etc.

Each Machine is provided with a button-hole attachment, gauge, screw-driver, wrench, oil-can, three-quarter doz. needles, etc., and perfect instructions imparted to all purchasers of Machines *free of charge*. Price, \$30.

Every Machine is warranted for one year. Each Machine is so constructed that an attachment for Fancy Embroidery and Eyelet-Holes, Button-Holes, etc., will fit it.

Reliable agents in every city and town. Illustrated circulars mailed free on application. Aug., 3t.

Urbana University.

URBANA, CHAMPAIGN CO., OHIO.

(A NEW CHURCH INSTITUTION.)

American Artisan and Patent Record.—New Series.

The *American Artisan*, now in the fourth year of its publication, is a Weekly Journal, devoted to fostering the interests of Artisans and Manufacturers, encouraging the genius of Inventors, and protecting the rights of Patentees.

Each number contains numerous original engravings and descriptions of new machinery, etc., both American and Foreign; reliable receipts for use in the field, the workshop, and the household; practical rules for mechanics and advice to farmers; "Mechanical Movements," and other useful lessons for young artisans; the official list of claims of all patents issued weekly from the United States Patent Office; reports of law cases relating to patents, etc.

Each number of the *American Artisan* contains sixteen pages of instructive and interesting reading matter, in which the progress of the arts and sciences is recorded in familiar language. Twenty-six numbers form a handsome half-yearly volume. The columns of the *American Artisan* are rendered attractive by articles from the pens of many talented American writers upon scientific and mechanical subjects.

Terms of subscription: Single copies, by mail, per year, \$3 50 in advance. Single copies, by mail, 6 months, \$1 25 in advance. The publishers of the *American Artisan* are also extensively engaged as Solicitors of American and Foreign Patents, and will promptly forward to all who desire it, per mail, gratis, a pamphlet, entitled "Important Information for Inventors and Patentees." BROWN, COOMBS & CO., Proprietors of the *American Artisan*, Mch. 11. No. 189 Broadway, New York.

THE CHURCH UNION.

This paper has been recently enlarged to mammoth proportions. It is

THE LARGEST RELIGIOUS PAPER IN THE WORLD.

Is the leading organ of the Union Movement, and opposes ritualism, close communion, exclusiveness, and church caste. It is the only paper that publishes

HENRY WARD BEECHER'S SERMONS,

which it does every week, just as they are delivered, without qualification or correction by him. It advocates universal suffrage; a union of Christians at the polls; and the rights of labor. It has the

BEST AGRICULTURAL DEPARTMENT

of any paper in the world; publishes stories for the family, and for the destruction of social evils. Its editorial management is impersonal; its writers and editors are from every branch of the church, and from every grade of society. It has been aptly termed the freest organ of thought in the world.

Such a paper, offering premiums of Sewing Machines, Dictionaries, Appleton's Cyclopaedia, Pianos, Organs for Churches, etc., makes one of the best papers for canvassers in the world.

Every Congregation may obtain a Communion Service, an Organ, a Melodeon, a Bible, or a Life Insurance Policy for its Pastor, or almost any other needful thing, by a club of subscribers.

Send for a copy, inclosing ten cents, to

HENRY E. CHILD,

41 Park Row, New York.

The Trapper's Guide; a

Manual of Instructions for Capturing all kinds of Fur-Bearing Animals, and Curing their Skins; with Observations on the Fur-Trade, Hints on Life in the Woods, and Narratives of Trapping and Hunting Excursions. By S. Newhouse, and other Trappers and Sportsmen. Second Edition, with new Narratives and Illustrations. Valuable as a work on Natural History. The numerous illustrations are accurate and beautiful. Price by mail, post-paid, \$1 50. Address,

S. R. WELLS, 389 Broadway, New York.

Davies & Kent, Printers,

Stereotypers, and Electrotypers, No. 183 William Street (cor. of Spruce), New York. Note, Circular, Bill-Head, and Card Printing neatly and promptly executed.

Oct. 21.

THE CATHEDRAL OF CHARTRES.

THE CATHEDRAL OF CHARTRES.

THE town of Chartres is considered one of the most ancient in France. Like many other old French towns, it has that picturesque and rustic attractiveness which adds no little to the interest excited in the mind of the thoughtful tourist by its claims to antiquity. The old cathedral, however, which towers clear above the comparatively brief extent of Chartres, is the one important feature which it proudly boasts. Indeed, the town nestling at its feet seems to depend upon the cathedral, and not the cathedral upon Chartres, so massive and

overspreading and all-absorbing the giant edifice appears to the distant observer.

The cathedral dates from the beginning of the eleventh century, and is distinguished for its grand gothic architecture. It is immense in its proportions, yet so gracefully and accurately are they adjusted, that one is deeply impressed by the harmony and oneness of the entire structure. Here and there are immense carvings, complete in themselves; but there is so much of ornamentation which blends design with design, that the eye is not distracted or the attention absorbed by any one outline.

The great front of the edifice is covered with

scarcely less than eighteen hundred figures, yet "it seems neither florid nor over-adorned;" rather, the superficies is so varied by the carvings, that one forgets its size in their engaging study. The spires are very lofty, one of them towering to a height of more than 400 feet. As respects its exact dimensions, we are unable to give the reader a definite idea, but will leave him to form some impression of its grandeur from the fact, that the Chartres cathedral is one of the largest church structures in Europe. There are 130 stained or painted glass windows in it, whose artistic beauty is unsurpassed by those of any other building in France. A recent visitor within the time and purpose hallowed precincts of this ancient structure thus writes:

"The first impression given by the interior as well as the exterior of Chartres cathedral is enormous height—height rising into such dimness of shadow that it takes away the idea of any roof; one looks upward as if to the sky, and with the same sensation of peace. Amiens cathedral has this in degree; but then Amiens still gives the feeling of newness; one is inclined to say, 'How grand! and who is the architect?' But at Chartres one never thinks of the architect at all: it seems as if the whole building was not made, but had grown. One's soul's wings begin to tremble and stir, just as under the open sky, with no fragment of mortal roof, however safe and ornamental, to keep them in and restrain their liberty, even under the most beautiful bonds. I can not clearly describe the feeling; but those to whom the very breath of religious life is freedom—perfect freedom—will understand it and what it symbolizes."

THE venerable Dr. Jacob Bigelow, of Boston, in responding to a toast at the recent dinner of the Massachusetts Medical Society, said that for the last half century he had not been obliged to keep his house for a single day, on account of any indisposition or malady whatever; and added: "I know not to what I should attribute this singular exemption for so long a period, except it be to the joint facts, which I do not boast of excelling in, but have been able to practice—temperance, hard work, and abstinence from medicine."

THE *Protestant Churchman*, of New York, under date of July 23d, styles our August edition: "An unusually interesting number of this valuable monthly," and prints a synopsis of its contents. What says the *P. C.* of this?

THE
PHRENOLOGICAL JOURNAL
AND LIFE ILLUSTRATED.

Is devoted to *The Science of Man*, in all its branches, including PHRENOLOGY, PHYSIOLOGY, PHYSIOGNOMY, PSYCHOLOGY, ETHNOLOGY, SOCIOLOGY, etc. It furnishes a guide in *Choosing a Pursuit*, and in *Judging of the dispositions of those around us*, by all the known external "Signs of Character."

Published monthly, \$3 a year in advance. Clubs of ten or more, \$2 each. Sample numbers, 20 cents. Now is the time to subscribe. A new volume began with the July number. Supplied by Booksellers and Newsmen everywhere.

The Journal.

Man, know thyself. All wisdom centers there; To none man seems ignoble, but to man.—Young.

MAX MÜLLER, THE DISTINGUISHED PHILOLOGIST.

This eminent philologist possesses a temperament of exceedingly fine quality; in the portrait there is no expression or conformation allied to that heaviness which is almost always a physiognomical accessory to the German face. The outlines are clear and sharp, the nose Grecian, the mouth delicate, the forehead noble. He is not deficient in those forces which a full back-head supplies, but the mass of the brain appears to lie forward of the *meatus auditorius*, or opening of the ear, indicating profound intellectual capacity. He possesses in a marked degree that type of brain which adapts one to study, research, and mental applica-

PORTRAIT OF MAX MULLER, THE PHILOLOGIST.

tion. He is a natural student; *i. e.*, inclined by the mere gravity of his organization to acquire learning, especially the principles and theories laid down by

thinkers and investigators. He appreciates the logical relations of subjects, finds enjoyment in tracing the sources of ascertained facts, and appreciates results in proportion as he comprehends the principles involved and the extent of their elaboration.

The elements which form a steady, persevering character are eminently Mr. Müller's. He is well poised; not fearful of consequences when he has once assumed responsibility,—and not reluctant in taking such responsibility as his sphere and circumstances may present. His large Continuity evinces the serenely balanced and direct thinker. When occupied in the examination of an intricate question, his thoughts do not diverge, but fasten their intensity to the thing in hand; hence he is clear, direct, convincing, and thorough as a reasoner and investigator. His memory partaking of this closeness of thought is keen and retentive; whatever engages his attention becomes absorbed into the *omnium gatherum* of his mind.

He properly graces the professor's chair, and that, too, of a department of learning as profound as it is useful in the study of man and his relations.

BIOGRAPHY.

FRIEDRICH MAXIMILIAN MÜLLER, or, as he is better known among us, Max Müller, the author of the "Rig Veda," "Lectures on the Science of Language," and other works of linguistic science, was born on the 6th of December, 1823, at Dessau, the capital of the duchy of Anhalt Dessau, Germany. He is the son of Wilhelm Müller, who acquired some distinction by his researches in the ancient German language and literature; and, as a poet, his "Freedom Songs of the Greeks," which appeared in 1821, received a cordial reception, and were extensively circulated. Müller's elementary education was obtained chiefly at the ducal-school of his native place, and, later, under Professor Carus, in Leipsic, and at the Nicolai School in the same city, where he was introduced into the elements of science. Part of his early youth was also devoted to music and poetry. He was a proficient on the pianoforte at eight years of age, and wrote a poem on the occasion of the Book Printers' Jubilee in Leipsic, in 1840, which gained him great applause and the life-long friendship of Mendelssohn. He completed his academic course at the University of Leipsic, where he studied the Hebrew and Arabic languages; then, under Professor Brockhaus, made remarkable progress in the study of the Sanscrit, the rich depository of his later investigations. He applied himself with especial earnestness to Sanscrit, and as early as 1844 translated and published "Hitopadesa,"

an old collection of Indian fables. In the same year he left Leipsic, and betaking himself to the Berlin University, there studied assiduously the old Sanscrit manuscripts, and attended the lectures of Bohl, Heyne, and others, being encouraged by the great Humboldt to further zeal. He was then always fresh, joyous, and progressive in the studies of his choice; and by his zeal soon won the esteem, the friendship, and encouragement of educated men.

Müller's youthful ardor is seen to advantage in the following fact: The celebrated poet and Persian scholar, Friedrich Rückert, was at that time called to the University of Berlin. Rückert hoped to give lectures on the Persian language, but announced them with hardly the expectation of a single hearer. When the day arrived for the commencement of the lectures, he found, truly, that he had only a single hearer—Max Müller. Rückert was grieved, and not willing to proceed unless his audience was increased to at least three. But Müller was determined to hear the gifted professor, and after assuring him that he would procure other two students, went among his acquaintances and laid the facts of the case before them. The result was that Müller returned with the required two, to whom Rückert commenced, though somewhat dispiritedly, his lectures. But the earnest attention of, and rapid progress made by, the three pupils, especially Müller, proved a great delight to Rückert. He became inspired with greater enthusiasm himself, and the whole course was gone through with complete satisfaction to all concerned.

In the same year, 1844, Müller received the Doctor's diploma from the University of Leipsic. In 1845 the fame of the celebrated Sanscrit scholar Burnouf drew him to Paris, in order to attend his lectures, and to procure materials for an edition of the Rig Veda—the oldest Brahmin sacred hymns in the Sanscrit. In order to maintain himself, attend the lectures, and study, he found himself obliged to engage in copying learned manuscripts; for, in spite of the recommendations of Humboldt and the esteem of Burnouf, he had to depend entirely upon his own resources. But he kept steadily at work on the Veda; and when he had gained money sufficient, he determined to go to England, and read the Sanscrit treasures in the British Museum. He did not understand a word of English when he found himself in London for the first time; but introducing himself to Professor Wilson, then President of the Asiatic Society and the first Sanscrit authority in England, he was immediately given employment in arranging the manuscripts of the Society. This furnished him with the means of subsistence; but he intended to return to Germany as soon as he possibly could; and when he had saved money enough for his homeward journey, he made all preparations to depart, visiting the office of the Prussian representative in order to procure the necessary pass.

This proved to be a most fortunate circumstance. The learned Bunsen was at that time the Prussian ambassador, and he had already

heard of Müller through Humboldt. He felt immediately drawn toward the young scholar, and finally persuaded him to remain in London. He examined the Rig Veda, and encouraged Müller to proceed with the work, making himself responsible for the means. And he nobly kept his word. Müller with joy took up the work on the Rig Veda again. Wilson desired at the same time that the Asiatic Society in the East Indies should publish the same work with the aid of learned Brahmins there, but the proposition found little favor with English scholars. Max Müller now proposed to complete the work with the means of the East India Company. Wilson at first refused to entertain this proposition, but finally agreed that the work should appear in England, and he himself undertake its translation. Müller immediately entered into this arrangement, and devoted himself to the task of completing the work, the first volume appearing, we believe, in 1847, bearing the title "Rig-Veda-Sanhita, the Sacred Hymns of the Brahmins."

Immediately after the publication of this first volume Müller was induced by English scientific scholars, with Bunsen at their head, to give public lectures in Oxford University on the Bengal language. This he did, receiving such a warm reception as determined him to prolong his stay. At first he made his appearance as Deputy Professor of European languages, and in 1847 assumed his special professorship. His fame increased with each lecture and with each volume of the Rig Veda. The latter was finally enlarged to four quarto volumes, each of one thousand pages. In the preparation of these he was assisted by Dr. Aufrecht, who afterward became Sanscrit Professor in Edinburgh. In 1850 Müller was appointed Deputy Taylorian Professor of Literary History and Comparative Grammar in Oxford. The prejudice with which he had been regarded by many English scholars and members of the University gradually gave way to an admiration for his genius. In 1856 he was elected Ordinary Professor, the degree of Master of Arts was conferred, and the privileges of a Fellow accorded him—the first "foreigner" to whom this highest academic honor had ever been given. Many other privileges were granted; and he is said to have been the first who dared to marry without losing the privileges of a "Fellow."

In 1857 Professor Wilson died, leaving vacant the Sanscrit chair in Oxford. Besides Müller there was only another candidate, Professor Cowell, of Calcutta, who soon withdrew from the contest. As soon as Müller was announced in his new position, he was opposed by certain members of the University on ecclesiastical grounds, but he finally triumphed. In the same year he published his "Buddhism, and Buddhist Pilgrims," followed by a "History of the Sanscrit Literature." His previous works are a treatise "On the Comparative Philology of the Indo-European Languages in its bearing on the Early Civilization of Mankind" (1854); a "Proposal for a Missionary

Alphabet" (1855); "Languages of the Seat of War in the East" (1855); an earlier translation of "Kalidasa's Megha-Duta," published at Königsberg in 1847, and other works. These and his lectures now made him the most popular philological lecturer in England. In 1861 he published the substance of his lectures, under the title of "Lectures on the Science of Language, delivered at the Royal Institution of Great Britain in April, May, and June, 1861," and dedicated "to the members of the University of Oxford, both resident and non-resident, to whom I am indebted for numerous proofs of sympathy and kindness during the last twelve years, in grateful acknowledgment of their generous support on the 7th of December, 1860." The English press and public gave the work a very cordial reception, and numerous editions have been sold both in England and America.

The "Lectures on the Science of Language" "do not pretend to be more than an introduction" to the science; they are the substance of the "researches into the history of languages and into the nature of human speech which have been carried on in England, France, and Germany"—a science of very modern date. The following is a synopsis of the work: The Science of Language reveals wonders far greater than the bewildering enigmas and myths which it displaces. It shows the natural and inevitable growth of mythical tales from words and phrases, and forces on the mind the idea of a law of language, simple and powerful. It undertakes to show the working of this law, not by proposition, but by facts. Human speech admits only of a growth. In it there is a continuous change which man can not prevent. The Aryan speech, in its earliest stage, consisted wholly of open sounds, and these probably without any aspirates, and in this stage no word existed except such as expressed sensible ideas. Man had probably lived for ages before the process of metaphor had created a single term to convey an immaterial conception. The working of metaphor can be traced, in its conversion of general notions, into personal beings, and in the translation of phrases applied originally to outward phenomena into incidents professedly historical. Man may at first have been mute; certainly during a long period probably could not express more than the merest bodily sensations. "It was an event in the history of man when the ideas of father, mother, brother, sister, husband, wife were first conceived and first uttered. It was an era when the numerals from one to ten had been framed, and when words like law, right, virtue, love had been added to the dictionary of man. It was a revelation—the greatest of all revelations—when the conception of a Creator, a Ruler, a Father of man—when the name of God was for the first time uttered in this world." "The Science of Language thus leads up to that highest summit from whence we see into the very dawn of man's life on earth; and where

the words which we have heard so often from the days of our childhood—'And the whole earth was of one language and of one speech'—assume a meaning more natural, more intelligible, more convincing than they ever had before." Such, in brief, are a few points of the Science of Language—a science without which, he adds, "the circle of physical sciences would be incomplete. The whole natural creation tends toward man; without man, nature would be incomplete and purposeless. The Science of Man, therefore, or, as it is sometimes called, Anthropology, must form the crown of all the natural sciences. And if it is language by which man differs from all other created things, the Science of Language has a right to hold its foremost place."

A remarkable feature of Professor Müller's work—as it is written in English—is its extreme purity of expression. The same is noteworthy in his later work, "Chips from a German Workshop" (1868); and what a critic says in the *Saturday Review* applies to all his later writings in an equal degree: "On one point there can be no difference of opinion, namely, as to the wonderful mastery which Professor Müller, a foreigner, has gained over the English language. We do not think that any one reading a page of one of these essays would for a moment attribute them to any one but a native Englishman! And what is more, Professor Müller is really one of the best English writers of the day. He employs our language not only with ease and vigor, but with conspicuous purity and good taste. He rises altogether above the fashionable vulgarisms of the day . . . We welcome every work of Professor Müller as a real addition to the English literature, in point of style no less than in point of matter." This is probably the highest compliment the English could pay to their gifted German resident.

As a philologist Professor Müller undoubtedly holds a high and honored position. But he ranks far below the greater Bopp in the real genius of his researches and attainments. His eminence is due mainly to his isolated position in philological science in England, though the earnest student in his youth well deserves his extended reputation of to-day. He laid before the English world, in his Lectures on the Science of Language, matter from an almost new field. He built on the solid German foundation of his predecessors, and presented his science in the most popular form that it is possible to give it; and his position to-day is that of a priest and pioneer of German science in England. It has been reported that Mr. Müller has accepted a professorship recently offered him by the trustees of Cornell University, and that he will shortly arrive in the United States for the purpose of assuming its functions. To this, educated Americans can have no objection, but will doubtless, with consentient voice, welcome the distinguished scholar, should he make his appearance here, and rejoice in so important an acquisition to the circle of the learned in American society and literature.

On Ethnology.

True Christianity will gain by every step which is made in the knowledge of man.—*Spurzheim*.

ANTIQUITY OF MAN.

THE antiquity of the human race, as demonstrated by remains discovered in the geological strata of North America, formed the chief topic of discussion before the American Science Association, at its recent general session in Chicago. The views expressed by several eminent naturalists and geologists, and the many evidences adduced in support of the theory of man's great antiquity, are sufficiently important to warrant our bringing the subject to the notice of our readers.

Whether or not the theory is in conflict with the Mosaic account of man's creation as received by theologians, it nevertheless seems irrefutable. Pure science reaches forward to its conclusions through media of an indisputable character, facts; and when results have been thus substantially attained which appear to contradict the revelations of Him whom we call God, the Creator, a most serious dilemma is presented, a dilemma which may be disposed of only, as it would seem, by the discovery of an error in our generally received interpretations of those revelations. If, however, "the wisdom of man is but foolishness with God," in what respect could man more gravely err than in his attempts to interpret the writing of the Most High, and to understand thoroughly His ways toward mankind. As the character and purposes of the Infinite are entirely beyond the comprehension of the finite, it is presumptuous folly for the finite to attempt to limit that character by definition, and those purposes by description. All serious minds will approve this. A corollary may be drawn from such a conclusion to the effect that Scripture being the revealed will of God, is to be interpreted with the utmost latitude, and the utmost care exercised in the literal application of any part of it. Of course we allude especially to its symbolism. There are passages, and we think they constitute the larger portion of the Bible, whose signification is comparatively simple, and which scarcely admit of more than one construction. But when we approach those portions which have an assertatory or declaratory character, and which, if accepted *literally*, seem to clash with some manifest conclusion of experience and reason, we feel compelled, for the sake of conscience and moral consistency, to hold in abeyance all preconceived notions. Many an obscure passage of Scripture has been clearly elucidated by scientific methods. Especially is this the case with prophetic revelation; and we may justly look forward to the developments brought about by scientific investigators to enlighten us with reference to Bible teaching on the subject of man's origin.

Let us examine briefly what our *savans* in council assembled at Chicago had to say of our remote ancestors. Mr. Charles Whittlesey enumerated several races of whose existence be-

* Westminster Review. 1862.

fore the red man there are abundant evidences in the superposed strata of North America, viz., the mound builders; a race that lived in the territory which is now Wisconsin; a war-like race inhabiting the region south of lakes Erie and Ontario; a people devoutly given to religious rites in the region of Mexico. The periods during which these races flourished have not been ascertained; but it seems certain that they extend many thousands of years into the dim past—thousands of years before the Christian era. Pottery, arrow-heads, and other works of man have been found in conjunction with and beneath the bones of the mastodon and megatherium, animals of whose existence there is no record save that of their imbedded skeletons. In regard to the time the Indians have occupied this country, the following fact is pertinent. Three skeletons were found in a cave beneath a heap of accumulations several feet in depth. The crania were so nearly perfect that there was left no doubt of their being the crania of red men. These bones were computed to have been placed in their sepulcher 2,000 years ago. A jaw and tooth were found in a stratum and pronounced by Prof. Agassiz to have been there 10,000 years, and must have belonged to the bronze men or the stone men, as they are called. These stone men belong to the second period of pre-historic times, or to an age estimated at from 7,000 to 10,000 years back.

Mr. J. W. Foster stated that there were recent discoveries which warranted a much greater antiquity for the human race than that shown by the estimates already given. Along the banks of the Nile excavations have been made to a great depth, and from them fragments of burned brick have been taken out. Calculating from the depth of mud deposited by the Nile each century, an age of 36,000 years is ascribed to the men who burned those bricks. The Pyramids are founded on the handiwork of man buried deep beneath the soil on which their hoary foundations rest. The feet of Napoleon's soldiers, upon whom thirty centuries looked down from the piles of granite above them, trod upon earth which for three centuries of centuries had embraced the relics of a mighty race. The discovery of a human skeleton in California deep down in the gold drift, and covered by five successive deposits of lava, also carries back the antiquity of man to a period far beyond the stone age.

Prof. J. D. Whitney gave an account of a human skull well preserved which had been found in Bald Mountain, near Altaville, California, 130 feet below the surface of the ground, beneath formations of basalt and strata of lava. He had himself visited the locality of the discovery and used the best means in his power to thoroughly sift the matter to its foundation, and could find nothing on which to hinge a doubt as to the authenticity of the discovery.

Professors Silliman and Blake discussed this discovery at some length, but without in any particular denying it. Their attitude appeared to be that of a suspension of judgment, the reasonable effect of a startling development;

for if the antiquity of this skull is to be estimated by the usual geological approximations, the depth at which it was found in the excavation, and the many changes which had taken place in the earth's crust around and above it, would assign it to a period of antiquity ages anterior to that to which geologists have placed the earliest men.

There were those in this learned assembly who differed in their views from the distinguished gentlemen already mentioned, and whose opinions are of some weight in scientific circles.

Prof. True remarked that exaggeration, credulity, and mystification were the tendencies of the age. Now that the bones of man have been found associated with those of the mastodon, it would be expected for a year or two to come that every mastodon found would have a human skeleton beneath it. He, however, did not believe in this amazing antiquity of the human race.

Prof. Andrews thought there was a practical joke at the bottom of the Calaveras County skull discovery as detailed by Prof. Whitney.

Mr. Waterhouse Hawkins, the eminent naturalist and lecturer, was present during this discussion, and made a few common-sense reflections on the manner in which specimens involving important scientific questions were preserved. He urged the necessity of taking up and preserving with them the original material in which fossils were found. This simple precaution would relieve investigators of many doubts and answer many inquiries in a satisfactory way.

Whether or not the discovery that man is a hundred or a thousand centuries old will subserve any practical purpose in the enlightenment and progress of the present man, we are not prepared to definitely say. We do not see the practical connection of such a matter with the real objects and necessities of society, and think that no great end would be promoted by its demonstration. Yet no objection would be urged to such demonstration, for our organ of Wonder, like that of Americans in general, is hungry for the new and startling. Let things "be done decently," however; let them be proved before their assertion. Mere *belief*, one way or the other, proves nothing. It is *knowledge* we want.

SELF-GOVERNMENT.

THE way to freedom is through obedience to law; the way to bondage is through laxity of self-government. The basis of civil society is the conviction that men can, and do, distinguish between right and wrong; between good and evil; between the just and the unjust; between yours and mine. If men can recognize these things, and obey them, then laws have nothing to do, and laws may grow mild. Just in proportion to the responsibility of the individual, laws have little to do. No country requires so little governing as one in which the people govern themselves. If self-government is wanting, then laws must

have more of the iron in them, and penalties must be more stern. You can change the name, and no longer call it "penalty;" you can call it motive or help; but still it will be *pain*; and pain is that which men do not like. External arrangements to compel right conduct must be augmented just in proportion as interior ability to generate right conduct becomes enfeebled. The man that takes care of himself is the freest man in the world. The man that can not control his own passions or feelings, or conduct, goes back into the cold embrace of irresistible natural laws, or modifications of them, which men make in the help of society.

The doctrine of liberty of choice, and of personal responsibility for conduct and character, leads to personal excellence, to social purity, and to civil liberty. The contrary view, that man is irresistibly controlled by external laws, although at first sight it may seem to give men greater scope and variety, yet leads directly to despotism and cruelty. I believe that the doctrine of the irresponsibility of man in one hundred years, or in three generations, would again lock up society in the embrace of irrefragable despotism. I hold that dignity of man intellectually, his nobility in the household and in society, his power and his glory in his various civil associations, and even the liberty of the state, strange as you may think it, turns upon the doctrine of free agency and moral accountability. If you look back through history you will find that those ages which have been most potential under the influence of this doctrine have been ages marked by the birth of liberty in the state; while, on the contrary, any doctrine that tends to lower human responsibility and moral accountability tends also to lower manhood, to reduce the purity of the household, and ultimately to bring society itself into bondage. The doctrine of accountability begets in society a broader and broader intelligence, and lays deeper and deeper the foundations of liberty.—*Henry Ward Beecher.*

THE Gulf Stream is a river in the ocean. Its banks and its bottom are of cold water, while its current is warm. The Gulf of Mexico is its fountain, and its mouth is the Arctic seas. There is in the world no other so majestic flow of water. Its current is more rapid than the Mississippi or the Amazon, and its volume more than a thousand times greater. Its waters, as far out as Carolina coasts, are of an indigo blue. They are so distinctly marked that this line of junction with the common sea-water may be traced by the eye. Often one half of the vessel may be perceived floating in the Gulf-stream water, while the other half is in the common water of the sea, so sharp is the line and the want of affinity between these waters. The fishermen on the coast of Norway are supplied with wood from the tropics by the Gulf Stream. Think of the Arctic fishermen burning upon their hearths the palms of Hayti, the mahogany of Honduras, and the precious woods of the Amazon and Orinoco!

On Psychology.

The soul, the mother of deep fears, of high hopes infinite,
Of glorious dreams, mysterious tears, of sleepless inner sight;
Lovely, but solemn it arose,
Unfolding what no more might close.—*Mrs. Hemans.*

CHARACTERS OF SHAKSPEARE.

FOURTH ARTICLE.

MACBETH.

DR. SAMUEL JOHNSON, in his review of the play of Macbeth, says:

"This play is deservedly celebrated for the propriety of its fiction, and the solemnity, grandeur, and variety of its action; but it has no nice discriminations of character; the events are too great to admit of particular dispositions, and the course of the action necessarily determines the conduct of the agents."

This is correct, and the only part of the Doctor's remarks upon the play worthy a masterly reviewer. How meagre and wide of the mark is his next paragraph:

"The danger of ambition is well described; and I know not whether it may not be said in defense of some parts, which now seem improbable, that in Shakspeare's time it was necessary to warn credulity against vain and illusive predictions."

Is, then, the subject of the play of Macbeth the danger of ambition? Has all its splendid fiction, solemn grandeur, and variety of action merely evolved this as the great illustration of Shakspeare's masterpiece? To say that Macbeth was ambitious, is critically next to nothing; or that a wicked ambition is dangerous, is still more puerile in nice discrimination of review. Now, in Richard, the ambition of a very incarnate Satan, and his greatness of character in the likeness of his physical malformation, with the weaving of circumstances in keeping therewith, form the subject and shaping of the play. Othello, again (at his very mention), brings up to us the most famous illustrated chapter of jealousy; while Lear is the rarest gem of tragedy set in the ingratitude of daughters. Thus is it with all of Shakspeare's plays. I have a distinct remembrance of hearing a star actor make Richard to say, "Great men have great sins; ambition is mine." I could not find it in the text, but am still impressed with having heard it many times. Whether it is in the *acting* copies or not, it is a critique in itself of the subject of the play of Richard III. But Dr. Johnson has given this subject to Macbeth. "The danger of ambition is well described," is the Doctor's remark upon the complex theme of the play of Macbeth. If all the splendid efforts of that noble work were merely to illustrate ambition, then Richard has stolen from Macbeth his subject.

The grand subject of the tragedy of Macbeth is the illustration of the evil agencies of the world working out their dramas among mortals. This is an epic theme. In it we have something more than a gorgeous dramatic portraiture of character; and it is

this epic subject, so masterly handled, that constitutes the play before us a masterpiece. Not, however, that Macbeth himself is superior to Hamlet, or Richard, or Lear, or Shylock. Indeed, it would be presumption to assert a pre-eminence for either, when all are pre-eminent, and drawn out to the last effort of their capacity; but the superiority of the play is in the fact that it is burdened with a subject kindred to that of Milton's "Paradise Lost," and yet brought into the compressed body of a legitimate acting drama. This is the crowning triumph; an epic poem on the stage in dramatic performance! Macbeth himself is but as an episode of the vast argument that takes in all humanity. Now we saw in Richard III. that Gloster's very metaphysics grow out of his physical malformation, and the play out of Richard; but it is the reverse with Macbeth. He is *born* of the subject, and is not the *parent* to the subject. Mark this in the very opening of the two plays, and fail not to notice a striking instance of Shakspeare's perfect dramatic *methods*, abounding everywhere in his works:

[*Enter GLOSTER.*]

Now is the winter of our discontent
Made glorious summer by this sun of York.

Then comes that famous passage—

But I, that am not shap'd for sportive tricks,
Nor made to court an amorous looking-glass, etc.

It is one of the greatest of Richard's soliloquies, and we have it at the very opening of the play. This is a very remarkable exception in dramatic composition, for the chief actor to open, and that, too, with one of his best soliloquies. But Richard holds the subject; and in his opening he gives the prophecy of the play, and it is all evolved from himself. See how different in Macbeth:

"When shall we three meet again?" etc.
"Upon the heath,
There to meet with Macbeth."

In this case we have an equally peculiar dramatic form in the opening as in that of Richard. This play, too, is opened by those who hold the chief subject, and out of whom all the action is evolved. But it is not Macbeth; it is the supernatural agencies that hold the drama. This shows the epic quality and method; a play superior in its essence and theme to the character and action of its chief human personage! The evil agencies of the world leading a soul, great in its twinship of good and evil, to its ruin through ambition—a ruling passion in great men—was the theme that Shakspeare was about to illustrate when he gave his supernatural powers the opening of the play, and made them call up Macbeth into the body of their drama. But this is not all. The subject has a vast bearing beyond the individual Macbeth. It takes in all mankind; and we have a grand illustration of the mighty theme of supernatural powers working out their dramas among nations and mortals in general. The view of the *dark* sides of this stupendous subject—the blended drama of our mortality and immortality—successfully illus-

trated in actual performance, and we have the whole. The sun-side is the other half which, though not brought out, is in the prophecy of the theme. We have the whole in substance. Night illustrates Day as much as Day does itself; and more strikingly are we impressed with the two great ordinances of nature when Night reigns.

The human mind is pregnant from the very birth with the twin ordinances of Day and Night in our mortal-immortal drama of life. Another moment and the twin shall be born, and the Day and Night of two worlds—which are but two halves of one birth—shall be fairly revealed before us. Thus it has been for six thousand years, and we are never more than that one brief moment from the delivery. Divines and poets have, in a long illustrious train, taken their turns at the bed-side of mother Mortality, to help on the other birth; and Shakspeare is chief among them there—and among poets none has helped the birth as much as he. At last he reaches the culmination of the capacity of genius, and gives us in an *acting* play the great drama performed between the beings of two worlds. All is made literal to the audience, and the natural and supernatural blended into the harmony of one great action—that harmony made more sonorous and unique by the very demoniac discords of the play. Yet Dr. Johnson saw in this matchless dramatic achievement no grander design than the necessity which Shakspeare felt "to warn credulity against vain and illusive predictions." Dr. Johnson did not understand Shakspeare's great work, nor was his robust but rude mind capable of appreciating so fine and subtle a composition in which the metaphysics of our two worlds are crowded. The Doctor has brought down a very epic fiction into his circle of a ghost story, or the telling of fortunes by the tea-cup.

Pass now to the type and character of Macbeth, and see the essence and theme of this epic drama unfolded in his action and person. I have affirmed that he is *born* of the subject, and is not the *parent* to it. He is the chief *instrument* in the hands of the superhuman powers. He is a medium—a clairvoyant in his metaphysics; and from the time that he makes his *entrée* to the close of his action, he is under the *influence*, and a son of supernatural solicitude. The potent managers of the play bring him on by their charms. In the linkings of the weird text, in the superhuman development, it was apparent that Shakspeare had given to the play a complete inner movement, so much so, that when abstracted it possessed in itself an entirety. Let us here give the linkings of the subject and action as embodied and evolved in the person of Macbeth—this clairvoyant regicide—who sees invisible things, and holds midnight consultations with beings of another world.

[*Enter MACBETH and BANQUO.*]

Macb. So foul and fair a day I have not seen.

Banq. How far is't call'd to Forres?—What are these,
So wither'd and so wild in their attire;
That look not like the inhabitants o' the earth,

And yet are on't? Live you? or are you aught
That man may question? You seem to under-
stand me,
By each at once her choppy finger laying
Upon her skinny lips.

Then follow the predictions of the witches concerning Macbeth's advancement, promising him that he shall be thane of Cawdor, and then king:

1 *Witch*. All hail, Macbeth! all hail to thee, thane of Glamis!

2 *Witch*. All hail, Macbeth! hail to thee, thane of Cawdor!

3 *Witch*. All hail, Macbeth! that shall be king hereafter.

Here it is apparent that Banquo fancies he has the subject, but in Macbeth's soul it has another form from its very birth. It is *temptation*, not ambition.

Banq. Good sir, why do you start, and seem to fear
Things that do sound so fair?

Macbeth did not *fear* to be ambitious; did not fear to challenge immortal powers; did not fear to call them "black and midnight hags," but he feared himself—feared the whirlpool of *temptation* into which he was hurled, like the archangel cast down from heaven upon the burning lake, lost and confounded by the fall; feared the direful warfare of the mighty elements of good and evil opening now their storm upon his soul. A moment, and the fiend need stay no longer to pursue their theme. Temptation has the mastery. More eager than they is he to open the matter farther.

Macb. Stay, you imperfect speakers, tell me more.
By Sinel's death I know I am thane of Glamis;
But how of Cawdor? the thane of Cawdor lives
A prosperous gentleman; and to be king
Stands not within the prospect of belief,
No more than to be Cawdor. Say from whence
You owe this strange intelligence? or why
Upon this blasted heath you stop our way
With such prophetic greeting? Speak, I charge you.

Follow the subtle working of temptation in the mind of our hero.

Macb. Your children shall be kings.
Banq. You shall be king.

Then the arrival of the king's messengers, who hail Macbeth "thane of Cawdor."

Banq. What, can the devil speak true?

But in Macbeth it has not this direct working; it takes the subtler method of doubt to reach the ecstasy of conviction. Banquo doubts not the strange greeting from the king, but is directly on his guard with, "What, can the devil speak true?"

Macbeth challenges the truth, to be more fully convinced.

The thane of Cawdor lives? Why do you dress me in borrow'd robes?

The fact confirmed by circumstance, the theme of temptation continues.

Macb. Glamis, and thane of Cawdor!
The greatest is behind. * * *
Do you not hope your children shall be kings,
When those that gave the thane of Cawdor to me,
Promised no less to them?

See how much better Banquo understood the subject than did Dr. Johnson.

Banq. That, trusted home,
Might yet enkindle you unto the crown,
Besides the thane of Cawdor. But 'tis strange:

And oftentimes, to win us to our harm,
The instruments of darkness tell us truths;
Win us with honest trifles, to betray us
In deepest consequence.

Is this a commentary on ambition or on the great subject of human temptation? It is Shakespeare that thus interprets himself. He knew his theme. Out of this subject our immortal poet has worked more sermons for the pulpit than from any other of his plays, not excepting Hamlet. It also gave him the opportunity for some of his finest metaphysical touches, and in no play have we nobler passages than in that of Macbeth. He is more of the divine and moralist even than the dreamy, philosophical Dane, for he has more of the subject to be illustrated in his life. He holds their best argument—the warfare of the good and the evil—the great play of man's soul passing through the fire of life's temptation. Here is a fine characteristic passage, which we beg to quote, to follow our dramatic master's great moral strain:

Macb. Two truths are told,
As happy prologues to the swelling act
Of the imperial theme. * * *
This supernatural soliciting
Can not be ill; can not be good:—If ill,
Why hath it given me earnest of success,
Commencing in a truth? I am thane of Cawdor:
If good, why do I yield to that suggestion
Whose horrid image doth unfix my hair,
And make my seated heart knock at my ribs,
Against the use of nature? Present fears
Are less than horrible imaginings;
My thought, whose murder yet is but fantastical,
Shakes so my single state of man, that function
Is smothered in surmise; and nothing is
But what is not.

Here is murder already conceived, and the ecstasy of fear, that makes his "seated heart knock at his ribs against the use of nature," is the fear lest Macbeth will vanquish Macbeth and lose his own soul in his victory.

For a fine description of the character of Macbeth let us pass to Lady Macbeth's opening scene. She enters in her imperial rapture, reading her lord's letter relating his meeting with the weird sisters.

Lady M. Glamis thou art, and Cawdor; and shall be
What thou art promised:—Yet do I fear thy
nature;
It is too full o' the milk of human kindness
To reach the nearest way: Thou would'st be
great;
Art not without ambition; but without
The illness should attend it. What thou
would'st highly,
That would'st thou holily; would'st not play
false,
And yet would'st wrongly win; thou'd'st have,
Great Glamis, that which cries,
Thus thou must do, if thou have it;
And that which rather thou dost fear to do,
Than wish should be undone. Hee thee hither,
That I may pour my spirits in thine ear;
And chastise with the valor of my tongue
All that impedes thee from the golden round,
Which fate and metaphysical aid doth seem
To have thee crown'd withal.

Have we not here a human subject for Satan to work upon? Could there be created for the archfiend a fitter soul to tempt? a soul great in its twinning of good and evil and active in its qualities. Our master is seen in all

his works. Shakespeare creates for all his varied subjects fitting souls. The reviewer that touches our immortal dramatist should be careful in his every touch, for Shakespeare has left his own reviews in his text. Johnson has made the theme of the play ambition. Macbeth's creator reviewed him thus: "Thou *would'st be great*; art *not without ambition*; but without the illness should attend it." But see the essence of character mixed for Shakespeare's chosen theme, which is *not ambition*. "Yet do I fear it is too full o' the milk of human kindness to reach the nearest way. * * * What thou would'st *highly*, that would'st thou *holily*; would'st not play false, and yet would'st wrongly win; thou'd'st have, great Glamis, that which cries, *Thus thou must do, if thou have it; and that which rather thou dost fear to do, than wish should be undone.*" What a mixture of character is here for Shakespeare's vast design! The pauper summary of Dr. Johnson on the play, "The danger of ambition is well described," is annihilated by the theme evolved of human *temptation*, magnificently described in the self-warfare and ruin of a soul mighty in its qualities of good and evil.

Macb. If it were done, when 'tis done, then 'twere well
It were done quickly; if the assassination
Could trammel up the consequence, and catch,
With his surcease, success; that but this blow
Might be the be-all and the end-all here,—

(Now for a sermon in a passing loaded thought upon our immortal essence and man's hereafter.)

But here, upon this bank and shoal of time,
We jump the life to come.

(Another sermon upon the *present* judgment of human acts quickly follows.)

But in these cases,
We still have judgment here; that we but teach
Bloody instructions, which, being taught, return
To plague the inventor: This even-handed justice
Commends the ingredients of our poison'd chalice
To our own lips.

Now mark the good and evil moving in him, in one of the noblest passages of poetic description.

He's here in double trust;
First, as I am his kinsman and his subject,
Strong both against the deed; then, as his host,
Who should against his murderer shut the door,
Not bear the knife myself. Besides, this Duncan
Hath borne his faculties so meek, hath been
So clear in his great office, that his virtues
Will plead like angels, trumpet-tongued, against
The deep damnation of his taking off:
And pity, like a naked new-born babe,
Striding the blast, or heaven's cherubim, hors'd
Upon the sightless couriers of the air,
Shall blow the horrid deed in every eye,
That tears shall drown the wind.—I have no spur
To prick the sides of my intent, but only
Vaulting ambition, which o'erleaps itself,
And falls on the other.

Macbeth has won his soul from the hands of the fiends. Duncan is saved and Satan is vanquished; but he flies to his daughter, Satanna, crying, Come to my help. She is known on earth as Lady Macbeth. He has many daughters among men, but Satanna is

his eldest and best beloved, and Macbeth married her.

The theme can not progress farther than Macbeth's great soliloquy, unless some one comes to Satan's help. Shakspeare never bungles his work. A lesser than he might manage by bungling. He can not triumph by a bungle in art and nature. His play must end, or he must bring some one on to Satan's help to continue the theme of temptation more potent than the weird sisters—more potent than Macbeth's evil thought—more potent than the archfiend himself, who has fled, vanquished. Iago would be a mere feather's weight thrown into the plot, for the devil himself has fled in dismay at the close of the matchless soliloquy of Macbeth. Othello's subject is jealousy: this the epic of human temptation. Who shall be sent now Satan himself is vanquished? There is one more potent than he, and only one in such a theme. It is the woman!

[Enter LADY MACBETH.]

L. Macb. He has almost supp'd. Why have you left the chamber?

Macb. Hath he ask'd for me?

L. Macb. Know you not he has?

Macb. We will proceed no further in this business; He hath honor'd me of late; and I have bought Golden opinions from all sorts of people, Which would be worn now in their newest gloss,

Not cast aside so soon.

L. Macb. Was the hope drunk Wherein you dress'd yourself? Hath it slept since?

And wakes it now to look so green and pale At what it did so freely? From this time Such I account thy love. Art thou afraid To be the same in thine own act and valor As thou art in desire? Would'st thou have that

Which thou esteem'st the ornament of life, And live a coward in thine own esteem: Letting I dare not wait upon I would, Like the poor cat i' the adage?

Note the finest of moral sermons upon what manhood might dare without losing itself in its daring.

Macb. Pr'ythee, peace:
I dare do all that may become a man;
Who dares do more, is none.

But how shall the soul of Macbeth resist the power of this assault:

L. Macb. What beast was't then That made you break this enterprise to me? When you durst do it, then you were a man; And, to be more than what you were, you would Be so much more than man. Nor time, nor place Did then adhere, and yet you would make both: They have made themselves, and that their fitness now Does unmake you. I have given suck; and know How tender 'tis to love the babe that milks me: I would, while it was smiling in my face, Have pluck'd my nipple from his boneless gums, And dash'd the brains out, had I so sworn, As you have done to this.

Macb. If we should fail,—

L. Macb. We fail!
But screw your courage to the sticking place, And we'll not fail.

To review the character of Lady Macbeth in her entirety is more than can be here attempted. She properly belongs to Shakspeare's female characters. I design no more than to call her up to reveal her husband, and not to deal, in special review, with that awful imperial character which has left Mrs. Sarah Siddons such an imposing memory.

Macb. Bring forth men-children only!
For thy undaunted mettle should compose
Nothing but males.

The daughter of Satan has won her father's issue, and the first act ends directly with her husband now kneeling lost at that father's feet. The devil holds the ground.

There is in Macbeth's essence that subtle psychological sense which belongs to clairvoyant natures. It is revealed even before crime, or a murderous business in design, had made conscience fanciful. As soon as he is brought into the action, he sees and converses with creatures of the other world. So did Banquo; but he was merely under their passing spell. Macbeth has a metaphysical union with the inner world; he has a sense in him as a gift of nature or witchcraft to see and hear what others present have no sight to see, or sense to give a vocal echo to a voiceless speech. The celebrated "dagger scene" is a psychological exposition, but even to the actors themselves it is appreciated most for its great dramatic opportunity. Note it here for its psychology as well:

Is this a dagger which I see before me,
The handle toward my hand? Come, let me clutch thee;

I have thee not, and yet I see thee still.
Art thou not, fatal vision, sensible
To feeling as to sight? Or art thou but
A dagger of the mind; a false creation,
Proceeding from the heat-oppressed brain?
I see thee yet, in form as palpable
As this which now I draw.

Thou marshal'st me the way that I was going
And such an instrument I was to use.
Mine eyes are made fools o' the other senses,
Or else worth all the rest: I see thee still:
And on thy blade and dudgeon gouts of blood,
Which was not so before. There's no such thing:
It is the bloody business which informs
Thus to mine eyes.

What scene-painting for murder is there in the following:

Now o'er the one half world
Nature seems dead, and wicked dreams abuse
The curtain'd sleeper; witchcraft celebrates
Pale Hecate's offerings; and wither'd murder,
Alarm'd by his sentinel the wolf,
Whose howl's watch, thus with his stealthy pace,
With Tarquin's ravishing strides, toward his design
Moves like a ghost. Thou sure and firm-set earth,
Hear not my steps, which way they walk, for fear
The very stones prate of my whereabouts,
And takes the present horror from the time
Which now suits with it.

Unlike the modern charlatan dramatists, Shakspeare needs not the stage manager and his flimsy paraphernalia, scarcely the scenic artist, scarcely our Garricks and our Keans to make him what he is in dramatic art. He is greater to the critic in his closet than to him in performance on the stage.

I go, and it is done; the bell invites me.
Hear it not, Duncan; for it is a knell
That summons thee to heaven or to hell.

What musical jugglery or orchestral accompaniment can add effect to this? 'Twould but burlesque the awful import of the text and the scene.

The deed is done. Macbeth has a new birth. It rushes upon his consciousness like a horrid self-transformation, and he flees aghast before his new-born self, that now pursues Macbeth of holier days.

Macb. One cried *God bless us!* and *Amen* the other:
As they had seen me, with these hangman's hands,

Listening their fear, I could not say *Amen*,
When they did say *God bless us*.

L. Macb. Consider it not so deeply.

Macb. But wherefore could I not pronounce *Amen*?
I had most need of blessing, and *Amen*
Stuck in my throat.

Is this the ecstasy of ambition in its great leap to the throne? Did Richard kill Henry VI. thus: "Down, down to hell, and say I sent thee there?" Gloster, beardless, would have murdered half mankind to have his head "impaled with a glorious crown." Is it not rather man's soul—tempted—lost—awaking to the consciousness that it has bartered itself away to the Fiend but one brief moment before? Yet what a world of new experience has that one moment brought. "But wherefore could I not pronounce *Amen*?" etc., would make Mercy weep. With it for a text, a Spurgeon or a Beecher might drown a congregation in tears.—The following of the same quality is matchless, and in it we have again a psychological exposition:

Macb. Methought I heard a voice cry, Sleep no more!
Macbeth does murder sleep, the innocent sleep;
Sleep, that knits up the ravel'd sleeve of care,
The death of each day's life, sore labor's bath,
Balm of hurt minds, great nature's second course,

Chief nourisher in life's feast:—

L. Macb. What do you mean?

Macb. Still it cried, Sleep no more! to all the house:
Glamis hath murder'd sleep; and therefore
Cawdor
Shall sleep no more, Macbeth shall sleep no more!

His wife bids him go carry the daggers back and smear the sleeping grooms with blood. How unlike Gloster's, "and buried gentle Tyrrel" (after the murder of his nephews) is this:

Macb. I'll go no more:
I am afraid to think what I have done;
Look on't again, I dare not.

How, too, unlike his wife's—

Infirm of purpose!
Give me the daggers: the sleeping and the dead
Are but as pictures: 'tis the eye of childhood
That fears a painted devil. If he do bleed,
I'll gild the faces of the grooms withal,
For it must seem their guilt.

Lady Macbeth holds a great episode of the theme of the play, and hers now is ambition, and *not* temptation; and does she not clear her way to the throne in Gloster's own style: so would Macbeth had Shakspeare designed his play to be "the danger of ambition well

described," and we should never have found in Macbeth a consciousness of guilt so "well described."

Macb. How is't with me, when every noise appalls me?
What hands are here? Ha! they pluck out mine eyes!

Will all great Neptune's ocean wash this blood
Clean from my hand? No; this my hand will rather

The multitudinous seas incarnadine,
Making the green, one red.

[*Re-enter LADY MACBETH.*]

My hands are of your color: but I shame
To wear a heart so white.

But Macbeth had not a "white heart" at the opening of the play. He was the valiant, victorious generalissimo of Scotland's armies. He illustrates in his transformation his own sermon on moral philosophy. "I dare do all that may become a man; who dares do more, is none."

When he screwed his courage to the "sticking place" he lost his daring.

To know my deed,—'twere best not know myself.
Wake Duncan with thy knocking! I would thou could'st.

A great personator of Macbeth will give to "I would thou could'st" a mighty soul-wail, to touch an audience to the very heart.

But Macbeth soon got familiar with murder, and waded in blood; but the new sense which conscience and metaphysical charms endowed him with grew. At the banquet scene the ghost of Banquo rises and sits in the place of Macbeth; but it is a ghost only to Macbeth. He alone has the psychological sense to see the inner world. His ecstasy of horror throws the company into confusion. His lady explains to them in brief his malady, and then to him,

Are you a man?

Macb. Ay, and a bold one, that dare look on
Which might appall the devil.

L. Macb. O proper stuff!
This is the very painting of your fear:
This is the air-drawn dagger, which you said
Led you to Duncan. * * *

Macb. Prythee, see there! behold! look! lo! how
say you?

Why, what care I? If thou canst nod, speak
too.

If charnel-houses, and our graves, must send
Those that we bury back, our monuments
Shall be the maws of kites.

[*GHOST disappears.*]

The scene is crowded with fine passages, and the dramatic opportunities are immense.

Blood hath been shed ere now, I' the olden time,
Ere human statute purged the gentle weal;
Aye, and since too, murders have been performed
Too terrible for the ear: the times have been,
That when the brains were out the man would die,
And there an end.

But that was when Macbeth was innocent of crime. He is reading now from his volume of the "judgment here," whose sequel shall be in the dread hereafter.

It will have blood; they say blood will have blood;
Stones have been known to move and trees to speak;
Augurs, and understood relations, have
By maggot-piles, and choughs, and rooks, brought forth
The secret'st man of blood.

But Macbeth is a soul falling headlong henceforth forever.

I will to-morrow

(And betimes I will) to the weird sisters;
More shall they speak; for now I am bent to know
By the worst means, the worst; for mine own good
All causes shall give way: I am in blood
Stepp'd in so far, that, should I wade no more,
Returning were as tedious as go o'er.

What a gospel sermon is this! Universal experience crowded into one man, to tell how deeply damned we are by sin, though hell should be a very myth. The "bottomless pit" may be a fiction, but there is a poetic truth in the conception. Macbeth has been falling headlong down that pit of hell since he murdered Duncan—"murdered sleep"—murdered his soul's rest.

At length Shakspeare's mighty subject conquers even Satan's daughter:

L. Macb. Here's the smell of the blood still:
All the perfumes of Arabia will not
Sweeten this little hand. Oh! oh! oh!

But Dr. Johnson saw no more in this great epic theme than "ambition well described," and even apologized for this glorious play: "And I know not whether it may not be said in defense of some parts, which now seem improbable, that in Shakspeare's time it was necessary to warn credulity against vain and illusive predictions." Did Homer write the Iliad to warn the Greeks against their mythology? Did Milton weave into his gorgeous poem its splendid supernatural fiction, to nullify its own influence over the human mind? Genius is earnest and full of faith and love for its subjects. Shakspeare had faith in his works, and there is a love expressed in their magnificent execution. So with Milton; so with Homer. They created their Iliad, their Paradise Lost, and their Macbeth to be immortal—to live forever in the faith and interest of mankind, and not to "warn credulity" against their own mighty potency.

THE PAR VALUE OF BRAINS.—Working as an ordinary hand in a Philadelphia ship-yard was a man named John L. Knowlton. His peculiarity was, that while others of his class were at ale-houses, or indulging in a jollification, he was incessantly engaged in studying upon mechanical combinations. One of his companions secured a poodle dog, and spent six months in teaching the quadruped to execute a jig upon its hind legs. Knowlton spent the same period in discovering some method by which he could saw out ship timber in a beveled form. The first man taught his dog to dance—Knowlton, in the same time, discovered a mechanical combination that enabled him to do in two hours the work that would occupy a dozen men, by a slow and laborious process, an entire day. That saw is now in use in all the ship-yards of the country. It cuts a beam to a curved shape as quickly as an ordinary saw-mill saw rips up a straight plank. Knowlton continued his experiments. He took no part in parades or target shootings, and in a short time afterward he secured a patent for a machine that turns any material whatever into a perfectly spherical form. He sold a portion

of his patent for a sum that is equivalent to a fortune. The machine is now in operation in this city cleaning off cannon-balls for the Government. When the balls come from the mold their surface is incrustated, and the ordinary process of smoothing was slow and wearisome. This machine almost in an instant, and with mathematical accuracy, peels it to the surface of the metal, at the same time smoothing out any deviations from the perfect form. The same plain, unassuming man has invented a boring machine, that was tested in the presence of a number of scientific gentlemen. It bored at the rate of twenty-two inches an hour, through a block of granite, with a pressure of but three hundred pounds upon the drill. A gentleman present offered him ten thousand dollars upon the spot for a part interest in the invention, in Europe, and the offer was accepted on the spot. The moral of all this is, that people who keep on studying are sure to achieve something. Mr. Knowlton doesn't consider himself by any means brilliant, but if once inspired with an idea, he pursues it until he forces it into tangible shape. If everybody would follow copy, the world would be less filled with idlers and the streets with grumblers and malcontents.

[The mechanical powers of Americans have been more exercised, perhaps, than those of other people, as seen in the greater number of our inventions; but we do believe greater achievements are to be made in this direction by our inventors than have yet been dreamed of. The par value of brains will be increased just in proportion as we know how to use them. We believe that there are many minds now exhibiting only inertness or torpidity, which, if roused into earnest action, would develop surprising results in their different spheres of industry.]

"MIGHT BE."—"If I might be" is the first awakening of youth's bright dream of glory, greatness, and goodness. When he reads the record of fame, and sees the names of the honored written there,—when he learns that many of the renowned have overcome difficulties and risen above discouragements, even worse than lie in his own pathway,—he exclaims, "Can this be so? Why may not I, too, leave a name, that will live, as do theirs, to tell that I have been?" But the task seems too great, and after the first unavailing effort, the faint heart falters, and we find him striving for wealth only; dreaming that this will fully satisfy his hungering thirst for distinction, and render all his after-life a continual scene of happiness.

This sad error is afterward wrought out in the years of care and anxiety which inevitably accompany the panderer to wealth.

AN EPIGRAM.

He only really lives
Who thinks, and thinking gives
Fresh life and power to truth,
As nature to our youth. C. WELLINGTON.

Religious Department.

Know,
Without or star, or angel, for their guide,
Who worship God shall find him. Humble love,
And not proud reason, keeps the door of heaven;
Love finds admission where proud science fails.

—Young's Night Thoughts.

MORAL PURITY.

THE first and highest and most perpetual study of your life should be to develop within yourself an absolute and positive reverence for moral purity and power. You should teach your soul to loathe impurity; to abhor with a deep and hearty disgust all moral debasement; to shudder at the thought of doing evil, or of seeing it in others. There is no such thing as cultivating too deep an abhorrence of evil, or too high a respect and admiration for moral excellence. The very thought of wrong should be cast out of the mind as its most deadly enemy; while the thoughts of goodness, purity, all moral loveliness, should be cherished as angel guests which are building up within you a sure foundation for pure and permanent affections. There is nothing else that seems to me to be of so much importance, of such priceless value, as a just appreciation of *moral worth*. It is not only the basis of all true affection, but the foundation of all that is noble, great, and good in human character. The basis of moral excellence may be placed in the religious principle. This is the only safe and sure foundation. The religious feelings, religious affections, religious sentiments should be cultivated most assiduously. The fervor of religious feelings should transmute itself through the whole being. Religion should be held as a sacred and heavenly thing. Religious feelings should be respected everywhere, and in everybody. We should hold them so supremely sacred as to feel that we have no power to outrage the religious sentiments or feelings of any human being. And we should feel that an affection based on such a respect for things sacred and good, must be pure and permanent.

"Assist us, Lord! to act, to be,
What nature and thy laws decree;
Worthy that intellectual flame
Which from thy breathing Spirit came
Our moral freedom to maintain;
Bid passion serve, and reason reign,
Self-poised and independent still,
On this world's varying good or ill.
No slave to profit, shame, or fear,
Oh, may our steadfast bosoms bear
The stamp of heaven, an upright heart,
Above the mean disguise of art,
May our expanded souls disclaim
The narrow view, the selfish aim;
But with a Christian zeal embrace
Whate'er is friendly to our race."

THERE is reason to respect the genuineness of that religion which is too modest to bear the gaze, and too delicate to bear the touch of the world.—*Jenkin Thomas*.

ISAAC TAYLOR.

THERE is some resemblance in this organization to that of the late Horace Mann. The head was decidedly high and long; the temperament was Motive-Mental. He was a natural thinker, writer, teacher, and worker. Such a nature could not remain idle, but would manage to be fully occupied. Though somewhat deeply furrowed, those features are come-

PORTRAIT OF ISAAC TAYLOR.

ly and attractive. That is a good face; it invites rather than repels, and there is more Yes than No in it,—more of the positive element than the negative. The tendency of such a mind would be upward, not downward,—to refinement and cultivation, not to coarseness and demoralization. Observe the features. What a symmetrical and well-formed nose!—what a fine mouth! and how elegant the chin! What speaking eyes! and how energetic and emphatic the whole contour! There was no mud in that brain; it was clear, flexible, and available. There was also dignity of the Jacksonian stamp; there was stability and decision; there was high integrity, devotion, faith, trust, and sympathy, and, withal, strongly marked affection.

Those large perceptive faculties would find occupation in the practical affairs of life,—in the use of tools, perhaps in man-

ufacturing; at least in the investigation of scientific questions. There was no deficiency in the reflective faculties. In short, it is a large brain, well set on, modeled on the plan of the religious philanthropist. There was something of Oberlin and Melancthon in this good man. Here is a sketch of his life:

Isaac Taylor is well known, especially in England, as having been a regular contributor to the leading magazines of the day on various subjects, chiefly of a religious character. In consideration of his literary efforts, Queen Victoria, in 1862, conferred upon him a pension. Yet he cared little for literary fame, since in his quiet retirement at Stanford Rivers he, for a long period, wrote anonymously, announcing his true name and authorship only at the urgent solicitation of his friends to stand for the chair of logic in the University of Edinburgh, in which, happily for himself, as he afterward thought, he was defeated, and the late Sir William Hamilton elected by a slender majority.

Mr. Taylor was born at Lavenham, England, in August, 1787, and had nearly completed his 78th year when he died. Mr. Taylor belonged to a family in which literary talent seemed to have been hereditary, and at an early age he abandoned the profession of an artist, to which he had been trained, for the more congenial pursuits of literature. In 1818 he became a regular contributor to the *Eclectic Review*, and his articles soon began to attract attention. But, a few years later, finding himself trammelled by the restraints which are incident in contributing regularly to a review, he betook himself to independent authorship. His first venture was a volume entitled "Elements of Thought," which was an attempt, but not a very successful one, to present the rudiments of intellectual science in a form adapted for educational purposes. This was followed by the "History of the Transmission of Ancient Books to Modern Times," and "The Process of Historical Proof." These works, though well received by the public, excited no marked attention. At the age of forty-two Mr. Taylor published, anonymously, "The Natural History of Enthusiasm," a sort of philosophical analysis of the social and religious problems of the age. This work placed him in the first rank among writers of the day. Two companion volumes, "Fanaticism" and "Spiritual Despotism," soon followed, and were eagerly welcomed by the public. His next work, and which is perhaps the one most warmly prized by his admirers, was entitled "Saturday Evening," which was intended as a preparation for the more direct religious services of the Sunday. It is a work of profound thought, and expressed in the massive and harmonious style of which Mr. Taylor was a complete master. "Saturday Evening" was followed by the "Physical Theory of Another

Life." This series of works were all published anonymously, Mr. Taylor's pen appearing to flow with greater freedom and power while thus protected. He next published "Home Education," a work which was suggested to his mind while superintending in person the education of his own children. The happy influences of a country life, the educational value of children's pleasures, and the importance of favoring the natural growth of the child's mind are among the matters powerfully insisted on in this volume.

The works of Mr. Taylor's later years may be briefly enumerated. "Loyola" and "Wesley" are philosophical essays on the lives and works of two of the greatest religious "enthusiasts" of modern times. "The Spirit of the Hebrew Poetry" was the substance of a series of lectures delivered in Edinburgh. "Spiritual Christianity" and "Man Responsible" were originally courses of lectures delivered in London. The "Restoration of Belief" deals with the Christian evidences with great power. "Logic in Theology" and "Ultimate Civilization" are two volumes of characteristic essays. "Without Controversy," one of the leading essays in the former volume, contains a more formal expression of Mr. Taylor's mature belief than he has elsewhere published. His final work was a series of "Personal Recollections," published in *Good Words*.

Mr. Taylor had a natural aptitude for mechanical devices and invention. One of these—a machine for engraving copper-plates—was perfected and applied. But the invention, valuable as it was, proved, financially, most disastrous to Mr. Taylor, involving him in liabilities from which he fairly emerged only in the last years of his life. As is usually the case, the invention, after ruining the inventor, passed into the hands of others and procured for them large returns.

In person, he was below the middle height, and compactly and firmly built. He had a broad and massive forehead, an exquisitely chiseled Grecian nose, expressive features, and snow-white hair brushed erect, which gave him a noble and striking appearance. He was educated as a Dissenter, but afterward attached himself to the Church of England, though he ever retained a characteristic independence of thought on all ecclesiastical questions. He was broad without being shallow, liberal without being latitudinarian. His writings can not fail to retain a permanent place in English literature.

Mr. Taylor died on the 28th of June, at Stanford Rivers, England, in his quiet country retreat, where he had passed the last forty years of his life in the contented enjoyment of domestic happiness.

We have said that Mr. Taylor belonged to a family in which literary talent seems hereditary. Some interesting facts with reference to this have come to our knowledge, and are not out of place in this connection.

Mrs. Taylor, the wife of the subject of our sketch, achieved considerable distinction as a

writer, having given some eight volumes to the world.

Four of the children of Isaac Taylor have contributed much to English literature.

Jane Taylor and Ann Taylor (the late Mrs. Gilbert), in addition to the well-known "Hymns for Infant Minds," published jointly seven works; Mrs. Gilbert solely three, and Jeffreys Taylor, their brother, published eighteen volumes of tales, poems, etc. Isaac Taylor, the author of "The Natural History of Enthusiasm," published nearly thirty volumes, besides innumerable separate articles and papers. The son of the latter, the biographer of the family, has published three or four volumes. Mr. Josiah Gilbert, the son of Ann Taylor, is the accomplished author of "The Dolomite Mountains;" so that altogether the Taylors of Ongar and their family have given to the world some ninety-six volumes; an almost unique instance of literary endowment and activity, especially considering the great merit of many of these works and the popularity they have attained.

IS MAN IMMORTAL? IS THERE A GOD?

WE are asked by correspondents to explain many points which have puzzled the sharpest thinkers of the world. Here is an instance. We are requested to prove to the satisfaction of the inquirer that "religion is a truth," and also two points of the greatest importance, viz.: "the existence of God, and the immortality of man." We feel ourselves constrained to say something in response.

The trouble with all skeptics in religious matters begins in a radical mistake, viz.: that religion is to be comprehended solely by the intellect. Most skeptics are intellectual people who deify intellect, or at least raise it above the emotional part of their being, and whatever can not be recognized by intellect, they deny the truth of; whereas the whole group of the religious organs is located, not in the intellectual region, but in a special group above. The same is true of the social group. Love is not an intellectual but an emotional element. Love of man and woman does not depend upon their strength of intellect. Sometimes people love in spite of the teachings of intellect, even against the suggestions of reason. Is love, therefore, not a truth because it does not depend upon the intellect or act according to the strength or weakness of the reason? Everybody knows that we do not love in proportion to our intellectual strength. Skeptics say, "Here is a great philosopher,—he does not believe in religion." Suppose we say, "Here is a great philosopher,—he does not believe in marriage;" would that be an argument against marriage? But suppose it were said, "Here is a man of weak intelligence who thinks his wife and children are the chiefest consideration of life; he will suffer and serve that they may enjoy;" shall we say wife and children are not desirable because a very

intellectual man ignores them and the weak-minded man almost worships them? It is said, "Here is a philosopher who is not a Christian." If men had to become philosophers before they became Christians, there would be few Christians among men. Everybody knows that man's love is not grounded upon the strength of intellect; and if you were to attempt to prove intellectually the existence of man's love, you would utterly fail. No man can appreciate a logical statement relative to it who has not the feeling instinctively within him. We know that love between the sexes depends upon a certain organic condition, the brain harmonizing with the physical nature. Now let us suppose that the physical nature (as sometimes it is in animals) was artificially changed; could a poet so situated write of female beauty? Would he have any conception of it? History tells us that eunuchs hate women, that they detest and despise them; but they are not destitute of intellect. Why can not they reason out that woman is beautiful and lovely? Show us a man who is destitute of moral and religious organs, or has them feebly developed, no matter how much intellect he may have, he will be a eunuch in respect to religion or religious ideas. But men very often deify the intellect and think they must silence every emotion, especially in religious matters, until the reason can work out the problem.

You must see, in the light of this argument, the folly of reducing religion, which is the product of emotion, to the standard of mere intellect. True, reason helps the mother to love her child. Reason helps man to appreciate the beauty which emotion suggests; and reason aids the religious man; but the feeling must exist first, and the reason must act secondarily and under the inspiration and guidance of the feeling. In regard to the existence of a Supreme Being, the lower animals exhibit no recognition of such a Power. They never yield to any being as superior to themselves until after they have tried their strength with him. Man, though he does not see God, has in his nature a sentiment or feeling which leads him to look up to a Supreme Power and willingly confess his subjection to that Power. Wherever man is found on the earth, however debased, barbarous, or ignorant, he is found with an idea of immortality and of a Supreme Being; and though among the lowest order of men demonology perhaps is more prevalent than theology, the feeling of subservience to supernatural existences is substantially the same instinctive religious sentiment which is known to the highest civilization. Our inference is, that religion is not the work of priestcraft or of invention, but that it is inwrought with the very essence of our being. The lower animals provide for their offspring precisely what should be provided for their health and comfort, and do it the first time without any previous example. This we call instinct, and is it not truth? Is not the treatment adapted to the necessities of the case? Could

reason alone teach the young mother—human or animal—to manage as well as she does for her child? The mother that is in her, instinctively manages rightly with or without intellect. Now we may understand what is meant by instinctive sympathy toward God, toward immortality. The lower orders of the human race exhibit this instinctive religious feeling. Rude, barbarous, though it may be, still they yearn for God and immortality; and as true as the needle points to the pole, so true does the heart of man, in spite of ignorance on other subjects, point toward a Creator and an immortality. It is a part of man's being to be religious as it is a part of his being to love; and as love to God and love among the human race are emotional instincts not originating in or measured by reason, we would thank those gentlemen who undertake to reduce everything to an intellectual standard to remember that all things can not be proved by that standard. This instinctive feeling when duly exercised leads one to go to his Lord and Redeemer in a child-like manner, and say, "Here I am,—do with me as thou wilt;" and thus find peace.

THE TRAVELER AND THE CLAY.

A TRAVELER, it is said, whose route through Persia lay, As he was on his journey picked up a piece of clay; And much to his surprise, he found it to exhale A breath as sweet as that of flow'rets in the vale. In language of emotion, he thus went on to say: "Thou'rt but an unattractive, unightly piece of clay; And yet how fragrant art thou! and how refreshing, too! I admire thee, and I love thee, and *this* is what I'll do: I'll make thee my companion wherever I may stray,— Ever within my bosom permitting thee to stay. But whence hast thou this fragrance, which ever from thee flows?" [the rose]" To which the clay replied: "I have been dwelling with How beautiful the story! how wise the lesson taught! A piece of lifeless clay affords a theme for solemn thought. It teaches our dependence—let us learn the lesson right; For, as Luna is dependent upon the sun for light, We're dependent on each other; this perverted world of ours [flowers; Hath some in human form who bear a likeness to the And to *them* we are indebted for much we have and are, As the day is to the sunshine—as the night is to the star; And we ever should acknowledge our dependence upon those,— And thus we may be dwelling with the lily, pink, or rose. REV. E. R. LATTI.

THE POOR BOY.—Don't be ashamed, my lad, if you have a patch on your elbow; it is no mark of disgrace. It speaks well for your industrious mother. For our part we would rather see a dozen patches on your jacket than hear one profane or vulgar word from your lips, or to smell the fumes of tobacco in your breath. No good boy will shun you because you can not dress as well as your companion; and if a bad boy sometimes laughs at your appearance, say nothing, my good lad, but walk on. We know many a rich and good man who was once as poor as you. Fear God, my boy, and if you are poor but honest, you will be respected a great deal more than if you were the son of a rich man, and were addicted to bad habits.

Our Social Relations.

Domestic happiness, thou only bliss Of paradise that has survived the fall! Thou art the nurse of virtue. In thine arms She smiles, appealing as in truth she is, Heav'n-born, and destined to the skies again.—*Cowper.*

THE LAUGH.

A RIPLE of daintiest music Came floating in at my door, Then left me to wonder, in silence, For just a minute or more;

To wonder what bird out of heaven Could warble in tones so sweet; When, as softly as falls the sunlight, The birdie knelt at my feet.

'Twas the laugh of our pet, our darling, That floated in at my door; And it had a strange new sweetness, I never had heard before.

And she knelt at my feet, the birdie, With a look, who could resist? The little hands folded together, The lips waiting to be kissed.

Laugh often, O bird, don't forget it! 'Tis sweetest music of all, And I know, like the blessed sunshine, On many a heart it will fall.

And one that was heavy with sorrow, Would be the lighter by half, Just to hear the soft rippling music Of our dear birdie's sweet laugh.

HOPE ARLINGTON.

OUR INFLUENCE.

In the Decalogue we are commanded not to injure our neighbor, neither to covet his possessions, steal his goods, nor take his life. Mankind in that age of the world had been trained only to the point of negative good, and he was considered a good man who had always abstained from harming those with whom he came in daily contact, although he might not have done any positive good. The obligations of active kindness, of advancing his neighbor's prospects, or enhancing his neighbor's good had not yet been imposed upon him. Looking over the world, we are inclined to doubt if the majority of mankind have advanced very much since Moses issued the ten commandments. The bond that now holds society together partakes too much of negative good. "Thou shalt not" is still the Alpha and Omega of many a person's creed. They abstain from doing good as faithfully as if Christ had never said, "A new commandment I give unto you, that ye love one another." They take no heed to the precept, "Let your light so shine before men, that they may see your good works, and glorify your Father which is in heaven."

Man is a social being, and every man is governed by social laws. It is impossible for a man to lay down his rule of life and say, "I will be a cipher—I will have nothing to do with society. I will have no intercourse with my fellow-men, only so far as it is necessary to supply my wants. No man shall ever say I influenced him for evil." This very man's example is pernicious. He is influencing those

around him to suppress friendship, benevolence, and the love which Jesus commands us to show to each other. Every one of us is influencing others, it may be insensibly, but it is none the less true because we can not see its immediate effects; and the question with which we have to do, as social beings is, *how shall we so conduct ourselves as to fulfill the commands of our blessed Savior? How shall we let our light shine, and so give light to our neighbor?*

One means of doing this is to avoid as much as possible caste and class; for instance: I step into my neighbor's, not for any special business, but for a friendly, social interview. Our conversation turns at first upon those subjects in which we are mutually interested. He has not had the same opportunities of education and society that I have had, and for the want of these advantages has but few topics on which to converse. I have a large number at my command; he, knowing this, will be sure to draw on me for a fresh supply of information which he knows I possess, and which he thankfully receives. We part mutually pleased. He is impressed with my Christian kindness and good-will toward him. I am more impressed with the dignity of human nature, and am more in love with my kind as I see the hungering and thirsting after knowledge which only the force of circumstances prevents him from obtaining. It will not stop here; the knowledge I have imparted to him, he will in turn impart to others.

There are, in almost every large community, leading spirits who will take the precedence, who will be looked up to by their fellow-men, who will lead and guide the community in which they live. Their influence will tell not only with those with whom they have daily intercourse, but it will be echoed and re-echoed from town to town and from city to city. They are like a city set upon a hill, which can not be hid. Happy will be those communities if these men, instead of growing conceited, haughty, and arrogant, as they become acquainted with their personal talents, grow the more humble, acknowledging that God gave them their talents to promote the good of others, as well as their own good, and that He will hold them responsible for the manner in which they use them.

Our leading public lecturers and speakers, who travel from place to place, are usually met at the depot by the wealthy, conducted to fine houses, and sumptuously entertained. Among their audiences will be many farmers, mechanics, and working-men listening to their speeches—drinking in every word and thinking upon them. "How I would prize an hour's conversation with that man! I would be willing to work one day without food if that would purchase for me an interview with him; but circumstances or the providence of God has placed me below him, and it is not for me to aspire to the company of such men," is the reflection of many a poor man as he listens to the eloquent orator. If our public men knew the pleasure they would confer by sometimes

visiting a humble home and partaking of frugal fare, we have sufficient faith in humanity to think they would not be backward to do it. Besides, it would be a great advantage to themselves—they would glean items of practical knowledge, be impressed with new ideas, and gain a deeper insight into human nature than they could obtain anywhere else.

MRS. M. WYNKOOP.

GETTING RICH.

BY MRS. GEORGE WASHINGTON WYLLIS.

"If I were only a rich man!"

You want to be rich, do you? What for? Haven't you enough to eat and drink and wear, as it is? You would like to have as much money in the bank as your wealthy neighbor, would you? True, he is making money—earning it, as people say; but did you ever pause long enough to consider what he is losing?

Did you ever think of the health and spirits and vitality that are deserting him, while you are as robust as a Norway pine, and as strong as a North American Indian? Did you ever remember the pleasant leisure hours that are like rifts of sunshine in the gray monotonous sky of every-day life—those hours for which he "never gets time?" What money could buy those seasons of enjoyment? They are not in the market; the gold is not minted which shall avail to purchase them!

Do his little boys ever come to him as yours do to you, with enthusiastic tales of top and kite and ball? Do his little girls ever climb upon his knee, and tangle their dimpled fingers in his hair and whiskers, and confide to him the grand frolic they have had with their new hoops and dolls, and the gray kitten with the pink ribbon round its neck?

Not they; he has no time for such follies, and so the little folks skurry away like frightened chickens when they hear his voice in the hall, and carry their small hopes and fears and trials and joys elsewhere.

He has no pleasant reminiscences of old school days; he never gets time to remember. The present fills up his whole life, crowding out past and future with relentless force.

There are two ways of getting rich: one is represented in the money-market; the other is wealth of heart and soul and brain, and love is the banker thereof! Does your rich neighbor ever think who it was that said, "Lay not up for yourselves treasures upon earth?" It is not likely; he is better posted on questions from the Board of Brokers than in the old Bible that his mother used to read aloud years and years ago. Stocks and bonds and fluctuating tides of commerce fill his thoughts, and all this sacrifice is for money alone—money, money, which he has grown to idolize for its own sake.

Is it so delightful to be rich after all? We doubt it! Let the rich man pass on his way, and thank God that he has not "led you into temptation." You have enough—and which of us needs more?

HIGH CULTURE AND CRIME.

OCCASIONALLY the reading public are startled by announcements of the commission of atrocious deeds by persons whose exalted position in life seemed to place them beyond degrading influences. In noting such occurrences one is instinctively led to ponder on the probable causes or motives which were so potent as to induce the unfortunate offenders before the law to forfeit their claim to purity and honor, and to incur the ignominy of sudden great crimes and of deep degradation.

COUNT GUSTAVE CHORINSKI.

Human nature in its best estate is only human, fallible, imperfect, weak; hence it is that the spectacle of a noble soul demoralized, degraded, sometimes shocks our feelings. There may come an occasion, a mind, a disposition, and a temptation suited to such occasion, mind, and disposition, which by the very concurrence will overcome the integrity of the stanchest heart.

Shakspeare has portrayed Macbeth as a man of sterling morality, of shining virtues, well-known and highly honored, yet Macbeth was not proof against the longing of his heart for power, when such longing was urged and aggravated by evil advice, repeated success, and ready opportunities. Macbeth, like many before and since his time, yielded to peculiar temptation, temptation peculiarly adapted to his type of morality.

In the case of those of acknowledged piety who have fallen under the ban of public sentiment by some vicious act, it may be accounted for by the presumption that at the moment of temptation they were unguarded by the instrumentalities of grace. They were not on the watch and prayerful, as Christ enjoined all his followers to be if they would escape temptation.

It is true that organization has much to do with natural tendencies of mind. It is true that some men are comparatively free from strong propensity to vice in one or another direction, while other men find it difficult to walk

in the straight path of rectitude. But it is also true that to each man will be accorded that measure of grace which his peculiar habitude of mind requires for the preservation of his integrity. God, we are assured in the Gospel, "will with the temptation make a way of escape."

As no condition in life is free from influences to error, the necessity of a "Christian walk and conversation," a simple, child-like faith in the mercies and aid of our heavenly Father, is obvious. "He shall never be moved whose trust is in Thee," writes the Psalmist.

These remarks are preliminary to a consideration of a recent atrocity which was committed in Austria, by a young and titled lady. This lady, named Baroness Ebergényi, became enamored of a Count Gustave Chorinski. Chorinski was married, but his Countess did not retain his affection long after the marriage, and being an actress by profession he turned her out of his house and bade her shift for herself. The Baroness Ebergényi, in the heat of her passion for this dastardly Count, ingeniously plotted to put the Countess out of the way by poison, so that she (the Baroness) and he might be married. The Count doubtless assisted the design, but to what extent we have not learned. The unfortunate actress was murdered, and the Baroness soon after arrested (as was also the Count), and enough evidence produced to fasten upon her the guilt of being the immediate perpetrator of the crime. She has been sentenced to twenty years' imprisonment at hard labor, and despoiled of her rank and titles—a terrible retribution for one young, beautiful, refined, and highly educated.

A foreign writer has described her as she appeared in the court, after the following somewhat sensational style:

"She is twenty-six years of age, graceful, and of elegant *tournure*. She has a youthful but energetic face, of winning and sweet expression. Without being a beautiful woman, everything about her denotes refinement and her pure extraction—for she comes of one of the most aristocratic of Hungarian families. Her hair is profuse, and of a soft yellow shade. Her hand is small and exquisitely gloved. She had assumed the dress she wore at the time of her visit to Munich, during which the deed was perpetrated—a black silk robe lightly trimmed with white; a pelisse Astrakan, and a small traveling hat, with a peacock feather. Her pendants and brooch were death's-heads of ivory mounted in enameled bronze; and her air of distinction and girlish mien were in conspicuous and painful contrast to the savage spikes and grim aspect of the murderer's dock."

The portrait given of this most unfortunate young woman represents a fair feminine type of the Hungarian stock. That she possesses very strong affections is indicated by the prominent and well-rounded chin and full lips. The lower portion of her face is rather heavy. Cautiousness and conscientiousness are evidently small and inactive, and so are Veneration and Spirituality; while Self-Esteem, Ap-

probativeness, and Firmness are above the average. If not deficient in intellect, she is somewhat so in moral sentiment. The features and head are not uncomely, nor do they show other deficiencies. She is the victim of inordinate affection, or unrestrained pride and passion. The Count Chorinski appears to be a vain, selfish, and unscrupulous adventurer. He is acute and artful, and probably of the stamp well calculated to attract weak women. He has, certainly, fair mental qualities, and under correct training could attain a good degree of success in a proper sphere of action. But there is nothing truly "noble" in his "make-up." He would do nothing for *your* sake, but would demand much for *his* own sake. He may not be a moral idiot, but he evidently is both weak and obtuse in this respect. Self-willed, self-indulged, flattered and spoiled, he is the production of a false condition of things. Had he been born poor, required to earn his own living, and thoroughly disciplined by right religious training, he would have been a different person. His education was probably ornamental; his religion mechanical; and his sense of right and duty aristocratic and monarchical.

From a New York paper we copy the following "bohemian" account of this horrible affair, as it contains interesting details which we have not already noticed:

"Such as we see her, this lovely lady, unmarried, and a 'noble canoness' of Brunn, in Moravia, had contracted a close intimacy with an intense passion for a certain Count Gustave Chorinski, an officer of the Austrian army, and a man of high family, his father being Governor of Lower Austria. This Count Gustave Chorinski, we are happy to say, appears to be as utter and profound a scoundrel as the most inexperienced and sensitive young lady in all the world could desire to read of in a novel or to flirt with at a ball. He had got himself married before he met with the Baroness, to a young actress, Mathilde Ruel by name. This stage beauty he had loved neither wisely nor too well, and, as became a noble Count, he had acted upon the maxim of Bussy-Rabutin, that 'the most chivalric way of breaking off a love affair is to marry the lady.' He had thrown his Countess out of doors soon after the ceremony, with the gracious intimation that 'she was pretty enough to earn her own living.' How the Baroness Julie d'Ebergenyi came to adore this superb scamp we leave it to those who are more skilled in the mysteries of the female heart than we can pretend to be, to ascertain. Suffice it, she not only did come to adore him, but made up her mind that life would be a burden to her unless she could marry him. As a condition precedent to this performance it was obviously necessary that he should first be unmarried from the existing Countess Chorinski, born Mathilde Ruel. A trip was made by the Baroness, under an assumed name, in November, 1867, to the Bavarian city of Munich, where the Countess Chorinski was then living alone and in lodg-

ings. The people with whom the Countess lodged in Munich told the rest of the story; how a strange lady came to see their lodger; how their lodger proposed one night to visit the opera-house in company with the strange lady; how for two days after this proposed visit to the opera nothing was seen of the Countess Chorinski; how after the expiration of these two days, on inquiry at the Hotel of the Vier Jahreszeiten, where the strange lady had been supposed to be staying, nothing could be learned of either herself or of the Countess

BARONESS EBERGENYI.

Chorinski; how the Countess's doors were then broken open, when the Countess was discovered lying dead upon the floor: A medical investigation revealed the fact that death had been caused by prussic acid. The suspicions of the police, Bavarians though they were, were excited by this trivial circumstance. The Count Chorinski, arriving in Munich to attend to the 'last duties' to be paid his hapless spouse, was arrested and examined. On his person were found photographs of a lady. These photographs being inspected by the persons with whom the Countess Chorinski had lodged, were declared by them to be portraits of the Countess's mysterious visitor; and these photographs were the photographs—of the Baroness Julie Ebergenyi."

PATIENCE.—Nothing teaches patience like the garden. We may go round and watch the open bud from day to day; but it takes its own time, and you can not urge it on faster than it will. All the best results of a garden, like those of life, are slowly, regularly progressive.

A **FOPPISH** nobleman, who saw Descartes enjoying himself at the table, having expressed his astonishment that a philosopher should exhibit such fondness for good cheer, got this answer for his pains: "And pray, my lord, did you think that good things were only made for fools?"

WHAT IS BEAUTIFUL.

EDMUND BURKE has given to the world an immortal scientific exposition of a subject very near akin to this; but it is not now the purpose of the writer to attempt any philosophical treatment of the subject.

Here we see a matron, plain in her features, homely in her dress, and homespun in her manners—still she is beautiful; why? Do you observe the gentleness of her touch, the dignified sweetness of her voice, the serenity of her countenance, the chastened spirit which speaks from every motion, the scarcely glowing fire in her eyes? Do you observe the chastity and modesty of every expression about her? Do you observe the exemplification of charity and meekness and goodness in her life? If so, you see what constitutes her wondrous beauty!—a glorious beauty; one which fades not forever.

Do you see this young man?—of feature singularly harmonious and attractive, of form almost angelic, in motion the personification of gracefulness; what makes him beautiful? 'Tis not these! See him crowned with intellect; see his ample forehead bright as gleaming gold; see his beaming eye,—his hair soft and rich and almost luminous; see every feature lighted by genius itself! These constitute his beauty.

That old man bound by the infirmities of old age to that arm-chair, too, is beautiful. His white hair hangs disheveled and lusterless upon his shoulders; his skin is wrinkled and hangs pendant from his face; his eye is bleary and his hearing hard; in body, he is unwieldy and helpless; his withered muscle and wilted flesh advertise the blight of years. Where is his beauty? In his kind word, in his complaintless suffering, in his forbearance and patience, in the faith in which he awaits his end.

To the cultivated mind, beauty does not "bloom upon the skin alone;" nor is it represented in the harmonious assemblage of comely features; nor, indeed, in the symmetry of limb, the lofty and pompous port, the imperturbability and repose which denotes familiarity with society, the gracefulness of carriage or gesture, the happy bow and salute; nor in the fastidiousness of etiquette: not in any or all of these alone. The dullard may exhibit a pastry face in which nature has imitated the highest cunning of the culinary art; the pugilist with his buck-head may display a giant development of muscles; the silly aristocrat may glory in a high head and an ample chest; a member of a rich man's livery may acquire indifference and ease of deportment; the fop the exquisite lifting of a hat; and the intellectual cipher the faultless conversationalism, even to the extent of never originating a thought with which to shock his "circle!"

The high-minded man sees the unobtrusive individual whose life, as evinced in the fineness and delicacy of his temper, has been the lot of bitterness; he sees beauty in purity and in struggles for self-mastery; he sees it on the

brow of the student; he sees it in him whose good deeds are known, not by his own advertisement, but by the measure of their virtue; indeed, wherever there is forbearance, sacrifice, or any of the legion whose general name is Charity, there he finds what is beautiful and adorable. In intellect, too, which often crops out in a man's features, he sees that which invests every lineament of his face with interest and attraction.

JOHN DUNN.

TABLE MANNERS.

FOR OUR LITTLE FOLKS.

In silence I must take my seat,
And give God thanks before I eat;
Must for my food in patience wait
Till I am asked to hand my plate;
I must not scold, nor whine, nor pout,
Nor move my chair or plate about;
With knife, or fork, or napkin ring
I must not play—nor must I sing;
I must not speak a useless word,
For children must be seen—not heard;
I must not talk about my food,
Nor fret if I don't think it good;
My mouth with food I must not crowd,
Nor while I'm eating speak aloud;
Must turn my head to cough or sneeze,
And when I ask, say, "If you please;"
The table-cloth I must not spill,
Nor with my food my fingers soil;
Must keep my seat when I am done,
Nor round the table sport or run;
When told to rise, then I must put
My chair away with noiseless foot,
And lift my heart to God above,
In praise for all his wondrous love.

THE CRISIS IN HER LIFE.

"WHAT ponderous volume is that you are reading?" said my friend Jennie, coming suddenly upon me, as I sat intent on the pages of a large book which lay in my lap.

"A work on Physiognomy," I replied, "and you can not imagine how interesting it is! I've been studying it for the past two weeks, and have learned—oh, such a host of things!"

"I should think so," said Jennie, laughing. "Why, you haven't been near me for an age, and I've so much to tell you, too. Come, put on that pretty new suit of yours and we'll go out for a promenade on Broadway—that is, if you can leave your book long enough."

"Oh, yes," I exclaimed, "just the thing, for I can continue my study by reading the faces we pass, and thus make some use of what I have learned."

"Dear! dear!" said my friend, in mock despair, "you'll be dreadfully dull company. I want you to talk with me, and not be absorbed in study all the time."

Now, between you and me, this friend of mine is a strong denouncer of Phrenology and Physiognomy. She laughs at me when I mention the words, and poohs at the idea of face indicating character; but I hope to convert her in time.

"Now, Nell," said my companion, as we started out, "I must say I think you are getting to be a perfect monomaniac. What good is it

going to do you to be poring over those dry, stupid books. The idea of a man's nose, or his ears, or his eyes, or his lips, indicating his character! Absurd! I defy any one to tell me my character by the shape of my head or face."

"Oh, Jennie!" was my sudden ejaculation, "let's go and have our heads examined, just for fun, this afternoon."

"Thank you," said she, "mine doesn't need it. I combed it very carefully before I came out."

"Oh, you provoking girl!" I cried, laughing in spite of myself—"do, just to please me—won't you? I've been crazy to go. See, we are very near the place—please! please!"

"Well, little tease, I will go with you, if you are so *crazy* to go, and I think that word expresses your infatuation. But, remember, you alone are to make a fool of yourself—I am not going to."

Now, while we are waiting in the reception-room for the coming of the phrenologist, I must tell you something about my friend. She is very beautiful,—just the opposite of myself. Her hair is dark, and so luxuriant! She never takes any trouble with it, yet it coils itself into the most bewitching braids—and waves back from her forehead gracefully. She never has to crimp it, or fuss over it, at all; while mine is always flying over my head, and so light, that when I went to buy—I mean some one told me, once, if I ever wanted to match it, they didn't believe it could be done. Oh, I do think dark hair is so splendid! Her forehead is very high and full—her eyes large, dark, and thrilling. They always seem to me fathomless eyes. I sometimes think there is a fire beneath them that will not always sleep. A time will come when those eyes will burn like a slumbering volcano suddenly awakened! What a sweet mouth she has! the lips always eloquent, even in silence; their full redness speaking of her warm heart; and by that slight indentation in the chin you may know how loving a disposition she has, and how desolate she would be if deprived of friends. Her life is a rather idle one, I'm afraid; reared in luxury, she has never had any stimulant to exertion, and the days are often listless and idle for her.

There are so many lives like hers borne unresistingly onward, careless of the true purpose of existence, yet with grand possibilities in their nature that only need something to arouse and develop them.

But the phrenologist has appeared, and Jennie laughingly saying that I was to be the "only victim," I became conscious of a pair of searching eyes reading my face, while my amused companion sat calmly by as if rejoicing that she would escape his scrutiny; but what was my delight to hear him tell me my character by comparing it with hers, thus making her as much an object of study as myself.

"You are very different from your companion," he said to me; "yet it is this very

dissimilitude which makes you such firm friends. You are weak, clinging, impulsive, easily discouraged, and crushed by the slightest wind; she, strong, self-reliant, triumphant in her nature, able to do, and dare, and suffer. You are more ready, from your impulsive disposition, to accept and believe any new doctrine or demonstration of science than this young lady. Indeed, I fancy she will cavil a long time at the truth, though rather more for the sake of argument than otherwise. Your Self-Esteem is small, while Approbativeness is very large; but your friend is just the opposite."

Poor Jennie! it was rather severe, wasn't it? when she had so vehemently declared that a phrenologist "never should speak to her if she could help it."

I fancied I could detect a twinkle in his eye as he proceeded, and wondered if he really knew how opposed she was to his principles. The examination ended at last, and Jennie and I were in the hurrying, bustling crowd again.

"Well, Nellie, we've heard some plain truths to-day, and I'm half inclined to think that you sent that gentleman word that we were coming," said my friend, with a very sober countenance. "He told me that I was too idle; that I wasted my time in fashion and amusement. How did he know that?" she added.

Wasn't I delighted? But you may be sure I didn't let her know it, and assured her so vehemently that no one knew of our going, and that I had not thought of such a thing until I suggested it, that she said,

"Well, well, child, I believe you; but you've almost converted me to your pet theory."

As we parted, Jennie said, "Nell, if you can spare that chart of yours, I should like to glance it over. Not that I mean to spend 'two weeks on it,'" she added, laughing.

I assure you I lent that book very willingly. A few days after my friend's little brother brought a message from his sister, inviting me to come and spend the night with her.

"Miss Nellie," said he, as he seated himself in a great easy-chair, and took a long breath of enjoyment, "do folks ever get bumps on their heads when they don't fall down to make 'em? because," he added, seeing my puzzled look, "sister Jennie was talking this morning at breakfast about folks having bumps on their heads, and pa said I had got one big one that he thought must be 'destructiveary.' But ma said, by the way the bread-and-butter disappeared, it must be 'alimentivious,' and they all laughed at me when I said I hadn't fell down for ever so long, and then it didn't take only a little speck of butter to go on it, for it was a little bit of a bump."

It was a real pleasure to see the little fellow's face light up when I explained it to him, and small as he is, I don't believe he will ever mistake those words again, or have a doubt of their meaning.

I found my friend in a new mood, though with a strangely bright and happy countenance.

"Nellie," she said, smiling, "I am going to turn over a new leaf! It never shall be said of me again, that my life is idle and worthless. I have been looking quite seriously into this problem—the study of human nature, and I shudder when I think how I have trampled under my feet the pearls that God hath given me. I am determined that I will no longer be a mere butterfly of fashion. There is something more to live for, and I shall try to find it, with God's help. Nellie, I have never been very happy. Why, how you open your blue eyes! No; I never have, and I think, sometimes, that they who work for their daily bread are a great deal happier than we who roll in wealth and luxury. But our lives are mostly so hollow and vain. May Heaven help me to make something more noble of mine!" Her face lit up as she spoke, and her eyes glowed with a new and fervent light.

Has it ever seemed to you that there would some time come a crisis in your life?—that a day would come when, with every nerve strung and dreaming put aside, you must go forward in the battle? I think such a time had come to her, and I know that once having put her hand to the plow she will never turn back.

Years have passed; they have brought their trials with them, and they have taken their record to eternity. My friend—ah, how my heart thrills with pride and affection at the thought, she is still *mine*! In joy, in sorrow, in temptation, in victory, I have had her sympathy and love. Her life is grand in its duty and endeavor—but the angels know more than the world what glorious results have followed. Her pure, earnest life has left its imprint upon her countenance. More beautiful she is than in those days of careless girlhood; the lips firmer, but bearing still their olden smile. "Her children rise up and call her blessed; her husband, also, and he praiseth her."

And so it is that some little incident may change the course of a whole life. As I sit in this soft, summer sunshine, and look back to that other June day when we went out for a gay promenade and found that which has made our lives purer and better, I can but murmur, "To God be all the glory!" and on bended knee pray that there may come a crisis in many a life in this great city lest coming years should steal the bloom from beautiful faces, and lips sadly cry,

"Oh, what a glorious record had the angels of me kept,
Had I done instead of doubted, had I warred instead
of wept."

GARDENING FOR LADIES.—Make up your beds early in the morning; sew buttons on your husband's shirts; do not *rake up* any grievances; protect the young and tender branches of your family; plant a smile of good temper in your face; propagate the tendrils of affection wherever they appear; and carefully root out all angry feelings, and expect a good crop of happiness.

WHICH IS THE BETTER WOMAN?

I AM thinking of two women, Mrs. A. and Mrs. B.; Mrs. A. is amiable, so exceedingly sweet-tempered, that her husband, children, and neighbors unite in pronouncing her a model of excellence. She moves about the house in a quiet and lady-like manner. Every fly is excluded, every particle of dust carefully brushed from the furniture each day; her meals are always well cooked, and at regular hours; her cat is sleek and fat; her chickens know their own territory, and never cackle in the front yard. In short, Mrs. A. does in an orderly and systematic manner all she undertakes.

"What a good woman!" "Oh, she is so good!" and a hundred like expressions, are heard from every one of her little circle of acquaintances.

Yes, Mrs. A. is a good woman,—that is, she does no harm. She is amiable and obliging,—it requires an effort for her to be otherwise. She has not the ability to do a great wrong or a great good.

She avoids agitation because of the trouble it brings. The woes and wants of suffering humanity she knows nothing of; the wrongs of woman she does not feel; the chains of old customs do not annoy her. Indeed, she has no appreciation of anything beyond her own womanly sphere. Yet she is good,—so are the snail and the clam, so are the mischievous black-bird and the much-abused crow.

Mrs. B. is a rough, angular, daring woman, doing with all her might whatever her hands find to do. She can laugh and weep, get angry and get pleased again. She deals unmercifully with wrong in high places, and takes to her heart and home the child of sin.

In the house disorder reigns supreme; her husband has his dinner at twelve, one, or three o'clock, just as it happens. The children are chastised and petted, according to the mother's whims. Mrs. B. is considered a termagant by one half of her acquaintances. Nobody says, in speaking of her, "What a good woman!" She has been called a "a strong-minded woman," but by no other pet name. Naturally sensitive and ill-tempered, she finds a great work to do to govern herself. She tries much harder to be good than does negative Mrs. A., who inherited a mild disposition.

The one makes the best preserves and jellies, is uniformly pleasant and devotional, and does few wrongs. The other's inheritance is a bad disposition; she labors to subdue it, speaks and acts from principle, when an occasion demands, even at the risk of offending people of position.

Which is more deserving of commendation, Mrs. A. or Mrs. B.?

L. H. K.

[We should say, give us all the qualities in due proportion. We do not want all sweet, nor all tart, but a combination of both. It is a harmonious character, in which all the human qualities are properly blended, that is the best. Very few men ever render themselves worthy such a piece of wisely perfection.]

MARRIAGE vs. CELIBACY.

THERE is no room for doubt that the married life is higher than the celibate. Churchmen, for some reasons not easily to be comprehended by those who are not students of theology, exalt the single life, and assert that wedded happiness, as a rule, is incompatible with saintliness. St. Elizabeth of Hungary affords, however, a very sufficient reply to this objection; and the lives of the many hundreds of good women who adorn modern society confirm all that can be advanced by their admirers to the fullest extent. Yet valuable though it undoubtedly is, and high though the aims and aspirations of those who enter upon it may be, it were well that it should not be lightly undertaken. Mr. Kingsley, among some other crotchets, has a fancy that it is the duty of every man to marry as early as he possibly can. Other writers, of possibly greater authority, have taken a different view. Sir Walter Raleigh, for example, expresses an opinion that no man ought to marry before the age of thirty; "for as the younger times are unfit, either to choose or to govern a wife and family, so, if thou stay long thou shalt hardly see the education of thy children." The same view has been taken by a vast number of writers on the subject since Sir Walter's time, and it must be indorsed by every one who reflects on the condition of things in the present day. It is not until about that age that nine men in ten have learned to "know their own minds;" or, what is in some cases of even greater importance, it is not until then that they have the means of properly supporting the wife of their choice. A long engagement is not a matter for much dread. Two young people who love one another are not likely to go very far astray, provided only that their principles are sound, and that their education has been decently cared for. The pause will be well filled up if the expectant bride busies herself in acquiring a knowledge of household matters, in which, to say the truth, women in this nineteenth century of ours are sometimes lamentably deficient. But, after all, a man does not want to marry a cook or a housekeeper. He wants a wife; in which word may be summed up all the perfections of the feminine nature. In the often quoted words of Jeremy Taylor, "A good wife is Heaven's last, best gift to man; his angel and minister of graces innumerable; his gem of many virtues; his casket of jewels. Her voice is sweet music; her smiles his brightest day; her kiss the guardian of his innocence; her arms the pale of his safety, the balm of his health, the balsam of his life; her industry his surest wealth, her economy his safest steward, her lips his faithful counselors, her bosom the softest pillow of his cares, and her prayers the ablest advocate of Heaven's blessing on his head." The words of the good bishop are as true now as ever they were, and to them it is impossible to add anything which will render their teaching plainer or their spirit more impressive.

"Signs of Character."

Of the soul, the body form doth take,
For soul is form, and doth the body make.—Spenser.

EMERSON ON THE EYE.

[We have heard it said that Emerson, the philosopher, "autocrat," etc., places little reliance in signs of character as analyzed and elucidated by scientific methods. We can scarcely reconcile this rumor with certain Emersoniana which we append. The careful declarations which succeed one another are evidently the product of thought on the subject and a belief in its leading principles. Besides, he writes with the vigor of one who takes more than a passing interest in the matter.]

An eye can threaten like the loaded gun, or can insult like hissing or kicking; or, in its altered mood, by beams of kindness can make the heart dance with joy. The eye obeys exactly the action of the mind. When a thought strikes up, the vision is fixed, and remains looking at a distance; in enumerating names of persons or countries, as France, Spain, Britain, or Germany, the eyes wink at each new name. There is an honesty in the eye which the mouth does not participate in. "The artist," as Michael Angelo said, "must have his measure in his eye." Eyes are bold as lions—bold, running, leaping. They speak all language; they need no encyclopedia to aid in the interpretation of their language; they respect neither rank nor fortune, virtue nor sex, but they go through and through you in a moment of time. You can read in the eyes of your companion, while you talk with him, whether your argument hits, though his tongue will not confess it. There is a look by which a man tells you he is going to say a good thing, and a look which says when he has said it. Vain and forgotten are all the fine offers of hospitality, if there is no holiday in the eye. How many inclinations are avowed by the eye, though the lips dissemble! How often does one come from a company in which it may easily happen he has said nothing; that no important remark has been addressed to him, and yet in his sympathy with the company he seems not to have a sense of this fact, for a stream of light has been flowing into him and out of him through his eyes. As soon as men are off their centers their eyes show it.

There are eyes, to be sure, that give no more admission to the man than blue-berries. There are liquid and deep wells that a man might fall into; there are asking eyes, and asserting eyes, and prowling eyes, and eyes full of faith, and some of good and some of sinister omen. The power of eyes to charm down insanity or beasts is a power behind the eyes, that must be a victory achieved in the will before it can be suggested to the organ; but the man at peace or unity with himself would move through men and nature, commanding all things by the eye alone. The reason men don't obey us, is, that they see the mud at the

bottom of our eyes. Whoever looked on the hero would consent to his will being served; he would be obeyed.

EYES, BLACK AND BLUE.

AN Italian poet presents the rival claims of blue eyes and black eyes in a *morceau* of verse, of which the following translation is furnished by "L. A. C.":

In days of old, as poets write,
A long and fierce dispute arose,
Betwixt the eyes of heavenly blue,
And those which Venus' lids disclose.

Blue.—Black eyes are passionate and proud;

Black.—Not sincere are blue avowed.

Blue.—Brown is tint too sad and grave;

Black.—Changes many blue eyes have.

Blue.—We are transcripts of the skies;

Black.—Hidden glory in us lies.

Blue.—Minerva's eyes are heavenly blue,—

Juno has orbs of azure hue.

Black.—The fairest on Olympus seen,

Has eyes of night—the Cyprian Queen.

With flashing brow and glance of fire,

The contest rose each moment higher;

But Love, to end the wordy strife,

Flew from her side who gave him life;

And stood with radiant looks of light,

Like planet on the brow of night,

And thus his sentence gave:

"Nor black, nor blue, are solely formed,

Or for my service set apart;

I claim the eye of either hue

That answers best the heart."

—Home Journal.

WHAT DOES IT MEAN?

THE largest-headed physician in Philadelphia wears a hat measuring eight and a half by six and a half inches. He never loses a case.

We find this paragraph going the rounds of the press, and copy it because of its very peculiar significance. We are told in the first sentence that there is a physician (no hint as to his school) in Philadelphia whose head measures in the neighborhood of twenty-four and a quarter inches—the largest "physical" head in that city. In the second sentence we are informed that he is remarkably successful as a practitioner—"never loses a case." This second sentence appears like a sequence or corollary to the first. It can not be an isolated assertion, for it is predicated of the same man who, the first sentence informs us, wears a great hat, and a very large head within it. The connection is obvious, and the logical and scientific construction or interpretation can not be otherwise than as follows: This physician has the largest head in his profession; therefore he has the most brains, the most eminence, the most success.

"Brains must tell;" and they do tell in whatever line of life we find them. The men—whether they be mechanics, laborers, storekeepers, teachers, lawyers, physicians, or clergymen—who wear the biggest hats, are the leaders, the authorities in society.

Of course we refer to healthy brains; not sap-heads, or beefy leather heads, or pork heads, or to burnt-out hollow heads. Large, well-formed, well-educated, healthy heads, with bodies to match, are supposed to be, all other things being equal, desirable to have.

THE GERMAN LYRISTS.

UNDER this title we group five eminent poets, all cotemporaries, with the exception of Gellert, who died, however, fully ten years after the birth of Schiller. Their names are comparatively little known to Americans at large; but in Germany they occupy an elevated niche in the popular estimation. The greater part of their compositions consists of songs, ballads, romances, and dramas of character in unison with the sentiments of the masses. The various phases of political and social life among the Germans are photographed in their lyrics with such naturalness that it is not surprising that they continue to stir the national heart. Of the five composing the group, Schiller and Heine are the most familiar to the cultivated class of America, the former taking rank with the foremost lyric poets of modern times, and the greater part of his writings have been translated into English and made a part of our general literature. Let us glean a little from the history of each.

SCHILLER.

Johann Christoph Friedrich von Schiller, one of the grandest dramatic minds of Germany, was born at Marbach, in Wurtemberg, November 11th, 1759. His father superintended the gardens attached to the country residence of the Duke of Wurtemberg, and was favorably looked upon by the Duke.

Schiller very early inclined to the study of theology, a sentiment awakened doubtless by the parish priest, from whom he received his first instruction; but when about fourteen the Duke offered to educate him gratuitously at the military academy he had established. Young Schiller accepted the offer, and entered upon a course of study which he found rigorous and uncongenial. He first tried the study of law, but with no success; and then medicine. He secretly cherished a longing for literature, especially poetry, and read and wrote as he had opportunity in the course of his regular studies. His *Die Räuber* (The Robbers) is the earliest surviving product of his pen. Published in 1780, it excited great enthusiasm among the young, and considerable indignation among functionaries and dignitaries, whom it treated with ridicule. In 1782 this drama was brought upon the stage at Mannheim, clandestinely, and occasioned the arrest of Schiller for thus disregarding the command of his superiors, not to meddle with poetry. He was so harshly dealt with that he fled from the Duke's control into Franconia, and lived there a year under an assumed name. Here he completed two dramas, and then returned to Mannheim, where he associated intimately with stage life.

In 1785, Schiller left Mannheim for Leipsic,

where he became acquainted with Huber and Körner, and wrote his charming *Lied an die Freude*. A few months only detained him in Leipsic, for we find him soon in Dresden, where his romance of "The Ghost-Seer" was composed. In 1787, Weimar became his place of residence, where he enjoyed the friendship of Goethe, Herder, and Wieland. The society of Goethe proved of great value to Schiller's literary life subsequently; for his writings at Weimar took a higher and nobler form than before. His productions there are of a philosophical and esthetical character, and rank high among standard German literature. Prominent among them is his

"History of the Thirty Years' War," completed in 1793. Schiller's greatest work is the drama "William Tell," produced in 1804. He was a close, assiduous student, and exhausted the powers of a constitution naturally delicate while yet comparatively young. He died May 9th, 1805, aged forty-six years.

His portrait shows a strong mental temperament and much susceptibility, both as regards intellect and sentiment, and, at the same time, he possessed an earnest individuality which ill brooked restraint. He was intense as a thinker, yet versatile and sprightly as a writer, capable of addressing the feelings of his readers and stirring their souls. In person, Schiller was tall and spare, with a pale face, a high and impressive forehead, and hair inclined to auburn.

CHAMISISO.

Louis Charles Adelbert von Chamisso was born at Boncourt, in Champagne, France, Jan. 27, 1781. His parents settled in Berlin when he was about nine years old, and six years afterward he was appointed a page to the Prussian queen. In 1798, a lieutenancy in the army was given him. The wars undertaken by Napoleon, placing Prussia in the coalition against France, Chamisso felt that he could not take up arms against his native country, so he returned to France in 1806, where, being advised to that course by Madame de Stael, with whom he became acquainted, he studied natural history. Subsequently he returned to Berlin, and there continued his scientific researches.

In 1814, Chamisso joined an exploring expedition gotten up by Count Rumjanzow, chancellor of the Russian empire, with the view to finding a northeast passage.

On his return to Berlin he was appointed to a position in the Botanical Gardens. He prepared several works on botanical subjects, but

PORTRAITS OF THE GERMAN LYRICISTS.

his fame chiefly rests on his poetical compositions. In 1813 he wrote the singular and amusing novel called "Peter Schlemihl," a man who is represented as having lost his shadow. One of his most known poems is *Salas y Gomez*. He is also the author of many songs, ballads, romances of a national and political character, which are highly esteemed in continental Europe. The nature of his poetry is wild, rugged, and eccentric.

The small portrait indicates a fine order of mentality, with a strong will and an earnest individuality incorporated. He was doubtless handsome in his youth and somewhat chivalric. His death occurred August 21st, 1838.

GELLERT.

Christian Furchtegott Gellert, a rhetorician, poet, and moralist, was born at Hayrichen, in the Erzgebirge, in Saxony, July 4, 1715. Being the son of a preacher, his attention, while a youth, was naturally directed to theological studies, and he entered the University of Leipsic in 1734 to prosecute them. At Leipsic, however, he became a teacher and a professor. His lectures on poetry, rhetoric, and morals drew large audiences. Goethe in his youth attended Gellert's lectures. Gellert was not a robust, vigorous writer, but rather delicate and womanish. He wrote fables, stories, didactic poems, spiritual songs and odes; his fables and stories became the most popular. To him, as much as to any writer of his age, is due the transition in German literature from its early heaviness and pedantry to that vigor and sprightliness so marked in Goethe and Schiller. His *Leben* (Life) is one of his more important works.

Gellert was a man of quiet disposition and the most earnest piety. His spiritual odes breathe an ardent religious spirit, which contrasts strongly with the liberal philosophy of later writers.

UHLAND.

Johann Ludwig Uhland, poet, was born at Tübingen on the 26th of April, 1787, and educated at the University of his native place. He applied himself to legal studies, and after becoming an advocate received the degree of Doctor of Laws in 1810. In 1830 he was made Extraordinary Professor of the German Language and Literature in the University where he had passed his student life, but resigned in 1833. For many years he was a representative in the Assembly of Württemberg. For several years he continued to publish ballads and other lyrics in various periodicals. These efforts made him immensely popular.

As a poet, he is remarkable

for spirit and naturalness as well as for a winning romantic sweetness. Several of his poems have been translated by Longfellow. He stands at the head of the Schwabian school of poetry. His chief works are, *Ueber den Mythos der nordischen Sagenlehre von Thor* (1836), and a collection of popular songs. *Alter hoch- und niederdeutscher Volkslieder* (1844-5), besides some dramas. From 1848 he remained in retirement, and died on the 14th of August, 1864.

From the portrait of Uhland it would be inferred that he possessed a forcible, individual character, with a very strong infusion of the elements of kindness, sympathy, and concession. He was doubtless a superior judge of human nature.

HEINE.

Heinrich Heine, distinguished as a poet and wit, was born at Düsseldorf on the 1st of January, 1800, of Jewish parents. His first poem was written on the occasion of Napoleon's visit to Düsseldorf in 1810. He attended the Lyceum of Düsseldorf, and in 1815 was sent to Frankfurt-on-the-Main to qualify himself for mercantile life. In 1819 he studied in Bonn University; in 1820 he went to Göttingen, where five years later he received the degree of Doctor of Laws. His early poems are singularly affected by a sorrow of his early life, his disappointed love for his cousin Evelina von Geldern. In 1831, because of his violent democratic sentiments and publications, Heine became obnoxious to the Prussian Government, and went to Paris, where he acquired the reputation of being the wittiest writer in France since Voltaire. His public bitterness and literary cruelties, it is said, were in strange contrast with his personal good qualities. He died on the 17th of February, 1856, when, by his own request, all religious rites were omitted at his funeral. His life is a difficult one to understand: "The bold infidelity, the reckless licentiousness, and the un-

qualified faith in the world and the flesh which characterized Heine's life as well as his writings, were counterbalanced by such sincere belief in his own doctrines, such sympathy for suffering, and such acute perception of the beautiful in every form, that it is difficult for those unfamiliar with the social development of modern continental European life and literature to appreciate his true nature or position. * * * In his later years Heine returned from unbounded skepticism, if not to an evangelical faith, at least to theism, the Bible being constantly read by him, and appearing to him, as he said, like a suddenly discovered treasure."

Of his writings, we should notice "Pictures of Travel" and "The Book of Songs," which were received by the German people with almost unbounded enthusiasm, and have been translated into different languages.

The great intellectual forces of Heine as evinced in the small profile, mark the man of intense original and accurate thinking.

On Physiolog.

A knowledge of the structure and functions of the human body should guide us in all our investigations of the various phenomena of life.—Oshawa.

My people are destroyed for lack of knowledge.—Ezek. iv. 6.

RECREATION vs. STIMULATION. FOR THE CLERGY, AND OTHERS.

["THE world moves." Here is the evidence. The *Examiner and Chronicle*, one of the best of our religious weeklies, is coming over on to our ground and preaching the gospel of science and common sense, as well as that of the Scriptures. Here is an article taken from that paper. We commend it to all "nervous" men, and especially to all women. *It is the truth.*]

The principle we desire to impress upon our readers will be best illustrated by an example.

We have the privilege of knowing one of the ablest, hardest working, and most efficient young ministers in the land, and one who, though but a few years in the harness, has already made his name widely familiar. Of a somewhat delicate nervous organization, this young brother at one time found that while his easy sociability and general talent for congeniality (a rare but real thing) enabled him to perform his pastoral duties without sensible fatigue, the excitement of Sunday's preaching and the weekly lecture always left him weak, nerveless, used up. In this condition he found it exceedingly grateful to go, after evening service, and quietly drink a cup of tea; it refreshed him, reinvigorated him, and made him feel bright. Yet, for some reason, he did not sleep readily; and when he did sleep, his slumber was fitful, uneasy, and the morning found him not much rested—while month after month his nervous sensibility increased, his preaching fatigues were constant, and his tea his only physical help. But by the judicious advice of a wise friend he suddenly resolved to forego the very thing he had so leaned upon,

and instead of refreshing himself with tea and society, he betook himself to quietude and sleep. After a short time of struggle against the habit and craving which he had unconsciously formed, he accustomed himself to find—not a stimulant, with temporary excitement and subsequent reaction, leaving him always lower and lower in tone—but healthful, restful, recuperative sleep. His health was gradually restored, his general system strengthened, his faintness disappeared, and by pursuing a course of restoration instead of a mere spurring-up of exhausted nature, he has found the secret of making hard work an element of growth instead of decay.

Now, the application of the above-mentioned incident is plain enough, to a certain extent; but we wish to make it a little wider. Tea is not the only stimulant that professional men, including ministers, think they find themselves in need of. The use of alcoholic drinks, bitters, tonics, and a thousand-and-one things which disguise the strong spirit under specious names—the habit which for some years past had faded away under the hot denunciations of the great temperance reform and reaction, is now again steadily and swiftly raising its head and spreading its deadly shade over the land. Undoubtedly, the war has had a great deal to do with this: the custom of taking such stimulants after the fatigues of march, battle, or hospital work being one easily fallen into and readily retained. But whatever the cause, the fact is not to be denied, that the reign of wines and liquors is again advancing.

Yet it is a sad mistake to suppose that alcohol in any shape is beneficial to the interior economy of man's body. It is supposed to assist digestion, to brace men up, to cool them when hot, to warm them when cold, to do all manner of marvelous things. This is not so. Alcohol is one of the few things that resist all attempts of the body to assimilation. It leaves the body in almost precisely the same condition as it enters it, having on its passage done nothing but inflamed the blood, excited the various functions to unnatural and furious action, stimulated combustion, weakened the brain and nerves, sapped the muscular strength, and done much mischief generally. Physicians who recommend a little whisky, or wine, or other tonic, are responsible for thousands of drunkards not only, but also for enfeebled bodies, which—when the souls that inhabit them pass into some sudden reverse of affliction or disaster, and need their sustaining power the most—are seen to be undermined and worthless. Our inebriate and lunatic asylums keep some dreadful secrets, but the graves of wrecked and disappointed men hold more.

The warning is terrible, but the remedy is very simple. Never stimulate: restore. If body and brain are weary with continued effort, seek a brief change of scene, a short exercise of mental and physical powers in some new line, and produce the relief which the archer always gives his bow—unstringing, and bending in the other direction. Then rest, and

kind nature will care for the remainder. The recuperative power of the body, when it really has a fair chance, is the thing that men always seem to doubt; and yet year after year finds that profession which lives by healing more and more discarding the doctrines of forcing nature by the large application of drugs and poisonous medicines. The first result of stimulants is deceptive and apparently helpful; but the last state of the man who uses them is always worse than the first.

Nature's laws are such that she is able to recreate as long as her laws are faithfully obeyed. When wearied, seek, then, instead of the false and treacherous aid of stimulants—causing invariable reaction—the wholesome, simple inexpensive cure of Nature. Find health and happiness in that process which is so pleasant that its very name has come to be the symbol of enjoyment—Recreation.

FOOD MAKES THE MAN.

Most people who raise animals believe that the kind and amount of food given them makes a great difference in their growth and quality. In the American Institute Farmers' Club the question of the best food for cows, with a view to the richness of their milk, and the consequent quantity and quality of the butter, came up for discussion, in the course of which one gentleman remarked that though some cows gave twice as rich milk as others, "the food had little to do with it." [We remember that the second day after commencing to give a cow a pint of meal a day, the good woman discovered the cream was twice as thick as before. So the better the food the more and better the cream.]

Dr. Hallock, in the course of the discussion referred to, remarked that, "To produce a refined and acute mentality on poor food is impossible. Nature refuses to honor the draft. A few years ago I was connected with the removal of a grave-yard in a rough country, where the labor required to support life from the soil was very great. The bones of the bodies were immense, showing that they had received their development in the struggle for subsistence; but the crania were small, and by holding a candle on the outside and looking in, the light showed a thin place at the base of the skull, where there had been full activity in the devotion required to preserve animal life. In the region of the intellectual and higher qualities all was dark. That gospel written long before, still was read, showing indisputably that the nature of the soil and the habits of the people will be indicated in their anatomy. Afterward, when the country was improved, and there were manufactures, and when wealth had accumulated, by which means bread was secured with less effort, I had an opportunity to examine the skulls of later generations, when I found that the bones of the body were much smaller and the crania one third larger. Here, on holding a candle and looking in, it was dark at the base of the

skull, and light glimmered in the region of the intellectual and moral faculties. The anatomy of man requires the best that the two kingdoms of the animal and vegetable can produce: the choicest of fruit and the very best of meat. He can rise high above the soil on which he stands."

TOBACCO vs. BALD HEADS AND GRAY HAIR.

D. B. HOFFMAN, M.D., a Californian physician, writes, and the *Pacific Medical and Surgical Journal* publishes, the following very sensible article:

While traveling over the State recently, I noticed almost invariably in every place that I passed through or sojourned in, that a large proportion of the male population, who otherwise appeared to be, and in fact were, young, were either bald-headed or gray-haired. I also noticed that this was not the case with the other sex of the same age. In answer to the question, Why is it that there are so many gray-haired young men in California, I was told by some, perhaps a majority, that it was in consequence of the dry and hot state of the atmosphere; by others, the brain-labor that it took to get along successfully here; others said it was lime in the drinking water, and so on *ad infinitum*.

On looking around I could not see that any of these were good physiological reasons. If they were, both sexes should be affected alike, as they are both exposed to the same causes. While reflecting over this matter, a very singular circumstance occurred in my practice. A gentleman under forty years of age, and a patient of mine, who had been in the habit of using tobacco to excess for many years, and who had been for the last five or six years both *bald-headed* and *gray-haired*, found it necessary a few months ago to quit the use of tobacco entirely. It was, of course, a hard struggle at first; for it makes no difference how firm a man may be, if he once becomes a *slave* to tobacco, whisky, or opium, it is hard, very hard work for him to recover his liberty, to be able to say "I have conquered;" and very few succeed in doing it. However, he finally did it, and since that time has become a changed man in more than one respect.

In the first place, he has entirely recovered his health, which was bad while he used tobacco; he also has recovered entirely from his *baldness*, and his "*gray locks*" have been replaced by an unusually luxuriant growth of natural hair, of as fine a black hue as one could wish to see; he has also lost that sallow, bees-wax hue of skin and sickly paleness of color which "*slaves to the weed*" so generally have. All of this might be expected as a very natural result, except the growth of hair and its change of color, which in this case at least has occurred as one of the results of leaving off a noxious habit.

The question now occurs, Is this the cause of the prevalence of *bald heads* and *gray hairs* on so

many men under forty years of age in California? Let us inquire. Tobacco is a sedative narcotic. When used to excess it produces numerous untoward symptoms, among which are debility of the nervous and circulatory functions. On these depend the growth of all animal organisms. If these functions are impaired, so is the growth of the body, and all belonging to it. The hair is only a modification of the epidermis, and consists essentially of the same structure as that membrane. It has root, shaft, and point, and, like all other organs of the body, requires for a natural, healthy, and vigorous growth a healthy state of the nervous and circulatory systems. If tobacco impedes the circulation, and prevents the free and natural supply of healthy nourishment reaching its destination, which it evidently does, it is a cause which results in disease and death of the hair. The yellow and waxy state of the skin, always found in those who use tobacco to excess, is easily accounted for in the same way. The debility which it causes in the nervous and circulatory functions prevents then the organs from being duly nourished, thereby causing their disease and death.

If these views should prove correct after further examination, and it becomes generally known to "*slaves to the weed*" that their gray hairs and bald heads are caused by it, what great baskets full of deep and damning curses will be showered down on the devoted heads of Nicot and Raleigh for introducing and causing to be used this terrible destroyer of health, youth, beauty, wealth, and fame!

[We believe that further observation and experience will prove the correctness of Dr. Hoffman's statements. Let the subject be thoroughly ventilated. There of course will be great opposition manifested. Millions of men and millions of money are invested in the tobacco interest. Many will "*pooh pooh*" and "*puff puff*" against this coming man. But he will be backed by fact, philosophy, and nearly all the women. Tobacco makes men bantams, stunts the boys, so that they become only half-grown men. It makes those who use it, prematurely old in mind as well as in body. It paves the way for strong drink and games of chance, excites the passions, and so tends to the perversion of a whole nature.]

A MAN FRIGHTENED TO DEATH BY A VISION.

A STRANGE and surprising incident occurred last week, in the country some miles north of Corinth. A Mr. Mangrum killed a young man during the war, and a few days since Mr. Mangrum was on a deer drive, and while at one of the stands he saw an object approaching him which so alarmed him that he raised his gun and fired at it. The object, which resembled a man covered with a sheet, continued to advance upon Mr. Mangrum, when he drew his pistols and emptied all his barrels at the ghost.

None of the shots seeming to take effect, he climbed a tree to make his escape. By the time he was a short distance up the tree the white object was standing under him, with its eyes fixed upon him, and he declared it was

the spirit of the young man whom he had killed. Mangrum was so startled at the steady gaze of the eye that he had been the cause of laying cold in death, that he fainted and fell from the tree. His friends carried him home, the ghost following, and standing before him constantly, the sight of which brought up the recollection of his guilt with such force to his mind, that he died in great agony, after two or three days' suffering.

A subscriber sends us the above, and desires us to account for it on scientific principles. We have two theories. The first is, the poor fellow felt the force of that old saying, "*A guilty conscience needs no accuser*," and that he was simply getting his deserts—justice.

The second theory is,—supposing the habits of the man to be those of his class or clan,—that he was suffering from the effects of an excited imagination produced by a too copious use of a popular liquid designated by apothecaries and tavern keepers as—Bourbon. The effects of this "*medicinal*" beverage—always injurious—upon one's nervous system is to produce a state of insanity terminating in *delirium tremens*. This Mississippi man is not the first thus afflicted. There are a great many in New York who "*see ghosts*" every night; but the poor creatures do not know that it is because they drink, smoke, or chew.

A RESURRECTION PLANT.—A very curious plant, called the resurrection plant, is now offered for sale at New York, at from twenty-five to thirty cents. As seen in the baskets of the venders, it resembles a small bunch of brown and curled-up leaves, as it were, curled in upon itself, with a few thread-like roots at the bottom. These plants are brought from the southern part of Mexico. During the rainy season they flourish luxuriantly, but when the dry weather and hot sun scorch the earth, they, too, dry and curl up, and blow about at the mercy of the wind. To all appearances they are as dead as the "*brown and sere leaf*," but as soon as the rain comes again, the roots suck up the water, the leaves unfold and assume a beautiful emerald-green appearance. No matter where the plant may be, on a rock, a tree, or a house-top, wherever the winds have blown it, there it rests, and being a true temperance plant, it only asks for water, and at once bursts into new life. Having purchased one of these tufts, and placed it in a soup-plate filled with water, the reader will be surprised to see it gradually unfold and take on a deep green. The leaves are arranged spirally, and altogether, the resurrection plant is the latest curiosity.

SAW HIS NOSE.—"Well," said a carpenter, "of all the saws I ever saw, I never saw a saw saw as that saw saws." He probably is a cousin to the man who knows his nose. "He knows his nose; I know he knows his nose; he said he knew his nose; and if he said I knew he knew his nose, of course he knows I know he knows his nose."

NEW YORK, NOVEMBER, 1868.

"If I might give a short hint to an impartial writer, it would be to tell him his fate. If he resolved to venture upon the dangerous precipice of telling unbiased truth, let him proclaim war with mankind—neither to give nor to take quarter. If he tells the crimes of great men, they fall upon him with the iron hands of the law; if he tells them of virtues, when they have any, then the mob attacks him with slander. But if he regards truth, let him expect martyrdom on both sides, and then he may go on fearless, and this is the course I take myself."—*De For.*

THE PHRENOLOGICAL JOURNAL AND LIFE ILLUSTRATED is published monthly at \$3 a year in advance; single numbers, 30 cents. Please address, SAMUEL R. WELLS, 389 Broadway, New York.

"A GOOD JUDGE OF CHARACTER."

In all successful generals, from Napoleon and Wellington to Grant and Sherman, it is claimed by historians and biographers that they were remarkable for their abilities to judge men correctly. It is said that Napoleon excelled in this; indeed, it is claimed that it was by his judicious selections of officers that he was so successful in his military campaigns. The same is said to be true of Gen. U. S. Grant. He "put the right man in the right place."

Now, we believe this to be equally true of all men who are successful in their various spheres of life. Take the merchant who manages a large establishment and employs many men. He must needs choose his trusty book-keepers, cashiers, and confidential clerks, as well as his salesmen, agents, porters, and others; and his success must largely depend on his ability to judge the characters of those he trusts. The same is true of a banking-house, with its numerous officers and clerks. So in a metropolitan newspaper establishment, where several editors are required for the different departments—literary, scientific, political, musical, artistic, and the rest. Let each be a first-class man, do his work in the best manner, and the result will be a newspaper of unsurpassed excellence;—but let there be bungling and stupidity in *any* department, and it will tell against the whole concern. So in manufacturing establishments, where mechanical skill with aptitude for different processes is required, and where order, method, promptitude are necessary, good judgment of character on the part of the director is equally essential.

We do not claim that one must necessarily understand the scientific rules of Phrenology and Physiognomy, in order

to arrive at tolerably correct conclusions in regard to character and capacity.

It is sufficient for our purpose to state here, that *he who is the best judge of character* will be the most successful, let his pursuit or position be what it may, whether that of school-teacher, physician, clergyman, or business man; while he who fails in this,—in "putting the right man in the right place,"—will just as surely fail in his undertakings. It is therefore evident that as a means to success, even in conducting ordinary enterprises, one should make sure of his ability to judge character correctly. Men often greatly mistake,—to their life-long regret,—in the choice of a wife; and the wife, in accepting what she supposed to be a suitable man for a husband. Had they been good judges of character, neither would have been disappointed.

Had he been able to read men, the merchant would not have placed a thief at the till, when an honest man or youth could just as well have been secured.

Poor generalship—incompetent leaders—has lost thousands of men and millions of money. Poor business management, with stupid or crabbed clerks, drive away custom. A surly sexton sometimes spoils all the effects of a good sermon. A cross captain or conductor makes passengers shun his route. A turbulent pedagogue keeps the whole school in an uproar; and a leather-headed doctor falls into quackery and kills many poor patients who, if let alone, nature would have cured.

We may end the discourse with the story of an old philosopher who wrote some time before the discovery of Phrenology and Physiognomy. He said: "God has made in this world two kinds of holes,—round holes and three-cornered holes, and two kinds of people,—round people and three-cornered people; but from ignorance as to their right relations and true position, the round people had got into the three-cornered holes, and the three-cornered people into the round holes. Hence the jarring and discord we see in society.

MORAL: Read the PHRENOLOGICAL JOURNAL, and learn to judge character correctly. Just in proportion to your ability to judge correctly will be the measure of your success in other directions.

AN EQUIVALENT.

SELFISH—not to say *dishonest*—persons seek to obtain from others something for nothing. There are many and various ways of accomplishing this. One convenient way is to borrow, and not return; another is to beg; another to cheat, defraud, swindle, or, in plainer terms, to steal. Of the first class there are many. One borrows your money, another your books, another your umbrella, jewelry, tools, pen, pencil, pocket-knife, dog, gun, fishing-tackle, razor, razor-strop, lather-box, or tooth-brush; not to speak of weightier matter, such as horses, vehicles, sail-boat, or anything else usable. These *habitual* borrowers own nothing more than the law allows, and can not be held for damages in case of losses. Many of this class manage to do a flourishing business on borrowed capital, but never get ahead.

The beggars—chiefly imported from monarchical countries, where natural-born paupers form a large part of the population—are as numerous in our cities as the means employed to import and produce them. In England they claim 600,000 drunkards; in America, we lament the existence of 400,000. Nine in ten of these may be counted as present or prospective beggars. But there are many beggars who are not paupers. They are persons without much self-respect, dignity, or true manliness. *The very act of begging is an evidence of inferiority.* Rogues frequently resort to it as an easier or safer means to get a dishonest living. Such persons do not even *think* of returning an equivalent for what they get. The swindlers—a very numerous class—are both native and foreign. They resort to every conceivable scheme to get "something for nothing." All the lottery dealers, all the prize ticket and gift concert concerns, and other gambling tricks, are practiced on the easily deluded. The patent-medicine swindlers are to be met with in most of the newspapers. Quacks fatten on the gains filched from poor diseased victims. Instead of returning an equivalent for money received, they poison their patrons.

Thieves also are everywhere, and of them there are many sorts, such as sneak thieves, pocket-book thieves, wharf

thieves, till thieves, fruit thieves, hen-roost thieves, horse thieves, house thieves or burglars, bank and post-office robbers, and highwaymen. Our State prisons contain thousands of these; and, if report be true, they are likely to soon contain many more. It is said that hundreds of European criminals are landed on our shores every month! They are harbored in Canada, or in other British provinces bordering on our lines, and make frequent excursions into our States. When those provinces shall be annexed, the thieves and robbers will have less security in their hiding-places. Our police are shot down by such desperadoes, and neither life nor property is safe.

One of the worst features connected with the administration of justice in such cases is the fact that wicked lawyers and venal judges combine—for a consideration—to let criminals go unwhipped of justice after detection and arrest, and before trial and conviction. The principle of *EQUITY* is sadly wanting here.

Then there is the game of husband-hunting and wife-catching. An artificial, weak, silly, simpering "fraud" tries to palm herself off as a well-organized woman! She is puffed, padded, painted, hooped, stayed, and rigged out in the most ridiculous style—see the Grecian Bend—intended to "attract." She makes a conquest. Let us see if she gets an "equivalent" for the valuable investment of herself. An inventory of *her* charms consists of what we have already enumerated, and the following: a weak back, a weak stomach, a small waist, decayed teeth, bad breath, contracted lungs, dyspeptic, nervous headaches, habitual cold hands and feet, a sore throat, and other slight infirmities, requiring the regular attendance of the family physician. Her movable chattels consist of a few sets of jewelry, sixty different dresses, and twenty-six Saratoga traveling trunks. She can dance, talk French a little, play the piano and the lady, but not the *woman*, as she never learned to work. She seeks a husband equal in social position, health, and other respects. She wants "an equivalent" to make an eligible match. Here is what she may be fortunate enough to receive in exchange:

An average young man of to-day, who

has a twenty-two-inch head; is ambitious, wide-awake, thin, nervous, sharp. He can read, write, and cipher; has some knowledge of science, mechanism, general literature, with a bias for business. He seeks an opening as a clerk in an established house, and will work his way up. His capital consists in energy, willingness to work, good habits, and perseverance. His wages at first are moderate, but *prospectively* his chances are promising. He looks forward with the hope of promotion, and to succeed his seniors in interest. He is always prompt—on time—cautious, frugal, honest, and becomes thoroughly acquainted with his business. He is careful in forming associations, avoiding "fast" men and "fast" customs; takes part in all good works, such as temperance, education, and religion; rendering an equivalent for every favor, and becomes in time a successful citizen. Will he find in the lady an equivalent? Here is a young man of another class more in correspondence with that of the aforesaid lady. He is not to be reckoned among the beggars or paupers, but of those who start out in life with the idea that "the world owes them a living." He has had equal privileges as to education, etc., with the average young man. But he does not like to work. He obtains a situation, but is always "in the drag," except when there is to be a holiday frolic. Out late at night; up late in the morning; behind time at the store; his customers are impatient; mistakes occur in his accounts; his cash is reported short; his wages are overdrawn; he borrows of fellow-clerks; fails to pay; smokes, moderately at first, then chews; then drinks; eats cloves and cardamoms to "purify his breath;" visits the race-course occasionally, the theaters frequently, and takes now and then a hand in a game of chance. He finally flirts with fast women; has occasion for medical advice; consults the quacks; is made worse, and his constitution becoming seriously impaired, he can not attend to business. His relatives are appealed to for help; a thrifty uncle lends him means to travel; stops at a fashionable resort, and there makes the acquaintance of a Saratoga "Grecian Bend;" tells her of his rich uncle; is engaged, and finally married; each gets a fair equivalent, but both feel "swindled." Their future may

be easily inferred. They soon find each other out, and appeal to the law to correct their blunders by divorcing them. To *them*, life is indeed a failure.

MORAL.—God is just. He has established a system by which we shall receive an equivalent for our good deeds or for our bad deeds. "The Lord shall judge the people with equity."

"The tissues of the life to be,
We weave with colors all our own,
And in the field of destiny,
We reap as we have sown!"

"BOGUS."

THIS term, "bogus," is not classical. It may not be defined in all the dictionaries; but it is very expressive, and its meaning is understood by everybody old enough to know how to cheat, deceive, or swindle. Illustrations of the term may be found in every community. There are bogus kings and queens and bogus emperors. There was a bogus emperor not long ago who attempted to set up a throne in Mexico. He was simply a cat's-paw for the smart French emperor, and got shot for his meddling. Max was a nice young fellow, and plucky withal, but was misled by the more cautious and crafty Napoleon. There are any number of bogus statesmen, who seek only party or selfish ends; bogus soldiers, bomb proofs; bogus doctors, the quacks; bogus lawyers, the shysters; bogus preachers, hypocrites; bogus phrenologists, the self-styled professors; bogus poets and authors, plagiarists; and bogus jewelers. There are counterfeits among all classes.

A genuine diploma conferring the title of M.D.—Doctor of Medicine—on a person is given by the faculty of a legally constituted institution to those duly qualified under its discipline. A "bogus" diploma is conferred by persons *not* authorized by the law to give it; or is given to those not qualified by education to receive it. Such bogus diplomas are sometimes bought from unprincipled professors for a few dollars. Or the thing may be managed in this way: Here is a poor jackdaw who desires to shine in borrowed or stolen plumes. He promises the professors of the institution "that if they will make him an M.D., he will, at a future time, attend their college, and will use all his influence to send paying students thither. The "degree" is given, and, "lo and behold," we have a new "six-weeks' doctor of medicine" in the field, to filch money from and poison the bodies of poor diseased humanity. This scamp has no thought of fulfilling his promise by attending lectures, and straightway sets up the dispensing of drugs and destruction on all he meets. There are to-day hundreds of such quacks in Europe and America, plying their work of poisoning and robbing on bogus diplomas, outraging common decency.

Again; a shrewd, cunning, ambitious upstart,

with a few elderly and feeble-minded physicians, not able to obtain a living in general practice, start a new college. It may be eclectic, Thomsonian, herbalist, or allopathic. It is open to students, both men and women. Several of the old gentlemen physicians are then dubbed "professors," and at once installed into chairs of anatomy, physiology, chemistry, theory, and practice, etc. But how are the chairs to be filled with lady professors? It is easy enough. Go to the young and ambitious wife of some elderly and amiable person—a preacher, a teacher, or a lecturer—who has a "name," and through whose influence "grists may be sent to this new mill," and the thing is done. The ambitious woman is available for the "honors." She is at once given a diploma, and announced in the college circular as Mrs. Doctor Blank, M.D., Professor of Obstetrics, or Lecturer, or something else. The public is not supposed to know or to care *how* she obtained her degree of M.D. Now this woman is about as ignorant of science as Bridget is of painting or sculpture. She is simply a bogus professor. Still, being the wife of Mr. "Somebody," she is supposed to know the difference between tripe and liver, bowels and brains, and so passes on down to fame and fortune. This is the way some schools *have* been formed and professors created. But what must be the sort of physicians turned out of such "colleges?"

As to the way of manufacturing bogus D.D.'s, it is very simple, very foolish, and very vain. Two sisters marry two clergymen. One of the clergymen gets an appointment as professor in a college. His wife "feels" the weighty honor, and desires to share it with her sister, whose husband is only the plain Rev. Mr. Middleman. He manages to get through the services without putting *all* his congregation to sleep, but attracts no attention, and it is as much as he can possibly do "to make both ends meet." But the sisters put their busy heads together, and through the influence of the professor it is decided to make Mr. Middleman a D.D. Prof. No. 1 whispers it to Prof. No. 2, remarking that the charming wife of Prof. So-and-so very much desires the thing should be done. At this juncture, sister No. 2 puts in an appearance, covered with such winning smiles, that the whole board of professors are completely fascinated. Mr. Middleman remains in the back ground, and, "unseen," is made a D.D. by the University of Humbug. The women pulled the wires, and without merit to recommend their small pattern of a man, he was exalted in name, but remains to-day only as a bogus D.D. The lion's skin he wears will not conceal his real character. It is often far more honorable to decline than to accept those plumes which would better grace another.

Bogus authors and editors are they who prostitute their talents to base purposes; who write sensation stories to excite morbid imaginations.

Bogus reformers are loud-mouthed in crying down the faults of others, but do nothing to

correct their own. We have heard of so-called temperance men haranguing the crowd on the evils of whisky drinking, with their own dirty mouths stuffed with tobacco! So, too, we hear frequently of thieves, pickpockets, burglars, and highway robbers, rioters, and incendiaries, declaiming against injustice! These rascals would

"Steal the livery of heaven,
To serve the devil in."

We have bogus watches, bogus jewelry, bogus eyes, bogus calves, bogus cheeks, and bogus bosoms. There is no end to the everlasting bogus cheats. We may as well stop enumerating them. Let those who prefer the genuine article to the bogus, take good care to get it.

PRACTICAL AND SCIENTIFIC BOOKS.

WE would beg leave to call the attention of our readers to the very large and valuable CATALOGUE OF PRACTICAL AND SCIENTIFIC BOOKS which we give in the present number.

This catalogue, comprising the largest and most varied list of this character of books issued by any one house in either the United States or Great Britain, will be found to present some book or books of real interest to every man in the country engaged in any productive industrial pursuit; nay, more,—there is not a man or a woman among our readers who could not derive advantage in the ordinary vocations of life in this practical age of ours from the perusal of one or many of these publications.

Observant travelers—men who go about the world with their eyes open, and learn something in every country they visit—have remarked upon the wonderful ingenuity of the French, and upon the marvelous beauty of the fabrics which they produce. Further than this, in tracing back effects to their causes, they have been led to attribute these results in a great measure to the industrial schools and colleges established by the French Government—those in which are taught engineering, chemistry, arts, manufacturing, and mining. One of the direct and most potent results of the institution of these schools is to be found in the fact, that France has to-day the most extensive and the grandest industrial literature in the world.

In England, the question of education is attracting attention, and the entire subject is certain to undergo a thorough revision at a day not now far distant; and science and its application to the arts must take a position which they have not hitherto held in the great schools and colleges of that country.

Shall we in this land of universal education, amid widespread intelligence, be behind in the race which is to take place? We trust not! We have our schools of arts and mines, and our polytechnic colleges, and the genius of our people has essentially a practical turn.

It is hardly worth our while to attempt to enumerate the many subjects treated of in these books. We refer our readers to the catalogue

itself. Suffice it to say that there are few practical questions connected with mechanics, architecture, surveying, engineering, manufactures, drawing, dyeing, chemistry, painting, mining, mathematics, or metallurgy, which are not treated of. Read the list.

NURSING A VIPER.

WHEN we commended the plan of the paper called the *Church Union*, we did it on the ground that its managers proposed to advocate a union of all the evangelical churches, and to encourage Christian fellowship among men. But we omitted one important condition—namely, the character and capacity of the men engaged in it. In the hands of proper persons such a paper could be made to exert the most beneficent influence—softening sectarian rancor, and begetting a more generous, kindly, and godly spirit among men. But *these* "Church Union" folks are "bogus." Soon after receiving a kindly introduction to the public—on the strength of their professions—they opened their blanket sheet for the reception of vile quack medicines; they slandered clergymen and other good men; and "played the deuce" generally. The whole tone and spirit of the paper is antichristian. The only worthy feature in it is an occasional sermon by Mr. Beecher. The claim they make of being the exclusive publishers of his sermons is, like other pretensions, only a down-right out-and-out falsehood. If no change for the better be made, the *Church Union* newspaper will terminate its career on the low level of its kindred, among the quacks and swindlers.

We are surprised that so shrewd a business man as Le Grand Lockwood should allow the low fellows to work on his capital so long. While he furnishes the money, they will puff, blow, and print a low paper. The public who patronize them will only "nurse a viper" that will sting the hand that feeds it.

THE EIGHT-HOUR LAW.—The interpretation given of this foolish act of Congress by General Schofield is, that it means eight hours' work a day, and *pay* for eight hours' work. The case is very simple, when looked at from a common-sense stand-point. We think the eight-hour law should be repealed. Most mechanics and artisans who work for the Government or for themselves would prefer—we are confident—to work ten hours a day, and get full pay for it. Then why not?

ONLY ONE NUMBER MORE THIS YEAR!—The 48th volume of this JOURNAL will be completed with the next (December) number. A new volume,—49,—begins with the new year. We are getting lots of good things ready for our readers—those who care to have the JOURNAL continued. Our hearts are often made to throb with gladness at the expressions of encouragement which we receive from friends and co-workers.

NEW ENGLAND FISHERIES.

FROM the time of its first settlement, New England has always been interested in the fisheries. They have been pursued with an ardor and perseverance which have been highly commendable; and each year has given greater importance to this healthy and profitable pursuit. The headquarters of the business at the present day, and the largest fishing port in the world, is the town of Gloucester, situated on Cape Ann, Massachusetts. It is a quaint old town, containing some 14,000 inhabitants, and possesses one of the finest harbors on the continent. This harbor is divided into an outer and an inner basin,—the former being three miles long by two broad, and offering excellent shelter during the severe autumnal storms to hundreds of coastwise vessels; and not unfrequently square-riggers of the larger class are glad to seek it as a place of safety when the storm-clouds lower. One of the prettiest spectacles to be witnessed during the fall months is the coming in of the shore fishing fleet just prior to a gale. Sometimes there are four or five hundred sail, belonging along the coast, all running for the harbor. The skillful manner in which they are handled; the readiness which they mind their helms; and their dashing, lively, sailing qualities as they tack to and fro across the harbor ere they reach the anchorage ground, affords a charming panoramic view worth going many miles to witness. The town has some natural adjuncts which in their way are unequalled. Pleasant drives and hard sandy beaches abound, while Annisquam River, which connects the harbor with Ipswich Bay, offers a most attractive resort for picnic and fishing parties.

The property valuation of the town, as per the recent returns of the assessors, is \$6,698,412, the greater portion of which has been gathered directly from the inexhaustible treasures of the deep. In summer's heat and winter's cold Gloucester's hardy sons follow their vocation, and the results of their industry may be observed in the yearly growth of the place. The vessels engaged in the fishery business are schooner-rigged, built and equipped in the most thorough manner, and are as pretty craft as one would wish to gaze upon. There are 518 owned and fitted from Gloucester, including 46 boats, making an aggregate of 25,472.45 tons. Their valuation in round numbers is \$2,250,000, and each year large additions are made to the number. In 1867 there were 47 added, and during the first six months of the present year there have been 35. The valuation of the wharf property is \$600,000. This gives some idea of the capital invested, and new wharves and vessels are fast being contracted for.

COD AND HALIBUT FISHING.

The first vessels of the season to start upon their trips are those which follow the cod and halibut fishery. Some of them pursue the business on the Western and Grand Banks; others go to Cape North; but the larger portion go to George's Bank, which is 160 miles dis-

tant. Trips to the first-mentioned grounds occupy from four to six weeks,—and to the latter, two or three. If a vessel is absent on George's Bank more than four weeks, there is great alarm for her safety, and it is rare that she ever returns after being gone from port that length of time. There are about 250 sail engaged in this branch, some of which pursue it the entire ten months of the fishing season. The vessels having been hauled up in November after mackereling is over, are stripped of their sails and lie alongside the wharves for some two months. During this interval the fishermen get uneasy—they want to be earning something—they wish to be afloat on the bosom of old ocean; but they must wait until February comes, as then the cod and halibut visit the Banks in order to deposit their spawn. The good weather which sometimes prevails for a week or two at this season is very tempting, and some of the most venturesome make active efforts to get their vessels under weigh at once. Skippers and owners of a more cautious disposition wait until the first trips are made, hardly daring to risk the sudden storms which break with such fearful fury on the Banks in winter. These first trips, unless the weather is unusually severe, are generally very successful, the vessels returning with full fares, which command high prices. The cash is most heartily welcomed at this early season by owners whose vessels have been lying so long idle; by the fishermen, whose household necessities are pressing; and by the traders in town, whose business is greatly increased by the proceeds resulting from the sale of the halibut and cod, caught at a season when danger is imminent and the cold severe.

THE DANGERS OF WINTER FISHING.

A trip to George's Bank in midwinter is a hazardous one, and yet it has attractions which even the veteran fishermen find it hard to withstand. Many a gallant schooner from this port has sailed out of the harbor, and in a short time, with all on board, has sunk beneath the billows. Generally, two vessels are lost together, and sometimes more. This is accounted for by the fact that the fleet, in their eagerness to obtain a full fare in the shortest possible time, anchor in close proximity to each other in good weather. So intent do the fishermen become in their employment, that sometimes they do not notice the heavy storm-clouds which suddenly rise, and not until the tempest is ready to break upon them do they fully realize the danger. In these storms a hundred, or a hundred and fifty sail, may be tossing and heaving at their anchors. If the cables and anchors hold, all is well, for these vessels are strongly built, and will "ride the water like a thing of life;" but there is constant anxiety, for a collision at such a time is sure destruction to both vessels. When the cry is heard, "A vessel is adrift!—stand by to cut the cable!" the captain, or some resolute man of the crew, is stationed forward on board of each of the crafts with hatchet in hand. The drifting vessel draws near. She comes down through

the fleet with fearful velocity,—sometimes just grazing the sides of some of her companions as she dashes by. The danger of collision to a particular vessel may be averted by the cable being cut; but the peril of the fleet is made greater, as there are then two vessels adrift for them to guard against. In the case of two vessels adrift coming in contact with another, destruction follows swift and sure. There is not the least chance for escape, and both of their crews are swallowed up by the foaming waves, never more to be heard from, this side of eternity. Oftentimes these storms arise in the night, and then of course the danger is very great. There is nothing then to warn the watching seamen save the lights which each vessel has set in her rigging. Sad indeed has been the record of these lost Georgescmen in the past; but the last two years have been highly fortunate in this respect, owing to greater caution of the fishermen and the comparative mildness of the storms which have occurred.

This department of the fisheries was first established in 1830, and since that time there have been lost upward of 600 lives and 72 vessels while engaged in it. The 21st day of February, 1862, will long be remembered with peculiar sadness by the fishermen of Gloucester. On that day 15 vessels of the George's fleet, with their entire crews, consisting of 148 men, all went down beneath the foam. One half of the men were married; thus in a few moments 74 women were made widows and 150 children were left fatherless. These, however, were kindly cared for until they could help themselves.

THE BRIGHT SIDE OF THE BUSINESS.

The shady side of the picture has been given. If the risks in this branch of human industry are great, the profits are good. If mild weather prevails, and the vessels take due precaution in regard to anchorage, a full fare, especially in the early part of the season, is quickly obtained, and then the vessel puts back to port. Handsome returns for the trip are realized. During the past season the first trips were remarkably fortunate, only one string of cable being lost throughout the entire fleet. The average amount which the crew will share for a trip lasting from two to three weeks, including their board, is \$60, although there are instances of frequent occurrence where the men share a hundred dollars and upward as the proceeds of a two weeks' trip. In order to keep a correct account of the fish caught by each man, the tongues are all saved when the fish are dressed; to these are oftentimes added the sounds, which are salted or sold fresh, and bring good prices. They are highly esteemed as food, and command a ready market. When a halibut is caught, the private mark of the catcher is put upon him, and in this way there can be no mistake.

The Western Bank, Grand Bank, and Cape North fisheries are also quite remunerative, although similarly attended with danger. The time occupied is from three to four weeks, and very large fares are landed. The largest of

last season amounted to 41,000 lbs. of halibut and 2,000 lbs. of codfish, the net stock realizing \$4,126 72. The crew shared \$171 51 each, and were absent twenty days. The crew of a fisherman ship "at the halves,"—that is, after deducting the bills for ice and bait and salt,—receive one half the fish they catch. The owners of the vessel find the provision, barrels, etc. Each man throws by himself, although sometimes two "chums" will catch together and share equally. The halibut and cod find ready sales in Gloucester as soon as landed. The former are taken directly from the vessel, packed in boxes, and sprinkled plentifully with crushed ice. In this condition they are immediately sent to wholesale dealers in the New York and Boston markets, and thence distributed all over the country. Many entire trips are bought by dealers in Gloucester, who cut them up and manufacture smoked halibut, which also finds a ready sale at remunerative prices. The fins are salted in barrels, and esteemed a great delicacy. The codfish are mostly bought in town by vessel owners, who pickle and dry them. A ready sale is obtained at the West, through New York and Boston merchants, as well as by some houses in town directly connected with Western establishments. The heads of the cod and backbones of the halibut, when they are cut for smoking, are given away to all who may come for them. The greater portion are used as manure by the farmers about Gloucester; but many a poor family make a good dinner from a chowder made of "coddled heads," or a delicious meal from the baked backbone of a halibut to which cling goodly streaks of meat, and which has cost them nothing. Is not, then, the perseverance of the winter fishermen worthy of record? All honor to them, say we. Let us now turn our attention to the

MACKEREL FISHERY.

The winter is over. Spring has come with its gentle breezes and bright sunshine. Most of the winter fleet are taking out their ballast, repainting, and scrubbing up for mackereling. About the middle of May some fifty sail go to the southward, cruising for the first schools of these fish. The business in former times was not very profitable; but it served to keep the men and vessels employed. The past two years, however, it has paid well, and it is safe to presume that it will continue remunerative. June is a busy month. All the vessels, save some few which follow cod and halibut fishing the entire season, are getting in readiness for shore mackereling or for a trip to the Bay of St. Lawrence. As they lay off in the stream, all ready to take their departure, they look gay, for the fishermen take pride in their craft; and oftentimes one of the crew, with considerable talent in the decorative line, will put such finishing touches on as will merit decided approbation. The crews of mackerelmen fish at the halves, receiving half the mackerel they catch, and paying half the bills for bait and salt. Very many young and middle-aged men, from every nook and corner of

the country, come to Gloucester at this season looking for a chance. As they walk through the streets or stroll down the wharves, they can be easily detected by the inhabitants. Very amusing are the tricks sometimes put upon them; but all is taken in good part, and if it results in their getting a chance to ship, all is well. Many persons try these fishing voyages for the improvement of their health. Dyspepsia, nervousness, lung difficulties, debility, and general depression are well represented among them. They go on board pale and weak, looking as if the breath of life could hardly be kept in their frail bodies. If such are careful, and pay due attention to the plain laws of health, they have taken a wise course in coming to Gloucester to try a mackereling trip. It may be a little rough for them at the commencement. Perhaps they will not at the first going off meet with such companions as they wish; but their shipmates, rough as they may appear on first acquaintance, have kind hearts in their bosoms—hearts that will freely help another; but they are very much disinclined to countenance any one who "puts on airs," or tries to pass himself off for some one better than they are. Therefore, reader, if you ever have an idea of coming to try your luck mackereling, come with the idea of treating every one well, and with the desire to make yourself agreeable, and be ready to conform to the circumstances of the situation you may be placed in.

The Baymen commence sailing about the last of June, and the last of the fleet generally leave port the middle of July. Many of them fit to stay the entire season, until November, sending home their mackerel by steamer, which affords them a longer time to fish. If they get short of provision, they can easily obtain what they wish at most any port in the Provinces. Others come home, and make two or three trips during the season. This is governed by circumstances, as sometimes there is better fishing on this shore than at the Bay. Some 450 vessels are engaged in the mackerel fishery from this port, requiring the services of 5,000 or more men.

A trip to the Bay is one of the best means for recreation that we know of; and if one is willing to be smart, and attend to fishing, there is a chance of obtaining a snug little sum as the result of the voyage. The vessels are fitted with the best quality of provisions, and the stewards take great pride in serving up the victuals in good style. Cruising along the shores or among the islands in the Bay of St. Lawrence gives a great variety of scenery; and the pleasures of going on shore, associating with the inhabitants, and participating in some of the merry-makings which are so frequently held, is fine sport, and serves to break up the monotony which would otherwise prove tedious to the "green hand." Inhaling the pure air from off the water gives even one who feels "broken down" a new lease of life, brings on a sharp and earnest appetite, strengthens the system, and improves the tone of the nervous forces. Besides the roughing of it on board,

this sea life has its peculiar pleasures, which, once participated in, awaken a desire for their repetition; hence it is that so many amateurs go again to join one of the craft and cast their lot with the jolly fellows who depend for their livelihood upon the hook and line. It is a very sensible method of passing the "heated term;" and the practical information acquired is not the least among the benefits derived.

There is an excitement in catching mackerel which has a charm about it not soon forgotten. Let us, reader, imagine ourselves on board a mackerelman at the Bay in the month of August. We have had a pleasant run from Gloucester, been a little seasick, perhaps, but have got bravely over that. The blue sky above and the clear water beneath have a pleasant look now that our stomach has settled. The sun is just making himself visible on the eastern horizon, tinging the sky and casting a faint light over the ocean. All hands are called by the steward, who has been up long enough to get breakfast. The watch on deck has been changed several times during the night, and the vessel has been jogging under a foresail, running off and on, so as to be kept in the vicinity where it is hoped that the mackerel will show themselves. The first duty is to hoist the mainsail; this being done, breakfast is partaken of; and reader, you and I will set down and take a mug of coffee, some of that bread, hot from the oven, a piece of corned beef, and the steward may give us some of his doughnuts to "top off" with. The men live well, oftentimes having better "grub" than they get at home, and the steward is a man of mark aboard, and well he knows it. If you keep the right side of him, he will give you gingerbread and duff—which is a kind of pudding with raisins in it—doughnuts, and other luxuries, which are so toothsome to those living in the free air and taking plenty of exercise. The pay of a steward is a full share with the men, and half the fish he can catch besides. This makes him active and willing to keep the larder well supplied, so that when the fishing is good he can engage in it. But we have digressed somewhat. Breakfast has been stowed away beneath the waistcoats of the fishermen. The vessel is sailing along, all eyes watching the water to descry the peculiar ripple which a school of mackerel make when swimming near the surface. This is an anxious time. Hooks are all baited, lines ready, and the men waiting. Soon the ripple is visible. The vessel is hove to; bait thrown overboard, to feed and entice the fish to keep alongside. Then the fun commences in good earnest. Over go the lines; quickly one is hauled in with a mackerel attached; a peculiar twist of the wrist, and he is "slat" into a barrel, and back goes the line; and this operation is repeated as long as the fish will take the hook. The bait is most skillfully put on, so that it can not be easily taken off by the fish, and oftentimes the same bait will last for hours. The mackerel when hungry do not pay very strict attention to the bait; they bite at anything white they

see. It's lively work then; all hands are hard at it, for well they know that the humor of the fish may soon change, and down they will plunge into the lower depths; in which case the fishing is over with that school, for a time at least. If another school is not soon raised, the fishermen turn to and dress their mackerel. There is quite a knack in doing this up to the required standard. Generally two dress together. The fish are placed on a board, grasped by the "splitter" with his left hand, and by a peculiar movement a keen knife's blade is passed from the extremity of the head to the tail. Then they are taken by the "giller," whose duty it is to take out the entrails and the gills. "Practice makes perfect," and this old adage is fully exemplified by the fishermen as they pursue their work of dressing. It is done quickly and neatly. After dressing, the mackerel are put in soak to rid them of their blood, and then salted in barrels and stowed away in the hold of the vessel. Each barrel bears the private mark of the catcher, so that there can be no mistake in regard to settling up affairs after the vessel returns to pack out.

Thus the work goes on, some days finding the men hard at work pulling in the mackerel, other days finding them cruising for schools, always ready and ever willing to jerk in the fish. Some trips are short, others long, according to the humor of the mackerel. Some schools will not take the hook, although you do your very best to entice them. There they are alongside, great fat fellows whom you want so badly to fill up the empty barrels; but no, their mouths will not open. Then you try the gaffing process, and armed with a long and slim-handled mackerel gaff you work it dexterously among the finny tribe, now and then securing one, until they are frightened away.

A day at the line, or six hours even, will make a "green hand" feel somewhat sore, and he will be glad when the work of dressing is over, to crawl into his bunk, when, after saying his prayers (if he be devout enough), and thinking of the "loved ones at home" (if he be lucky enough to have any such), it will not be long ere he is in dreamland, and "tired nature's sweet restorer, balmy sleep," presses down his eyelids, bringing in its train that refreshment which he needs. When the vessel is full, which requires from two to three hundred barrels, according to her size, the mackerel are oftentimes landed and sent home, *via* Boston, per steamer; but if this is not deemed advisable, her prow is put for home, where the mackerel are culled according to size and quality as No. 1's, 2's, or 3's, then repacked, salted, ready for the market.

The number of barrels of mackerel caught by the Gloucester fleet in 1866 was 112,850 $\frac{1}{2}$; in '67, 108,917 $\frac{1}{2}$. Of this number about 70 per cent. were No. 1's. The prices ranged from \$11 to \$17; and the season's catch of 1867 amounted to \$1,637,004, while that of 1866 amounted to \$1,784,272. These were not considered very profitable years. That of 1865 was better, amounting to \$2,095,260. The season of 1868

MRS. TABATHA MCGATH,
107 YEARS OLD.

bids fair to be a fortunate one; but at present writing it can not be determined with any degree of certainty. The fleet are away, and if perseverance will accomplish anything, we shall soon hear of good trips.

HERRING FISHERY.

In addition to the branches above alluded to, there is the Newfoundland herring business, comprising some forty sail of the largest and staunchest of fishing vessels. These get away in December, carrying an assorted cargo, which they exchange for herring. The fish are caught in nets, then frozen stiff, and packed in snow in the holds of the vessels. They return in season for the Georgesmen, who depend upon them for bait. There is quite a rivalry among the vessels of this fleet to reach home, as the first arrival of herring brings large prices. Those not required for bait are sold in New York and Boston, the vessels proceeding directly to these markets, where the herring meet with ready sales, and supply the poorer classes with good food at a low price in a season when they most appreciate it. These herring are of large size, quite fat, and when broiled, delicious eating. The herring business is very perilous, as the Newfoundland coast is exposed to the tremendous gales which sweep that section with so much violence in mid-winter. Notwithstanding this, the business is pursued quite successfully, and forms an important item in the profits of the fisheries. Besides helping the Gloucester people, it is of almost incalculable benefit to the Newfoundlanders, furnishing them remunerative employment at a season when all other branches are dull; and the catch of herring for the Gloucester fleet provides many comforts for the poor fishermen and their families, which otherwise they would be compelled to go without.

The baiting fleet, comprising about twenty sail, remains to be considered. They are provided with seines, and cruise along shore in pursuit of porgies. These fish travel in schools, and it is a lively work to set the nets and draw them in. They are used by the mackerel

catchers for bait, and are in good demand, yielding handsome returns to the baiting craft.

No employment followed by man requires more determination, daring, and genuine pluck than that of the fishermen. Their home, in a great measure, is on the wave. They see nature in its calm and storm, and early learn to rely upon themselves. It requires patience to stand at the rail in the severe winter weather, and wait for fish to bite; courage, to guide their little vessels through the gale and anchor them safely in port; much faith, to trust their lives on George's Bank. But there are men who follow it year after year, whose bronzed faces tell of exposure, whose broad chests, muscular forms, and manly bearing tell of good health, contented minds, and happy hearts. Very many of those now in the fitting-out business once followed the hook-and-line. By economy and hard labor they succeeded in accumulating sufficient funds to buy a share in a vessel. Continuing to prosper, they soon owned a whole craft, and from this become interested in other vessels, and subsequently quit fishing and become packers and buyers of trips. These form the solid business men of the place, and having a good foundation to build upon, they rapidly acquire wealth and become men of mark in the fishing community.

AN AGED WOMAN.

WE now and then hear or read of persons who have attained to an age greatly exceeding the Psalmist's "three-score and ten," and who, nevertheless, do not impress others with the notion that "their strength is but labor and sorrow;" but it is not often that a publisher is able to secure a veritable subject past one hundred years old, and show him or her to the public through the engraver's art. We are indebted to the kind efforts of a friend for the very striking case of comparatively vigorous longevity which is now introduced.

Mrs. Tabatha McGath, *née* Johnson, was born in Worcester County, Maryland, March 12th, 1762, and is therefore in her one hundred and seventh year. She married at the age of twenty-seven, and has been a widow about twenty-two years. Of eight children born to her, but three are living—all considerably past middle life. When Independence was declared, she was a girl of fourteen, old enough to appreciate the prominent features of the war which followed, and she manifests a lively recollection of many interesting incidents which occurred in its progress. As is usually the case with very old people, her memory is better of events long past than of those of recent occurrence. Her health is considered good; she sleeps well, has a good appetite, and appears to enjoy life with much zest. For one so old she is remarkably playful, and is much gratified if she can provoke a laugh by some humorous sally. Her features are so wrinkled and contracted with age that it would be difficult to predicate much character of them. The forehead shows considerable breadth, and it is

probable that the cranium generally is full in the lateral regions, an organization which is tenacious of vitality and appreciative of the things which appertain to this life. Although not a large-framed woman, she is evidently wiry, elastic, and enduring, and her simple habits from childhood to senility have supplemented nature and tended to extend her lease of life far beyond the ordinary boundary.

She has by no means been free from anxiety and sorrow in the conduct of her domestic affairs; but a cheerful disposition enabled her to bear what trouble fell to her lot with patient fortitude.

In the late war she may be said to have been well represented, as eleven of her grandchildren fought under the banner of the Union. Notwithstanding her great age, her hair is plentiful, and but half white.

OUR LIST OF PREMIUMS.

IN addition to a monthly magazine, which is richly worth its price, we now offer to those who may send us new subscriptions, valuable and useful premiums. As this JOURNAL is essentially useful and substantial in its general character, so the premiums named are of a useful and substantial sort. Many, to be sure, lay claim to the character of ornamental, but their decoration is but an attractive accessory to their utility. We offer no worthless frippery—no mean "pinchbeck ware" or "sham jewelry;" but appreciating more highly the mental tone of our readers, we invite their consideration to a short programme, which is thought to include things adapted to the tastes and wants of every well-ordered household and of every right-minded individual. As regards the liberal terms we make in this "premium business," we invite comparison with other magazine inducements.

TABLE OF PREMIUMS.

Names of Articles.	Cash Value.	No. Sub's. at \$2 ea.
1. Piano, Steinway or Weber, 7 octave. \$650 00....	350	
2. Parlor Organ, Mason & Hamlin or Berry, 5 octave.....	170 00....	100
3. Choice Library, your selection at publishers' rates.....	100 00....	70
4. Metropolitan Organ, Mason & Hamlin, 5 octave.....	130 00....	60
5. Gold Hunting-case Watch, American Watch Co.'s best.....	125 00....	60
6. Choice Library, your selection.....	75 00....	50
7. New American Cyclopædia, 16 vols.....	80 00....	40
8. Chambers' Encyclopedia, new, 10 vols.....	40 00....	35
9. Silver Hunting Watch, American Watch Co.'s best.....	60 00....	30
10. Sewing Machine, Weed's new style.....	60 00....	25
11. Sewing Machine, Wheeler & Wilson's.....	55 00....	20
12. Chest of Tools, 75 pieces.....	40 00....	25
13. Library, your choice.....	30 00....	22
14. Lange's Commentaries, any 3 vols.....	15 00....	10
15. Doty's Washing Machine.....	14 00....	10
16. Irving's "Belles Lettres Works," 8 vols.....	14 00....	9
17. Rosewood Writing Desk, furnished.....	12 00....	9
18. Webster's Illust'd Quarto Dictionary.....	12 00....	9
19. Irving's Life of Washington, 5 vols.....	12 50....	8
20. Mitchell's General Atlas, folio.....	10 00....	8
21. Student's Set of Phren'l Works.....	10 00....	7
22. Universal Clothes Wringer.....	9 00....	7
23. "Bruen Cloth Plate," for Machines.....	10 00....	6

Names of Articles.	Cash Value.	No. Sub's. at \$2 ea.
24. Stereoscope, Rosewood, 12 fine views.....	7 00....	6
25. New Physiognomy, Illustrated.....	5 00....	4
26. Weaver's Works, in one vol.....	3 00....	3
27. Hand-Book—How to Write, Talk, Behave, and Do Business.....	2 25....	2
28. Life in the West, new.....	2 00....	2

Our own books may be substituted in all cases for any other premium, if preferred.

The articles enumerated are the best of their several kinds. The "Belles Lettres" set of Irving comprises "Knickerbocker," "Tales of a Traveler," "Wolfert's Roost," "Crayon Miscellany," "Bracebridge Hall," "Alhambra," "Oliver Goldsmith," "Sketch Book," all elegantly bound.

Persons wishing our own publications instead of the promiscuous choice offered, will be permitted to select for themselves from our fullest catalogues. In this connection, we would say that lists of any number of *new* subscribers exceeding ten will entitle the sender to a liberal selection from our catalogue.

As we offer premiums for *new* subscribers, it may seem an injustice to present subscribers who may intend to renew their interest, if we do not exhibit some liberality toward them; therefore we say that each present subscriber who sends us a new name with his or her own (inclosing, of course, the requisite \$6), will receive the valuable hand-book, "The Right Word in the Right Place," or the illustrated "Pope's Essay on Man," which sells for \$1. We also offer the same premium to persons who subscribe to the JOURNAL for two years in advance at the regular rate.

In the general competition for premiums, *two* old subscribers will be counted as *one* new subscriber, and the premiums awarded accordingly to parties sending us lists at the full rate.

The "Cyclopedias" offered are handsome octavo editions, and beyond peradventure rank among the most valuable works of the kind extant.

It is scarcely necessary to say that the pianos and parlor organs on our list are acknowledged among the best manufactured.

The Mason and Hamlin cabinet organ, offered as premium No. 2, is a five octave double reed instrument with four stops, having their new and very valuable improvements introduced this season, viz., "Mason & Hamlin's Improved Vox Humana," and "Monroe's Improved Reeds."

The Bruen cloth plate is a valuable contrivance for embroidering on sewing-machines. When attached to Wheeler and Wilson's, it makes the Grover & Baker stitch, a desideratum in embroidery by machine.

Who will have these premiums? They are freely offered to all, and will be promptly sent to the parties entitled to them.

Clubs may be made up of subscribers residing at one or a hundred different post-offices.

REMITTANCES should be made in post-office orders, bank checks, or drafts payable to the order of S. R. WELLS, New York.

THE LIFTING CURE.

OUR former associate, D. P. Butler, of Boston, has established this treatment, original in its conception and application with himself, in a very eligibly situated suit of rooms, No. 830 Broadway, New York, near Twelfth Street, under the management of J. W. Leavitt of this city, and Lewis G. James, a graduate of Mr. Butler's Institute in Boston.

This new health-exercise is recommended by a large number of the leading citizens of Boston and vicinity, who have personally tested its effects as an exercise, developing agency and cure. It is also highly recommended by physicians and physiologists. Among the large list of references we notice the well-known name of Hon. William Claflin, the nominee for Governor of Massachusetts, Prof. C. M. Warren, of the Massachusetts Institute of Technology, Dr. David Thayer, and the Revs. J. A. M. Chapman, George Gannett, Edwin A. Eaton, and Frank K. Stratton, besides many of the best known business men in Boston.

It is claimed for the new system, that it is simple, but effective, and has been successfully applied to a large class of weaknesses and diseases. Its principle is, *that the curative power is inherent in the human organism*; that it is only by developing and increasing this inherent power by a proper system of exercise, etc., that health can be maintained or disease cured; that in lifting by this apparatus, man *develops his own power within*; and by the peculiar adjustment of springs, rod, and weights, and the position of the body in lifting, he is enabled, by the application of his will, to exercise harmoniously and completely, not only the external muscles, but wherever the muscular tissue extends, which is, of course, to the inmost vitals.

Thus, it is claimed, an equalization and uniform distribution of the forces of the system are secured, and these forces unvaryingly increased; giving at the same time such bodily strength that an invalid or weak person can frequently be trained in a few months to lift safely from 600 to 1,000 pounds, and attain a corresponding measure of *vital* power. The exercise tends chiefly to the production of internal or vital energy, and not, like the ordinary gymnastics, to establish muscular size and power at the expense of the vital.

It is highly recommended to business men—the sedentary and studious—doctors, lawyers, clergymen, and professional men, as fulfilling all the conditions of a health-exercise in the fullest degree, at great economy of time, and without sacrifice of personal quiet and decorum.

It is also said to be highly effective as treatment for all classes of invalids, and especially to sufferers from those weaknesses and diseases to which women are especially liable, furnishing always a palliative, and to many a complete restorative.

Our friends, of whatever occupation or condition of health, should examine the claims of

this new mode of treatment. We are assured that no harm can come of it, when practiced according to the rules established by the inventor and author.*

The New York establishment is but recently opened, and it promises to meet with a good measure of success.

A WESTERN SOCIAL SCIENCE ASSOCIATION.

THE intelligent minds of the West are moving onward in the line of a broader civilization. There is a movement afoot for the establishment of a Social Science Association, of which Chicago will be the nucleus. Those prominent in the measure have issued a call for a public meeting, to be held in Chicago on the 10th of November. The call briefly states some of the objects of the proposed Association. A primary one of these is the collection and dissemination of information concerning the organization of a society in the Mississippi Valley. It will be under the control of no sect or party. At its annual meetings the subjects of education, public health, finance, and jurisprudence will be freely discussed; and the discussions will be published, as far as the funds of the Association will permit.

It is hoped that this organization (which is intended to be similar in character and design to the British Social Science Association) will sooner or later include the majority of able, earnest men in the West who feel a true and deep interest in the public welfare; that it will afford to such men an opportunity for the comparison of views upon all subjects of vital interest to society, and unite them in the bonds of mutual respect and confidence; that it will call public attention to the necessity which exists for a better mutual understanding and a closer union between the heterogeneous elements which compose our Western population; that it will elicit valuable practical suggestions with reference to the amelioration of existing social abuses; that it will prove of service as a guide to the many young and growing communities in the West, both in towns and in the country, by pointing out the tendencies of our national and social life, so as to enable them readily to fall in with the general advance of society; that it will thus save to the West the immense sums of money annually expended in experiments which can have no other issue but failure and disappointment; that it will make more widely known the present and prospective importance and power of the States which lie in the Mississippi Valley, and aid in their development; and that it will give to men who have no personal interest in the success of political parties as such, but who do feel a deep interest in the preservation of the national honor and integrity, an opportunity to make their influence felt for good in the councils of the nation.

All persons of whatever class or profession

* See the book entitled "The Lifting Cure," by D. P. Butler. Price \$1. May be had at this office.

who are interested in the cause of social science are invited to participate in this effort.

Among those who have already shown a zealous co-operative spirit are Robert J. Ingersoll, Edward Eggleston, John M. Palmer, Ralph Emerson, Hosmer A. Johnson, Wm. W. Evarts, F. H. Wines, R. J. Oglesby, Sharon Tyndale, gentlemen of well-known eminence.

THE ILLUSTRATED ANNUAL OF PHRENOLOGY AND PHYSIOGNOMY FOR 1869 is now ready, containing nearly fifty portraits of distinguished characters—Civilized and Savage. Among the leading subjects are the following: The True Basis of Education; Uses of Culture; How to Study Faces; an illustrated article on Physiognomy; A Convention of the Faculties; What the different Organs Say and Do; Nature's Noblemen; Eminent Clergymen of several different Denominations; Power of Example; Choice of Pursuits, or, What Can I do Best; MIRTHFULNESS, Wit, Humor, with Illustrations; Heads of Victor Cousin, Hepworth Dixon, Wilkie Collins, Rev. John Cummings, author and prophet; Blind Tom, Artemus Ward, Alexander Dumas, Mrs. Ritchie, Mr. Julian, with Phrenological Descriptions and Biographical Sketches; with Indians, Cannibals, and others. Richer in Matter and Illustration than ever before, everybody will want to read it. Only 25 cents. Address this office.

FARMING IN VIRGINIA.

BY EX-GOVERNOR HENRY A. WISE.

BETWEEN the extremes of cold in the North and heat in the South lies beautiful Virginia. It is in every respect, so far as natural resources are concerned, one of the best States in the Union.

We commend to our readers the following extracts from an address delivered by ex-Governor Wise before the "Virginia Horticultural and Pomological Society:"

"With every variety of temperature, climate, soil, production, power, minerals, navigation, game and fishery, sites for residence, sublime and beautiful scenery, and hygeian springs, there is no people of the habitable globe who can not find the choicest localities in the limits of Virginia to suit their respective tastes, habits, and pursuits, however various and opposite, better than anywhere else on earth, now to be settled and developed. These various large, rich, grand, beautiful, and healthful sections, of countless capacities and resources, still lie waiting for skill and labor to come and develop their inexhaustible treasures. They were scarcely touched by the plantation system, which, with its African slavery, has been demolished forever. It developed nothing but its own evils, and that they could be prevented in the future only by civil war and its blood and crimes. If that be done, and if that could only be done by the war, and if civil liberty be not destroyed by the victors of the war, then the war was not in vain, was not so much a

crime as might first appear to the short-sighted and the selfish; and it may more than compensate for all its blood and battles, loss and costs, if made to cease in all its effects, now that its main cause has ceased and its main result has been accomplished. If the war can only be regarded as a messenger, an ambassador, sent by God to remove the evils of African slavery from among us, and not to scourge and harass and enslave each other, then the fear of God, and charity among men, and pure and undefiled religion, and the love of peace and justice and truth, and the sense of honor and the pride of patriotism, will heal the nation. I have unshaken faith in the conviction that this was God's own war with evil to free us from negro slavery, that He will not permit it to be made the means of enslaving any portion of the white race, and that He will awfully scourge any who dares to press its consequence to extremes of oppression beyond or beside His own providential designs. If they can only be fully seen and followed, we and our children's children shall be more than compensated; we and they shall be blessed.

"The plantation system prevented, in fact repelled, a dense population; it did not encourage the mechanic arts, mining, manufacturing, ship-building, and commerce, nor, indeed, consort with them.

"The first thing to be done by our landholders is to give every encouragement and premium to our own white laborers, and our young men particularly, to turn their attention to agriculture under a system of small farming.

"The young men of the best intelligence must devote their studies to the applied science of agriculture.

"I had rather plow a field for myself than sweep and dust offices and wash spittoons for any one else; it is much more respectable, and certainly more independent. It is well, perhaps, that now young men can not run to Washington or Richmond for office, and that some of them may be forced to take to the manly and dignified pursuits of agriculture.

"We must invite and tempt the people of the densely populous portions of the United States to come to us. No more as invading armies, but to come and repair the devastations of war.

* * * "Welcome them to come and pitch their tents and household gods in our pleasant places. If they have conquered us by force of numbers in war, let us conquer them by kindness to make us strong in numbers and in the arts of peace! This would be a reconstruction worthy of a great people!

"None of the other avocations of life can prosper unless the landholders and cultivators of the soil are strengthened by every means in our power.

"The lands must be divided into alternate sections of fifty or one hundred acres, and rented or sold to 'cunning artificers' of fortune. If we can not sell or rent, we must give away parts to make the remainder worth more than the whole."

[We fully agree with the ex-Governor in his statements, and advise young men not yet decided on a life pursuit to try agriculture, as promising the best results.—Ed.]

TRUTH "CROPPING OUT."

[EXPLORERS judge a new country by its surface indications, and by a "cropping out" of rock, iron, coal, marble, etc. So the general reader is enabled to judge something of science by the terms used in general literature. This is especially the case in regard to Phrenology and Physiognomy, which "crop out" in the descriptions of all our best writers. One of our lady readers sends us the following:]

I have often heard it said that Phrenology and Physiognomy were not true; that the shape of the head had nothing to do with one's character. I am laughed at, and thought weak-minded, for placing reliance upon them. The more I reflect, the more I read, the more strongly I am convinced that the world accepts the great principles of both Phrenology and Physiognomy. There is no more convincing proof of this fact than is shown in the works of the best writers of the day; they certainly are the expounders of public opinion. I will quote a few examples from different authors. The first is a description of the character of Francis Haslop, from "Sooner or Later," a romance by Shirley Brooks. He says:

"Francis Haslop is of somewhat spare figure, tall, and graceful in manner and movement, as a man of refinement. His head, though not of the highest, or even the most powerful conformation, denotes ample and ready intelligence, and there is decision in the lower portion of the face."

From the *World* I extract a description of Baron Von Beust: "The nose and mouth are full of power; the nose straight, with just a suspicion of the *retroussé*; the nostrils extraordinarily full, well cut, and sensitive; the mouth clearly chiseled, with thin, firmly-set lips, and a lurking light of satire about the fine lines which mark its junction with the thin, pale, yet not the least unwholesome-looking cheeks. The ear is large, well shaped, well placed; the back-head full; the throat, round and well proportioned, rises lightly from the ample shoulders of the stalwart bust."

Geoffrey Hennlyn is thus portrayed by a well-known writer:

"He was a somewhat short though powerful man, in age about forty, very dark in complexion, with black whiskers growing half over his chin. His nose was hooked, his eyes black and piercing, and his lips thin. His face was tattered like an old sailor's, and every careless, unstudied motion of his body was as wild and reckless as it could be. There was something about his *tout ensemble*, in short, that would have made an Australian policeman swear to him, as a convict, without the least hesitation. There were redeeming points in the man's face, too. There was plenty of determination, for instance, in that lower jaw."

Let me give a sketch of another character from the same work in which the last quoted occurs: "Any man, or woman, on seeing him, would have exclaimed immediately, What a

ISABELLA II., LATE QUEEN OF SPAIN.

handsome fellow! and with justice; for if perfectly regular features, splendid red and brown complexion, faultless teeth, and the finest head of curling black hair I ever saw would make him handsome, handsome he was, without doubt. And yet the more you looked at him, the less you liked him, and the more inclined you felt to pick a quarrel with him. The forehead was both low and narrow, sloping a great way back, while the lower part of the skull lay low down behind the ears."

Here is a description of Schiller, by Carlyle: "The lips were curved together in a line, expressing delicate and honest susceptibility; a silent enthusiasm; impetuosity not unchecked by melancholy gleamed in his softly kindled eyes and pale cheeks, and the brow was high and thoughtful."

Read also Motley's sketch of John of Olden-Barneveld: "He was a man of noble and imposing presence, with thick hair, brushed from a broad forehead, rising dome-like over a square and massive face; a strong, deeply colored physiognomy, with shaggy brow; a chill blue eye, not winning, but commanding; high cheek-bones; a solid, somewhat scornful, nose; a firm mouth and chin enveloped in a copious brown beard; the whole head not unfitly framed in the stiff, formal ruff of the period, and the tall, stately figure well draped in the magisterial robes of velvet and sable."

From Baker's "Nile" I copy this: "The Bari tribes and those of Follagi and Ellyria have generally bullet-shaped heads, low foreheads, skulls heavy behind the ears and above the nape of the neck; altogether, their aspect is brutal. Never saw a more atrocious countenance than that exhibited in this man. A mixed breed between a Turk and Arab, he had the good features and bad qualities of either race: the fine, sharp, and high-arched nose and large nostrils; the pointed and fighting chin; rather high-cheeked bones, and prominent brow overhanging a pair of immense black eyes, full of expression of all evil."

THE REVOLUTION IN SPAIN.

BUCKLE, the author of a "History of Civilization," lately published, was hardly right in saying—"Spain sleeps on, untroubled, unheeded, impassive, receiving no impressions from the rest of the world, and making no impressions upon it," for there has been within a month or two a tremendous outburst of popular sentiment in active rebellion. The queen has been forced to take refuge in France; and so general is the revolutionary feeling, that even Isabella's prime minister and the greater portion of the royal forces have espoused the rebel cause. So thoroughly and briefly has the overthrow of the family regnant been accomplished, that a provisional government inaugurated by the insurgent leaders is already in operation. A New York daily thus comments on the affair:

"As it may now be regarded as certain that Queen Isabella and her children will be excluded from the throne of Spain, we have in her expulsion another example of that retributive justice which has followed, for the last eighty years, the race to which she belongs. The question of who is to be her successor being yet unsettled, it would be premature to say at present that she will be the last reigning Bourbon sovereign."

The Atlantic telegraph reports that the revolutionists, through the provisional government, are considering the subject of the royal succession, the heir apparent—the Prince of Asturias—being generally disfavored.

In our January number we gave a brief sketch of the profligate queen, and we are not surprised that her excesses and mal-administration finally roused to active opposition her apathetic subjects. It is thought that this upheaval will effect an entire change in the government of Spain. We trust that it will be for the better; that this old nationality will shake off the fetters of absolutism and religious intolerance which have so long oppressed her people and obstructed all progress, and rise to the dignity of a power in Europe. The Spanish territory is large, and its undeveloped resources immense; under a judicious policy there is no reason why Spain should not soon attain to a creditable position among the nations of the earth.

MERITORIOUS.

THERE is in New York city an organized effort, on the part of a few humane spirits, to aid needy women in procuring honorable and compensating employment. It is known by the title of "The Working-Woman's Protective Union." This "Union" is worthy of notice by us because it is *genuine* and trustworthy, and not like many other so-called "protective unions" or "employment agencies," swindles upon the community.

The ladies managing the business of this movement are earnest and energetic, and deserve the sympathy and encouragement of those who have occasion to employ female la-

bor, especially that of a skilled character. Reliance can be placed on their representations; and what is of especial importance, the utmost fairness is insisted on in determining the value of services, it being the object of the "Union" to properly consider the interests of an employer as well as to improve the condition of those seeking situations. A neatly printed pamphlet lies before us, containing the fifth annual report of the workings of this society. It is interesting in its details because of the inside view afforded of the condition of the working-classes in the metropolis, and also because of the numerous incidents related in which the peculiar working of this movement is displayed. From it we take the liberty to transfer the following paragraphs, which set forth succinctly and impressively the plan and object of the organization.

"This Association is organized for the common benefit of all those women who obtain a livelihood by employment not connected with household services; and seeks that benefit: "First. By securing legal protection from frauds and impositions, free of expense.

"Second. By appeals, respectfully but urgently made to employers, for wages proportioned to the cost of living and for such shortening of the hours of labor as is due to health and the requirements of household affairs.

"Third. By seeking new and appropriate spheres of labor in departments not now occupied by them.

"Fourth. By sustaining a Registry system, through which those out of work may be assisted in finding employment.

"Fifth. By appeals to the community at large for that sympathy and support which is due to the otherwise defenseless condition of working-women."

"The Association consists of such persons, and the President of such Societies, as contribute twenty-five dollars or more annually to its support."

"Though supported entirely by private contributions, it is in no sense a charity. A very large number of those for whose benefit it is maintained were, before the war, surrounded by all the comforts of life. They do not ask or desire charity. They only ask encouragement and assistance in obtaining employment during their first battle with the world."

The office of this philanthropic movement is at 44 Franklin Street, New York. Communications should be addressed or applications made to "The Working-Woman's Protective Union" at that place.

A GOLDEN THOUGHT.—I never found heartless pride in a noble nature, nor humility in an unworthy mind. Of all the trees, I observe that God has chosen the vine, a low plant that creeps along the wall; of all the beasts the patient lamb; of all the fowls, the patient dove. When God appeared to Moses, it was not in the lofty cedar, nor in the spreading palm, but in a bush—as if he would by these selections check the conceited arrogance of man. Nothing produces love like humility; nothing hate, like pride.

BUSINESS vs. CHARITY.

"BUSINESS is business, and nothing should interfere with it," was chief among the business principles of a certain enterprising man. Consequently he would take nothing off the price of an advertisement on the score of friendship or benevolence, or any other of the ten thousand petty excuses made to "nip the printer." A gentleman once called upon him with an advertisement of a benefit for a poor widow with several helpless children. "How much for the advertisement, under the circumstances?" said he. "Just what it comes to," said Mr. S.; "business is business, sir; charity is another question." "But to a poor widow, sir! every dollar saved is a matter of serious moment to her family." "Business is business, I repeat, sir. What I choose to give in charity is my own private affair,—my business has nothing to do with it! Not a cent, sir." The gentleman paid the bill very reluctantly, amounting to, perhaps, two dollars, and was going out of the office reflecting rather severely in his own mind upon the parsimony of Mr. S., when the latter stopped him. "Do you know this widow? Is she honest and deserving?" "She is, sir." Mr. S. slipped a ten-dollar bill in the gentleman's hand, and turning on his heel walked away, saying "Business is business."

A SCHOOL-GIRL went through her calisthenic exercises at home for the amusement of the children. A youthful visitor, with interest and pity on his countenance, asked her brother "if that gal had fits?" "No," replied the lad, contemptuously, "that's gymnastics." "Oh, 'tis, hey?" said verdant; "how long has she had 'em?"

ADDITIONAL PREMIUMS.

As many of our readers reside in the West, where game is plentiful, we think it not amiss to offer those who are fond of hunting, some opportunities to enlarge their stock of sporting *matériel*, and at the same time extend our circulation. The rifles and shot-guns enumerated are accounted among the best in the market.

Name.	Cash Value.	No. Sub's at \$2 ea.
Henry or Winchester Repeating Rifle	\$50	42
Double-barreled Shot-gun, breech loader.	55	44
An Allen or a Wesson Rifle, breech loading	30	96
Double-barreled Shot-gun, English Twist and patent breech.	30	26
The "Thunderbolt" Breech-loading Rifle.	28	20
The "Gazelle" Breech-loading Shot-gun.	28	20
Revolv'g Pistol, Smith & Wesson's, 6 shots	20	16
Single-barreled Shot-gun, good quality	12	10

These premiums apply to both old and new subscribers, to be sent in before the 1st of January next, for 1869. Here is a chance to obtain a first-rate gun at a very small cost. Young man, will you have one?

"EXTRA MATERIALISM."—From the article by Chas. E. Townsend, with this caption, which appeared in our October number, the following paragraph was inadvertently omitted. Its place is properly next after the sentence commencing with, "All such dogmatic attempts are simply audacious," etc.

An original primal cause (which must exist) of all the

operations in nature, can not be a *simple* material cause, as heat, for that must have a cause back of it, thus necessitating a *compound* primal cause, which can only emanate from the impressment, or force, of a *Gigantic Will*; just as the essentially compound will-force of finite man alone accomplishes, through electric action upon muscles, all his acts; so may electricity, or some other more ethereal power, or cause (yet unknown to us), emanate from that Gigantic Will-Force, to the production of all that exists. If finite man, by will-force, only (which all must admit), is capable of gigantic material performances, what may not be the power emanating from the Infinite Will-Force? The adequacy, thus, for all that exists, is described in the incomparable advance of the Infinite over mere finite known will-force operations.

DEATH.

BY FRANCES LAMARTINE KEELER.

O WELCOME messenger of love,
Sent from those holy courts above
To bid us cease on earth to rove
In misery,
And take us where the angels move
In purity,—

To me thou seemest pure and bright;
An angel clothed in purest white,
From yonder land where there's no night!
Oh! thou dost come
To bear us far beyond Time's flight,
To our long home.

Thou com'st when earthly dreams are fled,
When shafts of grief in the heart are sped;
Thou call'st the soul, and we are dead—
Free from earth's woe—
To live above in joy, instead
Of care below.

Thou art e'er obeyed when thou dost call
At the lowly cot or the marble hall;
Thou dost cast a shade with thy blackened pall
O'er every heart;
Thou hast the low, the lovely, *all*
Upon thy "chart."

But thou art *kind*! Thou takest us where
The angels dwell, so pure and fair,
Beyond the blue, ethereal air,
To be forgiven!
For it is *purer* than *earth* there—
That home in heaven.

ED. JOURNAL:—In the last *Church Union* I find a piece headed "Phrenology Exposed," from a would-be critic who signs himself "Nyack." He has just made a wonderful discovery, viz., that the great founders of Phrenology, Gall and Spurzheim—the only sensible expositors of the operation of the human mind—were crazy. He is rather late in finding it out. So according to his say-so, all of the bright intellects who have adopted Phrenology as a science—and there is a host of them—among whom we may name George Combe, Andrew Combe, Dr. Caldwell, Rev. John Pierpont, Henry Ward Beecher, yourself and associates included, and thousands of others throughout the world, have been duped, regularly humbugged, by Gall and Spurzheim. Isn't this a discovery? This author should certainly have a leather medal awarded him by the friends of humanity for making this discovery.

This, however, is always the cry with persons who are on the weak side. For want of argument, they raise the cry of "crazy," thinking this will demolish their opponents. This is an old trick, and one which is "played out." Every man who has ever discovered anything of importance to the world has been pronounced crazy by such writers as "Nyack."

Although he is not a believer in Phrenology, I have no doubt that he is a firm believer in patent medicines, such as "Jew David's Hebrew Plaster," "Madame Zadoc's Balsam," "Sarsaparilla," and others of the same sort.

I hope that "Nyack" may yet see the "error of his way," and come out on the side of Truth. JUSTICE.

"What They Say."

Here we give space for readers to express, briefly, their views on various topics not provided for in other departments. Statements and opinions—not discussions—will be in order. Be brief.

HOW SMALL EXPENDITURES COUNT.—Five cents each morning. A mere trifle. Thirty-five cents per week. Not much, yet it would buy coffee or sugar for a whole family. \$18 25 each year. And this amount invested in a savings-bank at the end of each year, and the interest thereon at six per cent. computed annually, would, in twenty years, amount to more than \$670. Enough to buy a good farm in the West.

Five cents before each breakfast, dinner, and supper; you'd scarcely miss it, yet 'tis fifteen cents a day; \$1 05 per week. Enough to buy wife or daughter a dress. \$34 60 a year. Enough to buy a small library of books. Invest this as before, and in twenty years you would have over \$2,000. Quite enough to buy a good house and lot, and furnish them well.

Ten cents each morning; hardly worth a second thought; yet with it you can buy a paper of pins or a spool of thread. Seventy cents per week; 'twould buy several yards of muslin. \$36 50 in one year. With it you could get a suit of good clothes. Deposit this amount as before, and you would have \$1,340 in twenty years; quite a snug little fortune.

Ten cents before each breakfast, dinner, and supper—thirty cents a day. It would buy a good book for the children. \$2 10 per week; enough to pay for a year's subscription to a good newspaper. \$109 20 per year. With it you could buy a good melodeon, on which your wife or daughter could produce sweet music to pleasantly while the evening hours away. And this amount invested as before, would, in forty years, produce the desirable fortune of \$12,900.

Boys, learn a lesson. If you would be a happy youth, lead a sober life, and be a wealthy and influential man, instead of squandering your extra change, invest it in a library or a savings-bank.

If you would be a miserable youth, lead a drunken life, abuse your children, grieve your wife, be a wretched and despicable being while you live, and finally go down to a dishonored grave, take your extra change and invest it in a drinking saloon, or in tobacco.

WEST LODI, OHIO.

A SOLDIER ON THE A. P. J.—I have just received the August number of the JOURNAL. It is, like all the rest, a very good number. I will not praise the A. P. J., for that would be presumption in me, and entirely superfluous and unnecessary. The PHRENOLOGICAL JOURNAL is always able to speak for itself to the heads and hearts of all those who read it. I will say though, without hesitation, that it is a very cheap publication, and should be subscribed for by every man and woman in the land who can afford to pay for it and who is capable of appreciating it.

I found, from some observations which I made in Cheyenne and Laramie cities, and other places along the line of the Union Pacific Railroad, that the people composing the population of those ephemeral little cities are very unsteady in their habits and wild with excitement. They are all too eager to make a fortune in a day. They will build up houses to-day

and pull them down to-morrow, and move off to some new place. And they will buy houses and lots to-day and sell them all off to-morrow to the highest bidder, because they are afraid their value will decrease before the next day dawns on them.

Robbery, murder, and hanging are common occurrences along the line of this big railroad. The selfish and animal propensities prevail here nearly altogether. The moral and reflective faculties are suffered to lie dormant, and will not be exercised. I am afraid, for some time to come yet. The PHRENOLOGICAL JOURNAL should be read by the people out here, as it is a splendid moderator, and calculated more than any other publication I know of to check and keep in subjection the baser passions, while it encourages the cultivation and practice of the higher and nobler attributes of man's nature.

CHARLES WILSON.
FORT SEDGWICK, COL. TERRITORY.

THE London Baptist Messenger, a first-class weekly, published in the English metropolis, says of the AMERICAN PHRENOLOGICAL JOURNAL:

"This most admirable journal is conducted in a thorough Christian spirit, and is replete with articles bearing on the intellectual, moral, social, and religious interests of mankind. It has only to be known in this country to have a large English circulation. It is well edited and printed, and illustrated with numerous engravings. A recent number has a portrait, and extensive critique on the characteristics of one of our London Baptist ministers, Dr. Burns, of Paddington. Revs. Thomas Binney, Newman Hall, among the preachers, and Mr. Gladstone and John Bright, with others of our celebrated politicians, have been phrenographed in this first-class publication."

The Providence Press says:

"The PHRENOLOGICAL is one of the most instructive magazines in the country, and deserves a circulation even larger than that which it enjoys."

The *Pajaronian*, a newspaper published in Watsonville, a town among the golden rocks of California, has heard of the PHRENOLOGICAL JOURNAL, and very probably has seen it, for we find in the edition of July 16 the following criticism:

"One of the best publications in this or any other country is the PHRENOLOGICAL JOURNAL AND LIFE ILLUSTRATED, published in New York. Portraits and biographies of eminent men and women are given in each number, and the communications and editorials are of the most talented order. This magazine contains everything best calculated to advance the human family, physically as well as mentally. Every person should take this excellent journal."

A CORRESPONDENT writes from Wyoming in the following categorical style:

"Is the PHRENOLOGICAL JOURNAL an irreligious paper? To this question I would make answer by stating my experience after one year's intimate acquaintance with it. In the course of a conversation with a minister, he asked me to subscribe for a religious paper. I declined. He then insisted upon my giving my reasons, since I was a member of an orthodox church, in good standing, etc. The reason I gave him was substantially this: It seems very unpleasant to me to find in a paper established principally for the benefit of the soul, advertisements of the many poisonous nostrums and kindred deceptions which

destroy the health of many and mislead others, only to benefit a few swindlers. The revenue derived from these advertisements helps to sustain the paper. This is the only palliation editors have to offer besides the weak assertion that they do not recommend them. What papers had I subscribed for? I named the A. P. J., *Beauty of Holiness*, our Church's paper, and others. "But," said the minister, "the A. P. J. is not what you think it is, and should be read with care." Here he was not altogether right, for I was alive to everything opposing religious principles, and I read very cautiously, carefully, and attentively. I found it takes up leading characters, both of Europe and America, giving portraits and brief histories, analyzing and pointing out defects of disposition and their remedy; indicating, also, merit and its attainment according to the rules of Phrenology, thereby giving to the young a view of a path well marked to the higher walks of a useful and virtuous life. Besides, it boldly exposes and censures social evils and literary impurity."

HORTICULTURE IN CITIES.—A nurseryman of Bloomington, Illinois, gives his views on this subject in the following laconic style.

But "Horticulture in cities!" Yes—the first thing toward a garden is a dig at the thorns and thistles. Cities want life—every house a universal epitome of honest life—a great, throbbing, genial, sympathetic world in miniature, with horticultural tastes and efforts, living growths, bright flowers and fruits, linking them anew and forever to the great sources of life above and beneath—God's plant-life and sunshine and setting free innumerable waiting, fashion-enraptured hands and brains, making them all alive to the glad music of fruit and flower production. Now, cities or wealthy residents often lose the better part of all things rare and beautiful, the effort needful to produce them; as to do is better than to admire or enjoy what is done. To do, is to lead, to rise above; merely to admire, is to gape like young robins, and without the bold parent, perish. True wealth and refinement can not stop short of superior, steadily increasing vital force, life-giving and life-enriching power, mastery of every situation. Mere wealth consumption or hoarding is more cruel than the grave, which devours only the dead; the society that gapes after and supports it is more foolish than the suicide who takes only his own life, while society entails its vices and follies, living deaths, upon innocent posterity. Right action, removing nuisances, destroying evil, precedes, is strength, wealth, equal for all. Nothing so easy, would we only work at it.

Cities now gaping, running after these wealth and life destroyers, practically rob millions of fruits and flowers, of all knowledge of plant-life, refusing other rural millions their meed of reciprocal thought and effort. There is no true life without health and knowledge, brain and muscle food, growth and fruit, all of which are inseparable from honest plant-life, love and culture. Cities with their wealth and leisure have best opportunities—but do they furnish noblest scholars and inventors, not only in the mechanic arts, but in all right vegetable and animal culture? The curriculum is to be mastered if we want good fruit; and so with innumerable country and city pests—our life or theirs. We must have experiment, knowledge, and discipline in all things useful, leaving the tomfoolery to apes and fashionables. Millions for all goodness, beauty, and utility—not one cent for folly and sham!

Cities need gardens, with earth culture a science and art in every house. With a will comes a way. Glass roofs would make a fit orchard or green-house of every city attic. Our repulsive city walls, too—with an invention to consume all smoke—might be vine and flower clad beyond the fairest: dream of Eden. Whatever area will comfortably house any given population will thus supply ample food; climate will be defied, and Gardening the first shall be the last and most important avocation. In the mean time, better lighted rooms, vases, and hanging baskets, flower windows and balconies, with parks, fairs, and farmers' clubs, will furnish considerable scope—until most blessed inventors shall give us malleable and infrangible glass and good smoke burners.

[The above was written expressly for the A. P. J.]

Literary Notices.

[All works noticed in THE PHRENOLOGICAL JOURNAL may be ordered from this office, at prices annexed.]

PROCEEDINGS OF THE SIXTH NATIONAL TEMPERANCE CONVENTION, held at Cleveland, Ohio, July 29th and 30th, 1868. New York: National Temperance Society and Publication House. Price, 25 cents.

Proceedings of Conventions nowadays, though gotten up and offered to the reading public in all the glory and attractiveness of printer's ink, are not eagerly sought after and closely read. No; the frequency of Conventions has served to dull the public appetite so much that even the proceedings of important assemblies are disregarded. There is usually so much "talk" and so little action on these occasions, that the want of interest shown by people at large can not be a subject for surprise.

In the Convention which the pamphlet under review details, we find much matter for national consideration. Every true lover of progress and reform must appreciate the efforts of Temperance men—they who battle with the bitterest and strongest foe to civilization—and must read with a deep gratification the experiences and suggestions of those who are leaders and patriarchs in the Temperance cause.

At this Convention, those well-known pioneers, Dr. Charles Jewett, Rev. J. B. Dunn, Hon. Neal Dow, W. E. Dodge, were present, and their remarks as embraced in the collection are exceedingly interesting as well as instructive. Dr. Jewett's addresses abound with anecdote and humor, and General Dow's are practical, pithy, and convincing.

Not the least interesting portion of the Proceedings is the "Question Drawer," in which various questions relating to the medical peculiarities and social and political relations of alcohol are discussed. One of these we quote.

"Question. Is it true, as asserted by some of our medical men and advocates of moderate drinking, that the presence of alcohol in the human body prevents the waste of tissues?"

"Answer by Dr. Jewett: 'Prevents the waste of tissues!' It does, to a certain extent. It stupefies the fellow so that he can not use his muscles or brain. Wherever you develop power, you waste tissue; if you develop thought, you waste brain. When a fellow is dead drunk, he saves his tissues. Toads have lived in rocks one hundred years; but who wants to live a toad's life for the sake of saving his tis-

sues? I don't want to save my tissues. I want to go to my table every day, and have it well spread with substantial food, and incorporate the vegetable compounds and make them a part of Jewett; and then I want to use up the energy in advancing the glory of God and promoting the good of mankind. This idea of saving tissues is all a humbug."

An appendix to the pamphlet contains several well-written essays, which were prepared expressly for the National Temperance Convention. We give the subjects: "The Evil and the Remedy," by Hon. Woodbury Davis; "The Temperance Work among our Children," by Rev. Alfred Taylor; "Native Wines," by Rev. Wm. M. Thayer; "The Sabbath Question," by Rev. Philip Schaff, D.D.; "The Working Temperance Church," by Rev. T. L. Cuyler; "Open and Close Organizations," by Hon. Wm. E. Dodge; "The Ballot for Temperance," by Rev. James B. Dunn; "Temperance Literature," by J. R. Sypher; "A Plea for a National Temperance Temperance Party," by Rev. John Russell.

This pamphlet possesses a literary character of no mean grade, and should be disseminated and read universally.

THE SABBATH OF LIFE. By Richard D. Addington. New York: Published for the Author by the American News Company. 12mo, cloth, \$1 50.

This production, according to the author's own acknowledgment, "gives, in a series of Homilies (so called), an account of his Christian experience in the higher stages of the divine life." It is dedicated "to the professing believers in the sects, and to the indifferent of the outside world." The following passage is probably one of the most vigorous, and in keeping with the general run of the book:

"My Christianity can be boiled down to a few words. If the ungodly would only believe. My Christianity is hard to come down to, after listening to the man-worship of the sects. My Christianity once acquired, brings contentment in this life, independence of organizations, freedom from contributions, liberty of movements, beyond pleasing the Divine Master, and it robs Death of his sting—Rev. xx. 6. My Christianity gives me heavenly wisdom, power, and order, through the Holy Ghost, in unison with my conquered will. All my actions and all my words are no longer my own, from the divine nature having full control over me."

The book is unique, in many respects decidedly odd, but is evidently the result of earnest thinking. Besides the lucubrations of the author, it contains selections from many old religious writers—A Kempis, Fenelon, Madame Guyon, Milton, and also from sectarian rituals, and rules of order and discipline. These selections are to us the interesting features of the work.

SMOKING AND DRINKING. By James Parton. Boston: Ticknor & Fields. Cloth, \$1; paper, 50 cents.

This book is in every way a practical one, and discusses the subjects mentioned in its title with practical fairness. The first chapter or part is headed, "Does it Pay to Smoke? by an Old Smoker," and is written with that emphatic candor which distinguishes Mr. Parton's writings generally. The next chapter commences with this inquiry, "Will the Coming Man Drink Wine?" and in its progress, with the aid of physiology, logic, and illustrative facts, develops the enervating and pernicious influences of alcohol on the human organization. In the next article, "Inebriate Asylums, and a Visit to One,"

the subject of alcohol is further and graphically treated, the reader being brought face to face with the results of intemperance, and made to appreciate the *argumentum ad hominem* in its direct application. The book is eminently adapted to reach a class of smokers and drinkers which the ordinary agencies of Temperance reform fail to reach, and may, by its logic, humor, and invulnerable testimony, accomplish great good. We sell it.

PLYMOUTH PULPIT—a weekly publication of Sermons preached by Henry Ward Beecher. Terms, \$2 50 a year. J. B. Ford & Co., publishers.

No. 1 is an octavo pamphlet, with one sermon, of twelve pages; and eight pages of advertisements. By this we infer that but one of Mr. Beecher's sermons per week will be given, and that the one preached each Sabbath morning. Why not include the very interesting evening discourses, and also the week-day evening lectures, and the prayers? Make the price \$3 a year, or 10 cents single, and serve up in *Plymouth Pulpit* the whole. When pretending to squeeze the lemon, why not squeeze it, and save all the juice?

THE NATIONAL TEMPERANCE ALMANAC for 1869. Compiled by J. N. Stearns. New York: National Temperance Society and Publication House. Price, 10 cents.

This neat little pamphlet of sixty-four pages contains, besides the usual requisites of an almanac, many details of importance to those interested in Temperance reform.

Among these we may instance General Statistics of Temperance, Lists of Societies, with Post-office Address of their Chief Officers, a Full Directory of all the Temperance Organizations of New York and Brooklyn, Temperance Papers and Publications; besides several anecdotes and stories. The Almanac is illustrated with some neat and appropriate engravings.

THE PAST AND FUTURE OF OUR PLANET; or, Lectures on Geology. By William Denton. Boston: William Denton.

For those who have a mind scientifically disposed, this volume will prove interesting. Mr. Denton has presented in a pleasant style, and with a compendious succinctness, the leading facts of geology and natural history as related to the history of the moving ball which we inhabit. Six lectures constitute the volume.

Lecture I. considers the External Appearance and the Internal Structure of the Earth, the importance of a knowledge of Geology to the farmer, miner, and philosopher. How the Earth's Crust was formed, its Chemical Composition, the Nature of Volcanoes, Earthquakes, and Hot Springs.

In Lecture II. we have a presentation of the Earlier Geological Periods, and a description of the Fossil Remains sprinkled through the different strata.

Lecture III. takes up the Carboniferous Age, and treats of the formation of coal, and of the first mammals.

Lecture IV. covers a large extent of scientific research. Metamorphic Rocks, Age of Reptiles, Plants, Cretaceous Formations, Insects, Mastodons, are among the subjects considered.

Lecture V. introduces the Glacial Period, and the characteristics of the Ice Movement, the Remains of Man as found in connection with those of extinct animals; the "Stone-men," Water Formations, and the Effect of the Ocean on the Coasts of the United States, Scotland, and England.

Lecture VI. comprehends some remarks

on the Future of the Earth, the Probability of its Long Endurance, and continued Improvement in all Physical Aspects, the Agency of Man in Promoting Improvement, Man the Noblest Being that will ever live on this planet.

The author avoids the use of dry technicalities as much as he can conveniently, and evidently has intended his book for readers of all classes.

THREE VOICES. By Warren Sumner Barlow. Boston: William White & Company. New York: *Banner of Light* Branch Office.

The "Three Voices" are treated under the several heads, of the "Voice of Superstition," the "Voice of Nature," the "Voice of a Pebble." The "Voice of a Pebble" is the best part by far, but covers little more than a dozen pages. The volume has a religious character, but it would not altogether suit the views of a Lutheran or a Calvinist, as the sentiments are more in keeping with the gospel of modern Spiritualism than adapted to the standard of orthodox religionists.

CHAMBERS' ENCYCLOPEDIA. A Dictionary of Universal Knowledge for the People. On the basis of the latest edition of the German Conversations Lexicon. Illustrated. Philadelphia: J. B. Lippincott & Co.

We have received Part 132, which closes this valuable compilation. The work, taken as a whole, comprises upward of 27,000 distinct articles, each clearly and comprehensively treated of; so that the general reader may secure by a reference to it a good knowledge of what he may desire some information on. Its literary merit is high, owing to the first-class talent of its many contributors and the undoubted ability of its editors. Price of the work in ten volumes, octavo, cloth, \$45; in sheep, \$50. Persons desiring it may purchase through this office.

DRAWING WITHOUT A MASTER. The Cavé Method for Learning to Draw from Memory. By Madame Marie Elizabeth Cavé. Translated from the Fourth Paris Edition. New York: G. P. Putnam & Son. Cloth, \$1.

This little book contains more practical common sense on the subject of drawing, sketching, etc., than any of the elaborate treatises on a similar topic which we have examined. It shows fairly how one can instruct himself and become skillful in the use of the crayon or the pencil. The old notion, that professional guidance is indispensable to progress in artistic study, is fairly met and completely refuted. The volume is a creditable translation, and should sell readily. The French press is very laudatory of the method, and it has been favorably received in artistic circles.

TODD'S COUNTRY HOMES, and How to Save Money to Buy a Home; How to Build Neat and Cheap Cottages, and How to Gain an Independent Fortune before old age comes on, etc. By Sereno Edwards Todd, of the New York Times, author of "Todd's Young Farmer's Manual," etc. 12mo, cloth, \$1 50.

Every young man of any spirit or energy looks ambitiously forward to the time when he shall be an independent house-owner; when he can eat and sleep under a roof which he shall call his own. Appreciating this yearning of the young American heart, for doubtless he has experienced the feeling himself, Mr. Todd writes a book full of practical truth and suggestion, and puts it before the public. He essays to answer the questions embodied in the title above set forth, in a plain common-sense manner, and, withal, in the positive

style of one who may be said "to have been there and studied the ground." The volume is well worthy a place on every young man's book-shelf, as its personal and occasional reference will furnish hints whose application in their daily employment may prove of incalculable value.

To the young farmer the book is of special value for its agricultural and horticultural suggestions. A lengthy description of the lands of southern New Jersey and a general Business Directory are incorporated with the volume.

NEW YORK MEDICAL JOURNAL. A Monthly Record of Medicine and Collateral Sciences. Vol. VII. 1868. Edited by Wm. A. Hammond, M.D., and E. S. Dunster, M.D., and published at \$5 a year, by D. Appleton & Co., New York.

Comparisons are—what do you call them? and we shall not commit the offense of comparing *this* medical journal with any other; but it is large enough, and costs enough, to be the best in America. Its editors are young, ambitious, spirited, and are evidently aiming to secure reputation by making a first-class journal. They have recently secured for their publishers the opulent Appletons, who go through with what they begin. We see only the best success for the future of this Journal.

BEPPLO, THE CONSCRIPT. By T. A. Trollope, author of "Gemma," "Tuscany in 1849," "A Decade of Italian Women," etc. Cloth, \$1 75; paper, \$1 50. Philadelphia: T. B. Peterson & Brothers.

The brothers Trollope are fertile authors. Of the two, T. A. seems to us the more imaginative and winning as a descriptive writer. His novels abound in exquisite portrayments of scenery and people. Especially is this true of his Italian tales. In "Beppo," the "avarice, the pride, the love, the industry, and the superstition of the Contadini of the Romagna; a household of prosperous rustics, their ways and traits; and the subtle and prevailing agency of priestcraft in its secret opposition to the new and liberal government—are all exhibited with a quiet zest and graphic fidelity." Mr. Trollope shows that fidelity to nature which only a personal knowledge, obtained by intimate association with the subjects described, can evince.

PLAIN THOUGHTS ON THE ART OF LIVING; designed for Young Men and Women. By Washington Gladden. Boston: Ticknor & Fields. Cloth. Price, \$1 50.

These "Thoughts" deserve a careful reading by the young people—"the rising generation"—of the day. Originally delivered in the form of lectures, they have been published in the columns of a leading New England paper, and now come before us in the collated and convenient shape which their merits deserve, a neat volume.

The heads under which the "Thoughts" are arranged are, The Messenger Without a Message, Work for Women, Drees, Manners, Conversation, Habits, Health and Physical Culture, Mind Culture, Success, Stealing as a Fine Art, Companionship and Society, Amusement, Respectability and Self-Respect, Marriage, The Conclusion of the Whole Matter.

ROUTLEDGE'S ILLUSTRATED NATURAL HISTORY OF MAN, in all countries of the world. We have lately received Part XVI. of this exceedingly fine work. The greater part of this installment is taken up by an interesting chapter on the Abyssinians, while the remainder is devoted to the Nubians, Hamran Arabs, Bedouins, Hawsaniyehs, and Madagascar. London and New York: published by George Routledge & Sons.

SLOAN'S ARCHITECTURAL REVIEW AND BUILDERS' JOURNAL. An Illustrated Monthly. Conducted by Samuel Sloan, Architect. Office, 152 South Fourth Street, Philadelphia.

This promised monthly will fill a niche in the periodical literature of America. In a country of such grand activities as ours, there is scarcely a field more extensive than that of construction. Towns and cities rise everywhere with almost magical rapidity, developing, not unfrequently, unusual or new phases in engineering and architecture. Every American in his instinctive sense of independence, from early childhood looks forward to the possession of a home, and is therefore deeply interested in the science and art of building. This natural interest in architecture should be properly nourished and educated, and for that end the new "Architectural Review and Builders' Journal" is designed. Its conductor is a gentleman of experience and literary tastes. May it prove an important instrumentality in the education of the popular taste, and in adorning the settlements of civilization.

THE POET SOLDIER. A Memoir of the Worth, Talent, and Patriotism of Joseph Kent Gibbons, who fell in the service of his country during the great Rebellion. By P. L. Buell, with an Introduction by Nelson Sizer. New York: 1868. S. R. Wells, Publisher. Price, post-paid, cloth gilt, 75 cents; paper, 37 cents.

The dedication of this work will give a good idea of its aim and the spirit of its contents, viz.: "To the Rank and File of the Union Army, who bore the brunt of every battle, rendering eminent but undistinguished services, bravely suffering from wounds, or patiently enduring hunger, insult, and cruelty in loathsome rebel prisons, or wasting and dying in hospitals; thus giving their precious lives that the nation might live; this affectionate tribute to one of their number is gratefully inscribed by their friend, the author."

THE OPIUM HABIT, with Suggestions as to the Remedy. New York: Harper & Brothers, Publishers. Cloth, pp. 335.

The author in the introduction to his work opens its purpose, and we can scarcely do better than quote a sentence or two.

"This volume has been compiled chiefly for the benefit of opium eaters. * * * The confirmed opium eater is habitually hopeless. His attempts at reformation have been repeated again and again; his failures have been as frequent as his attempts. He sees nothing before him but irremediable ruin. Under such circumstances of helpless depression, the following narratives from fellow-sufferers and fellow-victims will appeal to whatever remains of his hopeful nature, with the assurance that others who have suffered even as he has suffered, and who have struggled as he has struggled, and have failed again and again as he has failed, have at length escaped the destruction which in his own case he has regarded as inevitable."

The writer therefore appears to be actuated by a purpose both wise and benevolent in its character, and the candid way in which he carries his purpose into effect assures us that his very interesting book will bring comfort and perhaps salvation to some infatuated victim of the benumbing drug.

The contents are briefly these: Introduction; A Successful Attempt to Abandon Opium; Dr Quincey's "Confessions of an English Opium Eater;" Opium Reminiscences of Coleridge; William Blair; Opium and Alcohol Compared; Insanity and Suicide from an attempt to abandon Morphine; A Morphine Habit Overcome; Robert Hall, John Randolph, William Wilberforce; What shall they Do to be Saved? Outlines of the Opium Cure.

THE pamphlet entitled **FLORIDA: Its Climate, Soil, and Productions**, contains, in brief, information on those subjects which persons contemplating emigration to a distant region desire particularly to know. It includes a neat Map of Florida. Jacksonville, Fla.: published by L. F. Dewey & Co. Price, 50 cents.

We have lately received the seventh number of "The Workshop," published by E. Steiger, 17 North William Street. It has an illustrated article on the "Handles in Antique Vessels," and fine illustrations of Gothic Base Moldings, Cast-Iron Panels, Silver Goblet with Salver, Paneled Door, Ebony Jewelry Cabinet, etc. To mechanics of the higher class this publication must be very useful.

PHYSICIAN'S HAND-BOOK for 1869. New and improved edition, containing all the new Remedial Agents. By William Elmer, M.D. Bound in English morocco, gilt edges, pocket-book form. Many valuable improvements and new features have been introduced, and corrections made in this new edition, it having been completely re-written, and re-stereotyped throughout. Price, postage free, \$2; without printed matter, \$1 75. It is amply worth its cost, and every physician should have a copy.

EXCELSIOR MONTHLY MAGAZINE.—No. 3 fulfills the promises of the first; No. 2 not received; and we are happy in the belief that it will soon secure its full share of public patronage. We notice the announcement, that the *Public Spirit* has been incorporated with the *Excelsior*. Terms, only \$2 50 a year. Olmsted and Welwood, publishers.

NEW MUSIC.—Mr. C. M. Tremaine, 481 Broadway, has just published, "You have Stolen my Heart," a ballad by C. F. Shattuck, 30 cents; "The Face that ever Wears a Smile," a ballad by H. P. Banks, 30 cents; "Logan's Gathering," a campaign song, with poetry and music by James G. Clark, 40 cents. Stirring words are in that song.

THE BELLEFONTE NATIONAL is a capital weekly newspaper, published by the Brothers Kinsloe, in Bellefonte, Pa., advertised in our present number.

The gentlemanly publishers take a lively interest in all that relates to the improvement not only of their own county and State, but of the whole country.

New Books.

Notices under this head are of selections from the late issues of the press, and rank among the more valuable for literary merit and substantial information.

INSTRUCTION BOOKS FOR STUDENTS in German: Preu's First Steps in German. 12mo. \$1 10. Witcomb and Otto's Guide to German Conversation. 18mo. 85 cents. Dictionary, German and English. James. 8vo. \$2 50.

ANCHORED. By the author of "The Climbers." 16mo, pp. 271. Cloth, \$1 15.

POETICAL WORKS OF ROBERT BURNS, with Notes and Memoir by Carrie. Globe Edition. 16mo, pp. 612. Cloth, \$1 75.

COMER'S NAVIGATION SIMPLIFIED. A Manual of Instruction in Navigation as Practiced at Sea. With Tables, Explanations, and Illustrations. 8vo. \$2 75.

CAMPAIGN LIVES OF SEYMOUR AND BLAIR. By D. G. Croly. Portraits. 12mo. Paper. 80 cents.

LIBRARY OF HAPPY HOURS. Five vols. Illustrated. 18mo. Cloth. In box, \$2 25. Containing Charlotte and her Enemy. pp. 126. The Three Half-Dollars. By Anna H. Drury. pp. 119. Paul's Mountain Home. pp. 130. Harry and Phil. By L. C. Comyn. pp. 138. The Little Medicine Carrier. By the author of "Basil," etc. pp. 113.

POETICAL WORKS OF LORD BYRON. Globe Edition. 16mo, pp. viii., 685. \$2 25.

SMOKED GLASS. By R. H. Newell (Orpheus C. Kerr). Illustrated. 12mo, pp. 277. Cloth, \$1 75.

LIFE OF HORACE GREELEY. New Edition, brought down to the Present Time. Portr. and Illustr. 12mo, pp. 598. \$2 75.

THE SPIRITUAL HARP: A Collection of Vocal Music for the Choir, Congregation, and Social Circle. By J. M. Peebles and J. O. Bassett. E. H. Bailey, Musical Editor. Cloth, \$2 25.

AMERICAN HOUSES: A Variety of Original Designs for Rural Buildings. Illustrated by Twenty-six Colored Engravings, with Descriptive References. By Samuel Sloan. 8vo. \$2 85.

VALUABLE HAND-BOOKS recently published. We would call the attention of mechanics to the following *valde necesse*:

PAPER-HANGER'S COMPANION: A Treatise in which the Practical Operations of the Trade are Systematically Laid Down; with Copious Directions Preparatory to Papering; Preventives Against the Effect of Damp on Walls; the Various Cements and Pastes Adapted to the Several Purposes of the Trade; Observations and Directions for the Paneling and Ornamenting of Rooms, etc. By James Arrow-smith, author of "Analysis of Drapery." 12mo. Cloth, \$1 25.

THE BUILDER'S POCKET COMPANION: Containing the Elements of Building, Surveying, and Architecture; with Practical Rules and Instructions Connected with the subject. By A. C. Smeaton, Civil Engineer, etc. In one volume. 12mo. \$1 50.

THE TURNER'S COMPANION: Containing Instructions in Concentric, Elliptic, and Eccentric Turning; also Various Plates of Chucks, Tools, and Instruments; and Directions for Using the Eccentric Cutter, Drill, Vertical Cutter, and Circular Rest; with Patterns and Instructions for Working Them. A New Edition in one vol. 12mo. \$1 50.

PAINTER, GILDER, AND VARNISHER'S COMPANION: Containing Rules and Regulations in Everything Relating to the Arts of Painting, Gilding, Varnishing, and Glass-Staining, with numerous Useful and Valuable Receipts; Tests for the Detection of Adulterations in Oils and Colors; and a Statement of the Diseases and Accidents to which Painters, Gilders, and Varnishers are particularly liable, with the Simplest Methods of Prevention and Remedy; with Directions for Graining, Marbling, Sign Writing, and Gilding on Glass, to which are added Complete Instructions for Coach Painting and Varnishing. 12mo. \$1 50.

To our Correspondents.

QUESTIONS OF "GENERAL INTEREST" will be answered in this department. We have no space to gratify mere idle curiosity. Questions of personal interest will be promptly answered by letter, if a stamp be enclosed for the return postage. If questions be brief, and distinctly stated, we will respond in the earliest number practicable. As a rule, we receive more than double the number of questions per month for which we have space to answer them in; therefore it is better for all inquirers to enclose the requisite stamp to insure an early reply by letter, if the editor prefers such direct course. Your "Best Thoughts" solicited.

THE CORNELL UNIVERSITY opened October 7th. Candidates for the departments of Agriculture, Mining, Engineering, etc., must be sixteen years of age. For the departments of Science, Literature, and the arts in general, they must be fifteen years of age. For admission to the classical course, they will be examined in the usual English branches, and Latin and Greek. For the Scientific and Agricultural departments only, a common English education is required. The expenses of each student will be from \$200 to \$350 per year, part of which may be paid by his own labor. Further information can be had by addressing Francis M. Finch, Secretary of the Board of Trustees, Ithaca, N. Y.

MAY TWINS MARRY?—Mr. Editor: being a twin brother, would there be any objection to my marrying a lady who is a twin sister, both of us having sound health and good physical organization? My twin sister is the mother of two fine healthy children. Would such a union as I propose be likely to entail any evil on offspring?

Ans. In reply to this interrogatory it may be remarked that the production of twins or triplets is certainly not indicative of a constitutional weakness on the part of parents, and though it frequently happens that one of the twins is less robust than the other, and sometimes diminutive in body and in mind, it is by no means the rule. We think that in eight out of ten cases of twins they are each equal to the average of children of single birth; and some of the finest children we have ever seen have been twins or triplets; we think if the subject were thoroughly canvassed, it would be found that in families where there are a large number of children, there is as much talent, vital force, and stamina as in families where there are but a few; and we see no objection, therefore, in this case, or in cases generally, to a twin marrying a twin. It has been said that if twins appear in a family, some member of that family will also be honored with twins; and we believe it is generally regarded as a physiological feather in the cap of any family which shows such an exuberance of vitality as to produce twins; and we do not remember a single case in which it was not a matter of congratulation, unless attended by that popular inconvenience sometimes denominated poverty.

LADY TELEGRAPHIC OPERATORS.—There are no good facilities for learning telegraphy from a teacher—though there ought to be schools in every State. The only way to learn at present is of operators now working the lines. Many of the operators will impart the necessary knowledge for a consideration. The wages paid to experts are remunerative, and it is just the thing for

young ladies who wish to earn their own living. Apply to the nearest office, and if qualified by suitable education and a fair intellect, a little perseverance will make success certain. A country office, where business is not pressing, is the best in which to learn. Any noble-minded, gallant young gentleman, now in office, will not refuse to teach a lady.

SPELLING AND READING.—

As a child learns *how* to talk by hearing others talk, what is the best method to teach children to spell and read?

A TEACHER.

Ans. This is an important question, a proper answer to which ought to do good. One learns to talk chiefly by sound. Many a foreigner becomes an excellent writer in the English language, but who, having studied it by sight and not by sound, can hardly make himself understood orally, in respect to the most common wants of life; while a person, not a scholar, spending as much time hearing people talk and talking as a scholar would to learn the language so as to write it, would talk almost as well as a native. If, then, talking is learned by sound, so reading and speaking should be. Suppose a child knowing its letters, which it must learn by sound, were to look over the book with another child that should read a spelling lesson and pronounce the letters to the words C-A-T cat, D-O-G dog, distinctly uttered, it would be almost as effective as if the child himself were to read and pronounce the words alone; he would see the letters, hear them pronounced separately, and then hear the word pronounced. This is the way, and almost the only way, that children in schools learn. They learn more by looking over the book and hearing six or eight read than they do in reading their own word or verse in the lesson. Reading in concert, reciting multiplication tables, catechisms, lessons of any kind, will train the young to remember, as nothing else will; and we believe that four fifths of the early education comes by sound more than by sight or study. A little prattling two-year-old on its mother's knee will recite all the nursery rhymes, most of which it does not understand, and those jingling rhymes are remembered better than anything else for life. Since our language has no fixed and definite rules of pronunciation, spelling can not be learned as a matter of principle or law,—it must be learned by rote and remembered accordingly. There are, to be sure, a few rules, such as a short vowel precedes a double consonant, etc.; but there are ten times more exceptions in English spelling and pronunciation than there are rules; hence reading in concert, spelling in concert, sounding words on the ear continuously, is the way to teach reading and spelling.

PHYSICAL TRAINING.—The most condensed epitome of this subject is given in the illustrated pamphlet entitled, "Notes on Beauty, Vigor, and Development." Sent, post-paid, for 12 cents. It gives directions for the harmonious development of the entire person. It treats of peculiarities incidental to occupation; beneficial effects of exercise; walking; horse-back riding; rowing, swimming, and bathing. On the beauty of complexion; plumpness of form; rules of health, diet, breathing, sleeping, etc. It is full of practical hints, useful alike to youth and age, men and women.

IRON.—"Overman on the Manufacture of Iron" has been out of print for some time, and is now very scarce; we can send a copy by mail or express, prepaid, for \$15.

CAUTIONSNESS.—I have very large Cautiousness; so large, indeed, that the organs have the appearance of young horns, consequently am timid, irresolute, fearful; what am I to do?

Ans. One of the foundation principles of reform in this matter is that you know what the trouble is; he who knows that the terrible pain in his face is tooth-ache, does not send for a council of doctors to treat him. Supposing that the ailment is not a mortal one, he grins and bears it; but let half as much pain be felt in the breast, the side, or any other vital region, and the alarm of the patient would know no bounds. When you feel, therefore, as if you would sink from fear, remember that it is morbid and excessive Cautiousness that troubles you, and try to regard it as a chained lion that may growl but can not reach you. Try to summon your judgment, your courage, your fortitude, and in proportion as you build up those opposing qualities, your Cautiousness will act with less relative strength. Pile the weights into the other scale until you have balanced Caution. Try to keep Caution quiet. Arrange your affairs so as not to get into sharp corners and dangerous conditions. Let Caution sleep, and it will get weak.

NERVOUS DEBILITY.—So many things are involved in this subject, that in order to answer your question satisfactorily we would require much explicit data. Send your address, and we will return you a circular which will set forth the particulars we would have described.

PURE WATER vs. IMPURE.—Which is the most healthy, pure water, or that which contains dissolved various gases which are collected while filtering through the soil or rocky strata?

Ans. How many puff, blow, and advertise mineral waters of any and every degree of impurity, and induce the bedrugged invalid to swallow quantities in the vain hope of a curative remedy! Besides using the mineral water, much of which "smells very bad," he will also be put on a low diet. If he recover, of course the impure water gets the credit of it; the same as is often the case with the use of the thousand-and-one patent medicines which are manufactured to "sell," by "respectable druggists," grocers, tobaccoists, and apple-women. No. Pure water is best for all hygienic purposes. Salt water is best to pickle pork.

RIFLES.—We can send the Howard breech-loading sporting rifle—called the "Thunderbolt"—by express, for \$38; also, the new breech-loading shot-gun—the "Gazelle"—for the same price, and we consider these in many respects the best in the market.

TIMOTHY TITCOMB.—Dr. Holland's latest, and by many considered his best, work is a poem called "Kathrina," price \$1 50, which we can send by mail, post-paid, on receipt of price.

MORBID IMAGINATION.—I have spells of morbid imaginings; how am I to avoid these?

Ans. In the first place avoid as much as possible all morbid conditions. Let tea, coffee, tobacco, pepper, mustard, pastry, candies, have the go-by; avoid alcoholic stimulants; eat plain food that is fit for a Christian, and you might carry the matter an inch further and say that which is fit for a Jew, thus avoiding pork. Greasy food, sugar, and the like in large measure or without measure, get people into a dyspeptic, nervous condition, and they are morbid from head to foot, and if they have

imaginings they will partake of the quality of their constitution and be morbid also. The first condition toward health is a clean, healthy body; if you try this experiment, and your morbid imaginings do not leave you, let us know it, and we will then tell you something further.

LIFE AND END OF A DRUNKARD.—In "New Physiognomy," the "Two Paths of Life" are given, with illustrations, which show the beginning, middle, and end of a drunkard's life. It is, perhaps, one of the best arguments in favor of temperance ever published. Young men may profit by reading it.

ELECTRO-PLATING.—"Napier's Electro-Metallurgy," price, \$2, is the best work.

MENTAL CULTURE.—What is the next greatest thing to the study of languages to draw out and strengthen the mind?

Ans. Mathematics for some, mental philosophy for others.

NERVOUS PEOPLE.—What is the best employment for a nervous person?

Ans. That depends much on his bodily strength and talent. Farming, if one be strong enough for the performance of the work, is a good vocation for a nervous man; raising fruit and fruit-trees would be a good pursuit.

IS IT AN INSULT?—It has been said to be an insult to write a letter in pencil instead of ink, to a stranger. Is it so?

Ans. No. In itself it is nothing more than a breach of etiquette. Good manners require the use of pen and ink in such cases. It could be no insult to notify a stranger or a friend of something to his interest, even in pencil. Some correspondents have a very shabby way of communicating their desires,—using soiled or crumpled paper, blotched at that, and dirty, sloppy envelopes, and so awkwardly written that it is difficult to make out the address. But the "insult," if there be any, consists in the language rather than in the materials used. It is a real luxury to read a clean, handsomely—plainly—written letter from a kindly spirit; but an unmitigated nuisance to spend valuable time and spoil one's eyes over pale ink marks or almost obliterated pencil scratches. Our correspondents—many of them—have read our little book, "How to Write," and know how.

MYTHOLOGY.—We can send "Dwight's Grecian and Roman Mythology" for \$3; "Grecian, Roman, Scandinavian, and Mediaeval Mythology," by Thos. Bulfinch, in three vols., viz., Age of Fable, Age of Chivalry, and Legends of Charlemagne. Price, \$3 25 per vol., or the set, for \$9.

STOLEN.—Several complaints are before us that the September number failed to reach its proper destinations, and we are requested to account for the fact. One theory is this. It was known to contain sketches of the Presidential candidates, and curiosity was greater than the sense of justice in those having the handling of the JOURNAL, and stopped it, thus cheating its rightful owner out of his dues.

PHRENOLOGY AS AN AID TO THE TEACHER.—We have received a copy of an excellent address on the above subject, recently delivered before the Wisconsin Teachers' Association by T. C. Chamberlin, Principal of the Delevan High School, which we shall present to our readers in an early number of this JOURNAL.

Publisher's Department.

THE QUESTION DECIDED.—

In answer to our question as to the size and price of the JOURNAL, we have had but one opinion from all who have written, and that is in favor of keeping up its size and price. "More matter," rather than less, is the cry. So that, till further advice to the contrary, the size and the rates of subscription will be the same as now, namely \$3 per year. But we shall keep the question of "change of form"—from the present quarto to an octavo—still under advisement. Should the cost for paper, printing, engraving, etc., change materially during the year from any cause, we shall feel at liberty to adapt ourselves to the change by increasing or diminishing the quantity of matter accordingly.

WHO WILL HAVE IT?—We printed a handsome sheet prospectus of the JOURNAL—the size of two JOURNAL pages—suitable to hang up in any public place, where subscriptions for the JOURNAL may be received. We should be glad to have one of them put up in every post-office, country store, hotel, reading-room, grist-mill, blacksmith's shop, factory, toll-gate, ferry-boat, steamboat, school-house, and other public place where it may be seen. Who will put one up? Sent gratis by return post, from this office.

OUR LIBERAL PREMIUMS.—It is not expected that every reader will take it upon himself to get up a club of subscribers for this JOURNAL. Many are so situated that they can not go about and talk it up. Such prefer to inclose \$12 and have the JOURNAL sent to themselves five years, which is equivalent to forming a club and getting the JOURNAL at wholesale rates. Or if two persons prefer, they may inclose \$20, and have the JOURNAL sent to each for a period of five years.

Still another way. If one be benevolently disposed, and wishes his FRIENDS to have the reading of the JOURNAL—friends with growing families—he may order it sent to any number, making them welcome to the same. Thus, when renewing a subscription, it would be easy to include the names of several friends, and all unknown to them place the JOURNAL in families where it would do a world of good. Already this thing has been done to some extent. We simply call attention to the *modus operandi*, and leave it with all good-hearted readers.

MUSIC.—Mr. Frederick Blume, of 1125 Broadway, New York, has recently published "The Excelsior Music Book for Violin, Flute, Cornet, Clarinet, Flageolet, Fife," etc. No. 24. Price 15 cents. Also Godfrey's Waltz, "The Dream of the Ball," 40 cents; "Amelia, the Golden Secret Waltz," 30 cents; and an Irish song, entitled "Live in my Heart and Pay no Rent," by Samuel Lover, 30 cents. Sent by post on receipt of price.

JOURNAL ADVERTISERS.—It is believed that the readers of the JOURNAL are a thoughtful, considerate, energetic, enterprising, reformatory, and "go-ahead" class. They read, think, and act. Advertisers inform us that they hear more from the brief "announcements" they insert in the PHRENOLOGICAL JOURNAL than from more lengthy advertisements in other papers and magazines. The reasons are

obvious: 1st. We print with good type, on fine paper, and good ink; 2d. We print so few advertisements, that all we do print are seen and read; 3d. We insert no cheating, swindling, or deceptive schemes; no patent medicines; no lottery, "gift," or other lying "inducements," and *this* fact makes the JOURNAL so much more desirable for honest advertisers. Until we enlarged the JOURNAL, we thought seriously of excluding *all* advertisements. But now that we have so much room devoted to original reading matter, we may, with propriety, give a limited space to those who are worthy of a hearing in a business way. Our circulation is, perhaps, as widespread as that of any aerial publication in the world. Wherever the English language is spoken, this JOURNAL may be found; and in many other countries where other languages prevail, it finds its way. In short, we are aiming to reach, through this JOURNAL, the hearts of all nations, and to carry civilization and Christianity to the most remote corners of the earth. Of course we shall look after the interests of our own country and people first. But "our light will shine none the less for lighting our neighbor's."

CAUSE AND EFFECT.—A correspondent sends us the following: The greatest study of mankind is man. Why not by classification seek after causation?

Take the greatest, wisest men of antiquity. Were they (1) born of city or country parents? (2) of wealthy or poor parents? (3) of noble or ignoble blood? (4) of learned, wise, or any way remarkable fathers? (5) of learned, wise, or any way remarkable mothers? (6) brought up mainly in city or country? (7) had they good academic advantages, or were they mainly self-taught? (8) were they of large, medium, or small physique? (9) of what religious faith were they? (10) wherein did each excel in the religious, intellectual, or material world? In like manner take most noted evil men—also, in like manner the most celebrated ancient women, good and evil. Then the greatest, best, and worst men and women of modern times, (1) dead, (2) living. Here, with better light and knowledge, we can doubtless arrive more closely at causes and results.

Hoping it may be undertaken, F. K. R.
[This is an interesting subject. We submit it for investigation.—Ed.]

TWO NUMBERS FREE!—To new subscribers for 1869, who remit during the present month, we offer the November and December numbers of this year gratis. This offer relates to clubs or to single subscribers.

Or, for \$1, we will send the JOURNAL to new subscribers on *trial* from July to January! Will not present subscribers make these terms known to their neighbors, and induce them to try the JOURNAL?

THE BRUEN CLOTH PLATE.—This is a new plate made for the Wheeler & Wilson sewing machine. It enables the operator to make the "double-loop," or Grover & Baker Stitch, on this machine, and for embroidery is not equaled. Every owner of a Wheeler & Wilson machine will find it indispensable. The price is \$10, but we have made arrangements with the manufacturers to give this for a club of six new subscribers to the JOURNAL at \$3 each. There is no doubt but that all of those to whom we have sent the Wheeler & Wilson sewing machine will want this.

We are enabled to offer the Wheeler & Wilson machine this season on more liberal terms even than ever before. For

twenty new subscribers for one year, at \$3 each, we will give one of their Family Machines, worth \$55. This, only \$5 more for the machine, and twenty copies of a good family magazine, than the machine alone sells for; spend a few hours a day, for a few days, in canvassing. Set up a club, secure the machine for yourself or some poor woman who is not able to procure one for herself. —

The publishers of the *School-day Visitor* have issued a fine steel plate engraving, entitled "Gen. Grant and his Family." It is to be 10 by 13 inches, and printed on heavy plate paper, 15 by 19 inches, representing the General, his oldest son, and his little daughter Nellie on horseback, while Mrs. Grant, Ulysses, and Jessie are standing by, seeing the trio off.

It is a careful study, and has been a deliberate work of art from the beginning. There is nothing hurried or slighted in any respect; the features of every member of the family are faithfully represented from photographs. We would say that the publishers commenced to work on this picture long before Gen. Grant was nominated for the Presidency, so that it is not in any respects a political or campaign picture, but something that all, without regard to politics, will be glad to possess as a national picture.

The retail price of this picture is \$3 50. We have just made arrangements with the publishers, by which we can offer the PHRENOLOGICAL JOURNAL and the Picture to new subscribers for \$3 75, or the JOURNAL, the Picture, and the *School-day Visitor* for \$4 25. There will be great demand for it as soon as ready for delivery, which will be about the 1st of this November, and we think many of our readers will be glad to avail themselves of this opportunity of obtaining it at so small an outlay. Those who are now regular subscribers may obtain it by sending us one new name with \$3 75. All orders should be addressed to this office.

A SPECIAL PREMIUM.—We offer as a special premium for a club of forty new subscribers to the PHRENOLOGICAL JOURNAL, at \$3 each, a copy of the NEW AMERICAN CYCLOPEDIA, which comprises sixteen large octavo volumes, of 800 pages each. Price, \$80, net cash.

This important work contains an inexhaustible fund of accurate and practical information on Art and Science in all their branches, including Mechanics, Mathematics, Astronomy, Philosophy, Chemistry, and Physiology; on Agriculture, Commerce, and Manufactures; on Religion, Law, Medicine, and Theology; on Biography and History, Geography and Ethnology; on Political Economy, the Trades, Inventions, and Politics; on Domestic Economy, Architecture, Statistics, the Things of Common Life, and General Literature. The work is a library in itself, opening to the student and general reader the whole field of knowledge.

We learn from many commendatory notices published in Western newspapers, that Messrs. Ely, Burnham & Bartlett, shorthand reporters of Chicago, Ill., are doing a good work in that department of intellectual progress. Their enterprise and professional skill are reaping a merited reward in the possession of an extensive and lucrative business. Interested as we have been, and are still, in developing the labor and time-saving science of shorthand, we can not but congratulate every one who makes it a success in the practical application to the business of life.

THE WALTER GRAPE, the vines of which we are now offering as premiums for clubs, is much exhibited at the farmers' clubs and fairs throughout the country, and receives the highest encomiums of fruit critics. We will send descriptive circular with terms on receipt of stamp for postage. Address this office.

Personal.

BAYARD TAYLOR, the distinguished traveler, and correspondent of the *New York Tribune*, is reported to be at Rome, seriously ill.

JAY COOK, the eminent banker, has built a beautiful church edifice for the society at Glardville, Pa.

DR. R. T. TRALL resuscitates the *Gospel of Health* with the January number. Terms, \$3 a year. Office, 97 Sixth Avenue, New York.

GEO. B. LINCOLN, Esq., late postmaster of Brooklyn, has been appointed a member of the Metropolitan Board of Health, to fill the vacancy caused by the resignation of Jackson Shultz, Esq.

EBENEZER IRVING, an elder brother of Washington Irving, lately died at the old residence of the deceased author, Sunnyside, at the advanced age of ninety-three.

THE celebrated prima donna Adeline Patti, who by the way has recently changed her surname for that of a Parisian nobleman, has a brother fiddling for subsistence in a New Orleans ice-cream saloon.

MR. EDWARD J. MORRISON—one of our former pupils—intends to spend the autumn in Scott County, Ill., and during the winter will lecture in Morgan and Pike counties, Ill. Mr. Morrison is a clear thinker, and brings to his work an honest purpose and a laudable enthusiasm. Those wishing to bespeak his services can address him at his home, Naples, Scott Co., Ill.

General Items.

TO STUDENTS IN PHRENOLOGY.—Our Session for 1869 will open January 4th, at 899 Broadway, New York. All who contemplate taking professional instruction in Practical Phrenology should indicate their desire at once. Our aim is to open up the whole subject of theoretical and practical Phrenology, and thereby teach our pupils how to become successful teachers, lecturers, and examiners; how to promulgate Phrenology, and by examinations to apply it to the practical wants of the community. We hope to know early in December who are to be members of the class of '69, that ample accommodations may be secured. Those desiring further information will ask for a circular entitled "Professional Instruction in Practical Phrenology." Please address Box 730, New York Post-Office.

"A FOOL AT ONE END, AND A FIRE AT THE OTHER, CONSUMING BOTH."—The number of cigars sold per day on Broadway, New York, is estimated at 20,000. Of these one twentieth cost 30

cents apiece, one tenth 25 cents, one fifth 20 cents, two fifths 15 cents, and one fourth 10 cents. Thus Broadway spends upon its cigars \$3,300 per day, or \$2,060,850 per year. It is estimated that in the city of New York 75,000,000 cigars are consumed yearly, the total cost of which is \$9,750,000.

EQUAL POSTAGE.—The *United States Mail*, a paper devoted to postage matters, says: We are authorized to state, that by an act passed June 25th, 1868, "mailable matter passing between Kansas and California pays the usual rates of postage from and after the 21st of October next, repealing section 259 of postal laws," thus, of course, rescinding section 229 of regulations. The section repealed is the very annoying one of charging letter postage on all transient printed matter between the western boundary of Kansas and the eastern of California. After the time named we will have uniform rates of postage all over the United States, for transient matter as well as regular.

[Books may now be sent to all post-offices in the United States and Territories at single rates. Sensible.]

It may not be generally known to American readers that a medical college for women was established some years since at Fitzroy Square, in London, for teaching the theory and practice of midwifery to educated women. It will commence its fifth annual session October 1st. Our English cousins are not as backward in social reforms as currently reported.

ONE WAY TO GET BOOKS "GRATIS."—It may be "perfectly legitimate" for county school superintendents to "draw at sight" on book publishers for specimen copies. By this means a private library may be quickly and cheaply stocked. Here is a specimen letter. We omit, in this instance, names of persons and places.

R—, PA.
S. R. WELLS—Dear Sir: In reading the *American Educational Monthly*, I observe the notice of a few new books published by you, namely, "The Extemporaneous Speaker," "History of a Mouthful of Bread," and "The Servants of the Stemach."

These books I should be pleased to examine, should you send them to me for this purpose. It is not my province to introduce, or even recommend, text-books; but our school directors very frequently apply to me for an "opinion," and I therefore feel inclined to make the acquaintance of new books. Should you feel inclined to send them, you can either forward to my address by mail to R—, or by express to H—. Yours respectfully,
* * * Co. Supt., Co., Pa.

[We reply: It will give us pleasure to have this county superintendent examine the aforesaid books, and any other of the hundred we publish, at his convenience, and at his expense, certainly not at ours. We discountenance both begging and blackmailing. We publish books as others are supposed to do—for pleasure and profit—but not to give away to those who ought to pay for their learning.]

A LITTLE INDUCEMENT.—We know all our readers would like to possess a copy of the new *Illustrated ANNUAL of Phrenology and Physiognomy* for 1869. To induce prompt renewals, it is proposed to send gratis a copy of that work to each single JOURNAL subscriber who renews his subscription for 1869 before the 1st of December. Already quite a number of new and old names have been sent in. On receipt of \$3 during this and next month, we will send the new ANNUAL if requested so to do.

FACTS.—The following are established weights and measures in this State, the weight being avoirdupois:

Hundred weight is 100 lbs.; a ton is, by custom, 2,000 lbs.; a ton by law, 2,240 lbs.; bale of cotton, 350 lbs.; bale of wool, 240 lbs.; barrel beef or pork, 200 lbs.; barrel flour, 196 lbs.; barrel soap, 256 lbs.; barrel gunpowder, 100 lbs.; firkin of butter, 56 lbs.; gallon of honey, 12 lbs.; gallon molasses, 11 lbs.; gallon lamp oil, 7.70 lbs.; gallon rain water, 8.25 lbs.; gallon proof spirits, 7.70 lbs.; gallon alcohol, 6.96 lbs.; a barrel is $3\frac{1}{4}$ gallons; a hoghead is 63 gallons; a wine gallon measure contains 931 cubic inches; a bushel 2150.43 cubic inches.

N. B.—Although the above weights are legally established in this State, yet custom has in some cases established a different standard, and even in the absence of a contract, the customary rather than the legal standard is frequently conformed to in settlement for sales.

MORE ABOUT CHICAGO.—It is generally conceded that Chicago is a "go-ahead" town. Western men speak of its rise, growth, and expansion with pride. We of the metropolis have no jealousy, no partiality, but feel a real interest in the growth and development of our whole country. But in the West there is great rivalry among the aspirants for fame and fortune. It is amusing to observe the emphasis with which citizens of Cincinnati, Toledo, Detroit, St. Louis, and Chicago speak of their relative importance. And now, there is strife between Council Bluffs and Omaha, St. Joseph and Atchison, Dubuque, St. Paul, St. Anthony, Minneapolis, and other prospective Western cities. But here is a paragraph which shows "which way the wind blows" just at present.

Within the past twelve months, Messrs. Root and Cady, music publishers, have purchased the entire music catalogue of Ziegfeld, Girard & Co.; the entire catalogue of H. T. Merrill & Co.; the entire list of Cabinet Organ publications of Messrs. Mason & Hamlin, Boston, and recently the immense music catalogue of H. Tolman & Co., of Boston, Mass., which is the growth of thirty years of successful business in the most musical city of this country, and transferred the whole to their own house. *The engraved plates alone weigh over twenty-five tons, and represent over five thousand subjects.* This concentration of catalogues added to their already standard publication makes Root and Cady the Great Central Music Publishing House of this continent.

[Verily Chicago is rising, not only as the greatest grain mart in the world, but also in music.]

BOWLSBY'S MUSIC DEMONSTRATING BOARD.—This is an excellent contrivance for the transposition of the scales and the study of thorough-bass. It has the approval of the best musicians in the country, and is warmly recommended as a valuable assistant to all who are interested in the study of music, whether as teachers or scholars. It enables one to acquire speedily a practical and objective knowledge of that difficult feature of music, the changes of the keys. We are ready to furnish the apparatus, which is neat and ornamental, at \$1 50 each, sent to any part of the country.

A GOOD BARGAIN FOR CANADA: the buying of Nova Scotia.

A BAD BARGAIN FOR NOVA SCOTIA: selling out so cheap to Canada.

A GOOD THING FOR ALL: annexation to the United States.

If a Republican Democracy, with free schools for all, equal rights, impartial suf-

frage, a free religion, etc., be an improvement on a monarchy, why not extend it over the continent? We believe it; and while European nations are extending *their* way in the East, why not we extend ours in the West? We believe in applying the principles of Republican Democracy over this continent. Let Europe keep her hereditary kings, queens, and emperors—genuine and bogus—if preferred, but let us have officers and servants of our own choosing, and subject to change when we please. Here, under *our* mode of proceeding, where education is—to be—universal, we expect men to govern themselves. Nor is it needful to keep a standing army to keep the peace. Instead of soldiering and consuming, *our* people are producers.

EMPTY HONOR.—We are in the receipt of letters, of which the following is a sample, from different parts of the country—not from the *freed* men, let us state, from whence, if anywhere, such a spirit of aims-seeking might more reasonably be expected—but from the thrifty East and the enterprising West!

Blank, Ohio. S. R. WELLS—Dear Sir: It is my pleasant duty, as Cor. Sec., to inform you of your unanimous choice to honorary membership of the "Excelsior" Literary Society of H—College, as a token of esteem, both for high literary attainments, and the laudable manner in which they have been devoted to the promotion of science and reform, especially through your most excellent JOURNAL.

The common object of literary societies, we feel, is too well understood to need any explanation. Any aid which your kindness or interest might suggest, either peculiarly or in the shape of books, etc., for the library, would be thankfully received and acknowledged. Hoping that you may take an interest in the welfare of the Society, and lend us your encouragement and aid by accepting the membership, I remain sincerely yours.

Now this may be a very honorable—it is certainly a very polite way of begging. It will, in many instances, "get" the thing solicited, at no other cost to the "association" than the polite—may we not say flattering—letter of the Corresponding Secretary. We can imagine the youngsters chuckling over their rich, plump magazines, contributed by the honorary member who has made himself worthy such distinction! For one, we beg to be excused, and may state publicly, that it costs real cash—not empty honor—to publish the PHRENOLOGICAL JOURNAL, and that such honors would not pay the printers or paper-maker. No, no, young men, excuse us, and come down with your greenbacks. Order your newspapers and magazines at club rates, if for charity, and not ask editors to feed you at *their* expense.

AN ATTRACTIVE BUSINESS.—Orange culture promises to be a profitable business in Florida. We are told of a grove on the St. John's River, consisting of less than an acre, the income from which, last season, was \$1,000. The business is attractive, especially in its pecuniary results. See advertisement of "Floridian."

THE BEST LETTER ENVELOPES.—It is strange that persons of good taste, culture, and judgment should use the odd, singular, inconvenient, and unsafe little bags open at one end, instead of those more comely and always ready stamped and self-sealing, made by the Government, and for sale by all post-masters. Of these there are different sizes, qualities, and prices: white, which are beautiful, and buff, which are cheap. Buy and use these instead of those "*leelle*," "*narrow*," "*tucked up*" and "*tucked in*" things, so liable to get lost or get opened on the way. Try a few

packs of stamped Government envelopes, and you will use no other.

P. S.—Use white paper, black or brown ink—no pale blue fluid; date and sign your letter, always putting on the full address, name, post-office, county, and State; then address it plainly, and you may hope for an answer by return post. For further instructions read our little book "How to Write, How to Talk, How to Behave, and How to do Business," in one volume.

THE NORTHWESTERN FARMER, a monthly magazine of rural life, is a handsome quarto of twenty-four pages, now in its third volume, published at Indianapolis and Chicago at \$1 50 a year, by the Northwestern Farmer Co. We will supply the above to *new* subscribers, with the PHRENOLOGICAL JOURNAL, at \$4 a year. Address this office.

Among the best general farming States in the Union are Ohio, Indiana, Illinois, and Iowa. The above journal, it is expected, will be largely circulated in these States. But it will, we presume, have readers in *all* the States.

THE HAND-BOOK AGAIN.—ELKHART, IND., August 20th.

SAMUEL R. WELLS—Sir: I had the good fortune a few days since to receive, peruse, and call my own "The Indispensable Hand-Book," with which I would not now part for even more than double its cost, were I to know that I could not obtain another. I therefore will act as agent, if you will send me full information as to the terms.

Yours truly, D. M. S.

WHEAT.—Chicago sent forward to the East last year 48,000,000 bushels of grain, of which ninety-one per cent. went by water, and nine per cent. by rail. Of the millions of bushels of corn which were forwarded East from the same point, ninety-nine per cent. went by water. And all this in face of the four and one half months of suspension of navigation during the season.

Is there any doubt about the absolute necessity of a ship canal around Niagara Falls, connecting the Upper Lakes with Lake Ontario, Lake Champlain, the St. Lawrence, and the Hudson River? If the East and the West are to remain good neighbors, and the present free exchange of productions is to go on, increased facilities must be had. Railways must be multiplied to carry passengers and light freight, and canals enlarged to accommodate the heavier materials. But let that Niagara Ship Canal be opened at once. Without it trade must be diverted from its natural channels, or become stagnant.

AN ELECTRIC CLOCK.—Mr. S. A. Kennedy, of 481 Broadway, New York, has put up a clock which is moved by electricity, generated by a weak galvanic battery. There are but three wheels in the clock. These require no oiling, and it is believed the clock will run a hundred years and more without variation. A company to manufacture and sell is organized. This invention comes the nearest to perpetual motion of anything we ever saw.

THE JUDGE AND THE LAWYER.—Judge Kent, of this State, a son of the illustrious commentator, while traveling upon the circuit many years ago, put up on one occasion for the night at the hotel of a small town through which his route lay. The chief lawyer of the place, hearing of the arrival of this bright light of his profession, thought the least he could

do was to attempt to entertain him. So he walked into the reading-room, where the Judge, in the dignity of spectacles and magnificent ruffles, was perusing the newspapers.

Lawyer—Hem! Good-evening, Judge!

Judge—Good-evening, sir!

Lawyer—Judge! hem! suppose we play a game of billiards?

Judge (astonished, and speaking very slowly)—I never play billiards, sir.

Lawyer—Ah! well, ninepins; what do you say to ninepins, sir?

Judge—I never play ninepins, sir.

Lawyer—Oh! then we'll have a game of *all-fours*.

Judge (turning pale and speaking emphatically)—I never engage in any game—in any game whatever, sir.

Lawyer—Eh! what! well, no matter (taking the Judge familiarly by the arm), I'll stand the drinks—brandy-and-water, or gin?

Judge (becoming paler)—I never drink, sir.

Lawyer (In the blankest amazement)—What a *confoundedly overrated* man you are! (The disappointed subaltern retires in disgust.)

Hospitality, in this case, was in the direction of *perverted* nature, and evinced the dissipated character of the lawyer. The Judge was evidently a man of sound moral character, and *not* perverted. He would continue to rise, while the lawyer was already going down, down, down.

Young man, have you the moral courage to say "No" when invited to violate your sense of honor and true manliness? Can you follow the example of the Judge? If so, there is hope for you; but if not, you, too, will go down.

ASTROLOGY—HOW THEY DO IT.

—Many people have a weakness for the mysteries; and designing rogues of the masculine gender adopt a woman's name, then advertise largely, somewhat after the following fashion. The remarks in brackets are our own.

Astrology! The world astonished at the wonderful revelations made by the great astrologist, Madame H. A. Virago. She reveals secrets no mortal ever knew [or ever will know]. She restores to happiness those who from doleful events, catastrophes, crosses in love, loss of relations and friends, loss of money, etc., have become despondent [such as these rascally advertisers]. She brings together those long separated, gives information concerning absent friends or lovers, restores lost or stolen property, causes speedy marriages and tells you the very day you will marry, gives you the name, likeness, and characteristics of the person [what assumption!]. She reads your very thoughts, and by her almost supernatural powers unveils the dark and hidden mysteries of the future. From the stars we see in the firmament—the malefic stars that overcome or predominate in the configuration—from the aspects and positions of the planets and the fixed stars in the heavens at the time of birth, she deduces the future destiny of man [i. e., he is destined to be duped by swindlers]. Fall not to consult the greatest astrologist on earth. It costs you but a trifle, and you may never again have so favorable an opportunity [to lose your money]. Consultation fee, with likeness and all desired information, \$1. Parties living at a distance can consult the Madame by mail with equal safety and satisfaction to themselves, as if in person. The strictest secrecy will be maintained, and all correspondence returned or destroyed [on the contrary, the letters, with names and address, are sold for so much a hundred to the lottery dealers, who send swindling circulars to all those who write letters to astrologists—and their names are thus hawked about by these wicked scamps]. References of the highest order furnished those desiring them. Write plainly the day of the month and year in which you were born, inclosing a small lock of hair. Address,

MADAME H. A. VIRAGO.
P. O. Drawer,
[and so forth, sometimes at Troy, then at Buffalo, Hudson, and elsewhere. Only "verdant greens," of whom, alas, there are not a few, get caught in by such traps.]

WANTS RECONSTRUCTING.—The Feliciana Democrat, of Clinton, La., thus laments over the departure of a school teacher for her Northern home: "The strong-minded woman who presided over the classic negrophilic hall where the offspring of the freedmen and they themselves drank freely of the fountain of knowledge the waters of which she laved upon them, has departed. Yes, Clinton knows her no longer; yet Yankeeedom will embrace her as a daughter who had gone among the disloyal and rebellious, and suffering martyrdom to the tune of \$2,000 net gains, the proceeds derived from her colored flock in teaching them hatred and insubordination to those who are their only true friends. She hath suffered much; yet it is hoped that little pile will go somewhat toward soothing her in this hour of affliction. For, lo! she ascertained that the mine which she has for the last two years worked so profitably is now exhausted, and she must look for new diggings. We are truly disconsolate. Hanging our harp up somewhere, we will skin an onion in remembrance of you, dear old school-marm, proud scion of gifted New England. May you rest there in peace, and in the enjoyment of the spondulicks which your industry has earned. May the scent to which you have been accustomed always remain with you."

[This young man needs reconstructing. He should be taught to respect school-teachers, and not be allowed to slander them. He may not know it, but he is cutting a stick for his own back by this sort of talk.

The same paper says: "As far as could be ascertained on the 20th ult. there were 41,560 whites and 78,500 blacks registered in this district; total, 119,860. Black majority, 37,140."

If this be so, we should think it would be policy for the whites to make friends of the blacks while they may. Kind treatment would be kindly remembered.]

FISH, OYSTERS, ETC.—The following letter explains itself:

GREAT SALT LAKE CITY, UTAH TER.
EDITOR PHRENOLOGICAL JOURNAL.—Sir: I am very anxious to obtain a work on the culture and propagation of fish and oysters. Our large streams are tolerably well supplied with the "mountain trout," a very good fish, and I am anxious to introduce them into our smaller streams, lakes, and artificial ponds. Can the salmon, do you think, be successfully introduced into our streams? [We think it can.] Our Great Salt Lake is too salt, I fear, being one third pure salt [of course it is]; but probably they would thrive at the mouths of the streams emptying into it. How can their eggs be brought? What time of year is the best? Of whom can they be obtained? etc. I desire, also, all the information I can obtain concerning the introduction of oysters. Is there a book that gives this information? [There is not, but there should be.] If so, please give me its name and price, and I will remit. I want this knowledge, not from speculative motives, but so far as I can to do the people good, believing that to live on pork and beef is injurious and unwholesome. Inclosed, I forward you \$1 for the trouble I give you, which I trust you'll please pardon. Very respectfully yours, A. MILTON MUSSER.

[We publish the above, hoping it may meet the eye of persons who can furnish the desired information. There is nothing now in print available. Who will get up a manual giving all the necessary directions for growing and curing fish, oysters, clams, and lobsters? It would sell.—Ed. A. P. J.]

THE TICKET SWINDLE.—A lady writes us from California as follows: Having occasionally received letters from parties in New York and elsewhere, wishing me to become an agent for some wonderful and cheap invention, to sell tickets in some grand lottery distribution, or something of the kind, please allow me to ask how such parties obtain the names and addresses of persons all over the country? Do they get them from publishers' books? We can think of no other way in which ours could have been obtained, and, supposing this to be the case, we beg leave to make a few remarks in regard to it. Our address is free to any persons who wish to use it for laudable purposes, but it is not free to swindlers and unprincipled vagabonds. If editors will give our names to some one who will send us a sewing-machine for nothing, we should certainly feel gratified, for none of us are too fond of stitching in the old way; or if they will put us in the way of making a fortune from three cents, we may tender them a vote of thanks, or we may choose to earn our fortunes; but if our names are given to those who would use us as instruments in swindling the unsuspecting, and in disseminating obscene books and engravings to poison the minds of the young and ignorant, we must protest against it as not only taking undue liberty, but as doing a great wrong in aiding the circulation of such things. [No respectable editor would do any such thing.—Ed.] We recently received from "Messrs. R. & Co.," of New York, a package containing specimens of lottery tickets, advertisements of obscene books, photographs, and paintings, wishing to obtain agents for selling the same! Such things are an outrage and a shame, and we trust your JOURNAL, which has ever been ready to expose and denounce imposition, may raise a protestation against this crying evil.—S. J. C.

[Persons who write to any of the fortune-tellers, patent medicine venders, hair restorers, gift concerns, etc., have their names, with post-office address, put into lists, which are sold by the thousand to lottery dealers and other swindlers. No responsible editor or publisher would permit the names on his subscription books to be used for any such purpose.]

ADVICE GRATIS.—Here is what the *Inside Track* says to advertisers: Nowadays, everybody can read. Your advertisements will not, in this era of common schools, waste their sweetness on the desert air.

Continued dropping will wear away a rock. Keep dropping your advertisements in the public, and they will soon melt under it like rock-salt.

Small advertisements are worth more in proportion than large. If all people were deaf, loud advertisements might be expected to win.

One twentieth of a column twenty times is worth more than a whole column once. People who see a flaming advertisement one week, but never after, get an idea the man has fizzled.

A heavy advertisement once is more than quadrupled in value by a small card published for a few months after, giving your address.

You can't eat enough in a week to last you a year, and you can't advertise on that plan, either.

Beware of long, prosy advertisements. If you want people to read them, have them "short and sweet."

Let those who read your notices feel that you are in earnest, and that you believe what you say. A little flippancy will sometimes create a complete distrust of your enterprise or wares.

If you mean to quit business next week, don't advertise. Advertisements are like seed-wheat. It takes months to reap the fruit after you scatter the seed. [We have ourselves made sales of printing presses distinctly traceable to advertisements of nearly three years preceding.]

If your competitor advertises, let your advertisement differ from his as much as possible. The public despise an imitator worse than any other 'tator.

Business.

[Under this head we publish, for a consideration, such matters as rightfully belong to this department. We disclaim responsibility for what may herein appear. Matter will be LEADED, and charged according to the space occupied, at the rate of \$1 a line.]

THE HYGEIAN HOME.—At this establishment all the Water-Cure appliances are given, with the Swedish Movements and Electricity. Send for our circular. Address A. SMITH, M.D., Wernersville, Berks County, Pa.

HYGIENIC CURE, BUFFALO, N. Y.—Compressed Air Baths, Turkish Baths, Electric Baths, and all the appliances of a first-class Cure. Please send for a Circular. Address H. P. BURDICK, M.D., or Mrs. BRYANT BURDICK, M.D., Burdick House, Buffalo, N. Y.

MRS. E. DE LA VERGNE, M.D., 325 ADELPHI STREET, BROOKLYN.

SPURZHEIM.—Photographs from Lizar's superb engraving of Spurzheim, from an original drawing by Madame Spurzheim. A magnificent head and face. 4-4 size, \$1; "carte-de-visite" style, 50 cents.

S. R. WELLS, 389 Broadway, New York, or JOHN S. D. BRISTOL, Detroit, Mich.

WORKS ON MAN.—For New Illustrated Catalogue of best Books on Physiology, Anatomy, Gymnastics, Dietetics, Physiognomy, Shorthand Writing, Memory, Self-Improvement, Phrenology, and Ethnology, send two stamps to S. R. WELLS, Publisher, No. 389 Broadway, New York. Agents wanted.

SOMETHING NEW.—To LECTURERS.—We have for sale a large poster, 29 by 43 inches, with more than fifty illustrative engravings, including our largest symbolical head, handsomely printed in colors, at \$12 per hundred copies; also a smaller size, which we call pictorial poster No. 2, and may be had at \$3 a hundred. These are particularly recommended to Lecturers, being printed with blank spaces for inserting the name of a lecturer and the date and place of his lectures. These posters are handsome, and well calculated to attract the public attention. They will save lecturers much time and money, by rendering it unnecessary for them to get up bills in each town as heretofore.

Besides these posters, we have an excellent circular of THREE 12mo pages, containing a statement of the UTILITY of PHRENOLOGY, with the TESTIMONIALS of distinguished men as to its truth and importance. With these three pages may be printed another page, giving a PROGRAMME of lectures to be given in any particular place. This circular of three pages—the fourth in blank—can be furnished at \$5 per thousand; or, if the programme be printed here with the other three pages, it may be had complete at \$8 50 per thousand. Samples of the posters and circular will be sent from this office, post-paid, on receipt of 30 cents, and orders for large quantities will be promptly filled by

S. R. WELLS, 389 Broadway, New York.

THE BEST AND CHEAPEST Advertising Medium in the South is the *Southern Journal of Education*. Rates sent upon application to JOHN T. HEARN, Publisher, Shelbyville, Ky.

THE BELLEFONTE NATIONAL (FORMERLY CENTRAL PRESS.)

Published at Bellefonte, Centre Co., Pa. BY KINSELOE & BROTHER.

Located in one of the greatest producing sections of the State, surrounded by some of the richest bituminous coal, iron, and lumber regions in the country, it presents advantages to advertisers which should not be overlooked by men of shrewdness and business tact.

It is the organ of the Republican party of Centre County, and has entered upon its eleventh volume. Send for specimen numbers and terms. Address, it.* "NATIONAL," Bellefonte, Pa.

REV. J. G. SCHAEFFER, Editor of "Mirror," has a new and popular Lecture. Address, "MIRROR OFFICE," Sharon, Wis.

Advertisements.

[Announcements for this or the preceding department must reach the publishers by the 1st of the month preceding the date in which they are intended to appear. Terms for advertising, 50 cents a line, or \$50 a column.]

The Northwestern Farmer, AN ILLUSTRATED RURAL MAGAZINE,

(size and style of the PHRENOLOGICAL JOURNAL) is the largest, finest, and most popular Rural Monthly in America. It is just closing its third yearly volume, with the largest circulation of any similar journal in the West, and with prospects the most flattering for the future.

IT IS UNIVERSALLY PRONOUNCED BOTH BY THE PEOPLE AND THE PRESS to be the best thing of the kind ever attempted in this country, and the cheapest paper offered to the people. Terms \$1 50 a year, and a premium book worth twenty-five cents given to each subscriber.

TO AGENTS we offer the largest and most attractive list of premiums of any publisher in the world, and on terms 25 to 50 per cent. more liberal. For example, we give a five-hundred-dollar, seven octave, rosewood Piano, for only 400 names at \$1 50 each.

Our list of premiums comprises Pianos, Cabinet Organs, Sewing Machines, Hand Looms, Tea Sets, American Watches, Washing Machines, Clothes Wringers, Encyclopedias, Dictionaries, Sets of Tools, Chromo Paintings, Hand Powers, Potato Diggers, Grain Drills, Corn Shellers, Early Rose Potatoes, Useful Books, etc., etc. Sample copies containing full particulars, only ten cents post-paid.

The *Northwestern Farmer* is published at Chicago, Ill., and Indianapolis, Ind. the Chicago edition being adapted to the Prairie States, and the other to Indians and the States east and south of her, and in writing on business connected with the paper, address NORTHWESTERN FARMER CO., 57 State Street, Chicago, Ill., or NORTHWESTERN FARMER CO., corner Meridian and Circle streets, Indianapolis.

Orange Culture.—A gentleman owning a suitable tract of land near the St. John's River, Florida, wishes a partner with some capital to engage with him in the culture of the orange and other tropical fruits. Address FLORIDIAN, care of S. R. Wells, Esq., 389 Broadway, New York.

Davies & Kent, Printers, Stereotypers, and Electrotypers, No. 13 William Street (cor. of Spruce), New York. Note, Circular, Bill-Head, and Card Printing neatly and promptly executed.

The Trapper's Guide: a Manual of Instructions for Capturing all kinds of Fur-Bearing Animals, and Curing their Skins; with Observations on the Fur-Trade, Hints on Life in the Woods, and Narratives of Trapping and Hunting Excursions. By S. Newhouse, and other Trappers and Sportsmen. Second Edition, with new Narratives and Illustrations. Valuable as a work on Natural History. The numerous illustrations are accurate and beautiful. Price by mail, post-paid, \$1 50. Address,

S. R. WELLS, 389 Broadway, New York.

The Bartram & Fanton

Elastic Stitch Sewing-Machines. For Family and Manufacturing Purposes.

This Machine was awarded First Premium, American Institute. Prize Medal, Paris Exposition. Principal Office and Salesroom, at Madame Demorest's Emporium of Fashions, No. 839 Broadway, New York.

The Manufacturers of the above Machine believe that, after a careful and thorough examination as to the merits and qualifications of the different kinds of Machines adapted to Family Sewing, they have overcome the faults and imperfections of the many now in the market. The BARTRAM & FANTON MACHINES are pronounced by connoisseurs to be better designed, better finished, more accurate and reliable, with a greater capacity for performing all kinds of Family Sewing than any other Machine ever before offered to the public; and are so perfect and simple in their construction that a novice can operate them with perfect success.

An examination of our Machines will convince the most skeptical that we have produced the *ne plus ultra*

SEWING-MACHINE.

This Machine uses but one thread, and that directly from the original spool, making a beautiful stitch, and locking the thread firmly at every stitch. The work requires no fastening off, and dispenses with all the extra machinery that is necessary to operate a two-third machine, which is an important desideratum to all operators.

The design of the BARTRAM & FANTON MACHINE is different from all others. It is so constructed that it is impossible for a lady to soil the work or dress while operating it, or become entangled in the machinery. It will sew equally as well upon one kind of fabric as another, from the finest muslin to the heaviest woolen.

This Machine will make Button-Holes upon thin fabrics, and finish them off complete, which no other machine can accomplish. It has also an attachment for making eyelet-holes.

Each Machine is provided with Castors, and can be readily moved from place to place, yet stand perfectly firm when in use. It will also embroider, tuck, quilt, cord, bind, gather, fell, ruffle, braid, and hem, etc., etc.

Each Machine is provided with a button-hole attachment, gauge, screw-driver, wrench, oil-can, three-quarter doz. needles, etc., and perfect instructions imparted to all purchasers of Machines free of charge. Price, \$60.

Every Machine is warranted for one year. Each Machine is so constructed that an attachment for Fancy Embroidery and Eyelet-Holes, Button-Holes, etc., will fit it. Reliable agents in every city and town. Illustrated circulars mailed free on application. Aug., '81.

Urbana University.

URBANA, CHAMPAIGN CO., OHIO.

(A NEW CHURCH INSTITUTION.)

Publishers, Booksellers, and Importers, Philadelphia.

Elementary Anatomy.—IN TWENTY PLATES, REPRESENTING THE FULL-LENGTH HUMAN FIGURE, HALF THE SIZE OF LIFE; together with a separate Explanatory Text, the whole forming a Complete Manual of Physiological Anatomy, intended for the Use of Physicians, Medical Students, Lecturers, Colleges, Schools, and others. From the French of Bourgery and Jacob. The following are the subjects and the arrangement of the plates:

PLATES I. and II.—OSTEOLOGY and SYNDESMOLOGY.

Plate I.—Anterior plane. *Right side:* The dry bones. *Left side:* The bones clothed with their ligaments. At the limbs, the large vessels are added, so as to show distinctly their relations to the bones, and to indicate the points at which compression is to be applied in cases of hemorrhage.

Plate II.—Posterior plane. The same arrangement.

PLATES III. IV. V. VI. VII. VIII.—MYOLOGY and APONEUROSIS.

Plate III.—Anterior plane. *Right side:* Superficial muscles. *Left side:* Superficial aponeuroses.

Plate IV.—Anterior plane. *Right side:* Muscles of the second layer. *Left side:* Muscles of the third layer.

Plate V.—Posterior plane. *Right side:* Superficial muscles. *Left side:* Superficial aponeuroses.

Plate VI.—Posterior plane. Second and third layers of muscles.

Plate VII.—Lateral plane. Superficial and deep muscles. Muscles of the os hyoides.

Plate VIII.—Diaphragm, interior of the trunk, muscles of the lower jaw, of the tongue, of the velum palati, and of the pharynx.

PLATES IX. X. XI. XII. XIII. XIV.—ANGIOLOGY. Heart, lungs, arteries, veins, and lymphatics. On the different figures are indicated the points at which compression or ligation of the vessels is effected, and in regard to the veins in particular, the proper points for performing venesection.

Plate IX.—Interior of the trunk. Heart, lungs, and their envelopes. Large vessels.

Plate X.—Vessels of the thorax and abdomen, azygos vessels, cerebral and spinal venous sinuses.

Plate XI.—Anterior plane. Sub-cutaneous veins, and deep vessels.

Plate XII.—Posterior plane. Superficial veins, and deep vessels.

Plate XIII.—Lateral plane. Partial figures, internal maxillary and internal carotid vessels, etc.

Plate XIV.—Lymphatic vessels.

PLATES XV. XVI. XVII.—NEUROLOGY.

Plate XV.—Anterior plane. Encephalic nerves. Nerves of the extremities.

Plate XVI.—Posterior plane. Great sympathetic nerve. Studies of the ganglions and their nerves. Pneumo-gastric nerves. Studies of the fifth and seventh cerebral pairs.

Plate XVII.—Brain, spinal marrow, and envelopes. Organs of the senses. Larynx.

PLATES XVIII. XIX.—DIGESTIVE APPARATUS.

Plate XVIII.—Alimentary canal; stomach, intestines, chyloferous vessels, peritoneum.

Plate XIX.—Liver, pancreas, spleen, kidneys, supra-renal capsules, bladder. Abdominal venous system.

PLATE XX.—Complete study of the perineum in both sexes. Male and female organs of reproduction. Embryotomy.

These plates are printed on paper twenty-four by thirty-six inches, the full-length figures being about thirty-three inches in height. They combine scrupulous accuracy of drawing and anatomical detail with great perfection of beauty as specimens of Lithography. They are carefully colored, after those of the original French work, and no expense has been spared in any part of their execution. The text is arranged, like the French, in a pamphlet for each plate. The whole text forms a handsomely-printed volume of more than 300 pages, and can be bound so as to accompany the full set of plates.

Price, full set, twenty plates, mounted, with text, \$35; same, colored, \$65. Sent by express, on receipt of price, by

S. R. WELLS, PUBLISHER, 389 BROADWAY, NEW YORK.

Mental and Social Culture.

For Families and Schools. By L. C. Loomis, A.M., M.D. President of Wheeling Female College. Contents: I. How to Obtain Knowledge; II. Observation, Reading, Lectures, Conversation, and Meditation Compared; III. Rules relating to Observation; IV. Of Books and Reading; V. Judgment of Books; VI. Of Living Instructions and Lectures; VII. Rules of Improvement by Conversation; VIII. Practical Hints: How and When to Speak, and What to Say; IX. Of Study or Meditation; X. Of Fixing the Attention; XI. Of Enlarging the Capacity of the Mind; XII. Of Improving the Memory; XIII. Of Self-Control; XIV. A Cheerful Disposition; XV. Politeness; XVI. Practical Hints on Behavior. Sent, post-paid, for \$1.

J. W. SCHERMERHORN, & CO., Publishers, 14 Bond Street, New York. 3t.*

Smoking and Drinking. By

James Parton. 16mo. Paper, 50 cents; cloth, \$1. This volume contains three articles on Smoking and Drinking, recently contributed to *The Atlantic Monthly*, by Mr. Parton, with a Preface. These have attracted unusual attention both from the public and the press. They deal thoroughly and candidly with topics of great individual and social interest, and should be read by all.

The *Tribune* says: "His impressive statements on the subject of Drinking are of more value to the cause of temperance than volumes of inflated rhetoric."

Every one of our readers should have a copy of this book. Send by mail, post-paid, on receipt of price, by S. R. WELLS, Publisher, 389 Broadway, New York.

A Popular Picture, and a

first-class Magazine.

Messrs. Daughaday & Becker, the enterprising publishers of *Our Schoolday Visitor*, Philadelphia, have just published a large, original, finely executed steel plate engraving, entitled—

GENERAL GRANT AND HIS FAMILY, from the hand of the celebrated Sartain, which is destined to be one of the most popular pictures of the day. Six persons, three equestrian figures. Every member of the family is as faithfully likened as the photographs, which were given to the artist from the hands of the General himself, have power to express. This work has cost months of skilled labor, and more than One Thousand Dollars in cash, and readily sells for \$2 50, its regular price.

This magnificent picture and a copy of

OUR SCHOOLDAY VISITOR,

one of the oldest, handsomest, and cheapest Young Folks Magazines in this country, which alone is worth \$1 25 a year, will both be sent to every subscriber for 1869, for \$1 50. Where clubs are formed, a still greater reduction.

The *Visitor* is a live, high-toned monthly for the Young of to-day. Neither sectarian nor sectional, yet acorn neutral, is independent in all things. Its aim, the instruction, amusement, and elevation of our young people everywhere.

Please send ten cents at once for sample number of the *Visitor*, and Circular giving the origin and complete description of this large and elegant engraving, and full list of Premiums for clubs.

A rare chance. Agents wanted everywhere. Address,

DAUGHADAY & BECKER, Publishers, 424 Walnut St., Philadelphia, Pa. 2t.*

Some of the Finest Piano

Music published is contained in the "Home Circle," the two volumes of which, costing but a few dollars, present a collection that in the usual Sheet Music form would cost ten times as much. Price, per vol., \$3 50; cloth, \$4; full gilt, \$4. Mailed, post-paid, OLIVER DITSON & CO., Publishers, 277 Washington Street, Boston. CHARLES H. DITSON & CO., 711 Broadway, New York. Nov. 11.

Says the Evening Post:

"Every young man should read it," meaning *The Chicagoan*, the New Literary and Family Weekly, published by H. N. F. LEWIS, Chicago, Ill. "No literary paper in the country is superior," adds the *Harrisburg State Guard*. The Choicest Stories, original and selected—numerous Special Features. Terms, \$3 per year, or specimen copies (and Premium List) sent free.

ESTABLISHED 1861.

THE GREAT AMERICAN TEA COMPANY

RECEIVE THEIR TEAS BY THE CARGO

FROM THE BEST TEA DISTRICTS OF

CHINA AND JAPAN,

AND SELL THEM IN QUANTITIES TO SUIT CUSTOMERS

AT CARGO PRICES.

The Company have selected the following kinds from their stock, which they recommend to meet the wants of clubs. They are sold at cargo prices, the same as the Company sell them in New York, as the list of prices will show.

PRICE LIST OF TEAS.

OOLONG (Black), 70c., 80c., 90c., best \$1 per lb.
MIXED (Green and Black), 70c., 80c., 90c., best \$1 per lb.
ENGLISH BREAKFAST (Black), 80c., 90c., \$1, \$1 10, best \$1 20 per lb.
IMPERIAL (Green), 80c., 90c., \$1, \$1 10, best \$1 25 per lb.
YOUNG HYSON (Green), 80c., 90c., \$1, \$1 10, best \$1 25 per lb.
UNCOLORED JAPAN 90c., \$1, \$1 10, best \$1 25 per lb.
GUNPOWDER (Green), \$1 25, best \$1 50 per lb.

COFFEE ROASTED AND GROUND DAILY.

GROUND COFFEE, 20c., 25c., 30c., 35c., best 40c. per lb. Hotels, Saloons, Boarding-house keepers, and Families who use large quantities of Coffee, can economize in that article by using our FRENCH BREAKFAST AND DINNER COFFEE, which we sell at the low price of 30c. per pound, and warrant to give perfect satisfaction. ROASTED (Unground), 30c., 35c., best 40c. per lb. GREEN (Unroasted), 25c., 30c., 35c., best 35c. per lb.

Parties sending club or other orders for less than \$30, had better send a Post-office draft or money with their orders, to save the expense of collections by Express, but larger orders we will forward by express, to "collect on delivery."

Hereafter we will send a complimentary package to the party getting up the club. Our profits are small, but we will be as liberal as we can afford. We send no complimentary packages for clubs of less than \$30.

Parties getting their Teas of us may confidently rely upon getting them pure and fresh, as they come direct from the Custom-House stores to our warehouses.

We warrant all the goods we sell to give entire satisfaction. If they are not satisfactory, they can be returned, at our expense, within thirty days, and have the money refunded.

N. B.—Inhabitants of villages and towns where a large number reside, by *clubbing* together, can reduce the cost of their Teas and Coffee about one-third (besides the Express charges), by sending directly to "The Great American Tea Company."

CAUTION.—As many parties in this city and elsewhere are imitating our name and manner of doing business, we hope our friends will be particular to address their letters to our principal warehouses, "Nos. 31, 33, 35, & 37 Vesey Street; Post-office Box, 5643, New York City." Attention to this will avoid mistakes.

Edward O. Jenkins, Steam

Book and Job Printer, and Stereotyper, No. 20 North William Street, New York, announces to his friends and the public that his establishment is replete with Presses, Type, and material for the rapid production of every description of printing.

Jenkins' Vest-Pocket Lex-

icon. An English Dictionary of all except Familiar Words; including the Principal Scientific and Technical Terms, and Foreign Money, Weights, and Measures. Price, in Gilt Morocco, Tuck, \$1; in Leather Gilt, 75 cents. Sent post-paid by S. R. WELLS, New York.

Just Published—The Proceedings of the SIXTH NATIONAL TEMPERANCE CONVENTION, held at Cleveland, Ohio, containing the papers presented, speeches delivered, resolutions and reports adopted, question drawer, etc. Sent by mail, post-paid, for 25 cents, by S. R. WELLS, Publisher, 389 Broadway, N. Y.

Chickering & Sons'

AMERICAN PIANOS,

GRANDS, SQUARES, AND UPRIGHTS.

Messrs. C. & Sons were awarded at the Paris Exposition the FIRST GRAND PRIZE—the Legion of Honor and a Grand Gold Medal—making sixty-three FIRST PREMIUMS during the past forty-five years.

A Practical Homeopathic

TREATISE on the Diseases of Women and Children; intended for Intelligent Heads of Families and Students in Medicine, by HENRY MINTON, M.D. Price, cloth, \$3; sheep, \$4. Sent by mail, post-paid, by S. R. WELLS, 389 Broadway, New York.

Watson's Manual of Calis-

THENICS contains a complete course of physical exercises, WITHOUT APPARATUS. It has all needful directions, rules, and explanations, with sections on phonetics and respiration. The exercises are arranged in accordance with well-known principles of anatomy, physiology, and hygiene. They have been thoroughly tested, securing the happiest results. These exercises, practiced habitually and energetically, can not fail to yield grace, agility, suppleness, a ready hand, as well as robust health and power of endurance. Almost any school-room or parlor will suffice for the exercises. For those who use the piano to enliven the exercises, there is music, prepared by the best masters.

The book is richly illustrated; is printed on superior paper, and bound in best style. A reviewer writes: "This is the most elaborate and satisfactory attempt yet made to apply practically to educational purposes the great truths of physiology, relating to physical culture and training. To those in authority it is a positive duty to promote the circulation of this book by every means in their power. All who have the physical welfare of the human race at heart, and understand how powerless the intellect is to contend against the burden of a feeble frame, are equally interested in its teachings, and answerable each in his own sphere, however small it be, for the consequences of neglecting them. Sent by mail on receipt of \$1.

J. W. SCHERMERHORN & CO., Publishers, 14 Bond St., New York. 3t.*

The Western Rural takes

the lead in the Rural line—has the largest circulation in the West.—*Farmers' Union*.

SPECIAL LISTS.—We have, in addition to the above, all works on Photography, and a special List of Medical Works, invaluable to those who need them. Lists sent on receipt of stamps.

For wholesale terms to agents please address S. R. WELLS, 389 Broadway, N. Y.

NOW IS THE TIME TO SUBSCRIBE FOR THE

NEW YORK WEEKLY,

the People's Favorite Journal, and the best Story and Sketch Paper Published. The most interesting Stories are always to be found in the NEW YORK WEEKLY. At present there are Four Great Stories running through its columns, and at least One New Story is begun every Month.

New Subscribers are thus sure of having the commencement of a new continued story, no matter when they may subscribe for the NEW YORK WEEKLY, the Unrivaled Literary Paper.

Each number of the NEW YORK WEEKLY is illustrated from designs by the best artists, and it publishes double the amount of reading matter of any paper of its class. The Stories, Sketches, Poems, etc., are from the pens of the ablest writers of America and Europe.

Our aim has been, and shall continue to be, to make the NEW YORK WEEKLY a favorite in the home circle, a welcome visitor in the workshop, in the cars, and on every way of travel. We do not alone confine its usefulness to whiling away an idle hour, but struggle to make it a means of instruction, presenting in a popular garb the results of the investigations of scientific men. The NEW YORK WEEKLY is emphatically a Paper for the Million, seeking to advance the best interests of the entire community, doing all in its power to make them better, more intelligent, and happier, and it is not controlled in the interests of any clique or faction.

To make the NEW YORK WEEKLY a fund of pleasure for all classes and ages, in addition to the Great Serial Stories we publish from Eight to Ten Stories and Sketches in every number, and also Half a Dozen Poems from the pens of Poets of high reputation.

The Departments of the NEW YORK WEEKLY have gained a high reputation for their thoroughness, excellence, and general correctness of statement.

THE PLEASANT PARAGRAPH is made up of the concentrated wit and humor of a great variety of persons. The jokes are not old and stale, nor rehashes of ancient Joe Millerisms, but the spontaneous outbursts of natural humorists—many of whom bid fair to rival our great comic contributors: Josh Billings, Q. K. Philander Doesticks, P. B., and John Quill.

THE KNOWLEDGE BOX.—This department is confined entirely to giving useful information. The recipes are original and culled from books, and the information conveyed through it could not be obtained from a whole library.

INTERESTING ITEMS.—News of events of importance in all parts of the world, stripped of all verbiage, and presented in the plainest, most condensed, and readable shape possible.

GOSSIP WITH READERS AND CONTRIBUTORS.—A free and easy talk with correspondents, in which good advice is given, and all questions propounded by inquiring minds are answered in pointed and courteous language.

Now is the time to Subscribe for the NEW YORK WEEKLY, "The People's Favorite."

OUR TERMS.—The NEW YORK WEEKLY is sold by News Agents throughout the United States and the Canadas. The price is six cents, but where agents have to pay extra freight, a higher price is charged. We desire our friends to purchase from News Agents where convenient. When sent by mail: Single copies, \$3 per annum; four copies, \$10, which is \$2 50 a copy; eight copies, \$20—the person sending us \$20 for a club of eight, all sent at one time, will be entitled to a copy FREE. Postmasters and others who get up clubs can afterward add single copies at \$2 50 each.

The NEW YORK WEEKLY and ILLUSTRATED LITERARY ALBUM will be sent to one address for \$6 a year.

Post-office Box, No. 4996.

American Artisan and Patent Record.—New Series.

The *American Artisan*, now in the fourth year of its publication, is a Weekly Journal, devoted to fostering the interests of Artisans and Manufacturers, encouraging the genius of Inventors, and protecting the rights of Patentees.

Each number contains numerous original engravings and descriptions of new machinery, etc., both American and Foreign; reliable receipts for use in the field, the workshop, and the household; practical rules for mechanics and advice to farmers; "Mechanical Movements," and other useful lessons for young artisans; the official list of claims of all patents issued weekly from the United States Patent Office; reports of law cases relating to patents, etc.

Each number of the *American Artisan* contains sixteen pages of instructive and interesting reading matter, in which the progress of the arts and sciences is recorded in familiar language. Twenty-six numbers form a handsome half-yearly volume. The columns of the *American Artisan* are rendered attractive by articles from the pens of many talented American writers upon scientific and mechanical subjects.

Terms of subscription: Single copies, by mail, per year, \$2 50 in advance. Single copies, by mail, 6 months, \$1 25 in advance. The publishers of the *American Artisan* are also extensively engaged as Solicitors of American and Foreign Patents, and will promptly forward to all who desire it, per mail, gratis, a pamphlet, entitled "Important Information for Inventors and Patentees." PORTRAIT OF CHARLES FRANCOIS GOUNOD.

CHARLES FRANCOIS GOUNOD.

GOUNOD has a symmetrical face, a face indicative of the artist. His temperament partakes of the motive, in good proportion with much of that sanguineous element which inspires animation and sprightliness intellectually, and a love for physical enjoyment and society. He is possessed of much imagination and constructive ability; and a strong development of the organs of Mirthfulness and Tune is apparent.

The whole physiognomy evinces cultivation, affability, and polish. In fact, it is said that his graceful manners and easy politeness make a lasting impression on all who come in contact with him.

He was born in Paris, June 17th, 1817. Like most eminent musicians, he very early in life manifested much musical precocity, and was afforded by his parents the means for cultivating his gift. He studied chiefly under the direction of Halévy, the distinguished composer, and at the age of twenty-one composed the cantate "Ferdinand," receiving for it the first or "Roman" prize, awarded by the French Government to young musicians. The recipients of this prize were entitled to draw a stipend from the Government to defray the ex-

penses of a three-years' course of musical training in Rome. As the composer of the opera "Faust," his name has become familiar "as household words" throughout Europe and America, that opera being one of the most popular among those produced on the musical stage.

Another composition of Gounod's is "Romeo and Juliet," which is better known in Europe, where its performances are said to have received the most flattering welcome.

Gounod resides in Paris, and lives in splendid style.

PHILANTHROPY DURING THE LATE WAR.—

Though the taxes levied and collected during the war were heavy, the voluntary benevolent contributions by the people for the aid and relief of the soldiers and their families have amounted to over one hundred and eighty millions of dollars (187,209,608). The contributions for the care and comfort of soldiers by associations and individuals have amounted to over twenty-four millions of dollars (24,044,865). The contributions at the same time for sufferers abroad have been \$380,140, and the contributions for freedmen, sufferers in the riots of July, 1863, and for the white refugees, have been \$639,644, making a grand total, exclusive

of the expenditures of the Government, of more than two hundred millions of dollars (212,274,259).

This work of "Benevolence" we believe to be unparalleled in the history of nations; indeed, we do not remember that the thing on a similar scale has been even so much as attempted. In England, during the Crimean war, and in Germany during the struggle against Napoleon, men and women did much for the comfort and relief of their armies; but nowhere else we believe have such spontaneous and systematic exertions been made, or such grand results accomplished, as in the United States. Nor were the "people" of the South less generous or less patriotic. Such heroic sacrifices as many of them made were worthy of the highest humanity. It is true that many acts of great wickedness and barbarity were committed by brutal men; still, benevolence was often manifested by whites and blacks in the fullest measure. But the grand significance of these contributions lies in the deep and almost universal devotion thus manifested by the people in the cause at stake. All classes have taken part in them,—the widow with her mite, the rich merchant with his thousands, the children of the Sunday-school, the settler of the backwoods, and the American roaming in distant lands, and, for once, unanimity inspired by enthusiasm and a noble patriotism was evinced. If it really is "more blessed to give than to receive," these contributors have indeed made a good investment in the way of "laying up treasures in heaven."

COMING WINTER.

ALL pallid lowers the southern sky
Its mist-like, dew-damp folds;
All bleak and lone the trees stand up
Out on the barren wolds.

The hills now weep for beauty shorn;
The vales all yellow lie;
No more the angels' rosy breath
Will tinge the western sky.

Their purple mantles, fringed with gold,
Will sweep the air no more,
For sadly, mutely, listening low,
They've passed through heaven's door.

And earth is left to winter's reign—
That dark and dismal night.
Earth's softest beauty swift hath fled
To realms of golden light.

Man, know thyself. All wisdom centers there ;
To none man seems ignoble, but to man.—Feng.

HENRI ROCHEFORT,
EDITOR OF THE "LANterne."

HERE is a young, wide-awake, clear-minded, highly educated, outspoken, incautious, frank, free, "high-pressure," republican Frenchman. He has a sort of no-fear, don't-care expression, which would look even an emperor in the face and say, "Who are you?" He is versatile, racy, emphatic, combative, sarcastic, critical. How much of the milk of human kindness, how much humility, penitence, or compunction he possesses, this deponent sayeth not. His religion will not deter him from playing the mischief with aristocratic royalty, and self-elected legislators, emperors, and other upstarts. So long as he continues to ventilate the wickedness of his own country, we will say nothing to him about that Scriptural sarcasm,

PORTRAIT OF HENRI ROCHEFORT, EDITOR OF THE "LANterne."

namely, "Physician, heal thyself." He is young, and, it is hoped, will improve. We give below a sketch, mainly founded on an article entitled "Der Lanternemann," in *Der Gartenlaube*, a Leipsic publication.

M. Henri Rochefort, whose *Lanterne* has created the latest excitement in France, and attracted the attention of the intelligent in other European countries and in the United States, is the son of the Marquis de Rochefort Lucay, and has, as yet, only attained his thirtieth year. He is a tall, slender man, with a high forehead and well-defined features,

though the mustache partly hides the expression of the mouth.

Not being familiar with the history of his childhood, we are unable to say whether or not, at an early age, he exhibited any remarkable talent. As a boy, the accounts of him are meagre, and with the exception of one or two favorable mentions during his school-days, and one literary performance, in which a prominent Frenchman discovered the manifestation of an embryo genius, we have little satisfactory knowledge of him until he came upon the political field.

He was at one time one of the officers of the Prefect of the Seine, Haussmann, and afterward Inspector of Fine Arts. He attained, also, some note as a critic, in which he displayed the same fearlessness which characterizes him as a politician. In the course of a criticism of one of Gêrome's pictures, "The Execution of Marshal Ney," he happened to say that "no one ever merited death more than Ney, and that in going over to the standard of Napoleon, after the Emperor's return from Elba, he acted more from ambition than patriotism." The consequence of this plain speaking was a challenge from the Prince de la Moskowa, son of the Marshal. In his reply, Rochefort insists that a writer has a "perfect right to criticise the acts of eminent men," that he should be held personally responsible only for a misstatement of facts, and that if he can not be allowed to set forth his own opinion with regard to the public acts of the Generals of 1815 without fighting their descendants, then "we must lock up histories and put the keys in our pockets," and concludes the letter as follows: "There is a question of principle involved which I am unwilling to compromise. To comply with the request of the Prince de la Moskowa would be to accept the rôle of insulter, which I reject with all my force. I have fought, as perhaps you are aware, several duels, often for very trifling causes, but at least they did not affect the right of judgment. I consequently refuse to set a bad example to my colleagues—that is to say, I decline to give the Prince satisfaction by arms."

Rochefort finally entered journalism, first on *Charivari*, then on *Nain Jaune*, and afterward on *Figaro*. On the latter he remained for several years, and ranked as one of the most brilliant and best paid of its contributors; but a warning voice from the Minister of the Interior whispered that unless the ceaseless barking around the heels of government be stopped, the days of the *Figaro* would be numbered. To this event we owe the establishment of the *Lanterne*. Rochefort made a pretense of not believing this, and in his finely sarcastic style proceeded to illustrate the idea, holding it beneath the dignity of a Minister to command an editor into his presence in order to say to him, "You have a contributor who is distasteful to me. Get rid of him, or don't be surprised to find your paper meet a sudden death." Besides, this would offend against the articles of the Code, and must therefore be impossible. So he wrote to the Minister, "taking care to sweeten every line with compliments and to adopt a servile tone," asking permission to establish a political paper. The new law on the press passed, and M. Rochefort was at liberty to publish his paper on payment of a *sou* stamp on each copy. "He notes the alteration of the law, and says the Government have sold him the right to say all the disagreeable things he pleases about them at the rate of five centimes (about a cent) a paper."

There is truth in this, for of course the more disagreeable things he says the more the paper will sell, and consequently the more will be the revenue returned to the Government. But the *Lanterne* is established, and henceforth the name of Rochefort is famous. It is a weekly pamphlet of fifty-six pages in a red cover, "with a picture of an open lantern suspended by a rope," and said, by one of our magazines, to be, in size and external appearance, very much like a "dime novel."

Rochefort is the satirical representative of the *émeute* side of the liberal principle in the Second Empire. As a public man he holds nothing sacred. That he has done good service is, perhaps, unquestioned, but he might have done better service if his probing-knife had been of more finely tempered steel. He thoroughly enjoys his work, and enters into it with his whole heart. The *Lanterne* is entirely written by himself, and has obtained a popularity previously unheard of in France. The Emperor, the ministry, and all other government officials come in for a share of his wholesale contempt. But then he tells the truth about them, and that to their faces; a thing no man ever dared to do before—and the truth is what the people want to hear,—they have been famishing for it for years. A starving man does not stop to cavil at bread because it is made of wheat-meal instead of superfine flour.

The French people were startled by his intrepidity and brilliancy; he had their sympathy from the beginning, and was raised to the rank of a hero by his own daring, and the unjust action of the Government toward him. The *Lanterne* was in everybody's hands; when with the second number the circulation had reached 30,000, the administration forbade its sale at the newspaper stalls, and the next week the circulation ran up to 80,000, and since, to a 150,000, and it is estimated to have at least a million readers in all parts of France. The very name, says a correspondent of a New York daily, has come to be so popular that it is "of commercial value, so that dealers in matches, sweet biscuit, and other small wares, find it to their account to offer them to the public in wrappers printed and colored in imitation of the cover of the *Lanterne*."

In the mean time the forbearance of the Government ceased, and with No. 11 the police seized the greater part of the edition before it had left the hands of the printer, and "even snatched copies from the hands of persons reading it in the streets." The libelous Imperial organ, the *Inflexible*, had been unable to cope with the straightforward truth of Rochefort, and the police must be sent to its assistance. At last the officially sustained *Inflexible* had in preparation a new number in which it was no longer satisfied with attacking the editor of the *Lanterne* himself, but had coined a net-work of slanders which should reach him through his daughter, a little girl being educated in one of the best schools in Paris. This raised in him a storm of indignation, and after

having attempted by remonstrance, challenge, and every other legal means, to secure the suppression of the libel, he struck the printer, who, in consequence, immediately instituted a suit against him. The suit was decided against Rochefort, who now finds himself for this, and for the publication of Nos. 11 and 12 of the *Lanterne*, sentenced to twenty-nine months' imprisonment and a fine of 20,200 francs,—say \$4,040.

The impossibility of a liberal editor obtaining justice in Paris has been abundantly illustrated of late, and M. Rochefort can not be blamed that he has taken it into his own hands and fled to Brussels, from which city he issued No. 13 of the *Lanterne*, the light of which he evidently intends to keep shining. In this number he announces that he shall stay outside of France, "and change his place of residence from time to time so as not to bring neighboring nations into diplomatic embarrassments with his native country." No. 14, therefore, though published at Brussels, is dated from Amsterdam.

The *Independence Béige*, a week or two ago, publishes a characteristic letter from him, which admirably portrays the inconsistencies of royalty: "I had prepared for circulation in Paris, on Saturday, September 5, a number of the *Lanterne*, wholly and solely composed, from the first to the last line, of extracts from the political works of Prince Louis Napoleon, now Napoleon III. This number appeared so revolutionary to the many printers whom I asked to print it, that not one of them would dare to run the risk of doing so. The fifteenth number will, therefore, like the fourteenth, be published abroad."

In private life M. Rochefort is cordial and unpretending. He is also reported charitable, and it is certain that he gave 500 francs to the family of a fireman who recently lost his life while arresting the progress of a fire. It is with regret that we must add that he is excessively prodigal, so that little remains from the enormous income which he received during the gala days of the *Lanterne*, which still remains the hope of a large class of French liberals in spite of the vigilance of the authorities.

FRIENDSHIP REAL.—Some true heart has given expression to its generous nature in the following beautiful sentiment: "Never desert a friend when enemies gather around him. When sickness falls on the heart, when the world is dark and cheerless, is the time to try a true friend. They who turn from a scene of distress betray their hypocrisy and prove that interest moves them. If you have a friend who loves you and studies your interest and happiness, be sure and sustain him in adversity. Let him feel that his former kindness is appreciated, and that his love is not thrown away. Real fidelity may be rare, but it exists in the heart. Who has not seen and felt its power? They deny its worth who never loved a friend, or labored to make a friend happy."

PHRENOLOGY IN THE SCHOOL-ROOM.

[The following interesting address was delivered before the Wisconsin Teachers' Association, at Milwaukee, July 22d, by Mr. T. C. CHAMBERLIN, Principal of the Delevan High School. Aside from its intrinsic merit it is an encouraging exponent of the progress made by the only safe science of mental phenomena in that most important sphere of human endeavor—the instruction of youth.]

THE work of a teacher is the development and equipment of the mind. Mind is the substance or essence wrought upon. Mind is that which must be molded, expanded, and adorned. Mind is the *subject-matter* of the teacher's labors. A thorough knowledge of mind is, then, necessary to rational instruction. Can we rationally cultivate that of which we are ignorant? Can the engineer control and direct the mighty forces of steam without a knowledge of the parts and powers of his engine? Can the teacher control and direct the still more potent energies of the mind while ignorant of its faculties and their functions? Without a thorough knowledge of human nature, how are we better as teachers than the old alchemists as professors of chemistry? Without this knowledge, what are our methods but imitations of old-time customs; what are our innovations but hazardous ventures? Electricity was not, *could* not be controlled and utilized till its laws were known. So neither can mind be educated rationally without a knowledge of its laws. I have stated my subject—mental philosophy as an *aid* in teaching. I should have stated it, mental philosophy a *necessity* in teaching. For if there be successful teaching without a practical knowledge of human nature, it is the result of sheer good luck or scurvy imitation. And here I may state that by mental philosophy I mean simply a knowledge of human nature. What can be more absurd than the attempt to develop and furnish a mind of whose nature, composition, and mode of action we are ignorant.

PRIMARY REQUISITES.

We need, then, fundamentally, a clear apprehension of the faculties and functions of the human mind; not only of the human mind in general, in the mass of mankind, but in each individual pupil. It is not enough to know that the mind is composed of the intellect, the sensibilities, and the will, but we need to know to what extent, in what proportion, these severally exist in each pupil under our charge. We need to know what are the predominant and what the inferior faculties, in every case—in short, the entire mental composition of the child. And not only should we thus know the mental *constitution* of man in general, and our pupils in *particular*, but we should clearly understand how that constitution *acts*, and here also not only universally, but individually. It is not sufficient that we know how nine persons out of ten *will* act under given circumstances, if the tenth, who is our pupil, will act differently; we should know how that tenth one will act. All mankind have the same faculties, and these have the same functions; but they

are possessed by individuals in different degrees.

To know this difference is all-important to the teacher. I *repeat*, we should clearly understand these four things: The constitution of the mind in general; the activity of mind in general; individual mental composition; individual mental bias. But is such knowledge within our reach? Does nature reveal such a treasure-house of intellectual wealth? Has she furnished the data? This is the problem of the ages.

NATURE THE TEACHER.

On general principles, I answer yes. Great necessities in nature are always supplied from her own boundless resources.

Far back in the dim ages of geological history, when the earth was a vast wilderness or an untraversed sea, when no man existed, when not even a living animal walked the face of the earth to foreshadow his coming, nature foresaw his great necessities and garnered up her exhaustless stores. Side by side, layer upon layer, lie the iron and the coal, and deep beneath the springs of oil. And shall nature thus lavish her material supplies and neglect the infinitely weightier interests of the mental world? Has she thus favored the manufacturer and forgotten the educator? Nay, verily, the requisite materials, the needed data *are* given.

Every one has some way of judging human nature, and prides himself in being particularly expert in so doing. It is universally conceded that character is indicated somehow, aside from action, and that naturally. But if so, then it must be on the basis of natural law, for nature never acts otherwise. There should then be a system (discovered or undiscovered), based upon scientific principles, by which character may be known, through which the great educational necessity may be supplied.

THE TWO SYSTEMS COMPARED.

Let us examine the systems of mental philosophy that are now advanced. But two deserve our attention, and they differ widely in their mode of investigation and the results obtained, but are by no means contradictory. The first attempts by an investigation of the ordinary activities and special phenomena of mind to discover its faculties and their functions, and to present an analysis of the mind and its activities. It studies mind directly, without regard to its connection with matter, at least without making matter a medium of investigation. This system has appropriated the name mental philosophy, or "metaphysics." I shall use the latter term as being most distinctive. What are the contributions of this system to our necessities? An analysis of the mind and a sketch of its activities.

It, however, proposes no means of determining the psychical endowments or activities of the individual. The deductions of metaphysics are comprehensive rather than specific, as regards their application to man. Its value as an educational auxiliary must then be confined to generalities. This system presents a

noble study, the product of deep thought and severe intellectual application. Its consideration elevates, intensifies, and ennobles the mind. But while we thus admire, we must search elsewhere for that practical, specific knowledge of human nature that our necessities demand.

The second system to which our attention is directed differs from the preceding, fundamentally, in considering mind not separately, but in its connection *with* and manifestation *through* matter.

We know nothing of mind except in its relation to matter. Mind affects matter; matter affects mind. Nay, mind is the union of spirit with matter; or, rather, mind is spirit manifested through matter. Beyond the bonds of this matrimony we can not go. Divorce is death. Upon the condition of this relationship, this system, together with its investigations, is based.

So far as our observation goes, nature provides a specific organ for every separate function. The mind must, then, possess its organ, and if composed of distinct faculties having separate functions, these must each possess its organ. Pre-eminently is this true, since mind is spirit manifested through matter. This matter, then, is its organ.

This system claims that the brain is the peculiar organ of mental manifestation, and that specific parts of it are appropriated for specific manifestations; that is, each faculty of the mind has its cerebral organ. It likewise claims that whatever may be true of spirit, the essence of mind, *mental manifestation* depends solely upon the *size*, *quality*, *activity*, and other conditions of the brain or its organs. And further, that the location of these cerebral organs has, for the most part, been discovered; and that their size, quality, activity, etc., can be estimated approximately. It is unnecessary to state that this system, so richly laden with momentous truth, is known as Phrenology. And as I indicate a belief in its beautiful truths and their unsurpassed utility, it may perhaps be expected that I shall attempt to prove its principles, defend its theory, and refute its opponents; that I shall enter upon a train of metaphysical and physiological theorizing to establish its truth. I shall not do so.

PHRENOLOGY PROVED. HOW?

Phrenology was not born of theory, has not lived by theory, *will not die by theory*. Phrenology is the offspring of observation. It is based upon ascertained facts. To that test it appeals. By the decision of that test it *has and will* triumph.

If teachers desire proofs, no better field of investigation can be found than their own school-room. There, carefully, cautiously, and faithfully, compare the known characters of your pupils with their cerebral developments, and upon the result base your opinion. As educators, it befits us to investigate rather than assume to ascertain facts; to search out truth rather than bow to dogmas. Thus you should do with the claims of this science.

And yet a word of caution. Beware of the false prophet! Phrenology has been more maligned and vilified, and its progress and influence more retarded by pretended professors, either grossly ignorant or knavish, than by all other causes combined. There are scarcely twenty phrenologists in America capable of delineating character with reliable accuracy. Yet there are hundreds of pretenders, devoid of ability and honesty, who impose themselves upon the ignorance of the public, filling their pockets by cheating the community and libeling the science they profess. Of such Phrenology is as guiltless as patriotism is of bounty-jumpers, upon whom, as upon those vile hypocrites, let the anathema of anathemas rest.

WHAT IT HAS DONE.

But what are the contributions of this system of mental science? *An analysis of the mind and its activities both universally and individually.* Like metaphysics, it presents a statement of the mental faculties and their functions as they exist in all minds without regard to individual differences; in other words, the universal composition of mind. Unlike, and in advance of, metaphysics, it proposes by means of the conformation of matter which mind has molded in harmony with its own peculiarities, to present an analysis of any individual mind brought under examination. To illustrate: Both systems alike give that which is analogous to the universal anatomy of plant, root, stem, foliage, flower, and fruit. Metaphysics stops here. Phrenology proceeds to classify and describe its natural orders, genera, and species. To avoid mistake just here, however, it should be borne in mind that the classification of faculties in these systems differs somewhat, owing to a different basis of classification and mode of investigation.

Metaphysics divides the mind primarily into the intellect, the sensibilities, and the will; Phrenology, into the intellectual, semi-intellectual, moral, selfish, social, and animal faculties, the nomenclature indicating, in a measure, the difference. The former may be compared to chemistry, the latter to anatomy. Each phrenological faculty is capable of metaphysical analysis, just as each anatomical section is capable of chemical analysis. Thus, though the symptoms differ, they are no more contradictory than the sciences with which they are compared. They are in perfect harmony, and both necessary to a thorough knowledge of the mind; but for the practical purposes of the educator, the vast superiority and peculiar adaptability of the latter can not have escaped notice. Its peculiar fitness to aid in the selection of a course of study, the methods and manner of instruction, and especially in discipline and the exercise of personal influence, would seem almost to indicate that the design of nature was to aid us in our character-forming labors.

ON THE STUDY OF PHRENOLOGY.

"But can the ordinary teacher master and apply the principles of Phrenology so as to form reliable judgments of character?" This

question I would answer cautiously. Even if impossible, the science is still of inestimable value in enabling its teachers to *understand and appreciate* character, when and after it is manifested. It is a very difficult matter to fully comprehend the mental nature of a child, though that nature is exhibited in our presence day after day. Let our errors of judgment bear witness on this point. While a high degree of natural ability, thorough study, and extensive experience are necessary to the accurate delineation of the *details* of character, yet its *outlines* can be drawn with tolerable accuracy by the mere tyro. The industrious teacher, possessed of good perceptive, by careful study and observation in that place so favorable to such investigations—the school-room—may ascertain, with all necessary precision, the rational nature of his pupils. There are those, indeed, whose perceptive judgment is so unreliable as to render this untrue, but such are equally unfit to be teachers.

USE OF PHYSIOGNOMY.

But many and valuable as are the contributions of Phrenology to didactics, it is yet wanting in one important respect. For while it presents a clear delineation of natural character, it fails to point out, except in a limited degree, the *voluntary* character, the mental habits, influence of past circumstances, or, in common parlance, "the bringing up." To ascertain these facts, recourse must be had to a prospective science which, though not a system of mental philosophy, is yet allied to, in fact, is a department of it. I refer to Physiognomy. I say prospective science, because its principles, if indeed they are discovered, are not yet altogether satisfactorily demonstrated. That character is indicated by the features is generally admitted, and the fact universally utilized. When the fierce tornado bursts forth from the recesses of the mountains and sweeps across the beautiful face of nature, destruction marks its path, and ruinous traces reveal nature's passion. So when the fiercer furies of the mind break forth and cast their fiery mantle o'er the dial of the soul, the vestiges remain the tokens of their rage. Thus nature keeps her records.

But if character is thus indicated in the features, it must be in accordance with fixed rules, for this alone is nature's method. And when these rules have been discovered and demonstrated, then will physiognomy take its place as a department of mental science.

And while we wait in hope this important attainment, let us honor those zealous benefactors of their race who, without the praise of men, yea, even mid their jeers, are devotedly searching the unfathomed intricacies that involve the subject, and who are slowly lifting the veil that hangs over its dark mysteries. But though not a science, physiognomy can still be utilized. Though "the *how* and the *why*" may not be evident, we can still judge man "by the looks of him."

Thus are the demands of our necessities met. Thus from these three sources may we derive the basis of a thorough knowledge of human

nature, a foundation upon which observation and experience may rear a complete and perfect structure. "The mind of man is the noblest work of God." The study of that mind is the highest intellectual endeavor of man. The complete education of that mind is the noblest work of man.

To this work, fellow-teachers, we are called. For the achievement of these grand results we are responsible. To this work, then, let us come, armed with all the auxiliaries the broad field of science affords. Let us come *knowing ourselves*, and prepared to know our pupils. And when this shall be—when the educators of our land shall come thus equipped for the Herculean task, encouraged by good hearts and directed by clear heads, then will spring forth results far mightier than ever issued from the founding of empires, the crash of armies, or the subtle chicanery of diplomacy. Then shall be asked, "Who are the mighty?" And the glad tones of a grateful nation shall respond, "*The Educators.*"

MANHOOD AND ITS DEVELOPMENT.

It is said that Diogenes, the Greek philosopher, was once seen carrying a lighted candle through the streets of Athens; and being asked what he was doing, replied that he was "looking for a man." Tradition does not inform us whether or not he succeeded in the object of his search; and therefore we do not know what was his ideal of a *true man*, or what, in his estimation, was necessary to form such a character. But doubtless in some modern Athens many who would pass before his scrutinizing gaze would be dismissed with a smile of scorn or a contemptuous glance, as entirely unworthy of the name we give them.

Judging by the Christian standard, we think that where true manhood exists, but little note is taken of it, and where most of its higher elements are wanting, it is sometimes supposed to exist.

These things ought not thus to be; a person may be learned, or wealthy, or what people call religious, and yet lack much of being a genuine man. We are three-fold beings—physical, intellectual, and spiritual—and no one of these elements should be educated at the expense of the others, for the full development of all these is essential to the completion of the highest type of manhood.

As you gaze at the Capitol at Washington, you feel that it is a grand and magnificent structure, worthy of the great people by whom it was erected; but strike from it the lofty dome, and it becomes only a vast pile of stone. It may indeed still serve as a building in which the Congress of the nation can convene,—but its distinguishing feature is gone, its glory is departed. Remove the main body of the building, and the dome has no support—the lower foundation alone remains to tell the folly of the builder. Take from beneath the structure the foundation, and the whole mighty fabric tumbles into ruins. So is it with man.

If he do not cultivate the spiritual element, his mind remains dark, his life an enigma—no ray of light reaches him from beyond his earthly existence. He may be learned, may possess great genius, but the noblest element of manhood is wanting. If the intellect be undeveloped, the man is but an animal, with the physical nature neglected; he lives a whining, sickly creature, or dies before his time, his work but half accomplished.

All that is needful for our development we have. All that the body needs—light for the eyes, air for the lungs, harmonious sounds for the ear, and all the exercise necessary to develop the body to its greatest degree of symmetry and power. For the social sentiments, there are friends to love and cherish. For the intellect, there are the principles of science—the facts of history—the sublime inspirations of poesy—and the profoundest thoughts of philosophy. The spiritual sentiments can soar beyond nature into the realms of the infinite—drink from the fountains of Divine truth—and by the guidance of Divine love and wisdom exalt and glorify our social and intellectual life. We need this culture—this education; for without it we are slaves, like the caged eagle, with little life or vigor; every acquisition of knowledge we make gives us greater freedom. So it should be the great object of our lives to obtain this development.

But says one, Should it not be the great aim of life to labor for the advancement of the glory of the Creator, and the elevation of our fellow-creatures? True—but these are involved in the other. He who is most truly laboring for his Maker, does that which will give the highest development to his own faculties. For if we labor rightly, every stroke of work we do, every fact of science and history we gather, every noble aspiration or desire we have, every feeling of joy or delight that thrills us, every act of charity and kindness we perform, gives fresh power to our intellectual and spiritual nature. Our work is like that of Tennyson's "Lady of Shalott,"

"Who weaves, by night and day,
A magic web with colors gay,
And moving through a mirror clear,
That hangs before her all the year,
Shadows of the world appear.
And in her web she still delights
To weave the mirror's magic sights."

So with us, images of all the varied scenes through which we pass are woven into the texture of our characters.

To me, this is a work of delight that will cease not with time, but continue through the endless ages of the "Great Hereafter;" and if we perform our part rightly, with genuine faith and hope, the ideal will become the real, this realization surpass in brightness the most fondly cherished dreams of youth, and our lives be made radiant with a beauty that shall fade not, but prove indeed a joy forever.

ALFRED WHITE.

SATIRE is a glass in which the beholder sees the faces of others, but not his own.

CONCENTRATED PROGRESS OF THE WORLD.

Few phenomena are more remarkable, yet few have been less remarked, than the degree in which material civilization—the progress of mankind in all those contrivances which oil the wheels and promote the comfort of daily life—has been concentrated into the last half-century. It is not much to say that in these respects more has been done, richer and more prolific discoveries have been made, grander achievements have been realized, in the course of the fifty years of our own lifetime than in all the previous lifetime of the race, since states, nations, and politics, such as history makes us acquainted with, have had their being. In some points, no doubt, the opposite of this is true. In speculative philosophy, in poetry, in the arts of sculpture and painting, in the perfection and niceties of language, we can scarcely be said to have made any advance for upward of two thousand years. Probably no instrument of thought and expression has been or ever will be more nearly perfect than Greek or Sanscrit; no poet will surpass Homer or Sophocles; no thinker dive deeper than Plato or Pythagoras; no sculptor produce more glorious marble conceptions than Phidias or Praxiteles. It may well be that David, and Confucius, and Pericles were clothed as richly and comfortably as George III. or Louis XVIII., and far more becomingly. There is every reason to believe that the dwellings of the rich and great among the Romans, Greeks, and Babylonians were as luxurious and well appointed as our own, as well as incomparably more gorgeous and enduring. It is certain that the palaces belonging to the nobles and monarchs of the Middle Ages—to say nothing of abbeys, minsters, and temples—were in nearly all respects equal to those erected in the present day, and in some important points far superior. But in how many other equally significant and valuable particulars has the progress of the world been not only concentrated into these latter days, but singularly spasmodic in its previous march!

Take two of the most remarkable inventions of all time, both of comparatively modern date—gunpowder and printing. One is four, the other five, centuries old. How infinitesimal the difference between the fire-arms of the year 1400 and the year 1800! The "Brown Bess," the field guns, and the carronades with which Nelson and Wellington and Napoleon won their victories when we were young, were superior in little except readiness to the matchlocks and the cannon with which the barons of the Middle Ages fought out their contests, as soon as they had discarded the bows and arrows which had sufficed for mankind from the days of Thermopylæ, and earlier, to the days of Agincourt, and later. But now contrast the progress since 1840 with the progress of the previous five hundred years. Compare the needle gun of Sadowa, or the Chassepot rifle of Mentana, or the Enfield of our own troops,

or even the Minié of Inkerman, with the common musket which the veteran pedants of the Duke of Wellington's army could scarcely be persuaded to discard. Compare the Armstrong, the Blakesley, or the Whitworth ordnance of to-day—with their almost boundless caliber, their terrible projectiles, their marvellous precision, and their three-mile range—with the round shot or shell fired from the field pieces which battered Badajoz and St. Sebastian. It is probable that within fifty years from the first application of gunpowder to war, the destructive power of the fire-arms then invented was nearly as great as that of those used in the reign of Napoleon. It is probable that we are now within far less than fifty years of the furthest point to which the conditions of matter will permit that destructive power to be carried.

Then as to printing. The books printed within five-and-twenty years after the first use of movable types were as clear, as perfect, as beautiful specimens of typography as any that were produced five-and-twenty years ago. A little more rapidity and a great deal more cheapness make up, perhaps, the sum-total of the improvements in the typographic art between the time of Caxton and the time of Spottiswoode. But within the memory of those still young the wonderful art of rapid stereotyping has been introduced; and to this alone it is owing that newspapers are able to supply the demands of their hundred thousand readers. It would be of course impossible to compose more than one set of types within the very few hours allowed for the supply of each day's demand. It would be equally impossible to print off from that one set more than an eighth or a tenth part of the number of copies which the leading papers are required to furnish within three or four hours. But by *casting* from the first composed types as soon as completed, any number of fac-simile blocks can be produced, and from these, by the help of circular machines, an indefinite number of impressions can be struck off in an almost incredibly short space of time. Twelve thousand copies an hour, and even more, can, we believe, be easily produced by each machine. The multiplication thus rendered feasible is practically almost unlimited.

But it is in the three momentous matters of light, locomotion, and communication that the progress effected in this generation contrasts most surprisingly with the aggregate of the progress effected in all previous generations put together since the earliest dawn of authentic history. The lamps and torches which illuminated Belshazzar's feast were probably just as brilliant, and framed out of nearly the same materials, as those which shone upon the splendid fêtes of Versailles when Marie Antoinette presided over them, or those of the Tuileries during the imperial magnificence of the first Napoleon. Pine wood, oil, and perhaps wax, lighted the banquet halls of the wealthiest nobles alike in the eighteenth century before Christ and in the eighteenth century after

Christ. There was little difference, except in finish of workmanship and elegance of design—little, if any, advance, we mean, in the illuminating power, or in the source whence that power was drawn—between the lamps used in the days of the Pyramids, the days of the Coliseum, and the days of Kensington Palace. Fifty years ago, that is, we burnt the same articles, and got about the same amount of light from them, as we did five thousand years ago. *Now*, we use gas, of which each burner is equal to fifteen or twenty candles; and when we wish for more, can have recourse to the electric light or analogous inventions, which are fifty-fold more brilliant and far-reaching than even the best gas. The streets of cities, which from the days of Pharaoh to those of Voltaire were dim and gloomy, even where not wholly unlighted, now blaze everywhere with something of the brilliancy of moonlight. In a word, all the advance that has been made in these respects has been made since many of us were children. We *remember* light as it was in the days of Solomon; we *see* it as Drummond and Faraday have made it.

The same thing may be said of locomotion. Nimrod and Noah traveled just in the same way, and just at the same rate, as Thomas Asheton Smith and Mr. Coke, of Norfolk. The chariots of the Olympic Games went just as fast as the chariots that conveyed our nobles to the Derby, "in our hot youth, when George the Third was king." When Abraham wanted to send a message to Lot, he dispatched a man on horseback, who galloped twelve miles an hour. When our fathers wanted to send a message to their nephews, they could do no better, and go no quicker. When we were young, if we wished to travel from London to Edinburgh, we thought ourselves lucky if we could average eight miles an hour,—just as Robert Bruce might have done. *Now*, in our old age, we feel ourselves aggrieved if we do not average forty miles. Everything that has been done in this line since the world began,—everything, perhaps, that the capacities of matter and the conditions of the human frame will ever allow to be done, has been done since we were boys. The same at sea. Probably, when the wind was favorable, Ulysses, who was a bold and skillful navigator, sailed as fast as a Dutch merchantman of the year 1800, nearly as fast at times as an American yacht or clipper of our fathers' day. *Now*, we steam twelve and fifteen miles an hour with wonderful regularity, whether wind and tide be favorable or not;—nor is it likely that we shall ever be able to go much faster. But the progress in the means of communication is the most remarkable of all. In this respect Mr. Pitt was no better off than Pericles or Agamemnon. If Ruth had wished to write to Naomi, or David to send a word of love to Jonathan when he was a hundred miles away, they could not possibly have done it under twelve *hours*. Nor could we to our own friends thirty years ago. In 1867 the humblest citizen of Great Britain can send such a mes-

sage, not a hundred miles, but a thousand, in twelve *minutes*.—*London Spectator*.

[The writer might have continued his illustrations concerning the concentrated progress of the world. He could have named the cotton-gin, spinning-jenny, safety lamp, steam-plow, ether and nitrous oxyd, modern surgery, the sewing-machine, the reaper and mower, electro-magnetism, the great improvements in the telescope and microscope, and the most wonderful of all, the art of photography. And may we not mention in this connection the development of Phrenology? May we not claim for it a scientific method of character-reading? and the happiest influences on our modes of juvenile education, the treatment of insanity, imbecility, and of criminals? Is it claiming too much for this comparatively new discovery to assert that it promises—when generally understood—to prove a blessing of incomparable importance to mankind. Here is what GEORGE COMBE, author of "The Constitution of Man," said of it:

"I speak literally, and in sincerity, when I say, that were I at this moment offered the wealth of India on condition of Phrenology being blotted from my mind forever, I would scorn the gift; nay, were everything I possessed in the world placed in one hand and Phrenology in the other, and orders issued for me to choose one, Phrenology, without a moment's hesitation, would be preferred."

HENRY WARD BEECHER says: "I regard Phrenology as far more useful and far more practical and sensible than any other system of mental philosophy which has yet been evolved."

But even Phrenology is not *all* we need to know, though we commend it as of inestimable value. We are to use the faculties God has given us for the further development of earth's resources. We are, by the inventive faculties, to turn water, air, the winds, the tides, electricity, magnetism, and other natural agencies, to the further use of man. It is not improbable that greater discoveries and greater inventions than have yet been made will be opened up to the eager scrutiny of present civilization.]

"JUST"—NEITHER MORE NOR LESS.

"Love worketh no ill."

WHAT is it to be truly just,
When fully 'tis defined?
And who dares say that he himself
Is just to all mankind?

To say one's just, is a small thing
When we don't weigh the thought,
But quite another thing to be
On scales of justice brought

When every sin of every hue
Has weight, and form, and size,
When take means theft, love means do right,
And all untruths are lies,—

When thoughts, and words, and acts conjoin
To form one whole, however small,
Though there be bud, and flower, and fruit,
The germ contains them all.

In the strict sense, are any just?
God knows—and so might we,
If we but brush the mists away,
That we may plainly see.

To do by one what's *mainly* just
When we our wishes please,
Is not enough to make us just,—
'Tis only loving ease.

But if we'll speak the truth of all,
Whether we please or not,
If we will *act* the truth in full,
All biases forgot;

If we are true to the unjust,
E'en when they are unkind,
And state each case *JUST* AS IT IS,
By zeal nor hate made blind;

And then, if to all this we add
Those finer shades of thought,
With delicacy and love combined
Do all the "Just One" taught,—

Then may we claim the title "*just*,"
Applied to mortals here,
And fearing naught that may assail,
May, with a conscience clear,

Stand rock-firm 'mid all shocks of time,
Unmoved amid dismay,
And linking this with life to come,
March forth to endless day.

'Tis well "all evil to abhor,"
And yet love one another;
To "cleave to all that's pure and good,"
Let's aid—not wrong, a brother.

G. A.

LIGHT LITERATURE.

THERE is a class of readers who make it a special business to con every new novel that "comes out" (that very properly expresses their origin—as with the Topsyies who were not born but "grewed"), to the end that they may get together and rehearse the rapid and stale flights of modern flash writers; and if, by accident, some person who devotes his time to delving in mines of rich and useful learning stray into their presence, he is intolerably bored by the questions, "Have you read 'Jack the Giant Killer' or 'Mother Goose's Melodies'?" or something equally profound. Of course the stranger is compelled to say "*No*" to every one of a long series of like questions, slightly indignant that he should be suspected of being "accomplished" in this kind of "literature," and every answer elicits the ejaculation of surprise, "*Why!*" This process is continued by these Chesterfields, who are delighted to find an occasion to ventilate their polite culture, because they mistake their victim's silence of contempt for the embarrassment and confusion which the ignorant experience in the presence of the erudite, until they have exhausted their capital, whereupon they abandon him as illiterate.

A man who can stand this inquisition without losing his temper, or getting entirely disgusted with those whose minds are so shallow, that a long-drawn, sickish "love-story" can satisfy their deepest longing, and without telling them all about it right on the spot, is a paragon of Christian forbearance, and should have a leather medal hung to his neck with a life-sized calf stamped upon it.

Let no one venture into one of these "first circles" unless he is as copiously stored with this light literary ballast as "The Admirable Crichton" was with a learning of as different character as it was less "genteel." Let him be deeply read in the "Arabian Nights," "Gil Blas," and "Widow Bedott," and by no means let him presume upon a half-century's study of the sciences as an equivalent for the achievements of a few hours' superficial devotion to what is rightly called "*light literature*!"

JOHN DUNN.

On Physiology.

A knowledge of the structure and functions of the human body should guide us in all our investigations of the various phenomena of life.—*Cuba*.

My people are destroyed for lack of knowledge.—*Isaiah* iv. 6.

THE BODY—WHAT IS ITS KING?

BY A. A. G.

It is a universal law that subjection, to a certain extent, is liberty. A land where every man might do just as he chose, without fear of jail, States prison, or hemp, would be a land of slaves, for every man in it would be in complete subjection either to his own passions and appetites, or to the passions and appetites of others; and boasted freedom would be nothing more or better than unendurable slavery. In a family where there is no law, but where father, mother, and child may act without restraint, there is no freedom to be enjoyed. If the parents have not made it a law that their own passions shall be controlled, their tempers subdued, and their whole being brought into obedience to all that is good and right, they will not only wear the chains of slavery themselves, but will compel their children to wear them. And if the children strike for freedom by trying to break away from wholesome restraint; if the older ones long for the liberty to do just as they choose; and, at last, by deception and falsehood, or some kind of artful management, or by open rebellion, attain the coveted freedom, they will soon feel the weight of the heaviest chains. If Susy, the little three-year-old—and Tommy, in his sixth year, and almost a man—grow joyful in anticipation of their mother's absence—if they say: "She's going out this afternoon, and we shan't have her to watch us, and we'll eat all the sugar in the sugar-bowl; and then we'll put our hands up to our elbows in her six-quart jar of plums;" if they revel in the prospect of such glorious freedom, and at last gain it, they will find themselves reduced to the most pitiable slavery. They may not be tied up to the bed-post, or put into the bed, or punished with stripes, for mother may, possibly, not miss her sugar or sweetmeats, but they will miss the comfortable feelings they had in their stomachs in the morning, and they will find themselves carrying around more sugar and plums than they know how to carry; they may not be conscience-smitten, but they will feel all the misery of subjection to an overloaded stomach.

It is a law, a law from which no man, woman, or child in all the length and breadth of the world can be safely released, that subjection to a certain limit is liberty, the highest liberty, and the sooner every one knows and believes it, and yields himself to the law, the sooner will true liberty be enjoyed.

Now, how far is this law acknowledged and obeyed? The world—at least the Christian world—confesses that God's law is holy, just, and good; that we ought to receive him as our king, as our righteous sovereign; that we ought to strive after spiritual redemption; that, indeed, there is no spiritual redemption for those who break loose from the restraints of God's law. But men, even Christian men, treat lightly those laws upon which physical redemption, or more particularly the redemption of the *body*, depends. They believe most firmly in that subjection of the soul without which its purity and perfection can not be reached. They think it a great sin to lie, or steal, or swear, or cheat, or build up a fortune by dishonesty; it makes their blood curdle to think of riches gained by robbing widows and orphans. They talk well about the guilt of a man who sins against his *immortal* nature by breaking God's laws. They have correct ideas—ideas which they try to put in practice—about the dignity of the *soul*, and our duty to work with God in bringing it to the highest possible point of perfection. In their view, no subjection that advances the soul in purity and all goodness can be too great. But, what about the *body*, the much despised *body*? Ah, it is nothing but the *body*. Made of dust, it will soon return to dust. Let it live out its brief period without knowing or yielding to any righteous law. Let the stomach—the worst of despots—rule the body! Let the stomach be king! It is an indisputable fact that the stomach wields the scepter in almost all human bodies. It makes the laws and enforces them, and its sway is complete. Hundreds and thousands, it is true, refuse to bear the yoke and become free men, but millions bow their necks to it, and wear it till they die.

A man, well known to fame for all the good that he does for the poor, whom he befriends and helps—building asylums and places of retreat for them, and paying for them debts that a stern creditor will no longer let remain unpaid—a man who is, in many respects, a king among men, will remain all his life a slave to his stomach. Hear him answer some plain questions put to him so directly and pointedly that he can not get away from them:

"How long have you had dyspepsia, sir?"

"Twenty years, and I expect to have it till I die."

"If he would only give up his strong coffee," quietly remarks the anxious wife, "he would soon be free from dyspepsia."

"Ah, strong coffee! Do you drink strong coffee, sir?"

"Yes; I've taken it, every morning, for twenty-five or thirty years."

"Do you think it hurts you?"

"Well—well—yes. Physicians say that it is very enfeebling to some stomachs, and my physician says I had better stop it,—at least try going without it for a while."

"Have you ever tried doing without it?"

"Yes; I've dropped it occasionally for a few days; but what is a breakfast without coffee? why, nothing more than an egg without salt—just the most unattractive thing in the world. Really, I should never care for any breakfast if I couldn't have my coffee. It makes such a cheerful, comforting breakfast; and the fact of it is, it is useless for me to try to give it up."

Now, here is a man, whose body was made for great and glorious purposes, lying down at the feet of a tyrant, consenting to be a slave to his stomach, sinning against every organ in his body, and spreading the ruin into his soul, for he has grown nervous, irritable, impatient. He gives his wife short answers, scolds at the children, threatens to give Harry a whipping if he "don't stop riding around the room on that cane," and finally does it, because Harry is a boy brim full of fun, and can't "stop riding around the room on that cane." For a brief, momentary pleasure he spreads ruin through all his being, and discomfort through his family. To quiet his conscience he sometimes says to himself: "Nobody knows positively that coffee is injurious;" but still it is his honest conviction that, however harmless coffee may be to many others, it is injurious to *him*. And yet he drinks it; and he will drink, drink, drink till he dies. He allows his whole body and soul to be in the grasp of the stomach.

Ask him if God is not the rightful sovereign of all bodies. "Oh, yes," he answers. "And has not God given every man a mind, and appointed that mind to rule the stomach and the whole body?"

"Yes, most certainly; but what can a man do with a habit that has been growing and strengthening for twenty-five or thirty years? I *must* have my coffee."

Surely the man who allows his stomach to rule is so far from what God intended he should be, that he isn't half a man. A *willing* slave has very little of manhood in him, for men who aspire to *manhood* desire liberty, and strive and toil to break all chains, not only from others but from themselves.

The willingness with which men and women consent to be under the power and in the strong grasp of the stomach is almost inexplicable.

Here is Mrs. —, and she is no imaginary character—but a woman, now dragging out a miserable existence in the world. Her stomach has worn her out. She has yielded to all its unreasonable demands. She has given it rich pastry, plum puddings, late suppers, and everything it has asked for. She has enthroned it in her body as king.

Children, as well as older people, are in bondage to the stomach. They are not taught resistance to tyrants, and as often as the usurper cries Give, give, give, so often do they give. Sometimes it is bread and honey between

meals, sometimes hot biscuits for tea—anything, everything that the stomach insists upon having.

‘And when the question is asked: “Who or what is king of the body?”—men, made in the image of God, are compelled to answer: “The Stomach!”’

THE ABUSE OF DRUGS.

[The Philadelphia *Medical and Surgical Reporter*, an excellent journal of the “regular school,” publishes the following very sensible article, by a physician, and we feel it a duty to our readers to re-publish the same for their edification. Read it, and learn to let “well enough alone.”]

There is undoubtedly no profession in which a man obtains more insight into the follies and foibles of human nature than the medical. What physician, for instance, does not know numbers of people who are continually injuring themselves with different kinds of intemperance, which means overdoses of the good things of this world,—the natural food, the procreative instinct, or what is the worst and most common among civilized nations, overdoses of drinks; others, on the contrary, who have very good intentions, and aim at the preservation of their bodily health, are continually doctoring themselves with quack medicines; or some of the latter class, having a wholesome dread of such remedies, study a dispensatory or other medical book, hunt in it for remedies which might do them good, or for symptoms which they think to observe in themselves. Medical students and young practitioners sometimes fall into such illusions. But what, then, must we say of middle-aged, well-established regular physicians (as I know some in this city) who are so weak-minded as to have no trust in nature, but are continually doctoring themselves not alone, but using quack medicines, quack lotions and ointments, notwithstanding they prescribe in orthodox style for their patients. It is a trait in weak-minded human nature to have more faith in *mystery* than in things well understood, and this explains as well the success of superstitious religions as that of quackery, the belief in the possibility of the growth or existence of frogs and snakes in the human body, etc.

People who have the habit of immoderate eating usually think that the human body needs a periodical cleaning out every two or three months, like a house; they can not possibly be persuaded that by moderate and temperate habits man may go on in a healthy state without these periodical cleanings, and that moderate exercise in the free air, combined with a proper watchfulness about the peculiarities of the system, in the agreeing and disagreeing of certain kinds of food and drink, the avoiding of all imprudence in this respect, as well as over-exertion and exposure to cold and dampness, may prevent most indispositions, and make those cleanings and druggings unnecessary.

[We know of a number of families in which doses of salts are administered to each member, whether well or ill, every spring and fall; the same chemical compound being given also to horses, and for the same purpose.]

I know that some will say that the existing circumstances which are chiefly due to the lack of common sense in the great majority of the people are rather favorable to the medical profession; and I answer, that this may be true. But I speak here not as a man who narrowly-mindedly seeks to increase, at any cost, the profit of his trade; I take, as a philanthropist, in regard to these matters, a higher point of view, looking at the promotion of the well-being of the whole human race.

Another thing which many a practitioner undoubtedly has experienced is the dissatisfaction of the members of his own family about his treatment of them; they have often a notion that because pa is a doctor, he ought to know some remedy to cure at a short notice (at least in his own family) every disturbance in health, as they think that surely there must be a quick remedy for every disorder, which a doctor ought to know, and that nature and time go for nothing. When pa honestly tells them his persuasion, that they do not want [need] anything, but must have patience, and take care of themselves, he gets the reproach that he is inactive or indifferent toward his family; that Mrs. A. or Miss B. surely would get a prescription of him in a similar case, and if pa is honest enough he can not deny this accusation.

The writer of this article could never persuade the members of his own family to use as little medicine as he uses himself; he pleads guilty of the reproach that old doctors never swallow their own medicine, and he mostly charged some of his colleagues with the treatment of the members of his family, and of himself, when this occasionally became necessary.

And here we reach an important point for the practitioner, namely, the advice never to prescribe for one's own person, when the trouble threatens to be of the least serious character.

We are educated to observe symptoms in others, not to observe our own; to prescribe with cool and sound judgment for others when sick,—not to prescribe with a judgment disordered by disease, for ourselves; besides this, our own feelings about the symptoms are illusive in the highest degree, our cool judgment is not only interfered with, but entirely upset by a simple transitory attack of fever; and even if this is not the case, we have our prejudices, likes, and dislikes, and can not possibly be as impartial in applying the rules of our divine art to ourselves, when applying them to others. Our feelings may be so distressing that we think ourselves worse than we are, and *vice versa*, if of a consumptive predisposition; in the latter case we may prescribe imprudently.

The writer once went through an attack of typhoid fever, contracted by contagion from a

patient, and his mind was so disturbed that he was utterly unable to make his own diagnosis,—really surprising in a disease so easily recognized; he did literally not know what was the matter with him till it was communicated to him by a colleague, who successfully carried him through an illness of more than six weeks' duration; this same colleague, two years afterward, unfortunately succumbed by the same disease; he prescribed for himself! He was a young and very able practitioner, and the writer is surely not the only one who remembers him with gratitude.

It may be interesting, in this connection, to mention a case in which the abuse of drugs was the cause of much trouble; the latest report, extracted from a letter, is this:

“After having had three different prominent physicians, each of whom was recommended by the former, when this one had, after his own admission, exhausted his skill, we found that when taking a remedy for one thing, another thing got worse, or a new trouble was created; so we have come to the conclusion to abandon all medicine, and trust to good nursing and a comfortable life; we tried this for the last six weeks, and the result is thus far very favorable.”

[When will the poor bedrugged people learn this *truth*,—that the *less* medicine they take, the better? What a sweeping away of pills, tinctures, bitters, and other slops, will be made when their utter worthlessness is acknowledged!]

ADVANTAGES OF CRYING.

We know how much relief is experienced by the grief-worn heart if it can vent its deep emotion in a gush of tears. Appreciating the philosophy of tears, a French physician publishes a long dissertation on the advantages of groaning and crying in general, and especially during surgical operations. He contends that groaning and crying are two grand operations by which nature allays anguish; that those patients who give way to their natural feelings more speedily recover from accidents and operations than those who suppose it unworthy a man to betray such symptoms of cowardice as either to groan or cry. He tells of a man who reduced his pulse from one hundred and twenty-six to sixty, in the course of a few hours, by giving full vent to his emotions. If people are at all unhappy about anything, let them go into their rooms and comfort themselves with a loud boohoo, and they will feel a hundred per cent. better afterward. In accordance with the above, the crying of children should not be too greatly discouraged. If it is systematically repressed, the result may be St. Vitus' dance, epileptic fits, or some other disease of the nervous system. What is natural is nearly always useful; and nothing can be more natural than the crying of children, when anything occurs to give them either physical or mental pain. Probably most persons have experienced the effect of tears in relieving great sorrow. It is even curious how

the feelings are allayed by their free indulgence in groans and sighs. Then let parents and friends show more indulgence to noisy bursts of grief—on the part of children as well as of older persons—and regard the eyes and the mouth as the safety valves through which nature discharges her surplus steam.

PHRENOLOGY IN THE WEST.

FRANCIS WILLIAMSON, M.D.

Among the pioneers of this science in the rural districts of the West, and one of its most devoted advocates, is Doctor Francis Williamson, whose portrait accompanies our sketch.

His organization impresses us by its breadth and strength. Those elements which contribute force, energy, and emphasis are eminently his, while the tall forehead shows an ample moral endowment. The organs of Comparison, Causality, Individuality, Ideality, Firmness, Veneration, Benevolence are evidently among the largest in his brain; and some of the characteristics resultant from their influence are, a strong disposition to thoroughly investigate whatever engages his attention, excellent powers of generalization, an appreciation of the esthetics of social life and literature, a strong will, much independence and originality of sentiment, and a good degree of kindness and liberality. He is a good specimen of the vital temperament in sufficient strength to meet the demands of a vigorous mentality and a large frame; his abundant recuperative forces supplement an excellent balance of the organization.

Francis Williamson was born on the 14th of November, 1812, at Manney's Neck, North Carolina. His father, of the same name, was an extensive slaveholder at one time, and for twenty years a clergyman of the Christian denomination, a liberal thinker, and a progressionist in advance of his immediate contemporaries, for he liberated his slaves, sending some to Liberia, while others remained in this country. At an early age the son was sent to school; he received the major portion of his education at Murfreesboro, North Carolina, under the direction of excellent teachers.

He cultivated an early taste for literary works. In 1836 he taught a classical school in Hanover County, Virginia, and reviewed his classical studies, thus fixing them permanently in memory, after which he read medicine with Dr. Trezrant, of Jerusalem, Virginia. He attended a course of lectures at the Medical School of the University of Pennsylvania, and took the degree of M.D. in 1835. His mind, at an early age, betrayed that intuition in the analysis of character which culminated in his investigation of the rich and inexhaustible domain of Phrenology. While attending the Medical School, Professor Horner, in the course of a lecture on the anatomy of the brain, told the class that Drs. Gall and Spurzheim had reflected much light on the true anatomy of the brain, and rather encouraged the class to study closely the

temperament and organology thereof. This stimulated Dr. Williamson to an immediate and more close observation of character. He noticed one man in that class who was very sly and secretive, and who would appeal to the lowest prejudices to accomplish his concealed plans. Looking at his head he found the region of Secretiveness large, while Conscientiousness and Self-Esteem appeared small. This correspondence of brain contour and character lead him to more extended investigation, until he was convinced of the truth of Phrenology.

In 1837-8 he traveled over the Western States, lecturing on his favorite theme, Phrenology; and among the many incidents which

FRANCIS WILLIAMSON, M.D.

relieved the monotony of his journeyings, and which served more deeply to impress the truth of this science on his mind, was one of his being mobbed for simply saying in a lecture that the brain was the organ of the mind. He visited jails, lunatic asylums, and penitentiaries, traveled over twenty States of the Union, and lectured before literary institutions.

He has been a successful practitioner of medicine for twenty-eight years. Where he finds a large cerebellum with a bilious-sanguine temperament, he claims that he can give, if deemed necessary, mercurial remedies freely with impunity, and almost invariably relieve inflammatory types of fever by this defibrinating course. Where the cerebrum is large and the cerebellum small, tonics, in his opinion, are the remedy to increase the red globules of the blood. He has been enabled, by investigating the physiology and pathology of the brain, to hew out a rational method of practice in his profession to meet the true indications of disease. Possessing strong powers of generalization and deductive reasoning, he considers *any exclusive system of medicine incompatible with the diversity of the constitution*. This he considers the true philosophy of medicine, and Phrenology essential as an auxiliary.

During the last twenty-two years he has followed the practice of his profession in Warren County, Ohio, with pre-eminent success, not only as a physician, but as a scientific surgeon. In 1862 he plunged into the exciting arena of the United States army, as surgeon, and was immediately promoted by Maj.-Gen. Rosecrans as surgeon to his staff, at Corinth, Miss., where he distinguished himself by his skill as an operator.

The study of character being his delight, I will mention a remarkable case which came under his observation early in the bloody battle of Corinth. A Minié-ball had penetrated the crown of the head of a soldier in the organ of Self-Esteem, to the depth of about one inch. The Doctor extracted the ball with his forceps, the soldier being entirely insensible at the time, and remaining so for twenty-four hours. One week after this operation General Rosecrans ordered Dr. Williamson to go through the general hospital and prescribe for the patients. He did so, and among them saw the man who had received the wound in the crown of his head; he was convalescing, but seemed somewhat stupid, would not hold up his head, and had no confidence in himself, the injury having impaired the power of Self-Esteem.

After leaving Corinth, Dr. W. was ordered to Nashville, Tenn., to take charge of a hospital. There he was actively engaged, night and day, for several months in attending to wounded soldiers from the battle of Murfreesboro, prescribing for three hundred patients daily.

Dr. W. is temperate in his habits, using neither whisky nor tobacco, which he contends lay the foundation for many diseases of the body; nor has he contracted the habit of opium-eating, of which some ambitious physicians are guilty. As a result of his abstemious habits, at the age of nearly three-score years he is robust and vigorous. Above the medium height and of imposing presence, he is the perfect gentleman, easy and self-possessed; in short he reminds one of the Virginia gentleman of the good old school. His culture being liberal and thorough, his powers of observation and analysis large, and possessing at the same no little conversational ability, he is a most desirable acquaintance and friend.

COST OF INTOXICATING LIQUORS.—When the late war was at its height, the expenses per day reached the sum of about two millions of dollars. Another destroyer is at work in the land, which consumes the enormous sum of four millions per day, or nearly fifteen hundred millions per year—half our national debt. From the late published statistics of Mr. Wells, special commissioner of the revenue, are made up the footings of the retail sales of intoxicating liquors in the several States for the year 1867, which reach the enormous aggregate of \$1,483,491,865. Reader, have you any share in this business?

Our Social Relations.

Domestic happiness, thou only bliss
Of paradise that has survived the fall!
Thou art the nurse of virtue. In thine arms
She smiles, appearing as in truth she is,
Heav'n-born, and destined to the skies again.—*Cooper.*

KISSES.

BY EMMA.

CHILDREN'S KISSES.

SCATTERED from among the roses,
Where a budding wealth reposes,
Little dimpled lips invite;
Springing from the heart's deep treasure,
With a never-failing measure,
Given with a pure delight.

BOGUSH KISSES.

Muffled footsteps softly tipping
Up behind, and gently slipping
Round you dear familiar arms;
Though warm hearts may touch unbidden,
Where you keep your kisses hidden,
Shelter them from rude alarms.

MOTHER'S KISSES.

Little urchins full of badness,
Little faces full of sadness,
Claim a mother's tender kiss.
Every little childish sorrow
Finds a solace none can borrow,
In a mother's soft caress.

FRIENDSHIP'S KISSES.

A kiss is friendship's kindest token;
A sympathetic language spoken
By tender natures for distress.
'Tis friendship's sweetest mute bestowing,
'Tis admiration's overflowing,
That loving lips so fondly press.

CUPID'S KISSES.

Prompted by some wild emotion
Of the heart, that hidden ocean,
Throbbing in the human breast;
It may be Love's incense burning
On the lips, or Fancy's yearning,
Like "a bird without a nest."

SILENT KISSES.

Some strange, sweet chord of kindred feeling,
Some nameless yearning softly stealing,
Earth has no dearer tie than this.
Heart to heart in sacred beating,
Lips in soul-communion meeting,
Does heaven afford a purer bliss?

PARTING KISSES.

The last, and it may be the dearest,
For hearts in parting seem the nearest,
Closer for the dear "farewell."
But O, the last that cold lips never
Give answering touch, the last forever,
Are sadder than the funeral bell.

A WOMAN'S WORK UPON THE PRUSSO-AUSTRIAN BATTLE-FIELD.

FRAU MARIE SIMON.

DURING the time of the brief conflict between Prussia and Austria, in 1866, many associations of women were organized for the purpose of relieving the wants and taking care of the wounded on the battle-field. Among the chief of these were the international associations at Geneva and Paris, and a society of ladies in Saxony, under the leadership of the Princess Carola. There were others who followed the strict law of a self-imposed duty—the Sisters of Mercy—the messengers of those half cloistered institutions of modern times. Besides these were many noble-hearted women who

can not be classed with any society or sisterhood, who offered their services as volunteers, and whose influence was individually most beneficial. These latter, like the afore-named societies, were mainly under the protection of Austria; and, strange as it may appear, the Germans have not been unwilling to give praise to this humanitarian spirit displayed by their enemies. The wounded of both nations were generally treated alike by these self-appointed agents of mercy.

Of those who engaged in the cause of alleviating human suffering in the manner described, one has received the warmest marks of distinction from both nations. Of her we would particularly speak—Frau Marie Simon, the wife of a merchant of Dresden.

Frau Simon is a native of Saxony, to which country she more especially draws our attention. As is well known, Saxony, though now a member of the North German Confederation, took active part with Austria during the war; and the people there, as well as in nearly all the anti-Prussian states, had great confidence in the final issue of the conflict. The entrance of the first transports of wounded, however, from the field of Königsgratz, into Dresden, created an almost boundless confusion for a time, and called out all the energies of the citizens, and thus, in short, was Frau Simon forced into her sphere of labor. She had at first placed herself under the direction of the chief hospital physician; but a feeling which everywhere prevailed, that the wounded were left almost helpless on the battle-fields, determined her to proceed thither herself. In following her, we shall adhere, as strictly as is possible, to her own account,* in which we find contained much relating to the general condition of affairs in Bohemia, that will, doubtless, be interesting to our readers.

Frau Simon left Dresden for the field of Königsgratz in company with another Dresden lady—Frau Amalie Vogel—after having collected a large amount of stores, linen, and refreshments for the wounded. The journey was an extremely difficult one, and her duties commenced almost at the start. In the station of Königinhof, the last before reaching Königsgratz, she found crowds of wounded waiting to be removed. The station was small, yet it contained many hundreds of wounded, distributed in every conceivable place, with neither nurses nor provisions. From this station all the field hospitals within a radius of twenty miles had to be provided with stores, but on account of a lack of wagons, horses, and men, the quantities of provisions, linen, bandages, etc., which daily arrived, were perfectly useless. At Horsens, where probably the greatest misery prevailed, Frau Simon found her first settled field of labor. With her lady companion and a physician, she reached this place after a long night's journey from Königinhof, in one of the wagons which had brought the wounded to the railroad. She describes this

as being a sad ride to her; along the route, under the open heaven, lay thousands of unburied dead, whose faces shone ghastly in the bright starlight. When she arrived at her destination she found that all the inhabitants of the place had fled except the pastor, who had given up his house to the wounded. Frau Simon and her companions then walked in the darkness to the castle, where were found six hundred wounded, filling every room, and without the least assistance. The morning revealed even greater misery. Frau Simon finally discovered two Bohemian villagers, whom she vainly endeavored to persuade to bring the peasants together in order to attend to the sick and bury the numerous dead. In the village church itself she found over a hundred wounded, lying upon the hard stones, without help, without water, and moaning fearfully. She had chocolate, extract of meat, and similar nourishing articles with her, but not a vessel could be found in which to prepare them. What had not been broken, the peasants and troops had carried away. She finally conceived the idea of taking the camp-kettles of the fallen; she found linen in the knapsacks of the dead, and used it as bandages for the wounded—an impropriety, she adds, compelled by necessity.

The presence of a woman among the dead and wounded in the early morning not only inspired the sufferers with new life, but brought also many of the frightened peasants from their hiding-places. The Sisters of Mercy were also discovered in the performance of their chosen duties quite early. Frau Simon directed the efforts of all, and an improved condition was very soon everywhere visible. After a few days she was enabled to add some delicacies to the provisions of the wounded. She also procured the loan of a peasant's wagon, and visited many of the neighboring battle-fields, where her affections drew her to the care of her wounded countrymen. She thus went to Sweti, Prim, Probus, Radeck, and Nechanitz, in which places she found the greatest misery. On the 11th of July she visited Maslowitz, a village of about fifty houses, where she found her worst experience. The village lies near to Horsitz, and is the head depot of the order of the Knights of St. John. She had believed that here her services would scarcely be needed. But to her astonishment she found nine hundred wounded, who had been eight days without help! The lamentations of these unhappy men, she says, would have melted a heart of stone. In a single barn, for example, upon rotten straw, lay sixty men, some of whom had been badly bandaged, but the greater part had not been cared for at all. Many could not move from their positions, and with horrible pain had lain through those long eight days without attendance, and without a single drop of water. The cry of these poor wretches as she entered the barn was so frightful that, as she herself expresses it, it must remain forgotten for her whole life. "The despair which this horrible picture impressed upon me was

* *Illustrirtes Familien Journal*, Leipzig.

boundless; I would willingly aid, but for the moment I knew not how. The peasants could be moved to help neither through gold nor threats, for a perfect stupidity rested upon them as the result of the just-gone days and their events."

Frau Simon here displayed wonderful courage. But we will let her speak further for herself: "Upon my excursion I had continually a Prussian soldier with loaded arms as my guard; and I now sought the superintendent of the place in order to induce him to provide help; but my hopes were soon disappointed. He was a malevolent, good-for-nothing rascal. I had the idea of bringing this creature, with the help of my Prussian guard, to the place where I had found the dreadful misery, when we were met by the orderly of a Prussian artillery column who had been dispatched in order to request horses from the superintendent. I desired him to accompany me and see with his own eyes the extent of the misery and how necessary was the help." He willingly did so, and immediately rode back for assistance, and the refractory superintendent was soon after arrested. Many of the officers and soldiers of the column now offered their services; and messengers were sent to the nearest station for Sisters of Mercy, nurses, provisions, etc. The peasants who had fled were driven together by the military and set to work. The houses were thoroughly searched for provisions, of which good quantities were found, especially in the house of the superintendent. Indeed, everything possible was done by the Prussian soldiers toward the alleviation of the prevailing misery; and "the restless activity of the forces in rendering help to their wounded comrades," she adds, "was to me an affecting sight."

Such was Maslowitz in the first days after the battle. Everywhere the lack of hospital appliances and provisions was painfully felt. It is a fact that, shortly after the battle of Konigsgratz, thousands of wounded were transported, even after mortification had set in, from the scene of battle to cities of Prussia and Saxony, because of this need. Frau Simon believed that this evil condition could be entirely remedied, and with this object in view she went, on the 13th of July, to confer with the President of the then existing International Union, in Dresden. The result was that large quantities of stores were sent to Bohemia from the large depot of the Society, and the management of the Union's operations on the battle-field was given to Frau Simon. She returned as soon as possible to her work, and established her headquarters at Horsens, from whence provisions never failed to reach the surrounding districts. She found everywhere the greatest sympathy. The proprietor of Horsens placed unlimited means of transportation at her command. This was an important service, as she found employment daily for twenty pairs of horses in the transportation of supplies from Koniginhof to Horsens, and thence to the different hospitals. The parsonage at Horsens served her for an abode.

Her position compelled her to work not only in the day but through many nights; and many of the highest officers sought in their intervals of leisure to relieve her of some part of her arduous duties. She had often to procure the medicines needed by the sick on her own account. And even at her own lodgings she had some of the wounded whom she served with her own hands, and set apart a room for the convalescent.

The need of such energy and zeal as Frau Simon possessed is very apparent in the whole history of her work. During a rapid journey which she made to Vienna, in the company of the court-physician, Dr. Brauer, she found in nearly every village numbers of badly amputated and bandaged wounded left in an almost helpless condition. Nowhere, she says, was a "Johanniter" (Knight of St. John) to be seen. Everything had been done by them toward the care and removal of the wounded officers, but the poor soldiers were quite neglected. After the battle, the effects of the dead, knapsacks, arms, etc., were carefully gathered up for miles around, but the wounded and dead were allowed to remain. The equipments thus found were rapidly transported in wagons, but hundreds of brave soldiers were left with neither means of transport nor provisions. Her report of this journey is very touching and in some respects appalling. It had one good effect in calling public attention to the conduct of the "Johanniters." They had unlimited stores of provisions at command, but even in the immediate neighborhood of their head depot the greatest misery prevailed. They would, it appears, merely bandage up the wounds of the soldiers, but seldom gave a second thought to the sufferers. Among these people the noble woman found many enemies, who tried to depreciate and calumniate her. But she met them all bravely and honestly; and the whole German nation joined in her support. Though of Saxony by birth, and possessing real womanly love for her country and its defenders, her care was devoted equally to their enemies. It was complained that she gave too much attention to the Saxony soldiers; but her answer, that "her heart naturally felt more drawn toward her countrymen," was at once noble and satisfactory.

The brevity of the conflict did not necessitate a long sojourn among the battle-fields. A few weeks served to bring something like order out of the confusion. Frau Simon gave up her duties into the hands of the Austrian commissioner, Professor Thumreicher; and after attending the hospital at Konigsgratz, where an epidemic had broken out among the soldiers, she returned to her home in Dresden. Everywhere she was received with extraordinary marks of approbation. She was personally received and warmly thanked by the king and queen of Prussia and the king of Saxony. She received the gold medal of the International Union for the care of wounded soldiers; a bracelet, set with gems and emer-

alds, from the empress of Austria, and from the emperor, the golden cross of merit, with the Austrian crown engraved thereon in relief; from the queen of Prussia a graceful letter written by her own hand, together with one with her sign-manual and an accompanying brooch, ornamented with the international cross; and from the king of Saxony a bracelet with a medallion portrait of the king, beautifully painted on ivory. But above all the honors of royalty, Frau Simons had also the heartfelt thanks of both the Austrian and German people, and in her own soul she had the beautiful consciousness of having fulfilled, with zeal and to the best of her capacity a noble duty of patriotism and love.

COMFORT.

[Under this caption we find the following excellent remarks in *Halt's Journal*; their exposition of the relation subsisting between wealth or money and human happiness is clear and practical. Such articles are adapted to instruct the reader.]

THE great aim of the mass of mankind is to get money enough ahead to make them "comfortable;" and yet a moment's reflection will convince us that money will never purchase "comfort," only the means of it. A man may be "comfortable" without a dollar; but to be so, he must have the right disposition, that is, a heart and a head in the right place. There are some persons who are lively and cheerful, and good-natured, kind, and forbearing in a state of poverty which leans upon the toil of to-day for to-night's supper and the morning's breakfast. Such a disposition would exhibit the same loving qualities in a palace, or on a throne.

Every day we meet with persons who in their families are cross, ill-natured, dissatisfied, finding fault with everybody and everything, whose first greeting in the breakfast-room is a complaint, whose conversation seldom fails to end in an enumeration of difficulties and hardships, whose last word at night is an angry growl. If you can get such persons to reason on the subject, they will acknowledge that there is some "want" at the bottom of it: the "want" of a better house, a finer dress, a more handsome equipage, a more dutiful child, a more provident husband, a more cleanly, or systematic, or domestic wife. At one time it is a "wretched cook" which stands between them and the sun; or a lazy house-servant, or an impertinent carriage-driver. The "want" of more money than Providence has thought proper to bestow, will be found to embrace all these things. Such persons may feel assured that *people who can not make themselves really comfortable in any one set of ordinary circumstances, would not be so under any other.* A man who has a canker eating out his heart, will carry it with him wherever he goes; and if it be a spiritual canker whether of envy, habitual discontent, unbridled ill-nature, it would go with the gold, and rust out all its brightness. Whatever a man is to-day with a last dollar, he will

be radically, essentially, to-morrow with a million, unless the heart is changed. Stop, reader,—that is not the whole truth, for the whole truth has something of the terrible in it. Whatever of an undesirable disposition a man has to-day without money, he will have to-morrow to an exaggerated extent, unless the heart be changed: the miser will become more miserly; the drunkard, more drunken; the debauchee, more debauched; the fretful, still more complaining. Hence the striking wisdom of the Scripture injunction that all our ambition should begin with this: "Seek first the kingdom of God and his righteousness;" that is to say, that if you are not comfortable, not happy now, under the circumstances which surround you, and wish to be more comfortable, more happy, your first step should be to seek a change of heart, of disposition, and then the other things will follow—*without the greater wealth!* And having the moral comfort, bodily comfort, bodily health will follow apace, to the extent of your using rational means. Bodily comfort, or health, and mental comfort have on one another the most powerful reactions; neither can be perfect without the other, at least, approximates to it; in short—*cultivate health and a good heart*; for with these you may be "comfortable" without a farthing: without them never, although you may possess millions!

WARNING A WIFE.

[There is almost as much common sense as romance in the following sketch, and for that reason our readers will pardon us for the infliction of a love story.]

"AND so you want to marry my daughter, young man?" said farmer Bilkins, looking at the young fellow sharply from head to toes.

Despite his rather indolent, effeminate air, which was mainly the result of his education, Luke Jordan was a fine-looking fellow, and not easily moved from his self-possession; but he colored and grew confused beneath that sharp, scrutinizing gaze.

"Yes, sir; I spoke to Miss Mary last night, and she referred me to you."

The old man's face softened.

"Molly is a good girl, a very good girl," he said, stroking his chin with a thoughtful air, "and she deserves a good husband. What can you do?"

The young man looked rather blank at this abrupt inquiry.

"If you refer to my abilities to support a wife, I can assure you—"

"I know that you are a rich man, Luke Jordan, but I take it for granted that you ask my girl to marry *you*, not your property. What guarantee can you give me, in case it should be swept away, as it is in thousands of instances, that you could provide for her a comfortable home? You have hands and brains—do you know how to use them? What can you do?"

This was a style of catechism for which Luke was quite unprepared, and he stared blandly at the questioner without speaking.

"I believe you managed to get through college—have you any profession?"

"No, sir; I thought—"

"Have you any trade?"

"No, sir; my father thought that with the wealth I should inherit I should not need any."

"Your father thought like a fool, then. He'd much better have given you some honest occupation and cut you off with a shilling—it might have been the making of you. As it is, what are you fit for? Here you are, a strong, able-bodied young man, twenty-four years old, and never earned a dollar in your life! You ought to be ashamed of yourself And you want to marry my daughter. Now, I've given Molly as good advantages for learning as any girl in town, and she hasn't thrown 'em away; but if she didn't know how to work, she'd be no daughter of mine. If I choose, I could keep more than one servant; but I don't, no more than I choose that my daughter should be a pale, spiritless creature, full of dyspepsia, and all sorts of fine lady ailments, instead of the smiling, bright-eyed, rosy-checked lass she is. I *did* say that she should not marry a lad that had been cursed with a rich father; but she has taken a foolish liking for you, and I'll tell you what I'll do: go to work, and prove yourself to be a man; perfect yourself in some occupation—I don't care what, if it is honest—then come to me, and, if the girl is willing, she is yours."

As the old man said this he deliberately rose from the settle of the porch and went into the house.

Pretty Mary Bilkins was waiting to see her lover down at the garden gate, their usual trysting-place. The smiling light faded from her eyes as she noticed his sober, discomfited look.

"Father means well," she said, as Luke told her the result of his application. "And I'm not sure but he's about right, for it seems to me that every man, rich or poor, ought to have some occupation."

Then, as she noticed her lover's grave look, she said, softly,—

"Never mind,—I'll wait for you, Luke."

Luke Jordan suddenly disappeared from his accustomed haunts, much to the surprise of his gay associates. But wherever he went, he carried with him those words which were like a tower of strength to his soul: "I'll wait for you, Luke."

One pleasant, sunshiny morning, late in October, as farmer Bilkins was propping up the grapevine in his front yard, that threatened to break down with the weight of its luxurious burden, a neat-looking cart drove up, from which Luke Jordan alighted with a quick, elastic step, quite in contrast with his formerly easy, leisurely movements.

"Good-morning, Mr. Bilkins. I understood that you wanted to buy some butter tubs and cider barrels. I think I have some that will just suit you."

"Whose make are they?" asked the old

man, as, opening the gate, he paused by the wagon.

"Mine," replied Luke, with an air of pardonable pride.

Mr. Bilkins examined them one by one.

"They'll do," he said, coolly, as he set down the last of the lot. What will ye take for them?"

"What I asked you for six months ago to-day—your daughter, sir."

The roguish twinkle in the old man's eyes broadened into a smile.

"You've got the right metal in you, after all," he cried. "Come in, lad—come in. I shouldn't wonder if we made a trade after all."

Nothing loth, Luke obeyed.

"Molly!" bawled Mr. Bilkins, thrusting his head into the kitchen door.

Molly tripped out into the entry. The round white arms were bared above the elbow; and bore traces of the flour she had been sifting. Her dress was a neat gingham, over which was tied a blue checked apron; but she looked as winning and lovely as she always did wherever she was found.

She blushed and blushed and smiled as she saw Luke, and then, turning her eyes upon her father, waited dutifully to hear what he had to say.

The old man regarded his daughter for a moment with a quizzical look.

"Moll, this young man—mayhap you've seen him before—has brought me a lot of tubs and barrels, all of his own make—a right good article, too. He asks a pretty steep price for 'em, but if you are willing to give it, well and good; and hark ye, my girl, whatever bargain you make, your father will ratify."

As Mr. Bilkins said this he considerably stepped out of the room, and we will follow his example. But the kind of bargain the young people made can be readily conjectured by the speedy wedding that followed.

Luke Jordan turned his attention to the study of medicine, of which profession he became a useful and influential member; but every year, on the anniversary of his marriage, he delights his mother-in-law by some specimens of the handicraft by which he won what he declares to be the best and dearest wife in the world.

JONES was, or believed he was, near his death; and, the doctor calling, he held a long and earnest conversation with him about his chances of life. "Why, man," said the physician, "you are likely to die any hour. You have been living for the last fifteen years without a constitution,—lungs gone, liver diseased, and all that sort of thing." "You don't mean to say," replied Jones, questioningly, "that a man can live for fifteen years without a constitution?" "Yes, I do," retorted the doctor, "and you are an example." "Then, doctor"—and a bright smile illuminated the pallid face of the doomed man—"then, doctor, I'll go it ten years more on the by-laws." And he did.

HENRY EDWARD MANNING,
ROMAN CATHOLIC PRIMATE OF ENGLAND.

THE Archbishop evidently possesses a cranium of large size, and a temperament of fine quality. The expression and cast of the countenance awaken thoughts of cloistered retirement and much meditation. The asceticism of the devout Romanist broods upon the features. How great the depth of the anterior region of the brain! and how small the occiput! How lofty the region of Veneration, and how extensive generally the moral organs! The neophyte in Phrenology could almost read this character. There is Veneration enough for the bigot, and Causality enough for the philosopher. Combativeness is apparently well developed, and supplies its fervor and resolution to the maintenance of intellectual and religious opinion.

In social matters the Archbishop is somewhat wanting. We could not conceive him to be influenced by strong instinctive affection for friends or kindred, but rather to exercise a kind and philanthropic sentiment that would comprehend the circle of humanity.

The organ of Continuity is finely developed, imparting steadiness of thought and concentration of purpose. In this connection the eye may be referred to as expressing an unwavering intensity.

In the finely chiseled and delicate features—a delicacy approaching sharpness—we find an excellent illustration of the mental temperament. He must be a close, earnest thinker, a devoted, nay, ultra, churchman, sharp and appreciative of whatsoever concerns the “finer feelings,” highly esthetical in his tastes, and disposed to ecclesiastical polemics.

Archbishop Manning was born about the year 1812. He received his scientific education at Harrow, and at Balliol College, Oxford,

where the first degree was awarded to him in the classical department. He was subsequently chosen fellow of Merton College, and obtained the living of Lavington, in Sussex. In 1860 he was made Archdeacon of Chichester, which office he held until 1851, publishing, in the mean time, several volumes of sermons. It was here that he suddenly joined the Roman Catholic Church.

In that year the celebrated Gorham decision, which left the doctrine of the effect of baptism an open question in the Church of England, was the subject of a protest from several of the clergy and laymen of the Establishment, among whom, Manning, Wilberforce (who was a fellow-student of Manning), Pusey, and

England, and there engaged in the official services of the Roman Catholic Church, and was made provost of the chapter of Westminster. He founded a congregation of secular priests, called the Oblates of St. Charles, modeled after the rules of the Order of St. Charles Borromeo. They have now, we believe, two missions in London—one at St. Mary's of the Angels, Bayswater, and the other at Westminster. Cardinal Wiseman died on the 15th of February, 1865, and Dr. Manning was then elevated to the archiepiscopal dignity by the Pope. The selection was almost as great a matter of astonishment to the Romanists themselves as to the Protestant clergy of England. The former were surprised that three of the

highest dignitaries of their Church, Dr. Clifford, Bishop of Clifton, Dr. Grant, Bishop of Southwark, and Dr. Errington, coadjutor of Cardinal Wiseman, should have been overlooked, while the latter saw one who had been brought up in their own colleges raised to the position of the highest dignity in the Roman Church in England, and using their own weapons in another cause.

The published works of Archbishop Manning show, even in their simple titles, a large share of the workings of the faculty of religious faith and devotion. He shows, too, the talent of an able reasoner. His works issued before his secession from the Church of England are, “The Rule of Faith—a Sermon” (1838); “Holy Baptism” (1848); “On the Unity of the Church” (1845); “Thoughts for Those that Mourn” (1850), and in the same year four volumes of Sermons. Since 1851 he has published the following, all in favor of Catholicism: “The Crown of Faith;” “Temporal Sovereignty of the Popes;” “Discourses on

Ecclesiastical Subjects;” “England and Christendom;” “Temporal Mission of the Holy Ghost;” “Love of Jesus to Penitents;” “Centenary of St. Peter;” “Certainty of Divine Faith;” “The Church, the Spirit, and the Word;” “Confidence in God;” “Devotion of St. Charles;” “Glory of St. Vincent de Paul;” “The Good Shepherd;” “Occisi et Coronati;” “Office of the Holy Ghost under the Gospel;” “Omnia pro Christo;” “St. Peter's Pence;” “Unity in Diversity the Perfection of the Church.” Besides these original works, he has edited, “St. Catharine of Genoa on Purgatory;” “Pictures of Christian Heroism;” “Flowers of St. Francis;” and “Life of the

PORTRAIT OF HENRY EDWARD MANNING.

others of the extreme High Church party were prominent. In this protest it was said, “that unless the decision was formally refuted, it would be of binding force upon the whole English Church; and its signers wished to free that which they considered the Church of Christ from submission to a doctrinal decision given by the Crown.” The clergy generally acquiesced in the decision, but Dr. Manning at once, with others, retired from the Church, giving up, at the same time, his living.

For a while he lived in strict seclusion; and in the year 1851 was received into the Roman Catholic Church. He visited Rome, where he resided for some time. He then returned to

Cure d'Ars." One of his latest works, published in March, 1868, relates to the ecclesiastical state of Ireland, but is generally condemned by the English Protestant press as illogical in its treatment of the subject, and quite unsatisfactory as the basis of a permanent settlement of the religious difficulties of that country.

Archbishop Manning is admitted to be the greatest intellectual power of the Roman Catholic Church in England at the present day, and his influence is very great.

THE ANGEL GUIDE.

BY MRS. L. C. HOLLOWAY.

In the quiet hush of midnight,
While the stars burned far and dim,
And the busy household music
Hushed its many-chorded hymn—
In the heart of a great city,
Far from home and dearest friends,
Lay a stranger, sleeping calmly,
While above an angel bends.

Hush! can'st hear the angel whisper
Of the path that man must tread
Over mountains bleak and lonely,
Under storm-clouds dark and dread?
Holding still in heart and nature
One true purpose deep and strong,
Just to triumph over evil,
And in spirit shun the wrong?

Nearer comes the strife and nearer,
Higher flights and depths more deep
Open to the troubled sleeper,
Till he awakens from his sleep,
And with weary, troubled feeling
Turns his head, and there in sight
Is his nature's better angel,
Radiant in a halo bright.

There is naught of human semblance
Save his glory-lighted face,
And he wonders at the vision
Coming in so strange a place;
And he questions, asking slowly
Of the name she bore on earth,
Of her station and condition,
And the land that gave her birth.

And she answers him as plainly
As his mortal brain and will
Can be molded to receive her
Words so faint and faltering still.
But though waking vision sees her
Fading dimly out of sight,
Still she lingers in his memory,
Angel fair of love and light.

HOW TO BE MISERABLE.

SIT by the window and look over the way to your neighbor's excellent mansion, which he has recently built and paid for, and fitted out.

"Oh, that I were a rich man!"

Get angry with your neighbor, and think you have not a friend in the world. Shed a tear or two, and take a walk in the burial-ground, continually saying to yourself:

"When shall I be buried here?"

Sign a note for a friend, and never forget your kindness, and every hour in the day whisper to yourself—"I wonder if he will ever pay that note?"

Think everybody means to cheat you. Closely examine every bill you take, and doubt its being genuine until you have put your neighbor to a great deal of trouble. Put confidence in nobody, and believe every man you trade with to be a rogue.

Never accommodate, if you can possibly help it.

Never visit the sick or afflicted, and never give a farthing to assist the poor.

Buy as cheap as you can and screw down to the lowest mill. Grind the faces and hearts of the unfortunate.

Brood over your misfortunes, your lack of talents, and believe that at no distant day you will come to want. Let the work-house be ever in your mind, with all the horrors of distress and poverty.

Follow these receipts strictly, and you will be miserable to your heart's content—if we may so speak—sick at heart, and at variance with the world. Nothing will cheer or encourage you, nothing will throw a gleam of sunshine or a ray of warmth into your heart.

On Ethnology.

True Christianity will gain by every step which is made in the knowledge of man.—Spurzheim.

NOTES ON THE INHABITANTS OF BRAZIL.

BY C. FRED. HARTT.

WHEN a man says "I am an American," he has indicated to us his nationality in a political sense, but he has given us no clew as to his place in the great family of man considered from a natural-history point of view. He may have descended from Teutonic or Semitic parents, or he may be of a mixed stock. The United States are peopled by representatives of almost every race on earth. Each race, where it preserves its blood pure in descent, perpetuates to a greater or less degree its race characters. Thus in America we have the Indian, Negro, German, Irish, English, and other elements distinctly marked in our population. But with time, mixtures of blood of a very complicated nature are taking place, and these result in the production of a mixed race of men, which, growing up under peculiar political, social, and religious influences, have taken on peculiar national characteristics, and these vary with the conditions which have tended toward their development, and are visible in the whole make of the man, physically, mentally, morally. Thus speaking broadly, we have the Southern and the Yankee. Notwithstanding the heterogeneity of the race-elements in our population, there is a national *tout ensemble* which distinguishes the American from the German or the Italian.

Brazil bears a remarkable resemblance to the United States in the mixture of blood visible in its inhabitants. When Cabral discovered the land of the "True Cross," he found it peopled by savage Indians belonging to several

different and well-marked tribes. On the coast he found the Tupis, a powerful nation which long ago had come from the south, driving before it the Botocudo Indians, who dispersed themselves before the invaders, taking refuge in the forests and mountain fastnesses.

Under the influence of the Jesuits, the most of the coast tribes and those on the Amazonas became converted to Christianity, and, instead of disappearing altogether as the Indians of the east coast of North America have done, have continued in existence, adopting the customs and creed of their European conquerors, while they have become mixed with their blood. The Botocudo tribe, however, had resisted almost entirely the influence of civilization, and, persecuted by the white settlers, had rapidly decayed, so that ere long it must go out of existence. The white settlers of Brazil are for the most part of Portuguese descent, though there are German, Dutch, and American colonists: Slavery has introduced another and very important element into the population of the country. The fusion of all these diverse elements, particularly of the Portuguese, Negro, and Indian, has produced a nation with very marked characteristics, but these vary locally; the inhabitants of Para, Pernambuco, Minas Geraes, Rio, and San Paulo differ markedly from one another, just as the inhabitants of different parts of the United States differ.

The whites, descendants of the Portuguese, preserve the general features and characters of their ancestors. They are short of stature, rather slimly built, dark or sallow skinned, black-eyed, and with black hair and whiskers. The forehead is rather low. The men are usually thin-featured and lean, but muscular and tough, and, on the whole, are good-looking. The women are, as a general thing, much inferior in good looks to the Spanish, though of much the same type. In their girlhood some are extraordinarily beautiful, their beauty consisting principally in their long oval face, delicate nose, black, languishing eyes, small mouth, and luxuriant black hair; but their beauty is fugitive, and they grow rapidly old, tending very frequently to excessive *embon-point* in middle age.

As children, the Brazilians are very bright, intelligent, and quick, making excellent scholars, but noted, however, rather for quickness than for depth. Brazil has a school system well-nigh as perfect as that of New England, and every one learns to read, write, and keep accounts. It is well known that in Brazil, as in other tropical countries, the children mature very early, so that one misses in Brazil the big immature boys and girls of North America.

Except in the cities, and especially among the educated, there is nothing which corresponds to the English and American home-circle, with all its attendant advantages for culture. The education of the girl is confined to the merest rudimentary acquaintance with the Portuguese and French literature,

and the accomplishments of music and dancing end with her leaving the college or nunnery, or with her marriage, and thenceforth she is, in most parts of the country, shut up within her house, never going out alone, and mingling with society only at the ball or the *feira*. In the large cities, where French manners prevail, the ladies may be seen at the table or in the parlor with their families. In the country, the *fazendeiro* receives and entertains a guest, and one may spend a month in a *fazenda* without being introduced to the lady of the house or her daughters, and without seeing them at all except at the chapel. Thus secluded from every-day society and surrounded by servants, the ladies of the *fazenda* lead an aimless and inert life, one which, from its inactivity, tells on them physically as well as morally. Music, French novels, and gossip are their recreations, and they are sentimental and wholly void of the energy and stability of character of the American or English woman. The want of education and the seclusion of the Brazilian woman unfit her for the proper training of her children, who grow up in the society of the young slaves and really receive their first education through them. The mothers are the making of a nation. Brazil needs a good system of female education, and a placing of woman on her proper level as an intellectual companion to man, before she can come up to the same intellectual and moral standard with other civilized nations.

There are many collegiate institutions in Brazil, as at Rio, Bahia, Pernambuco, and elsewhere, some of which are well endowed and have large staffs of professors; but there being no demand for a liberal, generous culture, these institutions fall far below the rank of the high schools of the United States, and their graduates are scarcely fitted to enter one of our colleges. There is a great ambition among the wealthier Brazilians to educate their sons for a professional life, and especially for the bar, and the country is flooded with young lawyers, candidates for political honors. One is astounded at the number of youthful doctors of law and judges he meets with. The Brazilians are a very polite and courteous people, and very fond of complimentary speech-making and discussions. They cultivate a neat and florid style, and write well, though with little depth. An American is much struck with the readiness, fluency, graceful diction, and animated delivery of the Brazilian orator, and nothing could excel in delicate compliment, roundness, and turning of sentences, or warmth of style an after-dinner speech. Evenings are spent among Brazilian gentlemen in conversation which is most likely to turn upon politics, and then becomes exceedingly animated. The Brazilian is particularly easy, fluent, and polished in conversation, and is more given to discussion than we are. They are very apt at acquiring foreign languages, and a speaking acquaintance with several is not uncommon. Music is much cultivated in Brazil, and there are prob-

ably more gentlemen in a hundred in Brazil who play on some musical instrument than with us. The piano, guitar, and flute are the favorite instruments. The music most admired is the Italian, Portuguese, and French. One need not feel surprised at hearing *Ah che la morte!* nicely performed on the flute everywhere. There is a peculiarity about the Brazilian national music which it is very difficult to describe. It is monotonous and melancholy, and there is a great fondness for a

A BOTOCUDO—FRONT VIEW.

singular mode of beating time, a rest following in the first beat in the measure or a part of it. One observes the same peculiarity in the Spanish music of the West Indies and South America. The music of the lower people is very plaintive, sentimental, and monotonous—the expression of a life devoid of vigorous culture, of a morality and religion dimly appreciated and worshiped as an idea.

Nominally, the religion of Brazil is the Roman Catholic; but the influence of Dumas and Paul de Kock, *et hoc omne genus*, has had a terrible effect. The ruined churches everywhere tell of religious decay; the profligacy

A BOTOCUDO—SIDE VIEW.

and immorality of the priesthood, and the open expression of infidel views, present a sad picture. The Virgin receives an outward worship, but it is not the homage of the heart. Is it then to be wondered at that, in a country where the religious teachers are, as a class, men of immoral lives, purity and truth, though worshiped in song, should fail to be exemplified in the lives of the people?

In business, the Brazilian is sharp and un-

scrupulous. Let me give an instance to illustrate his mode of dealing. I had been kindly treated in the Province of Minas Geraes by a young mulatto merchant, who had given me a free passage with him in his canoe down the river Tequitinhonha. Money ran low. It was impossible to draw any, so there was no resource other than that of selling a part of my baggage. I had a good hammock, new and unused, for which I had given eight milreis on the coast, where they were very cheap. So I produced it and offered it to the merchant for what I originally gave for it. It was no use—he would give no more than half that sum. It was used and worn, etc., etc. At the last moment I parted with it for the price. The merchant rolled it up and put it one side. Presently there came in a friend. The merchant unrolled the hammock and displayed it with the same words of commendation I had used, and said it had cost eight milreis, but he would sell it for nine, and that in my presence.

As a planter, the Brazilian is noted for his hospitality, courtesy, and pride. Nothing can exceed him in the kindness with which he receives and entertains a traveler. A letter of introduction from a friend obtains for one immediately the freedom of the *fazenda*; but many a time, when weary and travel-worn I have descended the roof of a planter's house at night-fall, my request for shelter has been granted, my mules have been taken care of, and, overwhelmed with a thousand attentions and kindnesses, my departure, intended for the morrow, has been delayed for a week. Traveling in Minas, I have time after time put up at a poor farmer's house, been fed and lodged, and on the morrow have only been charged a few pennies for the corn for the mules and the milk for our coffee. Once, at Minas Novas, my mule broke down, and, in addition, I was seriously ill. A gentleman, a stranger, meeting me on the road to Chapada, lent me a mule, took me to his house, and his mother, brother, and himself nursed me through a violent attack of fever and delirium. They had only the faintest idea of who I was or what was my mission, and when I came to leave they refused the slightest remuneration.

The manners and customs of the people are Europeanized, dress, etc., being as in Portugal, except in the interior, where, among the lower classes, the national mode of life still lingers.

The negro population consists of freemen and slaves. Among these last are representatives of very many African races, who, of course, preserve the national characteristics. The finest, as well as most independent-spirited are the Mina negroes, who are tall, very muscularly built, and more rebellious than the other negroes. A great number of the slaves are African born and are tattooed. There is no finer field for the study of the negro, from an anthropological point of view, than in the cities of Rio and Bahia. At Rio one may hear spoken under his hotel window within one hour a dozen African tongues.

Prof. Agassiz has collected a very large number of full-length photographs of naked African-born negroes at Rio and elsewhere, and we may hope that one day he may publish them, with the results of his ethnological studies *in extenso*. There is a marked contrast between the muscular, plump, and glossy negro form and the thin, fallow, wiry descendant of the Portuguese in Brazil. The negro is at home in the hot Brazilian climate, and stretches himself at noon-day in the sun on the sidewalk to sleep; but the white is degenerating in every way.

The Brazilian negro is the same laughing, happy being he is in the Southern States; he is docile and submissive, but active only when spurred to work by a master or by necessity. He is fond of music, but of a different class from that which pleases the North American ear, less lively, more monotonous, and more dreamy. He is superstitious, believes in the "bad eye," in charms, and is a devout worshiper of the Virgin. Generally, he is very trustworthy and honest. You might dispatch the first negro you met in Rio for the change of a dollar and feel quite sure of its return. The slaves are, as a general thing, well treated, but they receive no education, and are a most debased and unintellectual class. The free negro is on terms of equality with the white, politically and socially. I have met at the table of a wealthy planter a negro as black as a coal, who received the same attentions and same hospitality as the white guests. I have known many educated men, lawyers and physicians, government officials, who were not only perfect gentlemen, but whose intellectual attainments were such as would command the highest respect.

The mulattoes are, as a general thing, a fine-looking class, physically; the women among them are noted for their handsome faces and well-molded but voluptuous forms and loose morals. The men are effeminate, lazy, and unreliable.

The civilized Indians along the coast are short in stature, of heavy build, and with a dark swarthy skin. Their faces are round, with rather prominent cheek-bones, their beards are scanty, and their hair coarse, black, and straight. They are noted for their indolence, fondness for their superstitions, their lack of honesty and truthfulness, and their quick, revengeful spirit. They are much mixed with the whites and negroes.

Between Rio and Pernambuco, the principal tribe of savage Indians is the Botocudo tribe, which now occupies the forest belt in the provinces of Espirito Santo and Bahia, a tribe of which Von Tschudi and Prince Max. Zu Neu Wied have given very elaborate descriptions. These Indians differ very remarkably from the civilized tribes physically as well as in their language. They are somewhat taller and more lightly built, the legs being very slim in proportion to the body, the color of their skin yellowish and light, not swarthy; the hair black and coarse, and the features

more regular and less Indian-like than among the other aboriginal tribes. Among the many individuals I saw while there, I observed a remarkable variety in the shape of the features. They go naked, live on fruits and the chase, using very long arrows which they shoot from a heavy bow. The men pull out their scanty beards, cut their hair very close and shave it away all round for a finger's breadth or more. They pierce the ear-flap and insert in the hole a plug of wood sometimes three inches in diameter. The women, in addition, pierce the lower lip, in which they wear a similar plug. They are a warlike tribe, in constant feuds with one another, and are undoubtedly cannibals.

THOMAS H. STOCKTON, D.D.

OBITUARY.

THIS eminent Methodist minister died at Philadelphia, Wednesday, October 7th. Being widely known as an able divine, a charming poet, an elegant religious writer, and having for many years officiated as chaplain of either the national Senate or House of Representatives, his death claims much more than ordinary attention from the public.

He was born at Mount Holly, N. J., June 4, 1808. He received a plain education, and at the age of sixteen began authorship by publishing a brief poem in a Philadelphia newspaper. Thenceforth he made frequent contributions to various periodicals, furnishing essays, tales, poems, criticisms, and a variety of productions.

At the age of eighteen he lost his admirable mother, and about the same time he formally united with the M. E. Church. The following year he became a student of medicine, attending lectures in Jefferson College, Philadelphia.

In 1829 he became a preacher. He had previously made various efforts in other directions—medicine, from the practice of which he shrank; type-setting, newspaper-writing, and editing. At last, upon the suggestion of Dr. Dunn, a minister of the Associate Methodists (afterward Methodist Protestants), he commenced preaching. He preached his first sermon at an unoccupied country-seat near Philadelphia, May 31, 1829. He afterward traveled several large circuits on the Eastern Shore of Maryland. In 1830 he was in Baltimore; but

in the following year, on account of ill health, he was missionary at large, traveling North and West.

In 1832 he returned to Maryland, and was nominated for the chaplaincy of the U. S. Senate. Next year he was stationed at Georgetown, D. C., and was elected chaplain of the House of Representatives. Not being re-elected in 1835, he engaged in writing a poem, "Faith and Sight." In the winter he was re-elected to the chaplaincy. In 1836 he had charge of St. John's Church, Baltimore. In 1837 he finished compiling the Church hymn-book; for which service, by the way, the Church afterward displayed marked ingratitude.

He was still in Baltimore in 1838, when he wrote the poem on the Duel of Graves and Cilley; but he soon afterward removed to Philadelphia, where he continued for the next nine years, engaged with successful zeal in religious labors of various kinds. From 1847 to 1850 he resided in Cincinnati, in charge of the Sixth Street M. P. Church. While there he declined the presidency of Miami University, to which he had been unanimously elected. From 1850 to 1856 he was again in Baltimore, chiefly at St. John's. In 1856 he returned to Philadelphia, where he preached regularly for the Church of the New Testament, except when absent at Washington, serving as chaplain of the House of Representatives.

All of these labors, incessant as they have been, he prosecuted under the depressing circumstances of ill health, for he was a consumptive from his youth. Yet his industry never failed and his courage never seemed to waver.

His writings are many, and his pulpit labors have been great and extended. There are very few persons in America who have not either heard his eloquence or of his power as an orator.

He edited several periodicals, and published an edition of the New Testament in paragraph form. The following works also are from his pen: "Floating Flowers from a Hidden Brook;" "The Bible Alliance;" "Sermons for the People;" "The Blessing;" "Stand up for Jesus;" "Poems, with Autobiographies and other Notes;" and "The Peerless Magnificence of the Word of God."

His volume of "Sermons for the People" has passed through several editions, and has been widely circulated.

Dr. Stockton possessed an exceedingly fine-grained organization, with a temperament elastic, active, and vivacious. He had a strong appreciation of the true, the beautiful, and the harmonious. Much as he owed to nature for the gifts bestowed on him, the greater part of his acknowledged ability and mental power was due to careful culture. We may confidently say, too, that the science we advocate contributed in no little degree to Dr. Stockton's mental development and prominence, as he for many years took a warm interest in phrenological matters, both theoretically and practically.

On Psychology.

The soul, the mother of deep fears, of high hopes infinite,
Of glorious dreams, mysterious tears, of sleepless inner sight;
Lovely, but solemn it arises,
Unfolding what no more might close.—*Mrs. Hemans.*

NIGHT.

"In her starry shade
Of dim and solitary loveliness,
I learned the language of another world."—*Byron.*

'Tis night, and o'er the silent world
The shadows slowly fall,
As though the darkness had unfurled
Its canopy o'er all.

The fiery day-god's golden light
No more on earth is shed;
But by the stars serene and bright,
We know he is not dead.

And when a few brief hours are o'er,
The stars will cease their light;
The morning sun will beam once more,
And hide them from our sight.

'Tis thus when sorrow's night appears,
And joy's bright sun seems set;
To Heaven we look, and stay our fears—
We know *He* liveth yet.

Then though thy path be dark as night,
And hope be almost gone,
Let faith in that fair land of light
Sustain thy spirit on,—

Till in that home of heavenly rest
Beyond the viewless shore,
Thy soul shall dwell with seraphs blest,
There dwell for evermore.

DELTA KAPPA PHI

MIRACULOUS HEALING.

A SENSATION IN PARIS.

From the London *Star* we extract a brief account of a Zouave in Paris, whose gifts of healing aroused a wide-spread sensation. His performances remind us of the redoubtable Dr. Newton, whose fame, doubtless, has reached the ears of our readers.

The *Star* says, in the words of its correspondent:

"The great novelty of the day, and the subject of all conversation, is the miraculous gift of healing possessed by a Zouave of the name of Jacob, who, by the mere exercise of his will, performs daily the most extraordinary cures on paralyzed persons who for years have been unable to move without assistance. The Zouave receives no payment for the boon he confers; he is perfectly unassuming in manner, and does not attempt to explain by what means he accomplishes the cures he undoubtedly effects. His regiment is quartered at Versailles, but in consequence of the difficulty the poor experienced in reaching the only portion of the barrack in which he was allowed to receive his patients, the Count de Chateaullaid, himself a paralytic, offered him the use of several rooms in his hotel, where Zouave Jacob daily administers relief to thousands who flock from all parts. The Count publishes in *La Petite Presse* a plain statement of his own experience in the efficacy of Jacob's influence. He drove in his carriage, accompanied by his

wife, to the manufactory of M. Du Noyet, where Jacob was engaged with several poor and disabled patients. The Count, who had been paralyzed for years, was supported by his footman and a workman, who obligingly lent him his arm from his carriage to the *salle*, where he was allowed to take a place in the circle of the sick surrounding Jacob.

"Persons were being transported on litters or carried in men's arms to his presence, many being so utterly helpless as to be unable to sit upright, and only able to support themselves by leaning against each other. As soon as the room was full, Jacob entered and said, 'Let no one speak until I question him, or I shall go away.' Perfect silence ensued. The Zouave then went from one sick person to another, telling each exactly the disease from which he or she was suffering. Then to the paralytics he simply said, 'Rise.' The Count, being of the number, arose, and that without the slightest difficulty. In about twenty minutes Jacob dismissed the crowd. M. de Chateaullaid walked to his carriage without the slightest difficulty; and when his wife wished to express her gratitude to Jacob, he replied that he had no time to listen, for he had other patients to attend to. Medical men are themselves taken by surprise, but the facts are not contradicted."

In a later letter the same writer says:

"The 'Zouave Guérisseur' is decidedly the lion of the day. The importance attached by the public, as well as by the press, to the *so-disant* cures operated by this private, affords a striking indication of the temper of the public appetite in this country toward supernatural agency. France is a Catholic nation, and can not do without miracles. To many, the feats accomplished by the said Zouave appear as a delusive farce and extravagancy of superstition; but to many more, I am assured, it is a serious, all-absorbing faith. Scores of people in Paris, as well as Versailles, are actually made crazy by the miracles operated by Monsieur Le Zouave. He has created the greatest curiosity, and hundreds of men and women of character and ability now seek opportunities to witness and investigate the phenomena produced by Jacob, le Zouave.

"If this Jacob is a mere impostor, which many persons broadly assert, it is nevertheless confessed by careful and candid investigators that he is most successful in concealing his imposture. The fact is that Jacob, disdaining the former manifestations of spiritualism, which merely consisted in rocking, lifting, rapping, or tipping, has had the good sense to turn his mind toward things of ordinary and tangible utility. He does not pretend to introduce you to Socrates and Solomon, to put you in communication with Voltaire or Alfred de Musset, and offer to describe to you the scenery of the planet Jupiter or the star Aldebaran; but he, more practical and matter-of-fact, undertakes to rid you of rheumatism, gout, amaurosis, palsy, etc. For startling effects, the phenomena which he produces are worthy of the age of Michael Scott."

No human being possesses the power of "healing," nor of creation. These powers belong alone to God and to nature. The "effects" produced by the Zouave simply show the power of mind over matter, and what can be done by FAITH. There are thousands of bed-ridden invalids whose *minds* are diseased—who have been disappointed in the affections, in the attainment of fame or fortune—who take to their beds and remain there days, weeks, months, and even years! We have met several cases of "love-sickness," in which the parties fancied themselves unable to stand or sit. Physicians were consulted, medicines prescribed, and all to no purpose. Nothing but setting the bed on fire would start the "poor patient" into anything like energetic action. A lady had been ill and a-bed for more than two years—nothing seemed to relieve her—her case was pronounced singular and hopeless. One day her little four-year-old boy fell into a deep well, and the almost distracted woman sprang from the bed, descended by the rope into the well, and saved her child and herself. She had become bed-ridden from long confinement, and nobody supposed her able to sit up or dress herself. She was *started out of the rut* by the screaming child, and soon recovered. Men and women sometimes "*hug their aches and pains*" as though they were afraid to let them go. They are sad, gloomy, desponding, hopeless, faithless, dejected. All the drugs in the world could do them no good. Give them a warm bath, a good sweat, something to eat, a horse-back ride, or gymnastic exercises, and they would soon come up out of the slough of despond, and begin to recuperate.

The Zouave Jew Jacob performed no miracle. He simply induced a *belief*, on the part of his followers, that he could will away their diseases. But only ignorant or superstitious persons would ascribe to him supernatural powers. The effects produced—whatever they were—were *mental* or psychical, and may be produced as well by one as another. Of course the Zouave would not explain by what means such effects were produced. He may have read our Library of Mesmerism and Psychology, and have thence learned "how to do it."

When a withered limb shall be restored—when the dead shall be brought to life—it may do to talk about miracles. But we beg the public not to run after French Zouaves, quack doctors, and the rest, with the hope of seeing miracles performed.

The sick may be best put in the way of recovery by the simple agencies of nature—good food, pure water, fresh air, exercise, and sleep. The power of prayer, hope, and faith is vastly more potent to cure than all the Zouaves and all the drugs in the universe.

HENCEFORTH be mine a life of action and reality. This alone is life,—

"Life that shall send
A challenge to its end,
And when it comes, say, Welcome, friend!"

NEW YORK, DECEMBER, 1868.

"If I might give a short hint to an impartial writer, it would be to tell him his fate. If he resolved to venture upon the dangerous precipice of telling unbiased truth, let him proclaim war with mankind—neither to give nor to take quarter. If he tells the crimes of great men, they fall upon him with the iron hands of the law; if he tells them of virtues, when they have any, then the mob attacks him with slander. But if he regards truth, let him expect martyrdom on both sides, and then he may go on fearless, and this is the course I take myself."—*De Fur.*

THE PHRENOLOGICAL JOURNAL AND LIFE ILLUSTRATED is published monthly at \$3 a year in advance; single numbers, 30 cents. Please address, SAMUEL R. WELLS, 399 Broadway, New York.

RETROSPECTION.

It can not seem amiss, now that we are about closing the file of our JOURNAL for 1868, to briefly review the year's work. It affords an earnest and industrious soul no little satisfaction to glance a brief space backward over his track, and note here and there some meritorious accomplishment—some work performed with good intent and with happy results to himself and his neighbor. He is encouraged and inspired for further effort; he gathers sunshine and cheerfulness from the past to animate his hopes for the future. Even though he halted on his way weary, faltering, and sometimes depressed, the pleasant retrospect infuses a new life, a revived vigor, a reassured mind into his being, and he briskly resumes his intermitted task. So we would scan *our* year's march, trusting that the labor of a twelvemonth has not been in vain, but that here and there may be seen some healthy growth, some evident token that the seed we have scattered has not fallen altogether on "stony ground," or where there was no "depth of earth."

If assurance were needed to persevere in the line which we have freely chosen, and in which truth and duty encourage us to work and to battle, we can find much in the very favorable attitude of the American and foreign press toward us. During the year we have received more attention, and more commendatory attention, from the "knights of the quill," those exponents and wielders of public sentiment, than it was our experience in former years to receive. Newspapers and periodicals, religious and secular of every class, appear to vie with one another in their expressions of approval and courtesy. There have been a few attacks

upon our science, but their isolation and lack of candor wrought their own refutation. Very lately one of the leading religious newspapers of the country devoted over two long columns to a careful consideration of the ethics of Phrenology, as avowed by the PHRENOLOGICAL JOURNAL. The closing paragraph of the article we quote as illustrative of its general tone.

"Phrenology means the *Science of Mind*. Surely Christians should understand the functions of the mind—perception, memory, reflection, comparison, conscience, judgment. Christianity presented the truth to those who would (1) "see," (2) and "hear," (3) and "understand," in order that (4) they might "turn" and (5) be "healed." Matt. xiii. This is the mental process—seeing, hearing, understanding, turning, healing. Strange that people permit themselves to be influenced far more by dreamy sight-seeing and grotesque hallucinations than by the infallible truth of God. In the absence of the knowledge of the Plan of Salvation, we commend the close study of the science of mind to those who seek after things unrevealed and unforbidden by the Almighty, trusting that by the time they master that divine science they will be ready to begin the study of the Bible."

This is as fair a statement and as full an admission as a disciple of Dr. Gall could wish; and, coming as it does from a religious publisher of unquestionable orthodoxy, it must have no little weight with impartial readers.

In educational circles the practical bearings of Phrenology have been much discussed, many teachers openly declaring their belief in its principles, and testifying to the good results obtained by its application in the school-room. An address delivered by Mr. Chamberlin, before the Wisconsin Teachers' Association, which the reader will find on another page of the present number, conveys an adequate idea of the progress of our science in relation to the training of the young.

In the department of Biography—in which the PHRENOLOGICAL JOURNAL excels all other periodicals of the day—we have published during the year upward of *one hundred and twenty-five* men and women of distinction, represent-

ing nearly every sphere which human activity has rendered conspicuous. The statesman, the scholar, the educator, the divine, the merchant, the projector, the mechanic, the poet, the musician, the politician, the traveler, the sovereign, the man honored for his philanthropy, and the wretch despised for his crimes, are accorded places in the long catalogue. Even Africa is explored for her contribution to these personal histories, and the strange, eventful career of Theodore, king of the Abyssinians, is spread before the reader. The JOURNAL enacts the part of a leveler—all class distinctions disappear under its trenchant polity. The American, the Englishman, the Frenchman, the German, the Turk, the Chinaman, the Negro, the king, the emperor, the subject, and the slave find equal admission to its columns. Aristocrat and plebeian receive no differential consideration there. Its platform is a broad *democratic* one—indeed, a radically democratic one, measured by no party standard promulgated at Charleston, Chicago, New York, or elsewhere. Human nature, whatsoever the shape in which it may appear, ethnologically or socially, has only to command attention and it will have a hearing. Our *democracy* includes all mankind. Our departments of Ethnology, Sociology, and Physiology have presented a good variety of matter, humorous, entertaining and didactic, while the graver spheres of Religion and Psychology have been amply furnished with the choicest and soundest thought which we were able to provide.

The number of illustrations, including the portraits which accompany the sketches of character and biography, is nearly two hundred! Many of these were procured at considerable cost, particularly those groups, and others, occupying full pages. We have published single illustrations, the mere cost of engraving which on the wood was twenty-five, thirty, and even thirty-five dollars. Such portraits as Rev. Dr. Deems, Mr. Peter Cooper, Mr. Macy, in the February number—Mr. Reed, the phonographer, in the March number,—Adelina Patti and Mr. Griffith, in the April number, are rated at such figures. From this statement some idea may be gathered of the expense of conducting a work like the

PHRENOLOGICAL JOURNAL. If the illustrations alone require an outlay of more than two thousand dollars, how shall we estimate the cost of preparing the matter for the printer, the paper, printing, binding, and forwarding? Well, no matter—the work goes on. Four hundred and eighty quarto-sized pages, equivalent to nine hundred and sixty pages octavo—the usual magazine size—replete with good reading, are furnished annually to our subscribers. Certainly they must be satisfied. They get the worth of their money almost in paper alone, to say nothing of the print. They *are* satisfied, and inundate us with thankful letters, expressive of their gratitude and satisfaction. We thank them, praise God, and take courage.

It must not be expected that this JOURNAL will strike into new channels and introduce new and startling features, *except* as the progress of science may develop them. As time rolls on, whatever may appear and exhibit a relation to Phrenology, Physiology, or Physiognomy, especially whatever may have a bearing upon man, individually or collectively, for his improvement, we shall endeavor to render practically available for the purposes and ends of the PHRENOLOGICAL JOURNAL for 1869.

END OF THE VOYAGE.

HERE we are, dear reader, at the end of our year's pilgrimage,—and so much farther on in the voyage of life! "How times flies!" and how we must fly to keep up! Think of it,—we are just about to enter upon the new year of our Lord 1869. Thanksgiving, Christmas, New Year's! What joyful emotions these words excite in all young hearts! and what grave thoughts in the minds of the aged! The young and vigorous are ever pushing on toward the goal of their ambition; while old age, having reached the mountain top, pauses and meditates before taking the final step which separates them from earth and opens up eternity.

The present year has been most eventful. In Europe, at least one decayed monarchy has almost silently fallen; and Spain lives! That was a glorious, as it was a bloodless, revolution.

The ignorant, superstitious—and we

may say insane—Theodore of Abyssinia, who imprisoned and brutally treated strangers who visited his country, has been extinguished, and all the captives set free!

The Cretans have thrown off the Turkish yoke, and are bravely contending for their right to worship God according to enlightened Christian principles.

China and Japan are opening their vast countries to Christian civilization! Benighted Asia and Africa are being explored by scholarly travelers who publish to the world important facts, no less useful to the merchant and manufacturer than to the missionary, the philanthropist, and the educator.

At home, we are reorganizing our political and labor systems,—developing our agricultural, mineral, and other resources,—building thousands of miles of new railways, opening up for settlement new territory enough for a population of 500,000,000 souls! Inventors and mechanics are startling the world with their new and useful improvements; artists are beautifying our homes; authors fill our libraries; teachers instruct young America—the ambitious ones putting more advanced ideas into his head than healthful vitality into his body; preachers are zealous in doing the work of their Master, coming as near practicing what they preach as can be reasonably expected; physicians are learning to treat their patients with less poisonous remedies and with more common sense; women are trying to reform their fashions, looking to comfort and economy as well as to beauty; they are also reading up law and the constitution, to qualify themselves to take part in political affairs,—studying medicine, that they may know how to treat and nurse the sick and make their services generally available. Farmers grow crops to feed the world, and the world returns an equivalent in implements, tools, clothing, books, sermons, lectures, works of art, and other like advantages; while *we* ransack creation, study up the laws of our being—body and brain—to make the most instructive and useful JOURNAL in the world! So we go; each is striving to do his part in the great drama of life. It were useless for us to edit and print the JOURNAL did not our friends—*voluntary co-workers*—distribute it. Believ-

ing in the doctrines we teach, they second our efforts by forming clubs and in advocating the truth on all proper occasions. This they do year after year,—and it is believed that the PHRENOLOGICAL JOURNAL has on its list to-day more subscribers of many years' standing, renewed every year, than any other serial publication of the same age. It has been our happiness to greet the return of their familiar names to our new subscription books each succeeding year. Nor do they come alone. With the father's name come that of the son, now grown to manhood and settled in the West, and that of the daughter away at school; and each of these will hand down the rich legacy of useful knowledge. Thus one year succeeds another, and we are growing older—if not wiser—together.

A word more at parting. We can not doubt we shall now part company at least with *some* of our readers, to meet in this relation no more. Changes occur; death will come to some of us ere another year rolls round; our places will be filled by others. But *while* we live, if it be the will of God, we shall try to serve Him by serving our fellow-mortals here on earth. Our good ship touches the shore,—the gang plank is out,—we must part. Here are our hand and our heart! Good-bye! Farewell! Adieu! Shall we meet again?

DO AS OTHERS DO.

A CHILD may be said to be justified in following the example of its seniors, for as society is constituted and human nature developed, young persons, both girls and boys, must be expected to imitate their elders. If a mother is truthful or deceitful, orderly or disorderly, saving or wasteful, slow to anger or quick-tempered, affectionate or indifferent, neat or slovenly, her daughter will in most cases resemble her. "Precept is great,—example is greater." If a father be active, energetic, and enterprising, the son will most probably exhibit like qualities, unless brought up in idleness, and be thus permitted to contract those vile habits which Satan finds so readily "for idle hands to do." It is a law of nature, that "like begets like."

But only children or weak-willed adults fall into the wicked or foolish

ways of others, and blindly "do as others do."

How often do we hear the question, "Why did you commit so foolish an act, or form so foolish a habit?" answered thus: "Oh, my father sets the example." Or, "The old man swears and drinks, so why not I?—what's the harm?" Can a corrupt tree bring forth good fruit? Parents are responsible not only for the morals and manners of their children, but also for their "make-up," health of body, and other qualities. There is no shirking these things. *It is so*, and God will require a full account of their parental stewardship at their hands. A young man with all the elements of a strong character, one who could grow into a commanding position, often becomes so perverted by some one or more bad habits, that in a measure he blocks his own way to success and usefulness.

"Hello! John,—come, let us have a game of 'old sledge,' 'euchre,' or 'seven-up.'" John is reading a useful book; but being unable to say No, yields, and so not only *loses* his time, but forms a habit which follows him through life.

"I say, Charley, come, let us take a drink." "No, thank you, I am not thirsty." "O, come along and be sociable. You are not a teetotaler, are you?" Charley hesitates; but not having been fortified by proper moral, intellectual, and social training by his parents, and not realizing the demoralizing effects of the social glass, finally yields to persuasion, and so stumbles, and finally falls. He halts between two influences—sociability and bad companionship on one side, and his own innate moral sense on the other. He gives way to the propensities, and loses his manhood. In the same way we are all more or less beset by temptations. One is urged to eat when not hungry, or to over-eat when dining. To appear obliging, or appreciative of an acquaintance's hospitality, one with more Approbativeness than decision would eat, stuff, and gormandize, because urged to try this and that. Instances of this kind are of daily occurrence in every one's experience. Can we wonder, then, at the extent of the perversion of our appetites? How few there are who eat and drink by any rule of judgment! How many there are who stuff and stuff, simply to gratify the appetite! Dyspepsia, apoplexy, and

other diseases arise from these excesses; many eat and drink their way into early graves. One who holds himself more accountable to God than to man will strive to decide *all* questions on their "merits." He will inquire, first, whether or not in the sight of Heaven a subject or undertaking is right. It is wicked for one to part with his time or his means without an equivalent. If the expenditure be for charity, see to it that the charity be worthy, and not "bogus." Giving to every habitual street beggar is a most mischievous policy,—it only encourages common pauperism. When you give a dollar or a dime, let it be accompanied by a benediction; and if you have doubts as to the worthiness of the applicant, satisfy yourself before you bestow your gifts. This "doing as others do" is a very unsafe rule, in charity matters, and no man of sense will follow it. Take counsel of Heaven, and then be your own judge.

Our principles apply equally to the silly slaves of fashion, who spend most of their time and money on external decorations, without regard to cost, good taste, health, or comfort. Here, in the fashions, we find nearly all the ladies "doing as others do," even to the wearing of those great bundles of somebody else's hair, or wool, on their heads, with a long twisted handle like a Chinaman's queue hanging down over one shoulder or straight behind. We hope the dear creatures will not try to imitate the South Sea islanders and wear rings in their noses; nor the East India ladies, by blackening their teeth. This organ of Imitation is large in children, weak young men, and in those ladies who never rise above fickle fashion, or "doing as others do."

Adult human beings are accountable, not so much to others as to themselves and to God. The question of "doing as others do" should first be considered with reference to the approval or disapproval of the "All-Wise," and next with reference to its subservience to our health and happiness. If these considerations confirm our desires, we may safely execute them, without regard to what others think or say. Let each one seriously cherish within his heart this most admirable resolution: "As for me and mine, I am resolved to follow Him."

AUTUMN.

THE summer has passed away; the flowers have faded, withered, and died,—children of the light and lovers of soft, balmy air as they are. The skies are of clearer, deeper blue, and the soft, fleecy clouds float quietly along, more beautiful they seem than summer skies and clouds. The trees are clothed in their autumn robes of crimson and gold, and the wild ivy, changed to golden hue, encircles many of the evergreen pines with a glorious crown. The birds have ceased their warblings, and have gone away to warmer climes. The insect songs are tinged with sadness, and the shrill cicada no longer offends our ear with his nerve-scraping drum.

The leaves drop from the trees in their ripeness—not because the frost has touched and killed their life, but because they have come to the perfection of their nature, and the sap has withdrawn into the body of the tree, which, having first provided its buds for the ensuing season, and wrapped them closely in their warm and waterproof covering, no longer needs "its lungs," and stands dormant during the winter until the warm spring sun and air shall rouse it from its sleep, again to put forth buds and leaves and branches.

The reapers are busily stacking their corn and gathering up the golden ears. "The harvest is past, the summer is ended." And oh! with how many of us the summer life is past and gone! Some have ripened under sunny skies, and brought forth summer fruits. Others needed shade to perfect their natures. The hot sun of prosperity has scorched some, and the cold, shady spots of adversity have given others stunted, sickly growth; but for all alike, the summer is gone, the autumn of life is come, and the harvest is being garnered, and they are waiting for the great Reaper to gather them in.

And to those of us whose autumn life produces not full ears of golden grain, which might have filled us with gladness and hope, but to whom time still is given to produce something to the Lord of the harvest, nature has still a voice of gladness and hope; for soon, very soon now, the snow will cover the earth with its soft, warm mantle, protecting the tender wheat seeds, sown even in autumn. Then, amid the surrounding desolation, some fields shall be clothed with summer green, the promise of a future harvest. So, though we may have been barren of good works in the bright, sunny days of life, even in hoary, white-haired age we may cherish and plant some seed of good which may spring up to future generations, and produce a harvest of which though we may not ourselves reap in this life, others who come after us may enjoy the fruition, and at the great harvest of the world we may still be garnered in good grain, though not so full and ripe as we might have been. For He, our loving Lord, and great example, did not refuse the service of those who entered into His vineyard to labor even at the eleventh hour, though the day was nearly spent.

If we sow to the spirit and not to the flesh, we shall in the end reap life everlasting.

PREMIUMS.

IN addition to a monthly magazine, which is richly worth its price, we now offer to those who may send us new subscriptions, valuable and useful premiums. As this JOURNAL is essentially useful and substantial in its general character, so the premiums named are of a useful and substantial sort. Many, to be sure, lay claim to the character of ornamental, but their decoration is but an attractive accessory to their utility. We offer no worthless frippery—no mean “pinchbeck ware” or “sham jewelry;” but appreciating more highly the mental tone of our readers, we invite their consideration to a short programme, which is thought to include things adapted to the tastes and wants of every well-ordered household and of every right-minded individual. As regards the liberal terms we make in this “premium business,” we invite comparison with other magazine inducements.

TABLE OF PREMIUMS.

Names of Articles.	Cash Value.	No. Sub- scribers at \$2 ea.
1. Piano, Steinway or Weber, 7 octave, \$650 00.....	350	
2. Parlor Organ, Mason & Hamlin, 5 oct. 170 00.....	100	
3. Choice Library, your selection at publishers' rates.....	100 00.....	70
4. Metropolitan Organ, Mason & Hamlin, 5 octave.....	130 00.....	60
5. Gold Hunting-case Watch, American Watch Co.'s best.....	125 00.....	60
6. Choice Library, your selection.....	75 00.....	50
7. New American Cyclopaedia, 16 vols.....	80 00.....	40
8. Chambers' Encyclopedia, new, 10 vols.....	40 00.....	33
9. Silver Hunting Watch, American Watch Co.'s best.....	60 00.....	30
10. Sewing Machine, Weed's new style.....	60 00.....	25
11. Sewing Machine, Wheeler & Wilson's.....	55 00.....	20
12. Chest of Tools, 75 pieces.....	40 00.....	25
13. Library, your choice.....	30 00.....	22
14. Lange's Commentaries, any 3 vols.....	15 00.....	10
15. Doty's Washing Machine.....	14 00.....	10
16. Irving's "Belles Lettres Works," 8 v.....	14 00.....	9
17. Rosewood Writing Desk, furnished.....	12 00.....	9
18. Webster's Illust'd Quarto Dictionary.....	12 00.....	9
19. Irving's Life of Washington, 5 vols.....	12 50.....	8
20. Mitchell's General Atlas, folio.....	10 00.....	8
21. Student's Set of Phren'g Works.....	10 00.....	7
22. Universal Clothes Wringer.....	9 00.....	7
23. "Bruen Cloth Plate," for Machines.....	10 00.....	6
24. Stereoscope, Rosewood, 12 fine views.....	7 00.....	6
25. New Physiognomy, Illustrated.....	5 00.....	4
26. Weaver's Works, in one vol.....	3 00.....	3
27. Hand-Book—How to Write, Talk, Behave, and Do Business.....	2 25.....	2
28. Life in the West, new.....	2 00.....	2

Our own books may be substituted in all cases for any other premium, if preferred.

Two old subscribers will be counted as one new subscriber.

ONCE MORE we call the attention of readers to our Class of 1869, for “PROFESSIONAL INSTRUCTION IN PRACTICAL PHRENOLOGY.” It will be opened on Monday, Jan. 4th, 1869, and continue about five weeks. In this course of instruction we aim to be very specific and thorough, giving students the benefit of all the information we have derived from thirty years of experience in the daily study and practice of the science. A person desiring to avail himself of our instruction may learn the terms, subjects treated, etc., on sending a pre-paid envelope, properly addressed to himself, asking for a circular entitled “Professional Instruction in Practical Phrenology.”

PROGRESS IN CO-OPERATION.

HUMAN meetings promote human activity, by either the stimulus of opposition or the stimulus of co-operation. Combativeness and Destructiveness are the ruling faculties of the former sort of stimulus, while Adhesiveness and Benevolence color the latter. Where one company opposes another company, each man finds both these couples of faculties in activity; for while he does his best in combating the opposing host, he is stimulated in his opposition by his sense of the presence of his companions, and of their need of his best aid. And again—to complete the theoretical analysis—while he helps his friends to the uttermost, his opposing faculties, aided by Approbativeness, make him try to rival and outdo them in services to the cause.

A battle is the rudest sort of human congress, and it gives place for the play of these dominant mental powers in their extreme manifestations. But if we substitute oral or written discourse for arms, and the forum for the field, we shall find exactly the same mental diagram for peaceful contests, at least for all those meetings where there is competition between two sides for the winning of something, or debate and argument for the demonstration or assertion of something. Even in meetings where there is supposed to be only one object, and an object common to all, the combative element is pretty certain to have a full representation.

The joining together of numbers of human beings to accomplish anything too great for one is an obvious process. But their joining into an organized force, though it is a method as old as history for the purpose of war, has hitherto been very little used for the purposes of peace. It is only within a few years that associated action has even begun to contribute to the vast field intended for it—for the improvement of all industrial arts, and in particular to bettering the condition of the people by increasing their gains, diminishing their toils, elevating their condition, developing their minds, and extending their means and their enjoyment of happiness.

It is interesting to observe the number, the varied objects, the earnestness, the respectability, and the efficiency of the various co-operative meetings that have taken place within a few months past, by the names of “Congresses,” “Conventions,” “Annual Meetings,” etc. Some of them have been only to promote sports or gambling, such as billiard “tournaments”—absurd name!—and the numerous races that have so long been promoted in England, and are so rapidly increasing in interest in America. Some of them are for religious purposes; such is the annual meeting of that awfully long-named thing the A. B. C. F. M.—we really can't print all of it! This meeting, the fifty-eighth, was held at Buffalo, September 27th. It was notable for the announcement that public interest in foreign missions is waning. Is it not probable that this decrease may, in part, be the result of

a sense of the enormous and pressing importance of elevating the condition of the freedmen in the South who are at our doors. It is of course also more or less caused by the unprosperous condition of business in the country, and the consequent inability to give.

The great meeting of Roman Catholic bishops at Rome some months ago was another religious one. It was not for any very direct immediate religious object, but rather part of the regular machinery of that vast and powerful centralized hierarchy, the Church of Rome. The bishops meet around the Pope once in a while—bring him gifts, receive his blessing, take counsel together, and go home refreshed and stimulated.

The “Pan-Anglican Synod,” which met in London, was another; a consultation of Episcopal bishops, a good deal like that of the Roman bishops, but without any Pope. This Synod really seems not to have done anything at all. They met, talked, heard sermons from each other, and went home. A comic paper most keenly satirized their do-nothingness, by a picture of some old washerwomen (with bishops' costumes, hats, and faces) scrubbing away at their tubs, but ill-naturedly rejecting an enormous basketful of real dirty clothes (church abuses of many sorts) brought up by Mr. Punch, with the fretful remark that they can't meddle with those nasty things! The “May meetings,” or “Anniversaries,” as they are called, or the annual meetings in New York in May, of many of the leading American religious societies, were prosperous and efficient for many years, but of late have been a good deal neglected.

Science, however, is comparatively very lively. The British Association, which met at Dundee, Scotland, in September of last year,—and the American Association—for foolishly enough there are two—which met about the same time, had quite enthusiastic and prosperous sessions. The speeches delivered and papers read showed great zeal and activity among the best scientific minds of the day. There is a paragraph in the newspapers which even announces that Professor Somebody has just got home from the “International Congress of Oculists” at Paris. These gentlemen, it appears, get together once every five years, in order, probably, to “see eye to eye.” Our Professor says there were over three hundred delegates present. Suppose that each was appointed by one other. Did anybody dream that there were six hundred oculists in the whole world?

The great Universal Exhibitions at London and Paris—ours in New York need not be talked about—have been important and useful industrial co-operative institutions; and so are the innumerable local agricultural fairs and similar gatherings. They keep people's eyes wide open, give them new ideas, show them either how smart they are or how much smarter somebody else is; and in either event stir them up to further trials.

Of diplomatic and political congresses little can be said that is good: they are against the

people, not for them; conspiracies, not reforms. They are consultations of rulers to try how they can keep the people down. Such was the congress of Vienna and that of Verona. Somewhat better, but not so very good yet have been sundry councils of European rulers about the Turkish question, the Eastern question, the Italian question. Napoleon is said to be anxious for a European congress now, for something or other, but the other monarchs won't "come into his parlor." Such congresses are "neither here nor there." Their end approaches. The congresses of the people are growing more and more important, and they will choke down and exterminate the old diplomatic weeds.

These congresses of the people—that is, those at present most properly so called, are of two kinds, which may be called popular and scientific. The popular are trade unions, associated stores, and banks, etc.; all associations formed to make the poor man's wages greater, his expenses less, his home happier. The scientific ones are pretty well described by their name, and there are several of them. All that need be mentioned are, the Social Science Congress at Belfast, Ireland, in September, and the annual meeting of the American Social Science Association at Boston, in October. A little bit of a body, for similar objects, was organized in New York, and made a small utterance; but although it included some *men*, it included no *go*, and on its present footing will do nothing. The other two are wide awake and busy. At Belfast there were some useful addresses and papers on legal reform, education, international arbitration, commerce and industry, and criminal reform. At Boston the leading subjects were population in Massachusetts, the health and training of American women, and value of life in city and country.

Sociology is the youngest of the sciences, and the most benign. It is just budding into early youth, but gives signs of a near and an immensely useful maturity. The Sociological Congresses—the truest congresses of the people—are richly entitled to the attention, the good wishes, the active aid, of all. From them and the practical discussions and instructions connected with them must probably come a large part of the progress of humanity in the future.

This rapid, and far from exhaustive, sketch will refer to only one more sort of congress—the Peace Congress. Of Peace Congresses there have been lately two important ones. One was the meeting of the American Peace Society at Boston, October 9th and 10th, 1867. This very respectable and well-meaning body was a good deal "rubbed out" during the war, when it presented, on the whole, a pretty ridiculous appearance, as some of its leading members were also leading promoters of the war. Still, there is logically no doubt that the doctrines of the Society will be practically excellent, as soon as circumstances allow them to work. Peace, not war, is the proper atmosphere of American polity more characteristically than of any of the standing-army kingdoms

of Europe; and it will doubtless be safe for the lamb to lie down with the lion (outside of him) in America, sooner than anywhere else in this quarrelsome world.

Last on our list is a still more ridiculous, though equally well-intended meeting—that of the Peace Congress of Geneva, September 10th and 11th, 1867. This singular meeting was, in one sense, an utter and absurd failure. Hardly two of its members agreed on any question discussed; it wrangled as long as it sat; it had very little idea of confining itself to the subject in hand; and it finally broke up in a regular New York city Democratic row, in which large words, and even direct assault and battery were freely used. Besides, it received a letter from Mazzini, in which he argued at length and with force, that war will prevail for a time, and that peace belongs to a period after the destruction of the despotisms. And Garibaldi wrote a letter, and even came and made a speech containing a programme, all so worded as to provoke much opposition in consequence of its alleged infidelity. So there was neither theoretical nor practical peace at the meeting, as a matter of fact. Yet imperfect and abortive as it was, it was a beginning of Peace Congresses in Europe; it appointed another meeting at Mannheim; and it was at least a protest against the monstrous tyranny of the standing-army system, and the irresponsible hereditary-monarchy system, and a declaration in favor of the government of the people by themselves.

In this last particular it signified exactly what all popular gatherings for counsel and deliberation *must* mean, whether they will or no—the spread of the practice of combined organized co-operation for the common good. That practice will destroy political abuses if anything can. Its effect on them is indicated by the French Emperor's law, now in force in France, that no meeting of so many as twenty people may take place for any purpose whatever, except under express government management. Popular meetings would soon destroy the Empire. But this law will not last long. Popular intelligence grows all the time. Popular strength grows in a corresponding ratio; and popular freedom must necessarily come close behind. These amicable co-operations are regenerating society. They will extinguish war, lead to the harmonious instead of the inharmonious development of all the human forces, and open the road to whatever good the kindly aid of all men can secure for the benefit of each one.

THE UNION PACIFIC RAILROAD.—Cars now run regularly *eight hundred miles west from Omaha* into the Rocky Mountains! The track is graded to Salt Lake City! Twenty thousand men are now at work on the road! Soon the Atlantic will shake hands with the Pacific. Clear the track when the bell rings. Every American ought to have an interest in this great work. How many shares will you take?

ADDITIONAL PREMIUMS.

As many of our readers reside in the West, where game is plentiful, we think it not amiss to offer those who are fond of hunting, some opportunities to empty their stock of sporting *materiel*, and at the same time extend our circulation. The rifles and shot-guns enumerated are accounted among the best in the market.

Name.	Cash Value.	By what
Henry or Winchester Repeating Rifle	\$50	6
Double-barreled Shot-gun, breech loader	55	4
An Allen or a Wesson Rifle, breech loading	30	2
Double-barreled Shot-gun, English Twist and patent breech	30	2
The "Thunderbolt" Breech-loading Rifle	25	2
The "Gazette" Breech-loading Shot-gun	25	2
Revolving Pistol, Smith & Wesson's, 6 shots	20	1
Single-barreled Shot-gun, good quality	12	10

These premiums apply to both old and new subscribers, to be sent in before the 1st of January next, for 1869. Here is a chance to obtain a first-rate gun at a very small cost. Young man, will you have one?

FROM THE ROCKY MOUNTAINS.—Messrs. Savage and Ottenger, artists, of Salt Lake City, to whom we are under many obligations for portraits of leading men, including Brigham Young and other prominent Mormon leaders and Indian chiefs, some of which have been used to illustrate these pages, have just sent us an oil painting representing a view in City Creek Canon, one of the most sublime scenes of that grand country. We have placed the picture on view in our cabinet, where it has been much admired. When we take our next vacation, we shall try and look in upon City Creek Canon and other Rocky Mountain grandeurs. We commend Messrs. Savage and Ottenger to our art-loving friends with the assurance that they are producing some of the best specimens in photography and oil painting to be found in America. Their album and stereoscopic pictures are unrivaled.

A PRINTERS' CEMETERY.—On Wednesday, October 14, a very interesting ceremony was performed in Woodland Cemetery, Philadelphia, dedicatory of a plot of ground for the interment of deceased printers. This plot was presented to the Philadelphia Typographical Society by that large-hearted publisher Mr. George W. Childs, and the exercise of presentation and dedication drew together a large assemblage of the prominent publishers and printers of Philadelphia, and others. Appropriate and impressive addresses were made by the Hon. Ellis Lewis, late Chief Justice of the Supreme Court of Pennsylvania, Mayor McMichael, Mr. H. J. Dubarrow, President of the Typographical Society, and Mr. E. H. Munday.

BOOKS FOR THE HOLIDAYS.—A short list of appropriate books for presentation to the old and young, with publishers' prices annexed, will be found in the department headed NEW BOOKS. We invite the reader's attention to them, as the selection has been carefully made from the latest publishers' list.

FAIR HAVEN HARBOR AND THE COMMERCE OF LAKE ONTARIO.

WHEAT, CORN, LUMBER, COAL, IRON.

THE beautiful and capacious harbor of Fair Haven (formerly Little Sodus) is being rapidly improved by the General Government, and will soon be opened to the commerce of the great lakes. It lies in an indentation on Lake Ontario, in Cayuga County, N. Y., some fourteen miles southwest of Oswego, and in the southeast basin of the lake, which gives it a most favorable geographical position for commercial purposes. It is as near the great cities of New York and Philadelphia, and the great anthracite and semi-bituminous coal-fields of Pennsylvania, as any harbor on Lake Ontario, and much nearer than any harbor on Lake Erie.

The already large and rapidly growing commerce of the lakes, with the limited capacity of Oswego Harbor—now taxed to its full capacity—has made the improvement of Fair Haven a commercial necessity. This harbor has ample room to shelter the commerce of the lakes. It is two miles and a quarter long, two hundred rods wide, and from thirty to forty feet deep. It is of easy access in all weathers, the entrance being protected by the adjacent highlands, and it affords an excellent anchorage.

The obstacles that have heretofore prevented it from assuming a commercial importance will all soon be removed. The first obstacle was a sand and gravel drift across the entrance. This the General Government is now removing, and a deep and safe entrance is being made, and protected by piers and breakwater extending several hundred feet into the lake. The work is well advanced, and the present season will open it to any craft that floats on the lakes.

The other obstacle to its assuming a commercial importance was the want of a channel of communication to connect it with the seaboard and the coal-fields of Pennsylvania. Such a channel of communication will soon be supplied. THE SOUTHERN CENTRAL RAILROAD, now building, terminates at this harbor, and extends across the State, intersecting the Erie Canal and New York Central Railroad at Weedsport, the old branch of the New York Central at Auburn, and thence through a beautiful and productive valley to Oswego, on the New York and Erie Railway, and thence southwest in the Susquehanna Valley to the State line, where it will unite with the Pennsylvania and New York Railroad and Canal Transportation Company, which manages the lines running through the Susquehanna Valley to Pittston—the center of one of the richest and most extensive anthracite coal-fields on this continent. The road-bed of the Southern Central is two thirds done, and will be nearly completed the present season. A large portion of the bridging is done. The track-laying will soon be commenced, and in all probability completed next year.

The development and utilization of this splendid harbor, and the completion of the

Southern Central Railroad, which will extend, as we have seen, entirely across the central part of the Empire State, and connecting with our present thoroughfares, will be an important addition to the public works of New York. It will add a new gate to commerce and a new channel for the accommodation of the great and vastly increasing business between the commercial and manufacturing East and the great agricultural, mineral, and lumber regions of the North and West.

We require, and must have, more highways of communication between the East and the West—between the great lakes and our tide-water cities. The Niagara ship-canal should be constructed without further delay. The commercial interests of the country demand it, as well as national dignity, safety, and independence. The Lake Ontario Shore Railroad Company, of which Hon. Gerrit Smith is President, is organized to construct a road from Oswego to Lewiston on the Niagara River, passing Fair Haven, and will be an important link in connection with the projected New York and Oswego Midland Railroad, and other railroads at Oswego between the East and the West. Boston and Portland are making strenuous efforts to reach Lake Ontario and the West by new and improved routes; and while the Lake Ontario Shore Railroad will furnish them their Western railroad connection, joining hands with the grain, grazing, and mineral regions of the prairies, the Rocky Mountains, and California, Fair Haven and Oswego will form the harbors on Lake Ontario for their accommodation.

The commerce of Lake Ontario, now considerable, is destined to equal, if not to exceed, that of any of the great lakes. Its geographical position and the surrounding elements of commerce will give it that advancement. The construction of the Niagara ship-canal will let the commerce of the upper lakes down into Lake Ontario in large measure, from the fact that the southeast basin of Lake Ontario is more than a hundred miles nearer the great ocean markets of Boston, Portland, New York, and Philadelphia than Lake Erie. The great importance of this lake communication between the East and the West lies in the fact, that Western productions can be moved on the great lakes toward Eastern markets for one fifth of the cost by rail.

Boston, Portland, New York, and Philadelphia will soon have new and improved channels of communication with Lake Ontario by shorter and lower grade lines of railroads. Portland has recently pledged her credit for seven hundred and fifty thousand dollars to attain that object. Boston, or more accurately Massachusetts, by her last Legislature provided five millions of dollars to prosecute her Hoosic Tunnel, which means a short and level route to Lake Ontario and the West. New York will have her Midland Railroad, and the cities of New York and Philadelphia will have their connection by the Southern Central and connecting lines at Fair Haven.

Heretofore the elements of trade on Lake Ontario have been made up principally from the grain-growing regions of the West and Canada, and from the Canadian pine-lumber district. The West sends now more than a hundred million bushels of grain down through the great lakes yearly. This amount will be doubled during the next ten or fifteen years, for the West is yet comparatively in its infancy in population and production.

The eight food-producing States contiguous to the great lakes—Ohio, Indiana, Illinois, Michigan, Wisconsin, Minnesota, Iowa, and Missouri—in 1850 contained a population of 5,403,666. In 1860 their population was 8,957,700. When they shall have become as densely populated as Massachusetts, they will contain a population of 61,893,894. In 1850 these eight States produced of wheat and corn 266,389,000 bushels. In 1860 they produced 485,161,000 bushels. It is evident from this data that the grain trade on Lake Ontario will go on increasing.

The great pine country of North America east of the Rocky Mountains is in Canada, and directly north of Lake Ontario. The Valley of the Ottawa alone embraces a region of country as large as the States of New York, Vermont, and New Hampshire, and is covered with a dense pine forest. It is estimated that the existing growth of pine would support a trade equal to that now carried on for a century to come. Nearly all the cities and villages on the north shore of Lake Ontario are important lumber points. The cities of Albany, New York, and, to a considerable extent, Philadelphia, derive their supply of pine lumber from Canada. A large portion of this lumber is shipped across the lake to Oswego. The want of room at that harbor is a great drawback on the trade, and will be relieved by the opening of Fair Haven. The iron deposits of Canada are attracting considerable attention, and will add to the commerce of the lake. The ore is being mined and brought out at Cobourg, and shipped to different points; a considerable quantity of this ore is taken to Pittsburg and there converted into iron. It has been fully tested, and found to be ore of a superior quality. Canada also produces considerable quantities of grain for export, which adds to the commerce of the lake.

Heretofore the south side of Lake Ontario has furnished no very considerable element of trade for the lake. A want of "equilibrium," or return freight, has been felt by the grain and lumber vessels trading in its basin. The defect has been partially supplied at Oswego in coal; but on account of the limited capacity of that harbor, no considerable amount of coal has been shipped. This "equilibrium" will soon be fully supplied. The construction of the Pennsylvania and New York Railroad to the New York State line, and connecting there with the Southern Central, which runs across the State of New York as before stated—terminating at Fair Haven, will form a direct and easy channel for the transportation

of the anthracite and semi-bituminous coals of the Susquehanna Valley to Lake Ontario. This combination will make Fair Haven the principal coal depot on the lake.

Pittston is on the Susquehanna River, and the center of the Wyoming and Lackawanna Coal Basin, and is the most northerly anthracite or hard-coal depository. The basin is some fifty-five miles in length with an average width of three and a half miles, and is estimated to have a capacity 14,768,000 tons—a quantity sufficient to sustain a trade equal to that of 1866 for 1,000 years. We give these figures to convey an idea of the magnitude of the coal resources of Pennsylvania, as well as to show the elements of trade on Lake Ontario. Canada has no coal, and the great West has no anthracite or hard coal.

This useful article of fuel will be carried as ballast on their return trips by the vessels which come down loaded with grain from the upper lakes. It will be carried also across the lake in the returning lumber vessels. Toronto already consumes 80,000 tons of coal annually. It will soon be used in smelting the iron ores of Canada, which can not be successfully done with charcoal.

A few words more in conclusion. It is believed that the magnitude of the lakes, and the commerce now carried on over their waters, are not generally appreciated. These lakes are truly inland seas; they have an aggregate length of one thousand five hundred miles, and it is estimated that they contain five sevenths of all the fresh water of the globe. On their picturesque shores are springing up the most flourishing cities and villages of this continent. Fair Haven itself is a surpassingly beautiful spot, and although it has now only the nucleus of a village, we venture the prediction, that its geographical and other natural and acquired advantages will make it a thrifty village, and in due time something more.

A DREAM.

"I had a dream which was not all a dream."

[FROM time immemorial dreams have, by their frequently truthful premonitions, called forth the strongest efforts of the intellect to arrive at a full and satisfactory explanation of them. It would seem as if the window of the soul were sometimes raised and the light of futurity admitted to the mental apprehension. Many a one can call to mind vivid dreams which have proved the phantasms of reality. Here is the experience of a lady—she asks for an explanation.]

One year ago, while sleeping alone, my husband's business requiring his absence almost continuously from home, my rest was disturbed by a strange dream. I thought I started out of a sound sleep and saw my husband close to the head of my bed, hurriedly preparing to depart with a young girl who stood a few feet distant, anxiously watching and awaiting his preparations. O'er me flashed the conviction that I was thus to be forsaken—that my right, through the might of another's attraction, was to be snatched—stolen from me. In the vision even guilt showed its inherent weakness, for they appeared excited and nervously anxious to be gone. On

my husband's return home I related my dream to him, saying that girl's face is stamped upon my mind—I should know it wherever I saw it. He made very light of it. Subsequently, however, I found a likeness, two letters, and a valentine (two hearts woven together) that had been sent to him. The likeness was *hers*—the midnight illusion, and the destroyer of my once calm repose. Though I had never seen the original I knew the face, for it was graven as indelibly on my mind as grief upon my heart since the night of that vision. My suffering long after the dream was sore; but now, when I looked on that face and read those letters, my agony seemed too much for weak mortality to bear. My heart sank within me, and I felt a withering, consuming flame penetrating my very soul. I could neither eat, nor work, nor sleep. For six long weeks I could not shed a tear, and then the flood-gates of my sorrow were opened, and I felt as though I could weep my life away. Time passed thus for five months. I lost flesh; my countenance grew haggard; and the neighbors read that something was wearing out my mind and body; but still I loved my husband, and felt that I must keep his secret and let it wear my life away. They had carried on a correspondence for seven months, and in one of her letters she thanked him for *his* likeness which he had sent her.

Sequel: My husband and the girl have disappeared, and nothing has been heard of them. What is the explanation?

[If the Scriptures be true, dreams and premonitions were regarded as something not to be slighted. In the present case, we can only suggest that it is possible the lady may trace and find out the whereabouts of the truants in the same way she first discovered *his* infidelity. Why not try to dream it out?]

AN IDEAL CHALDEA.

ONE imagines the world's early years, the new age after the great flood, the increase of population on the plains of the Euphrates, the dispersion of peoples.

The sphere of man is full with Divine ideas, and the nations move with the purposes of God over all lands.

The Chaldees separate in sight of Babylon; one part remains upon the land of man's ambition, but the other wanders to the north.

Chaldea wanders to the north in quest of godliness, leaving a moiety that hope for away.

Thy high valley, O Euphrates, is the end of pilgrimage; for thy waters flowed from Paradise, that navel of the earth, and the City of the Garden towering beneath the throne of God, his viceroy on the earth of man's ambition. Thy high valley, O Euphrates, is green, and blossoms from the deluge; but no hand of man is there to kindle a fire among the solitudes!

It was in days primeval,—and there came to the banks of the great river a wayworn crowd of Chaldees, spurning the freshness of the ground, in quest of holiness.

Weary and worn the wanderers hasten for repose. At their head went on two prophets, two leaders wasted with anxiety, of audacity unflinching, stirring up the jealousy of pilgrimage, seeking the source of the great river.

The pilgrims follow up from valley to valley with springing courage toward their hopes.

But now the advance collects at forking waters, and stops perplexed.

"Brother," says one of the fellow-seers, "our judgment is embarrassed here. What shall we do?"

"We must evoke the spirits of the streams," replied his mate.

"And whither shall our first adventure be?" the other asked.

"The lot must choose our course," was the reply.

So the two by chance went up the stream alone, leaving the people camped about the fork.

As the two men journeyed, they stopped from time to time to cast pebbles into the water, evoking from the tranquil deeps, but nothing came of it. And at noon they lay down, tired and dispirited.

A burning noontide; and the men repose beneath a tree that overhangs the water.

"Brother," says one, "this search is seeming vain."

"The world is out of shape," replies his friend, "else would our destiny appear in bright recesses of the darkling north, blessed of the only star that stands majestic." *

"My nightly contemplation troubles me," one speaks again, "yet hereabouts was once the joy of Paradise. Be it our toil to find its site beneath God's throne. For there must needs the city be wherein our blood shall triumph in the power of the Highest."

A still, hot midday in the valley, and the two men lay by a shady pool and mused upon the mystery around. Suddenly a loud bubbling beside them, startling the men to their knees as they turned to see a girl, clothed only with her tresses coming half out of the water, to stare upon them and then quickly sink from sight.

Regarding each other for an instant, the two rose to their feet and continued up the current in silence.

A cry arrests them. "Do men inhabit this valley? No one inhabits this valley."

"Child of the torrent," called the travelers in reply, "show us the beauty of the torrent."

Presently the naiad came peeping upon them, coyly advancing into clear and shallow water, and reddening as in anger while she came. "Why do you hunt me?" she asked, with mock asperity.

"Beauty of the streamlet!" exclaimed the prophets, "all this fair valley up have we been calling you." Noting her arch behavior they continued, "Believe us, sweet trifter, our hearts are heavy. Listen to us, for there is distress on the river below; there are eyelids that ache for repose. They would sleep by the temple of Euphrates. Light of the streamlet, will you conduct us thither?"

"You are right in the way," said the spirit.

"But, child, the course is devious and untrudened. Guide us, and win the blessing of the river."

* I will ascend the heavens; above the stars of God I will exalt my throne; and I will sit upon the mount of the congregation in the recesses of the north.—*Isaiah xiv. 13.*

"As far as the lilies grow?" she questioned, timidly.

"The lilies love thee, then," said one. "Aye, lead on, dainty piece; we follow thee forever for the sake of sorrowing ones that need their rest."

"It is a long way," said the girl.

How scant the waters of Euphrates now! A brook within a glen.

The Chaldean seers pursue the tortuous path laboriously. Their guide has long since left them; she feared to go beyond her haunts of flowers.

The travelers tire on the narrowing way—a glen, a straitened glen, a dark ravine, a cave, and a low, dank tunnel. They penetrate the mountain's side, and hand-in-hand encounter slippery night.

By rocks and slime they force a passage won by straining falls and chills, exhaustion on the mire.

Is such the gateway to Euphrates' fount—that river of the Garden?

"Brother," sighs one, "my strength is going; my faith is gone."

"Courage!" exclaims his friend, "the light appears."

Courage and strength, with hope for a few more trials with the rough obscurity; then they tear and struggle through the dense entanglement that screens the cavern's mouth, emerging into brightest sunshine. One glance at Paradise, and the worn-out pilgrims faint upon the sod.

What birds are singing all about them? and trees waving in the fragrant afternoon? Quick refreshment steals upon their senses: "O God," they question, "can this be thy garden?"

"O vale of loveliness!"

While brook and breezes cleanse them from their toil, from meadows and flowers to woods and hills beyond, and high, green mountains crowned with peaks of snow, their wondering gaze explores unnumbered charms.

Then all their motions yielded up to childhood's impulse the fair secluded spot is wandered over.

No awe of angels in the enclastered solitude beneath the blue of heaven; and the spirit of the dale is lost in dreams.

The pilgrims had long been lost in sensual mazes, and the mountain shadows were creeping over the valley unheeded, when all at once some one spoke from within the grove that hid the source of water. Shocked from their self-forgetfulness the two men listened. A lamentation breaking into song, a woman's song of sorrow, sweet as the chant of angels, sobs of melody that thrilled and melted hearing. The birds had ceased their warbling, for the master voice was heard.

The singing ended as suddenly as it had begun, and all was quiet in the valley now lying in shade.

"It is Euphrates in her temple," whispered one, "and she sings to the setting day. Brother, brother, how have we been unmindful?"

"By the mourning we have heard," his fel-

low answered, "I know there is no Paradise of God on all the earth, nor are we now beneath the throne on high."

"Come," said the other, "let us inquire at the fountain of this mystery."

Slowly they approached the grove, and with agitation entered the solemn precinct of shadows. No form was visible. All was silence but the whispering overflow.

By the rocky basin of the plaintive stream two children stand and watch the water sadly while the twilight deepens.

"Euphrates, hear us!"

Then a pale glow in the fountain, and a motion that causes the men to fall back as the spirit, veiled in mist, comes up and stands luminous before them.

"What do my pilgrims seek?" a sweet tongue asks.

"Spirit of song," they answer, "is this the garden of the blessed?"

"Your question mocks me," she exclaims; "the woe of waters ruined it forever."

"Tell us," they speak again, "is not our God above thee in thy temple?"

The form sighed deeply. "My springs indeed were once in Paradise; but, sirs, ye see them now. Once my hand was kissed aloft; but where is my worship now? My God, this heart is breaking for the songs that once were mine: but all Thy ways are just, Thy will is tenderness."

Because her wail was overpowering, she checked the lamentation and continued: "Can poor Euphrates dry the tears of hearts she understands? Your Paradise may yet be found. Some favored stream may well up from its midst and Heaven smile upon it. I do not wish to know. Children, beseech great Ararat. Ask her above what happy realm eternal thrones are set. But come not back to tell me. The spirits of the land will show your way. God and His messengers assist you!"

The men looked up, and night had fallen and Euphrates gone. The sound of water coursing in their ears seemed like her tears unfailing.

They moved not from the sway of melancholy until the moonlight on the vale without made the grove's shadows seem like threatening gloom.

Out on the meadow, in their conference, spoke one to the other: "Should we advance forthwith?"

"Certainly we must advance," was the reply; "the hope of glory pending is worse than failure."

"Should we then both advance?" was asked again.

"No," was the answer; "one must return to the people's side."

"Which of us should advance?"

"Brother," replied his mate, "it is you must venture. My confidence is broken by our trials. Yours will be broken too on Ararat."

"Dear fellow-wanderer," said the other, "may our confidences ever be alike. Return then to the camp, and send me on my way.

Make haste, before this garden of great sorrow can work its power on us, Euphrates seems a-dying."

Then the two friends embraced, and turned each to his own adventuring.

Chaldea invokes direction: her prophet is on pilgrimage for Ararat.

The Chaldean seer invokes a guidance for his steps; and from the pitfalls comes a spirit that beckons him away.

A guide conducting cruelly as Fate, heeding no roughness of the straight swift stages; pausing not ever until its follower has fallen down, faint with fatigue.

A pilgrim on the rocky heights falling to rest. And Chaldea rests, his weakness reinforced by angels' food, his hope rejoicing.

O hope, rejoicing for the coming spectacle of heaven and earth in unison! the firmament down reaching to the earth; the crystal height ablaze with angels' speed down reaching to the sands of gold—the sands of Chaldea's promised verdure and Babylon of God.

Then Chaldea follows on by day and night, with hurried stumbling, the rugged course that leads to Ararat.

At last upon a desert tract he sinks, and hears with falling senses how his guide exclaims: "Behold the haunts of Ararat!"

The breath of evening bathes the fallen brow, and Chaldea lifts himself from off the sand. He calls his guide, and calls in vain until the night is on him; then is he afraid to call on Ararat.

Chaldea is sitting lonely on the waste, by mystic starlight, watching, wondering to heaven in fear, and awe, and silence. And now he murmurs, "O Ararat, declare thy seat is blessed, and not this wilderness;" and a pang of hopelessness bows down his head. "O God, let not this desert be my grave!"

Is such the end of Chaldea's pilgrimage?

Prophet, a host expects thee—be not cast down. Look up, and see how something shrouds thee from the light, and mark the glimmerings round within the dark. Do lamps in order ranged arrest his glance, and archwork overhead, and forms in motion dimly visible? A hall contains the astonished seer. Amazement wakes audacity. "Hall, be thou lighted up!" he shouts. A flood of softest radiance fills the place, and busy servants do hospitality. Then Chaldea knew his journey at an end, and his spirit rested for a while.

Do cloud pavilions spring from every desert? Does every pilgrim meet celestial rest?

Chaldea is resting in a palace pearl, the guest of lightsomeness and warm serenity; pleasure eternal seems to wait at hand. Chaldea is slumbering by eternal happiness.

Is such the ending of a nation's toil?

Chaldea, awake!

"Servants," exclaims the prophet from his throne and lap of ease, "who gives me all this entertainment?"

"Master," one answers him for many, "thy palace entertains thee."

Chaldea, awake!

Out from a maze of thought the master speaks again. "Servant, how long have I been here?"

"Time is not measured here, my lord."

The startled pilgrim rises to his feet. "I should be moving," he mutters, tremblingly; "good servitors, conduct me. Slaves, lead me elsewhere!" sharpens the command from Chaldea's mouth, alarmed at their inaction. "Slaves, lead me elsewhere!"

"O my dread lord," says one, "what is there elsewhere?"

The frightened prophet lifts a flashing hand: "Tell me, or I will bleed thee to death," he thunders.

From the floor comes up the whisper of the suppliant: "Master, the haunts of Ararat."

The haunts! why not the seat and joy of Ararat, great Ararat of God, the holy land of earth?

"Spirit of blessedness," cries out the seer, "thy pilgrims are at hand. Their servant waits, refreshed within thy vestibule—waiting to see thee throned within thy shrine—to see thy beauty and to praise thy reign—to hear the word of Chaldea's destiny."

"O master!" the anxious servant interrupts, "master, we serve this palace and thy pleasure; master, thy words have terrified us!"

"My hope may well be terrible to thee," said Chaldea. "But rise up, lead me onward."

But now the impatient pilgrim sees with vexed alarm the disobedience of his menials, all prostrate at his feet, immovable. "My servants fail me—may God sustain me," is the piteous cry.

"Master, dear lord," one cries, "these speak to thee."

"And what does silence say?" the trembler asks.

"Master, these dying speak to thee. O master beloved, these say great Ararat is dead!"

Quick for thy soul! Poor Chaldea hold thy soul! A single clap of thunder shakes the palace walls and all is gone. Hall, light, and service, all—all pass away; and there, by night, upon the desert place he knew before, stands Chaldea, left alone. The cold moon lights the desolation round; the man is staring, stunned, in vague expectancy.

A gleam of recollection on his mind gives utterance to his fevered tongue piercing the air of night: "O Ararat, great Ararat, declare thy seat is blessed, and not this wilderness!"

Out of the darkness comes an echo of despair. He listens fearfully.

Do far-off spirits call, or owls?

Great Ararat is dead.

Dread utterance of death! See Chaldea kneel. The cold moon lights the solitude around. Crushed by his hopes, see Chaldea bow his head. Death and confusion on this earth of ours! The man sinks down and hides his head in stupor of despair.

A pale, robed figure coming from the shadows moves toward him. It comes and stands

above him in the attitude of God's compassion. A tear from heaven falls down and wets his hand. Another falls. He lifts his wretched face to look aloft.

"O holy Ararat! She weeps upon my grave."

"O man, thy will is very great."

"Pure and divine existence, what art thou?"

"Ah, what am I? Once was my joy filled up by God. Listen, strong heart. Once was my glory in the love of God; but now I wander on my barren heights, and wait and wait forever. Can I forget my life? My soul is disembodied, and it cries for flesh. Chaldea, when thou wast coming to my place, the power was mine to rest thy weariness and weep upon thy misery. Go now, brave spirit, bring thy people to these mountains, and the grass will grow. Your sorrow is my comfort. Come thou, and with thy mate lie down and sleep, and rest your tired hearts upon the bosom of my land. Here shall you slumber till your people's need has come."

The form has passed away; but all night long the man of Chaldea sits and gazes heavenward. The stars despise him, and the dead sand claims him.

The dawn is coming, but he has not moved. The dawn has risen, and the sun is shining now; but stars invisible are mocking him to death.

The sun is high and fierce, but Chaldea can not stir. How long can manhood thus resist fatality? Sore smitten heart, thy strength is weakness now—the cruel glare of noon upon thy woe! He falls at last, and lies beside his rock. The groan of Ararat is sensed afar—the sympathy of earth with every hero's fall when conquered not by man. And Chaldea's long pilgrimage is ended.

By the forked Euphrates' waters, where the naiads die, the worn-out Chaldees hope no more for holiness.

Then spoke the Lord of heaven to a man: Get thee out of this place of the Chaldees, and from thy kindred, and thy father's house, and journey to a land that I will show thee—a land which the Lord thy God careth for, and his eyes are always upon it as the gateway to the ladder of my heaven. And I will make of thee a great nation, and a great name, and a blessing: kings shall come out of thee, and a royal priesthood, and a holy people not counted among the nations; and I will say over them—ye are gods. For the whole creation groaneth and travaileth in pain together until then—the manifestation of the sons of God. And in thee and in thy child shall all the nations of the world be blessed.

Said the prophet of the Chaldees, as he raised his brother from the sand: "Is thy heart broken too?"

Lift him and bear him to the camp. Call back the spirit to his ears and tongue. Tell him concerning his long absence, and the searching for his place of overthrow, all when the river groaned; and listen for the utterance of his memory.

"High heaven has mocked us!" says the sufferer.

"Nay, brother," speaks his fellow; "heaven is too lofty for our utmost reach."

"The will of God is hidden," sigh prophetic souls; "the ways of God are hidden. Let us kiss the vail."

So Chaldea came to dwell in Ararat, and fed her sheep upon secluded hills, until the kings of Nineveh built Babylon.

SMOKING ON THE STREET RAILWAY CARS—

If there be one public nuisance more common and annoying than another, it is this. Men—common fellows—not gentlemen—with filthy old pipes or stinking cigars crowd the front platform and suck away at the nasty stuff, filling the air with impure and unhealthy smells to the annoyance of all decent people. Nor does the evil or nuisance end here. The filthy tobacco smoke sticks to all it strikes. In many sensitive natures it causes headache, sick stomach, and prostration; and, as is well known, there is nothing in the world more distressing than severe tobacco sickness.

Why our railway superintendents and conductors permit the nuisance is indeed most strange. It is clearly an outrage to permit the filthy fellows to pollute the air which all passengers—men, women, and children—must inevitably breathe.

But, "General Grant smokes," say these men, and why may not we? So do nearly all the gamblers, thieves, robbers, and murderers smoke. Nearly all beggars and paupers, white, black, and red, smoke. But it does not follow that *any* man is the *better* for it. We do not propose at present to go into a discussion of the merits of the general question. We simply wish to enter our most emphatic protest against being *compelled* to breathe the fumes of burning tobacco on a railway car where we *pay* for our ride. Any man may smoke, chew, snuff, drink, and make a beast of himself in his own house, or in his own barn-yard, stable, or pig-pen,—but *not* in our house; nor should it be permitted on a street railway, where we have all the common rights of citizens to protection from nuisances. We call on the officers to protect us in our rights, and to abate the common evil, for evil it most certainly is, "and we will ever pray."

THE WORLD'S ELECTRIC TELEGRAPHS—

The total length of electric telegraphs in the world, not including the submarine, amounts to upward of 180,000 miles, which is more than enough to go around the earth half a dozen times.

Germany and Austria.....	30,000 miles.
Russia	24,500 "
France	21,800 "
Great Britain	17,350 "
Italy	9,800 "
Spain and Portugal	4,650 "
Sweden and Norway	5,900 "
United States	43,850 "
East Indies	13,500 "
Switzerland	2,500 "
Belgium	1,300 "
South America	4,000 "
Australia.....	1,750 "

180,500 "

Personal.

MR. NATHAN SHEPPARD, of Chicago, after spending some months in Europe, has returned physically refreshed and mentally expanded, and will soon again enter the lecturing field. His former subjects, the Tongue, the Disposition, Motives, and the Pathos and Humor of Human Life, were formerly very popular; so also were his Sunday evening lectures, On the Bending of the Twig—a lecture to young men; The Love of Money—a lecture to business men; The Manliness for Woman; and An Imaginary Lecture by an Advocate of Intemperance.

MR. C. J. HAMILTON, formerly connected with our office, has at last entered the very ancient and respectable order of the "Benedicts." We commend his wisdom in adopting so reasonable and *manly* a course. His only fault—that of bachelorhood—is redeemed. Mr. and Mrs. Hamilton have our warmest wishes for their happiness in their new and intimate relations.

MRS. LUCY OSGOOD died at Mexico, Me., last week, aged one hundred years eight months and eighteen days. At the time of her death she had living five children, twenty-four grandchildren, forty-two great-grandchildren, and two great-great-grandchildren, being seventy-three in all.

REV. JAMES MCCOSH, LL.D., lately Professor of Logic in Queen's College, Belfast, and well known as the author of "The Divine Government," "Intuitions of the Mind," etc., was inaugurated President of the College of New Jersey, at Princeton, October 27th ultimo.

MR. T. R. PICKERING, of New York, has designed a new velocipede, which is said to be an improvement on any of the French models. It is probable that this man-power vehicle will soon become a favorite mode of exercise with many Americans.

MR. H. C. FULLER, a most worthy photographic reporter,—formerly of our establishment—is now in Washington, D.C.

MRS. ANTOINETTE B. BLACKWELL—a regular graduate of a theological seminary, and an ordained Christian minister of the Presbyterian denomination—has written a book—Messrs. Putnam and Son, publishers—under the title of "Studies in General Science," of which we shall have more to say when ready.

Literary Notices.

[All works noticed in THE PHRENOLOGICAL JOURNAL may be ordered from this office, at prices annexed.]

WHAT ANSWER? By Anna Dickinson. Boston: Ticknor & Fields. Price, \$1 50.

We venture to say that the impression created by this title in the mind of one totally unacquainted with the character of the book would be altogether remote from its true nature. With a knowledge of Miss Dickinson's public career in memory, we expected to peruse page after page of well-prepared essays, embodying her views on politics and social life in America. What was our surprise when the book came under our inspectorial eye to find a novel! Anna Dickinson has written a novel! Does she emulate the reputation of Mrs. Stowe

or Mrs. Childs? The narrative, however, embodies in a most marked manner the author's well-known anti-slavery sentiments; is written in a style of the highest fervor; yea, is even sensational. We think that the fusion of the novelist and the politician in the composition of this book has marred its effect.

THE AMERICAN BUILDER AND JOURNAL OF ART. A quarto monthly, with Designs; and matters relating to Engineering, Mechanics, etc. Terms, \$3 a year; single numbers, 25 cents. J. C. Adams, Chicago.

Another Western enterprise. We agree with the editors as to the necessity of such a work as this, and have no doubt it will be the means of doing good, and, if properly conducted, prove remunerative. Succeeding numbers will, we presume, be gotten up with less apparent haste.

THE POETICAL WORKS OF ALFRED TENNYSON. Complete. Half-dollar edition. Boston: Ticknor & Fields. A very neat edition, in paper binding, of the English laureate's poetry.

OUR MUTUAL FRIEND. By Charles Dickens. With eight illustrations. "Charles Dickens' Edition." Boston: Ticknor & Fields. Cloth, 12mo. Price, \$1 50.

Those who find enjoyment in studying variety and incongruity in human character, and like such variety and incongruity in juxtaposition on the novelist's pages, have but to read "Our Mutual Friend," to fully realize their heart's affection in that respect. We do not say that the book will improve their moral tone, for its most striking features relate to degraded life.

PROCEEDINGS OF THE FIRST ANNUAL MEETING OF THE FREE RELIGIOUS ASSOCIATION, held in Boston May 28 and 29, 1868. Boston: published by Adams & Co.

This "Free Religious Association" is an effort to unite men and women of all creeds in a harmonious co-operative society. It does not accept any instituted form of religion as necessarily a finality, and of course admits the possibility of advance in religious truth beyond any present religious system. It is composed, as might be inferred, largely of free thinkers, men and women who can scarcely be termed "religious" in the ordinary acceptance of the term. It claims as one of its aims "to encourage the scientific study of theology," and also seeks to avoid all species of sectarianism in religious matters, and to promote the free expression of opinion on religious subjects. Prominent among those who took part in the proceedings detailed in the above pamphlet were Revs. O. B. Frothingham, James Freeman Clarke, Robert Collyer, John P. Hubbard, Olympia Brown, Miss Lizzie Doten, and Messrs. Wendell Phillips, Thomas W. Higginson, and F. B. Sanborn. Many religious denominations were represented, including even the Hebrew Church. The addresses, which form the main bulk of the pamphlet, are in many respects very interesting.

THE CHRISTIAN HOUSEHOLD.—Embracing the Christian Home, Husband, Wife, Father, Mother, Child, Brother and Sister. By Rev. G. S. Weaver. 1 vol. 12mo, 160 pp. Muslin, \$1.

This little volume is designed as a partial answer to one of the most solicitous wants of Christian families. I have for years seen and sorrowed over the absence of Christ in our households. Among the Christian people of every sect, there is a sad deficiency of Christian principle and practice at home. . . . Why is it so?—Preface.

It has been out of print for some time past. A new edition is now in press, and will be ready on the 1st of December. Orders solicited; booksellers and agents supplied on best terms. Single copies by mail, \$1. May be ordered from this office.

A PRACTICAL TREATISE ON BUSINESS; or, How to Get, Save, Spend, Give, Lend, and Bequeath Money; with an Inquiry into the Chances of Success and Causes of Failure in Business; also Prize Essays, Statistics, Miscellanies, and numerous Private Letters from successful and distinguished Business Men; also Business Education, Choice of Business, Habits of Business, getting Money by Farming, getting Money by Merchandising, how to get Customers, the True Man of Business, how to get Rich by Speculation, Interest, Banking, Private Banking, getting Money by Inventions, how to become Millionaires. By Edwin T. Freedley. Post-paid, \$1 50. Address this office.

Here are hints, suggestions, and rules which young men may read with profit. Let it not be supposed, however, that the reading of the book will be the means of bringing wealth to anyone. That requires personal exertion, energy, perseverance, application, integrity. But there are many kinds of wealth in the world besides that of dollars and cents. There is the wealth of knowledge, acquired by long and hard study, which is a greater power than dollars and cents. There is the wealth of affection and friendship, compared to which "lucre" is as dross. Then there is the wealth of benevolence, of honor, of Christian charity, and of godliness, which abides to the end of life, and goes with us to the realms of bliss. Let us not neglect, while getting money here, to lay up treasures in heaven by cultivating the nobler sentiments.

COACHMAKER'S INTERNATIONAL JOURNAL. Philadelphia: J. D. Ware, Publisher.

The October number of this magazine is before us, and commands our approval for its neat typography, clear engravings, and excellent adaptation to the branch of mechanical industry of which it is a representative in the current literature of the day. Price, \$3 a year; 35 cents a number. Clubbed with the PHRENOLOGICAL JOURNAL for \$5 a year.

THE STATESMAN—a weekly Journal of Politics, Business, Literature, and Art. Published by the Maryland Democratic Association, at \$3 a year. Address *The Statesman*, Baltimore, Md.

This is the late *Leader* newspaper in a new form, as that was the *Southern Society* under a new name. The present journal is published by a joint stock company of \$100,000, in shares of \$5 each.

True democracy is the thing for this republic. But "bogus" democracy will never more thrive on American soil. We hope the *Statesman* will advocate and defend the genuine article. The *Statesman* is fashioned after the New York *Nation*. Is it not on too small a pattern?

HOW CROPS GROW. A Treatise on the Chemical Composition, Structure, and Life of the Plant, for all students of Agriculture. With numerous Illustrations and Tables of Analysis. By Samuel W. Johnson, M.A., Professor of Analytical and Agricultural Chemistry in the Sheffield Scientific School of Yale College, etc. New York: Orange Judd & Co. 12mo, cloth, \$1 75.

In point of practicability, this volume appears to us the best that has come under our notice, of treatises relating to the chemistry of vegetable growths. The arrangement is excellent; tabulated results of careful analyses of all the ordinary articles of vegetable food are furnished,

besides clear and concise descriptions of the nature and properties of their elementary constituents. The author is well known for his scientific researches in the department of agricultural chemistry, and possesses a weight of authority on the subject that can be attributed to very few American chemists. The constitution of plants and their adaptation to soils is a matter of no slight importance to the intelligent farmer, planter, or horticulturist in this great agricultural country, and the book which contributes reliable information thereon is welcomed with no little satisfaction. "How Crops Grow," is placed before the American people as one which will "serve the student of agriculture for thoroughly preparing himself to comprehend the whole subject of vegetable nutrition, and to estimate accurately how and to what extent the crop depends upon the atmosphere on the one hand and the soil on the other for the elements of its growth."

THE PRESBYTERIAN HISTORICAL ALMANAC, and Annual Remembrancer of the Church, for 1867. By Joseph M. Wilson. Volume IX. Philadelphia: Joseph M. Wilson.

This volume, although somewhat late in its appearance, is a valuable addition to American church history. It of course is special in its data, and therefore the more comprehensive and reliable. In one respect it may be said to be unique; for it is the only denominational work published in the United States which treats fully and satisfactorily of religious affairs. The other religious societies would do well to follow the Presbyterian example in producing comprehensive annual expositions of their movements. Fine portraits on steel of Rev. Drs. E. D. Macmaster, Miles P. Squire, and Rev. James Dickson, with their biographies, are included in the work. Biographical notes relating to over one hundred other clergymen of the Church are also given. To the thorough-going Presbyterian such a work must be most desirable.

THE CO-OPERATOR; A weekly Record of Co-operative Progress by Working Men. Edited by Henry Pitman, Manchester, England.

We have received some copies of this well-managed weekly from the publisher, and are very willing to indorse its progressive and reformatory character. Among its contributors we find many eminent names, for instance: Henry Vincent, Goldwin Smith, Dr. Levison. The laboring classes find in it expression of their grievances under injudicious government, and a cogent appeal for reform. We notice in its pages lengthy quotations from the columns of the PHRENOLOGICAL JOURNAL.

A DEFENSE OF JESUS CHRIST. By Menard Saint Martin. Translated from the French by Paul Cobden. Cincinnati: Hitchcock & Walden. \$1.

This volume contains five discourses on the following subjects: (1) The Testimony of Prophecy with regard to Jesus Christ; (2) The Testimony that Christ Himself has given in His Words; (3) The Testimony that Christ has given of Himself in His Life Among Men; (4) The Testimony that Christ has given of Himself in His Inner Spiritual Life; (5) The Testimony that the Christian Church has given of Christ. These embody, as is apparent, the leading features of the Christian religion, and having been uttered by one of the noblest ministers of France in modern times, are worthy of examination for their learning, reasoning, and fervent piety. The translator, who by the way is an old contributor to the columns of the PHRENOLOGICAL

JOURNAL, has performed the task of rendering the French into suitable and adequate English with unusual accuracy. The spirit of the original with its many delicate shades of significance and deep feeling is preserved with a rare fidelity. We commend the book to all inquirers after light in religious matters.

THE TIM BUNKER PAPERS; or, Yankee Farming. By Timothy Bunker, Esq., of Hookertown, Conn. With Illustrations by Hopkin. New York: Orange, Judd & Company. 12mo, cloth. Price, \$1 75.

This is a compilation of papers published in the *American Agriculturist*. Their popularity is the reason for their appearance in a convenient book form. The preface of the collection speaks of them as "a humble attempt to represent the average wisdom of the Connecticut farmer, and the steady progress which this class is making in rural improvement, and in the comforts and moralities of social life." The style of composition and the incidents narrated are amusing enough to engage the attention of general readers, but the vein of common sense underlying the mere phraseology imparts to the papers an instructive character. Farmers, young and old, who are still in the meshes of old fogeyism with respect to the conduct of their farms, would derive much benefit from a reading of Tim Bunker's sententious reflections.

CAST AWAY IN THE COLD. An Old Man's Story of a Young Man's Adventures, as related by Captain John Hardy, Mariner. By Dr. Isaac J. Hayes, author of "An Arctic Boat Journey," etc. Boston: Ticknor & Fields.

Here is an interesting book for our boys and girls; one that contains much real information as well as a great deal of that lively, tripping fascination which the juvenile mind so warmly appreciates. Dr. Hayes shows himself as capable of interesting children by narrative and incident suited to their capacity, as of winning the respect of the mature mind by his sedate, graphic, and well-written accounts of arctic researches.

WHERE THE ROSES NEVER WITHER—is the title of a new and sweet song, "written and composed" by James C. Clarke, and published by C. M. Tremaine. New York. Price, 40 cents.

The author's portrait (as we take it to be) is neatly lithographed on the title-page. Besides, he dedicates the effort to no less than four ladies, all Marys, and all pretty, no doubt! Can't he decide which to choose?

IF, YES, AND PERHAPS. FOUR Possibilities and Six Exaggerations, with some bits of fact. By Edmund E. Hale. Boston: Ticknor & Fields. Cloth, \$1 50.

A queer book in most respects, containing several stories, which are not altogether wanting in fun, humor, philosophy, pathos, and some useful hints. The table of contents contains the following: The Children of the Public; A Piece of Possible History; The South American Editor; The Old and the New Face to Face; The Dot and Line Alphabet; The Last Voyage of the Resolute; My Double, and How He Undid Me; The Man Without a Country; The Last of the Florida; The Skeleton in the Closet; Christmas Waits in Boston.

THE LIVES OF HORATIO SEYMOUR AND FRANK P. BLAIR, JR. Philadelphia: T. B. Peterson & Brothers. Paper, 50 cents; cloth, 75 cents.

This book purports to be a complete history of the lives and services of these distinguished candidates for the highest office in the gift of the American people.

THE WORKSHOP. No. 8 of this elaborate work lies before us, and exhibits evident marks of progress on the part of the publisher. Its popularity, already attained, has induced an enlargement by way of a supplement, in which matters of interest to American artists and mechanics will be presented. This new feature will greatly add to the "Workshop's" value, and doubtless materially extend its circulation. Those who love art should subscribe to this monthly exposition of really exquisite engravings. Price, \$5 40 a year; single numbers, 50 cents.

THE ATLANTIC ALMANAC FOR 1869 is published by Messrs. Ticknor & Fields, at 50 cents a copy. It contains upward of sixty large octavo pages, with several pictures in oil-colors, and many excellent wood engravings. The "Atlantic" is gotten up after the fashion of the "Illustrated London Almanac," and, for Americans, greatly surpasses its European prototype in interest.

TEUBNER'S AMERICAN AND ORIENTAL RECORD is a monthly register of the most important works published in North and South America, India, China, and the British Colonies: with occasional notes on German, Dutch, Danish, French, Italian, Spanish, Portuguese, and Russian books. We receive it regularly from the London house, and are able to testify to its value as an important aid to the philological scholar. It is especially rich in Oriental literature.

Subscription 5s. per annum—about \$2 currency. Messrs. Trübner & Co., Publishers, 60 Paternoster Row, London, Eng.

The October number of the New York *Coachmaker's Monthly Magazine* is embellished with several neat drawings of carriages representing the newest styles. Its reading matter is more than usually varied and instructive. \$5 a year; 50 cents single. New York: E. M. Stratton, Publisher.

THE Homeopathic Sun is a new candidate for public consideration. It is intended more for general circulation than for professional use only; for in the words of its prospectus, "it is designed to furnish a medium of intercourse and communication between homeopathic physicians and the now rapidly extending circle of intelligent and inquiring laymen." Does it not include "laywomen," too, in its beneficence? It seems to us that the old-school physicians are permitting the "progressionists" to forestall them by reaching the public eye first through medical periodicals of a comparatively untechnical character. The *H. S.* is published by Wm. Radde, New York, at \$2 a year.

LE BON TON, a Journal of Fashions, gives, monthly, four highly colored steel engravings, executed in Paris, representing the latest styles of dress adopted in Europe and America. Its descriptive matter is in French and English. Two full-sized paper patterns accompany each number. Price, \$7 a year; 75 cents a month. New York: S. T. Taylor, Publisher.

MESSRS. WILLIAM A. POND & Co., Broadway, New York, have just published—

VOCAL EXERCISES for the Training and Developing of the Voice. By H. S. Perkins. 60 cents.

THE DREAM OF THE BALL. A Waltz. By Dan. Godfrey. 75 cents.

NOW I LAY ME DOWN TO SLEEP. A Song. By Arthur D. Walbridge. 30 cents.

CHICAGO boasts a weekly paper devoted to legal matters; it is titled, *Chicago Legal News*. It is printed neatly, and has a shape well adapted to the needs of the profession which it technically represents. The editor promises to do all that is practicable "to make it a paper that every lawyer and business-man in the Northwest ought to take." Price, \$3 a year.

PART XVII. OF ROUTLEDGE'S ILLUSTRATED NATURAL HISTORY OF MAN, in all Countries of the World, takes up the consideration of Australia and its People. As in the preceding number, the text is plentifully strewn with striking illustrations. New York: George Routledge & Sons, Publishers. Price, 50 cents.

EDUCATION IN MISSOURI. We notice with interest the new effort to establish a JOURNAL OF EDUCATION, by J. B. Merwin, of St. Louis, in the rich and rising State of Missouri. It is published monthly at \$1 50 a year, in the usual quarto form, and makes a very creditable appearance. There are many "live teachers" from the East in Missouri, and they will put the Journal at once on a paying basis.

We shall hail with gladness any effort to advance the common schools of our country, especially in the South and West. Why not establish at once journals of education in each of the Southern States? Look at California, Kentucky, Louisiana, and now Missouri, with their educational journals as rallying instruments in the work of civilization! Where are Georgia and Alabama? Where are the Virginias? Let each have a Journal of Education!

THE AMERICAN HOUSEWIFE is the name of a new monthly journal published by Mr. and Mrs. Goodwin at Indianapolis, Ind., at \$1 50 a year. Motto, "Elevate mankind through the influence of cheerful, happy homes." We wish the *American Housewife* the best success in its laudable enterprise.

THE LITTLE CORPORAL now comes out with a fine pea-green cover, and aspires to a place among the magazines. It is all alive with energy, hope, zeal, and "go-ahead." It is still published at \$1 a year, by A. L. Sewell, Chicago.

New Books.

Notices under this head are of selections from the late issues of the press, and rank among the more valuable for literary merit and substantial information.

WHITTIER'S POEMS. Complete, and illustrated with twelve full-page Engravings. Small quarto. Cloth, \$4 50; Turkey morocco, \$8.

THE KING'S LILY AND ROSEBUD. A charming Fairy Tale. Finely illustrated. 16mo. \$1 50.

THE POETRY OF COMPLIMENT AND COURTESY. Revised Edition, with ten Steel Engravings. 12mo. Cloth, \$4; morocco, \$6 50.

TENNYSON'S POEMS. Complete. Illustrated. Cloth, \$4 50; morocco, \$8.

DICTIONARY OF POETICAL QUOTATIONS. Mrs. Hale's. Octavo. Cloth, \$3.

SELECTIONS FROM THE WORKS OF DE QUINCY. 12mo. \$1 50.

HOME INFLUENCE. A charming Moral Tale. By Grace Aguilar. 12mo. Cloth, \$1 50.

THE WORDS AND MIND OF JESUS AND FAITHFUL PROMISE. By Rev. J. McDuff, D.D. 1 vol. gilt. 85 cents.

BRITISH POETS. From Ben Jonson to the present time. Most complete Edition of the kind. 3 vols. royal octavo, with 30 engravings. \$12.

LONGFELLOW'S POETICAL WORKS. Cabinet Edition. 2 vols. \$4.

WHAT MAKES ME GROW; or, Walks and Talks with Amy Dudley. Illustrated by Frohlich. \$2.

LITTLE WOMEN; or, Meg, Jo, Beth, and Amy. A girl's book. By Louisa M. Alcott. Illustrated. \$1 50.

CHRISTMAS STORIES. By Charles Dickens. With original Illustrations. 12mo. \$1 75.

POETICAL WORKS OF SHAKESPEARE, BYRON, SCOTT, AND BURNS. Completed in 4 volumes. Cloth, \$8; half calf, \$13 50.

KATHERINA. A poem by Dr. J. G. Holland, 12mo. Cloth, \$1 50. With 70 Illustrations; in small quarto form. Turkey morocco, \$12.

MRS. PARTINGTON'S KNITTING WORK; and what was done by her plucky boy Ike. With Illustrations. 12mo. Cloth, \$1 75.

MAKE OR BREAK; or Half Around the World. By W. T. Adams (Oliver Optic). Illustrated. 16mo. \$1 25.

GOLDEN TRIBUTES. In Prose and Verse. A beautiful book. \$2.

CHIMES FOR CHILDHOOD; a collection of Songs for Little Ones. Illustrated. 16mo. \$1 50.

OAKENDALE. A Story of Schoolboy Life. By R. Hope Moncrief. Illustrated. \$1 25.

HOW TO CONQUER; or, Ellen Ware. A Temperance Tale. By Catharine M. Trowbridge. Cloth, \$1 25.

POPE'S ESSAY ON MAN. Beautifully illustrated. With notes by S. R. Wells. 12mo. Cloth, gilt, \$1.

WEAVER'S WORKS FOR THE YOUNG. Comprising "Hopes and Help for the Young of both Sexes," "Aims and Aids for Girls and Young Women," "Ways of Life." By Rev. S. G. Weaver. 12mo. pp. 636. Cloth, \$3.

NEW PHYSIOGNOMY; or, Signs of Character. With over 1,000 Illustrations. By S. R. Wells. A splendid presentation book for old or young. Cloth, \$5; calf, \$8; Turkey morocco, \$10.

HAND-BOOK FOR HOME IMPROVEMENT; How to Write, How to Talk, How to Behave, How to do Business. Adapted to youth and middle age. 12mo. \$3 25.

ORATORY—SACRED AND SECULAR; or, the Extemporaneous Speaker. By Wm. Pittenger. An excellent manual for the young man who would become a ready and accurate speaker. Cloth, \$1 50.

LIFE IN THE WEST; or, Stories of the Mississippi Valley. By N. C. Meeker, of the New York *Tribune*. 12mo. Cloth, \$2.

THE EMPHATIC DIAGLOTT; or, the New Testament in Greek and English. With notes and varied readings of difficult translations. References and a valuable Index. By Benjamin Wilson. Cloth, \$4; extra binding, \$5.

ÆSOP'S FABLES; Pictorial Edition. With 70 fine Illustrations. 1 vol. 12mo. Cloth, gilt, \$1.

SELECT MUSICAL WORKS. **MANN'S NEW METHOD FOR PIANO.** The best elementary book for teaching young pupils to play the piano—being comprehensive, progressive, and reiterative. The work has received the highest encomiums from many of the best teachers in the country. Price, post-paid, \$3 50.

NINE O'CLOCK IN THE MORNING. The new day school-book, by Henry Tucker; especially adapted to the wants of public schools, comprising in its pages, Marching, Gymnastic, Opening and Closing Songs, arranged expressly for the work. 50 cents.

THOMAS'S SACRED MUSIC. A selection of Psalm and Hymn Tunes, Anthems, etc., selected from the works of the best masters, together with a number of original compositions, arranged with a separate Organ Accompaniment. By J. R. Thomas. \$1 25.

BUCKLEY'S VIOLIN TUNES. A collection of the most choice Jigs and Reels, for the Violin; to which is added Buckley's celebrated imitations of the "Farm Yard," and celebrated "Cuckoo Solo," and all the new and beautiful melodies of the day; the whole carefully arranged for the violin. By James Buckley & Sons, of Buckley's Serenaders. 50 cents.

FOSTER'S SOCIAL ORCHESTRA. A collection of Popular Operatic and other Melodies, judiciously arranged as Solos, Duets, Trios, and Quartets, for Flute, Violin, Violoncello, or Piano-forte. Among the Quartets are several beautiful sets of Quadrilles, Waltzes, etc., suitable for the country hall-room. Compiled and arranged by Stephen C. Foster. \$1.

CZERNY'S LETTERS TO A YOUNG LADY ON THE ART OF PLAYING THE PIANO-FORTE, from the earliest rudiments to the highest state of cultivation. By C. Czerny. In cloth, 50 cents.

LODER'S VOCAL METHOD. A simple and concise method of acquiring the art of singing well at sight. By Geo. Loder. \$1.

To our Correspondents.

QUESTIONS OF "GENERAL INTEREST" will be answered in this department. We have no space to gratify mere idle curiosity. Questions of personal interest will be promptly answered by letter, if a stamp be inclosed for the return postage. If questions be brief, and distinctly stated, we will respond in the earliest number practicable. As a rule, we receive more than double the number of questions per month for which we have space to answer them in; therefore it is better for all inquirers to inclose the requisite stamp to insure an early reply by letter, if the editor prefers such direct course. Your "BEST THOUGHTS" solicited.

RELIGION AND NATURE.—ED. PHREN. JOURNAL: "The question I propounded to you in a former letter, viz., 'Is religion a truth?'—is man immortal? was conclusively answered in the JOURNAL for November, page 170; but I did not mean exactly to inquire if religious feeling was true, for this I know by experience,—but might not all this feeling be exercised toward an imaginary being?"

Ans. In reply to this question we say we think not; all the analogies of nature speak the contrary. The twining vine has a law of clasping, and it reaches for something to be clasped; and when nature's works are without man's intermeddling, the vine will find something to cling to—a tree or a shrub, by which it will be lifted into sunshine. Take as an illustration the instincts of animals. These are relatively no nearer perfection than are the purely human instincts, the fact not being forgotten that many things are left for man to reason out in the progress of civilization and development. Our instinctive qualities, including the moral, are just as perfect instincts as is the tendency of the calf to look upward for its first meal, and for the ox to look downward for his food; and the whole realm of nature is adjusted on the principle of truth, reality, and adaptation. Does manly strength sigh for gentleness, grace, and beauty? and do beauty, gentleness, and grace admire the stalwart form, the broad chest, the heavy beard, the bass voice and the thunder of courage, and all by interior instinct? Do not these preferences and

fancies grow out of instinctive truth? The more widely we examine nature, and the more extended our knowledge becomes of the institutes of nature, the more reverence and confidence we shall have respecting these teachings. The heart of man sighs for immortality. The heart of man yearns for something to worship, and when he worships a Supreme Being, he is conscious of being lifted up and strengthened; and as the twining vine reaches up and begins its twining even before it reaches the object it blindly yet truly seeks, so the soul directed by an infinite intelligence and goodness, by means of its instincts, yearns through worship and aspiration for its God. The fact that all nations look upward, acknowledge superiority, believe in superior goodness and superior power and wisdom, is to an anthropologist the strongest possible evidence of the existence of God and the truth of immortality, and the fact that we have those feelings ought to be proof enough that they have their counterpart in a Being to be worshipped. Since the wide world of nature is full of these instincts, acting blindly through animal life, shall we doubt the correctness of the higher instincts of the higher animal, man? That there may be error in regard to trinity or unity; in regard to predestination, election, forms, services, baptism, and other ordinances, good men may be permitted to believe; but when we forget the Quaker, Episcopalian, Roman Catholic, Baptist, Unitarian as such, and stand in the midst of our common humanity looking forward to a higher life and a better state, we believe the earnest-hearted Christian sentiment of the world springs from an inborn truth, and that some sublime condition of immortality, more than the eye hath seen, the ear heard, or hath entered into the heart of man to conceive, shall be the lot of those who, in this life, seek righteousness, purity, and holiness. May this not be the result of education? you ask. Who got the first idea to promulgate? Where was born the thought of a superior Being and of immortality? It is in us, and the best organized of the human race have the most elevated and consistent ideas of a higher life, of God, and of godliness. We do not speak of single persons, but of the great mass of the well-intentioned and refined of the human race, who have the most earnest religious convictions. We hope your doubts will be dispelled, and that more of purity and beauty in the life to come than we now conceive shall be our lot.

CONCRETE BUILDINGS.—We are often questioned by letter in regard to houses constructed of concrete—sand, gravel, and lime—and have written many descriptions of the method of constructing the walls of buildings with this material. For the past fifteen years we have thus referred to the subject many times in the JOURNAL, besides writing frequent letters on the subject. In 1852 we built a house near Lake Ontario, in Cayuga Co., N. Y., the walls being composed of lime, sand, gravel, and small stones. That house still stands, the walls being firm and durable. A book, entitled "A Home For All," has been published at this office, in which everything is explained in detail. We send the book to those who wish it, by mail, post-paid, for \$1 50. Since that time some changes—probably improvements—have been made, in the construction of concrete walls, by different persons. We have no doubt that there is to be an era of cheaper buildings, and that efforts now being made will tend toward its realization. Another method has been devised, and a description of the material and the mode of using it, entitled

"Building with Concrete," can be had by sending to us 40 cents; or the two books for \$1 90. We beg to say that we have not, personally, the slightest interest in any system of house-building, but we have good-naturedly answered scores of letters on the subject; and now, by referring to the works above named, we doubt not persons who wish to try the concrete house-building experiment will hereafter ask for the book instead of requiring us to write lengthy letters on that subject.

A single suggestion in conclusion. Instead of trying the experiment on a large or expensive scale, it would be better for parties to build an ice-house, ash-house, milk-house, wood-house, or other small out-building, and then, if the plan works well, try a stable or a carriage-house, and then a dwelling. But, first of all, let the foundation be thoroughly drained, and, if convenient, laid on good-sized field stones.

COURTSHIP QUARRELS.—EDITOR JOURNAL—Sir: If a man be courting a woman for a year, and they quarrel frequently through mistrust and jealousy, would they not be likely to live unhappily together if married?

Ans. If people quarrel before marriage, when they are proverbially solicitous to please each other, we think it better for them never to marry; for if they can not harmonize before, they will not be likely to harmonize after marriage.

LAW STUDENT.—We can furnish you "Hillard on Sales," for \$5; "Story on Contracts," \$14; "Reeves on Domestic Relations," \$6; "Wharton's Criminal Law," \$15; or any other law-book in market at publisher's price.

PHRENOLOGIST.—We can supply one complete set of the PHRENOLOGICAL JOURNAL, 1838 to 1868 (except vol. 4), thirty volumes, for \$175. The price of volumes for 1854, 1858, 1862, and 1863, separately, is \$10 each. For 1866, '7 and '8, \$3 50. If post-paid, \$4.

HYDROPATHY AND HYGIENE:—In reply to numerous inquiries relative to the old *Water-Cure Journal*, we would say that we have copies bound in cloth, from 1847 to '62, and will supply them as long as they last, at \$3 per volume. Each year makes a complete volume.

BASHFULNESS.—I wish to get your opinion in reference to bashfulness; whether or not a natural, mental diffidence can be cured, and where I can obtain the most light on the subject. I am in receipt of a letter from Dr. —, of — city, who says that bashfulness is as much a disease as rheumatism, and as liable to treatment, and offers to furnish appropriate remedies for two months for the sum of \$30; but my organ of Cautionness is large, and I fear he would be getting the best of the bargain.

Ans. If you will read an illustrated article in our Combined Annals, entitled "Bashfulness," you will find this subject thoroughly discussed. The Dr. who offers to cure you of bashfulness with medicine for \$30 is both a knave and a quack. He might as well undertake to treat a person for idiocy, for pride, or for selfishness, as for bashfulness. If he succeeded no better than most physicians do in treating rheumatism, you would require a good many months' treatment at \$30 to effect a cure. Beware of the quacks who set traps for ignorant and indiscreet young men and foolish women!

INJURY OF BRAIN.—On the 30th day of December last, a Mr. Gifford, residing in Indiana, was accidentally shot with a pistol. The ball struck two inches above the left eye, and was flattened on

the skull. The wounded man went home, and then a mile and a half farther, to see a surgeon. After two days, Mr. Gifford was compelled to go to bed. He continued to get weaker, and died on the 6th of February. During his illness he suffered from convulsions. In the intervals between these convulsions he retained his senses. The skull of the deceased was opened and examined, when it was found that from the inner table of the skull, at the point where the ball had struck, a splinter of bone one eighth of an inch wide and an inch and a quarter long had been detached and driven into the membranes which cover the brain. Matter had collected to the amount of one and a half ounces. Now comes the very pertinent question—How was it possible that, notwithstanding so great an injury to the front part of the brain, which, according to Phrenology, is the seat of the intellectual organs, the injured man retained his power of thinking through all his sickness, unimpaired?

Ans. The injury to the brain was on one side, involving only one hemisphere. The brain is divided anatomically from the root of the nose to the back of the neck, and connected at the base by ligaments. The brain being double, and all the organs being also double, one set being in each half of the brain, it follows that one half of the brain may be injured without serious impairment of mind, as one eye may be injured or destroyed without destroying the sense of sight. The injury was sufficient to produce convulsions, but those convulsions might have been mainly connected with one side of the person. They were sufficient to render the patient unconscious while they lasted, and during their continuance the opposite side of the brain sympathized with the paroxysms. Paralysis is generally more or less partial, one side being alone affected, and an injury of one hemisphere of the brain may occur without obscuring the mind, as the uninjured half or hemisphere of the brain contains a full set of the mental organs.

IDIOT AND FOOL.—In order to appreciate the real difference existing between these terms, they having become almost interchangeable in common speech, we must consider their respective derivation. *Idiot* is derived immediately from a Greek word signifying an uneducated, ignorant, or ill-informed person. *Fool* is from the Celtic, and originally had reference to a jester or buffoon. If we wished to designate a person devoid of intellect—a natural—we would be inclined to select *idiot* as the more appropriate term.

WARTS.—There is a man in our neighborhood who can cure warts by looking at them a short time intently, and bidding them begone. Can you explain it?

Ans. No, we can not. We have recollections of such feats kindly practiced by a beloved aunt of ours, in our boyish days. No explanation is given for the appearance of warts, and none whatever for their disappearance either without any incantation or apparently by means of it. *Rub* them.

STUDYING GERMAN.—The following works are recommended for students: "Ahn's German Method," \$1 40; "Ollendorff's German Grammar," \$2; "Adler's German Reader," \$2; "Adler's German and English Pocket Dictionary," \$3 25; "Fulborn's German Instructor," \$1 15. We can send any of them by mail, post-paid, on receipt of price.

LEVELING.—The instrument called the "level" used by mechanics, is influenced by the same forces which produce the water level. As is well known, the surface of the ocean is curved, that curvature producing a declination from any given point of about eight inches to a mile.

Publisher's Department.

THE END.—What! so soon! And is it a year since the last December number announced the end of a volume? Aye, verily. And this closes the volume for 1868. In accordance with our custom, we open new books with each new year—and only enter the names of those who renew their subscriptions. Reader, will you be re-booked for 1869? We are promised a large company and a good time generally. Good-bye.

GRAPES.—As some of our readers doubtless appreciate this delicate fruit enough to make some effort to secure a vine for home cultivation, we offer a two-year-old vine of that superb variety the Walter, and a copy of the JOURNAL for 1869, for \$10—the growers' price of the vine itself.

LANGÉ'S COMMENTARY.—An American edition of Dr. Lange's "Commentary," translated and edited by Dr. Scenaff and others, is now being published. The following three new volumes of this great work have just been issued: Thessalonians, Timothy, Titus, Philemon, and Hebrews—translated and edited by Drs. Harwood and Washburne, Professors Kendrick, Hackett, and Day, and the late Dr. John Lillie. Genesis—translated and edited by Professor Taylor Lewis and Dr. A. Gosman. Corinthians—translated and edited by Drs. D. W. Poor and Conway Wing. The four volumes previously issued are: Matthew—translated and edited by Philip Schaff, D.D.; Mark and Luke—translated and edited by Prof. W. G. T. Shedd, D.D., Philip Schaff, D.D., and Rev. C. C. Starbuck; Acts—translated and edited by Charles F. Schaffer, D.D.; the Epistles General of James, Peter, John, and Jude—translated and edited by J. Isidor Mombert. Each volume is complete in itself, and the seven volumes already completed make in themselves a library which no clergyman can well do without, if he aims to keep abreast of the times; while they are indispensable to Sunday-school Teachers, and an invaluable aid to laymen and all Biblical students, without regard to profession or denomination.

The German edition embodies the results of the labors of the most earnest and profound Christian scholars of the Continent; and the American translation, which is in progress, under the supervision of Dr. Philip Schaff, aided by a large corps of our own most eminent and learned divines, is enriched by numerous and important additions which entitle it to be considered to a great extent as an original and independent work. That the undertaking has thus far been prosecuted in a spirit which elevates it above all sectarian or denominational considerations, is sufficiently proved by the fact that among the Continental scholars, more than twenty of whom are engaged upon the work, under Dr. Lange's direction, are representatives of all the different evangelical denominations of Germany and Holland, while the ecclesiastical connections of the contributors to the American edition are quite as diverse.

By a special arrangement we are enabled to offer this most valuable work as a premium for clubs to the PHRENOLOGICAL JOURNAL on such liberal terms that any one can procure it by a little effort. For seven new subscribers at \$3 each, we will

send any two volumes, or for ten, we will send any three volumes desired; for twenty, we will send the seven volumes complete. Here is a chance by which any congregation may present their pastor, or a Sunday-school class their teacher, with this valuable work. Published at \$5 per vol.

OUR BOOKS IN ALBANY, N. Y.—The young and enterprising firm of Messrs. Gottwails & McDonough have opened a commodious book and stationery store at 83 State Street, where all our publications may be obtained. Subscriptions for this JOURNAL will be promptly forwarded by them.

FARM LANDS IN KANSAS.—In the past we heard much of "bleeding" Kansas. Of late, we hear of flourishing Kansas. Happily that State is now settling down to civilized modes of life. Farming, stock and fruit growing, are everywhere going on; railways, school-houses, churches, etc., constructing, and that young prairie State bids fair to become the successful rival of her older neighbors. There are yet a few millions of acres open for settlement.

MR. A. HOFFSTETTER, of Riverhead, L. I., has entered the field as a lecturer on popular subjects, and has already received flattering notices from the press, testifying to his ability, etc. He may be addressed at 392 Canal Street, New York or through the American Literary Bureau, Nassau Street.

VERY POPULAR.—Our Illustrated Annual for 1869 is proving the most acceptable of any we ever before published. One edition after another, of 5,000 each, goes off in rapid succession. The press everywhere praises it. Agents and newsmen duplicate their orders, and the friends of Phrenology use it as an entering wedge, to introduce the subject into new quarters. A reading of the Annual creates a desire to learn all about the SCIENCE OF MAN, and thus performs useful missionary work. For this purpose it is furnished at a very liberal discount, so that it may be widely circulated. In noticing this new "Hand-Book" for 1869, the Lawrence *Sentinel* says: "Phrenology is now classed as a science, and inductive observation yearly adds to the facts enunciated by Gall and Spurzheim." The Putnam *Herald* says: "The Annual is a very entertaining book, and furnished at the low price of 25 cents." [Much less to agents.] The *Hosack Valley News* says: "It embraces all the topics of information usually treated in such publications. It is finely illustrated, and will be found a book of great and valuable interest." The Washington *Daily Union* says: "It contains a great variety of articles upon subjects of every-day importance, such as education, culture, character, etc., and is illustrated by nearly fifty portraits of distinguished characters, civilized and savage." We might extend these notices to any length—suffice it—we shall be glad to have all our readers order a dozen or more to sell or to give away, as they can afford.

POPULAR LECTURES ON SCIENCE.—The American Institute have arranged for a course of lectures on scientific and other subjects, to be delivered weekly during the winter months of 1868-9. Gentlemen of acknowledged eminence in their several spheres of scholarship and research comprise the programme. Some of these we are at liberty to mention. President Barnard, of Columbia College, the first lecturer in the course,

whose subject is "The Microscope and its Revelations;" Prof. Alexander, of Princeton, following Pres. Barnard, will lecture on "The Telescope;" Prof. Guyot, of Princeton, on "The Barometer and Meteorology;" Prof. Cook, of Cambridge, on "The Spectroscope;" Prof. Silliman, of Yale, probably on "The Endiometer;" Pres. Dawson, of McGill College, Montreal, on "Primeval Flora;" Prof. Hall, of Albany, on "Primeval Fauna;" Dr. T. S. Hunt, of Montreal, on the "Formation of Continents." The lectures promise to be peculiarly interesting from the fact that so many of them will have for their consideration important philosophical instruments. The intelligent class of the community, already somewhat accustomed to popular lectures on scientific topics, will find in the lectures a rich fund of literary enjoyment. Steiny Hall is the place designated for their delivery.

BULBOUS ROOTS.—Lovers of fine flowers would do well to examine the large catalogue of bulbous roots offered for public appreciation by Messrs. Griffling & Co., Nos. 53 and 60 Cortland Street, New York. We must acknowledge the receipt of several fine specimens of hyacinth, tulips, crocus, and amaryllis, which they lately sent to our office.

MESSRS. FELL AND DUFFEE, 711 Sansom Street, Philadelphia, booksellers, will supply all our publications at New York prices. Give them a call.

General Items.

ART AND SCIENCE COMBINED.—We have often referred to the exquisite chromos produced by the Messrs. PRANG & Co., of Boston. Their latest achievement, and one of the most brilliant landscapes ever issued in chromo, is just ready for public consideration. It is a view in the Yosemite Valley, by Bierstadt, the well-known American painter. The Boston *Daily Advertiser* says of it: "The Falls of the Yosemite is a characteristic bit of California scenery, in Bierstadt's well-known style. It represents a bright sun-set on a lonely lake, whose solitude is disturbed only by a pair of water-fowl that hover over and rest on the rocks at the shore. Abrupt, steep, and rugged cliffs, over a part of which tumbles headlong a graceful waterfall, form the southern boundary of the lake; and a fringe of gigantic branchless fir-trees skirts the northern shore. It is a careful study after nature, and very Bierstadtish."

This warm and cheerful picture awakens at once a love for the grand and sublime in nature, and begets a gleam of gladness, with a hope that we may some time look on the original scene which inspired the artist. The picture will find millions of admirers, and we hope many purchasers.

A ZOOLOGICAL GARDEN.—Our citizens are becoming impatient for that long-promised "collection" which is to form one of the attractions of the Central Park. We want to secure for this purpose the best native and foreign specimens of all living animals, birds, reptiles, etc., and thus form what shall be in itself a school of natural history. It is a shame and a reproach that we have nothing in America to compare with the collections of London, Paris, and Vienna. We are the most traveled people in the world,—have many explorers, hunters, and lovers of natural history, but no collections worthy of

note. In this city there is great wealth, great enterprise, and public spirit, but we ask a leader to put this thing in the way of accomplishment. Where is the man? Let him appear! He shall have men, money, and the gratitude of all Americans.

POPULAR LECTURES ON ANATOMY AND PHYSIOLOGY, HUMAN AND COMPARATIVE, by Dr. F. G. Lemerrier, illustrated by the classic models prepared by Dr. Anzous, of Paris, delivered in New York under the auspices of the Association for the Advancement of Science and Art. This is the programme of Dr. Lemerrier's lectures:

1st Lecture.—Presentation and description of the organic structure of the human body, including the bones, the muscles, the heart, arteries and veins, the nerves, and all principal organs of digestion, breathing, circulation, and secretions, considered in a general manner, to be compared with the similar organs and functions of other principal classes of animals.

2d Lecture.—Resumé of the first lecture: the senses, skin, and touch; tongue and taste; the nasal structure and smell; the ear, its organization, mechanism of hearing; the eye, its delicate organization; mechanism of vision—long sight, short sight—cataract; and comparative anatomy of some of these senses.

3d Lecture.—The brain; the little brain and spinal marrow, or central nervous system; sensitive and motor nerves; progressive development of the nervous system in the principal classes of animals.

4th Lecture.—Resumé of the third lecture; the anatomy of the gorilla, the comparison of its organs with similar ones in other animals, especially with those of man.

5th Lecture.—Anatomical and physiological study of the horse: its wonderful structure arranged to give strength and quickness; practical explanations.

6th Lecture.—Vegetable anatomy and physiology; structure of a dicotyledon tree—of the flowers and fruits; comparison of animal and vegetable ovules, or eggs.

It is presumed that these lectures—so elaborately illustrated by classic models—and so popular in Europe, will be repeated in other cities in America. If well patronized, the lecturer will remain some time in this country.

CRANBERRY FARMS FOR SALE.—Mr. Barclay White, of Julietstown, N. J., offers fifteen cranberry farms for sale. They are offered at from \$15 to \$100 per acre.

PRETTY PICTURES.—The season for selecting Christmas presents has arrived. Our Broadway windows are teeming with beautiful temptations. There is no end to cheap toys for children, or to the more expensive toys for adults. There are "stacks" of jewelry—genuine and bogus—watches, clocks, hats, caps, boots and bonnets,—and cords of books useful and ornamental. But among all the pretty things, a thing that most resembles the friend we love best would be most highly prized. Do you ask what that thing? We answer, A LIKENESS of that friend by our neighbor A. BOGARDUS, of 263 Broadway, on the corner of Franklin Street. He makes pictures that almost wink, if they do not talk. We send all our downtown friends there, and enjoy the happy assurance that they will be well pleased with both his polite treatment and his high artistic skill. If you wish for pictures on ivory or for plain photographs, for Christmas presents, that is the place to get them.

Business.

[Under this head we publish, for a consideration, such matters as rightfully belong to this department. We disclaim responsibility for what may herein appear. Matter will be LEADED, and charged according to the space occupied, at the rate of \$1 a line.]

A CHALLENGE FROM A LADY.

New York, Oct. 20, 1868.
Messrs. Wheeler and Wilson, 625 Broadway.

GENTLEMEN—Referring to the challenge of Mr. Pratt, whose Wheeler and Wilson sewing-machine has been in use ten years without repairing, I beg to state that I have used my Wheeler and Wilson machine in family sewing fourteen years, without even the most trifling repairs; and it is now in so good condition that I would not exchange it for your latest number (now upward of \$50,000). One needle served me more than a year for fine sewing. Can any one beat this? Yours truly,
MRS. ANNE WARNER.

Any one who can give a better report than this will be entitled to one of our new tucking gauges.—Wheeler and Wilson Manufacturing Co.

[For a club of 20 new subscribers to the JOURNAL, at \$3 each, we will give one of Wheeler and Wilson's family sewing-machines (price \$55). We believe these to be the best machines manufactured, having sent away many of them, and they have in all cases given the best of satisfaction.—Ed. A. P. J.]

The Galaxy

IS NOW THE MOST BRILLIANT, ENTERTAINING, AND ATTRACTIVE MAGAZINE PUBLISHED IN THIS COUNTRY.

Commencing with the May number, SHELDON & COMPANY became the publishers, and have greatly enlarged and improved it.

1st. It now contains 50 per cent. more matter than heretofore, and is the largest monthly magazine (with one exception) published. Each number contains an amount of reading matter equal to most 12mo vols. which sell at \$2.

2d. It is the most elegantly illustrated magazine published in this country. Each number will have elegant full-page illustrations, printed on tinted paper. The best artists will be employed on the illustrations.

3d. It will contain articles by the most popular authors in this country and in Europe.

4th. The GALAXY will be in every respect an elegant and entertaining magazine

5th. In the October number of the GALAXY was commenced a remarkable story called "The Cipher," the first part of which has called forth the highest praise from the press. Although written by a well-known author, it will be published anonymously. We shall soon commence a new serial by Mrs. Edwards, author of "Archie Lovell" and "Steven Lawrence Yeoman," and within a few months shall offer to the readers of the GALAXY several new literary attractions, which we are not yet quite prepared to announce.

Price 35 cents. \$4 per year; two copies \$7; three copies \$10; ten copies \$30.

WHAT THE PRESS SAY OF THE GALAXY.

From the New York Tribune.

Well sustains its reputation for vigorous and racy writing. The young blood employed on its pages tells in the fresh glow of its complexion.

From the New York Times.

We rarely open a more readable magazine than the number of the GALAXY for March. There is not a dull page between its covers.

From the Philadelphia Inquirer.

Remarkably fresh, readable, and free from all conventionalities, is the GALAXY. Its contributors, all, have something new to offer, and they have the happy knack of writing concisely and clearly.

From the Elmira Daily Gazette.

It has reached an enviable position in our periodical literature.

From the Cincinnati Telegraph.

The conductors of the GALAXY have manifested great and creditable enterprise in its publication and improvement, and have made it second to no other magazine published in America.

From the Philadelphia Press.

Without any flourish of trumpets is steadily becoming a standard magazine. A model periodical; a credit to American periodical literature.

SHELDON & COMPANY, Publishers, 498 and 500 Broadway, New York. Dec. 2t.

The Greatest Dramatic Romance of the day!

SIBALLA, THE SORCERESS;

OR, THE

FLOWER GIRL OF LONDON.

A Tale of the Days of Richard Crook-back.

BY PROF. WM. H. PECK,

Author of "Beaumont, the Banker;" "Wild Redburn;" "The Executioner of Venice;" "The Beauty of Paris;" "Ashes of Southern Homes;" "Copper and Gold;" "The Attorney's Plot;" "Maid and Matrons of Virginia;" "The War in Georgia;" "The Confederate Flag on the Ocean;" "The Footprints of Crime;" "The Conspirators of New Orleans;" "Bertha Seeley;" "Beatrice Holmes;" "The Brother's Vengeance," etc., etc., etc.

The great inventive talent of this prolific and always intensely entertaining author has never been more brilliantly displayed in any of his popular romances—and he has never written an unsuccessful one—than in this brilliant gem of sensational literature,

SIBALLA, THE SORCERESS;

OR, THE

FLOWER GIRL OF LONDON,

now being published in the

NEW YORK WEEKLY.

The story opens in the last year of the reign of

RICHARD III., OF ENGLAND.

who is one of the prominent characters in this intensely exciting and vigorously executed romance.

The dark superstitions of those stormy days of English history, which marked the close of

"THE WARS OF THE ROSES;"

the crafty and desperate heart of Richard of Gloucester,

THE LAST OF THE PLANTAGENETS;

the cold and scheming ambition of Henry of Richmond,

THE FIRST OF THE TUDORS;

the fierce struggles of the haughty nobles and the resolute people for right and wrong; the noble and patriotic soul of William Caxton,

THE FIRST PRINTER OF ENGLAND;

together with a LOVE STORY of most absorbing and interesting character, sparkling with incidents, episodes, plot and counterplot, thrilling scenes, fearful adventures, and dialogue of great dramatic power—all these are discussed, depicted, and delineated with that graceful ease and nervous strength of the pen with which the readers of this always universally read author are so familiar.

The characters of the beautiful Lauretta, the Flower Girl, and of little "Fla," the intended victims of the ferocious sorceress, Siballa, and her good sister, will at once become clear to the reader, and all the gentler emotions of the soul be excited with sympathy for their trials.

Noble and vicious passions have each their potent representatives in this great romance, as: The brave and honorable Mortimer Clair; the dark and plotting Roger de Mountfort; the reckless and daring mercenary, Sir Barton; the heartless libertine, Sir Simon; the bold and independent printer, Nicholas Flame; the devoted and widowed mother, Madame Clair; the helpless orphan's power to resist cruelty and temptation, as displayed in little "Fla;" pure love and resolute determination to die rather than sin, as depicted in the character of Lauretta, the

beautiful flower girl; the ruthless ambition of the hump-backed king; the treachery of his resentful lords; the calm dignity of Caxton, the father of English printing; hideous vice in every phase in Siballa and her gaunt limb of sister, the jillossess; and the power of an evil mind to make even birds and beasts fearful accomplices in crime, as the skillful author pictures in thrilling style in Philip the Owl and Rarab the Assassin Ape.

The plot of the story is admirable in its originality and firmness to the very end, the reader being kept profoundly interested throughout.

This great story, with others of great power and interest, are now being published in the

NEW YORK WEEKLY,

and will be followed by others by the very best writers.

NOW IS THE TIME TO SUBSCRIBE FOR THE NEW YORK WEEKLY,

"THE PEOPLE'S FAVORITE."

OUR TERMS.—The NEW YORK WEEKLY is sold by News Agents throughout the United States and the Canadas. The price is six cents, but where agents have to pay extra freight, a higher price is charged. We desire our friends to purchase from News Agents where convenient. When sent by mail: single copies, \$3 per annum; four copies, \$10, which is \$2 50 a copy; eight copies, \$20—the person sending us \$30 for a club of eight, all sent at one time, will be entitled to a copy FREE. Postmasters and others who get up clubs can afterward add single copies at \$3 50 each.

The NEW YORK WEEKLY and ILLUSTRATED LITERARY ALBUM will be sent to one address for \$5 a year.

STREET & SMITH, Proprietors,

No. 55 Fulton Street, New York.

Post-Office Box, No. 4396. Dec. 1t.

Performing Animals.—How

to teach horses to feign lameness; and hidden articles; fire pistols; turn hand-organ; pump water, etc. Dogs to dance; "sing;" go errands; select any article at command from a large number and give to any designated person, as, "Give the blue stocking to the lady in the white dress;" to find a card privately drawn and replaced in the pack by any stranger, etc. Pigs to answer questions by selecting appropriate printed cards; to tell day of week or month; to tell any lady's age, and name of future husband, etc. And many amusing, curious, and wonderful feats of bears, monkeys, elephants, goats, donkeys, and even cats, rats, mice, and fleas. Explanations of the tricks, with instructions for teaching, will be published with illustrations, in

HANEY'S JOURNAL.

a handsome, moderately illustrated monthly of interesting, entertaining, and useful matter for all. Exposures of humbugs, quacks, and swindles; lives of the rich men of the world, showing how they gained their wealth; new arts and recipes; hints on health; magic, games, puzzles, etc., for the young, and choice miscellany for all.

Enlarged with new volume, giving over 1,500 square inches of reading, illustrations, etc., each month, for

ONLY FIFTY CENTS A YEAR.

Get it of newsdealers, if any in your place, at 5 cts. By mail to localities where there are no dealers, 50 cts. a year, or 7 cts. singly. None free.

JESSE HANEY & CO.,

119 Nassau St., New York.

The following books can be had of any dealer or by mail: Guide to Authorship, including editing, proof reading, publishing, etc., 50 cts. Phonographic Hand-Book, 25. Hand-Book of Ventri-ouism, 15. Watchmakers' and Jewelers' Manual, 25. Bad Memory Made Good, 15. Rogues and Rogueries of New York, 25. Common Sense Cook Book, 25. Home Recreations, 25. Painters' Manual, 50. Secrets Worth Knowing, Hundreds of Money-making Recipes, 25. Dec. 1t.*

D. Appleton & Co.**NEW ILLUSTRATED BOOKS FOR
THE HOLIDAY SEASON, 1868-69.****I.****THE POET AND THE PAINTER;
OR, GEMS OF ART AND SONG.**

An imperial octavo volume, four hundred pages, containing Choice Selections from the English Poets, and Superbly Illustrated with
NINETY CHOICE LARGE STEEL ENGRAVINGS, printed in the most perfect manner on the page with the text.

The volume is the most fully and richly illustrated, and, altogether, the most sumptuous Gift Book published in America. The illustrations are all on steel, and include highly-finished likenesses by Huntington, Durant, Church, Keneett, Gignoux, Cropey, Cole, etc., etc., and exquisite Ideal Portraits by famous European artists.

II.**THE SCHILLER GALLERY.**

Consisting of fifty Steel Plate Illustrations of Characters in the Works of Friedrich Schiller, with descriptive text by Frederick Pecht. In one volume, imperial octavo, antique morocco, gilt. Price, \$30.

The "Schiller Gallery" is an attempt to delineate by the pencil the famous characters in the Poems and Plays of the great German Poet, in a manner similar in general plan to the well-known "Stratford Gallery," "Waverly Gallery," and "Byron Gallery."

The Engravings in the "Schiller Gallery," however, are, in many particulars, superior to that of any similar collection.

To the admirers of Schiller, a study of these happy artistic realizations of his characters will prove a great and lasting delight. To all others the work is a Superb Gallery of Art of almost unequalled interest.

III.**WOOD-SIDE AND SEA-SIDE.**

ILLUSTRATED BY PEN AND PENCIL.

An elegant small quarto volume of Rural Poems, very handsomely illustrated by engravings from drawings on wood, by Butler, Foster, Horne, and others. Printed on tinted paper in the best manner. In cloth, gilt sides and edges, price, \$4; in morocco antique and morocco gilt, \$8.

D. APPLETON & CO., Publishers,
90, 92, and 94 Grand Street, New York.

Unusual Attractions! Lippincott's Magazine.

AMERICAN AND ORIGINAL.

PROSPECTUS FOR 1869.

The Third Volume and Second Year of *Lippincott's Magazine of Literature, Science, and Education* will commence with the Number for January, 1869; and it is the intention of the Publishers that the Magazine shall not only maintain the

HIGH LITERARY REPUTATION

which it has acquired during the first year of its publication, but that it shall be indeed still more valuable, attractive, and entertaining.

The Publishers, encouraged by the *great success and marked approbation* which the Magazine has already gained, have made liberal arrangements for the future. Their object will continue to be, to present to the American Public a Monthly Magazine of the

HIGHEST CLASS,

thoroughly National in its tone, and treating the questions of the day in a philosophical and statesmanlike manner. Each Number will contain a large proportion of *light reading*, together with articles of a more thoughtful class.

The January Number will contain the opening chapters of a

BRILLIANT AND ORIGINAL AMERICAN NOVEL,

written expressly for this Magazine, which will be entitled

BEYOND THE BREAKERS.

A STORY OF THE PRESENT DAY.

SHORT ORIGINAL TALES,

and Sketches by the best authors, will appear in each Number, together with Sketches of Travel, History, and Biography; Essays; Papers of Wit and Humor; Articles on Popular Science, Finance, and Education; Poetry; and Miscellanies.

Our Monthly Gossip and Literature of the Day will add variety and interest to each Number.

NOW IS THE TIME TO SUBSCRIBE,

and secure the opening chapters of the new and entertaining Serial Novel.

From the New York Mercantile Journal, October 8.

It is with pleasure that we announce to our readers the appearance of the first number of a new weekly Dry Goods Price List, much more extensive than any other that has heretofore been offered to the public. Believing that the mercantile community ought to be thoroughly informed as to market values, we can sincerely say to this new corner, "The more the merrier." We therefore cordially welcome *Sheldon's Weekly Dry Goods Price List* as it enters the arena as a competitor for the favors of the Dry Goods trade.

Messrs. J. D. Sheldon & Co., of 336 Broadway, are the publishers of this new candidate for public favor. The specimen number before us indicates plainly that an immense amount of labor has been performed in compiling and arranging its extended quotations. The subscription price of the above publication is \$5 per annum, being *less than ten (10) cents per week*. All Dry Goods merchants in city or country who yearly sell goods to the amount of \$1,000 and upward, should certainly subscribe at once. Those whose business will not admit of an outlay of ten cents—yes, twenty, thirty, forty, or even fifty cents a week for invaluable commercial and financial information, ought to sell out immediately.

Dec. 11.

PREMIUM LIST

FOR
DEMOREST'S MONTHLY.

One of the following valuable Premiums is sent to each and every Yearly Subscriber, whether single or in clubs, who pays three dollars each for the Magazine:

First—A package of fine stationery, including two sizes of note-paper, and envelopes to correspond, both stamped in color, with initial letters from A to Z, so that subscribers can select what letter they require. All ladies require stationery, and this being of the best quality and fashionably initialed, can not fail to prove welcome and attractive.

Second—Croquet, as played by the Newport Croquet Club. Cloth.

Third—A large and fine photographic portrait of Mr. and Mme. Demorest, on an eight by ten card-board, ready for framing.

Fourth—A package of Mme. Demorest's celebrated "diamond" needles.

Fifth—A package of Mme. Demorest's Lily Bloom or Roseate Bloom for the complexion, or an everlasting perfume packet.

Sixth—The children's Dress Chart.

Seventh—One dozen of Stimpson's very superior pens.

Eighth—The Family Letter Scale.

Ninth—A package of fine Visiting Cards, with your name elegantly written and inclosed in a neat card case.

Tenth—A Pocket Diary for 1869.

Eleventh—An Indelible Pencil for Marking Linen.

Twelfth—A package of twenty Eagle Paper Collars.

Thirteenth—A Concordance to the Holy Scriptures.

Fourteenth—Demorest's Parlor Annual, or Ladies' Almanac for 1869.

Either of these premiums will be sent promptly on receipt of subscribers names, with three dollars for each name, commencing with any number.

Premiums for Clubs of two SUBSCRIBERS, at \$3 each, and the First Premium to each SUBSCRIBER.

One pair of Silver-plated Butter Knives, the newest pattern, and the best article of plated ware manufactured, value \$3; or, A Lady's Memorandum Book and Card Case, combined, in Turkey morocco; or, A package of French Imperial Note Paper, 100 sheets, and Envelopes to match; or, One dozen yards of Cash's Imperial Lace, No. 7, No 10, or Plain Frilling; or, A binder for DEMOREST'S MONTHLY. ESTABLISHED 1861.

THE GREAT AMERICAN TEA COMPANY

RECEIVE THEIR TEAS BY THE CARGO

FROM THE BEST TEA DISTRICTS OF

CHINA AND JAPAN,

AND SELL THEM IN QUANTITIES TO SUIT CUSTOMERS

AT CARGO PRICES.

The Company have selected the following kinds from their stock, which they recommend to meet the wants of clubs. They are sold at cargo prices, the same as the Company sell them in New York, as the list of prices will show.

PRICE LIST OF TEAS.

OOLONG (Black), 70c., 80c., 90c., best \$1 per lb.
MIXED (Green and Black), 70c., 80c., 90c., best \$1 per lb.
ENGLISH BREAKFAST (Black), 80c., 90c., \$1, \$1 10, best \$1 20 per lb.
IMPERIAL (Green), 80c., 90c., \$1, \$1 10, best \$1 25 per lb.
YOUNG HYSON (Green), 80c., 90c., \$1, \$1 10, best \$1 25 per lb.
UNCOLORED JAPAN 90c., \$1, \$1 10, best \$1 25 per lb.
GUNPOWDER (Green), \$1 25, best \$1 50 per lb.

COFFEE ROASTED AND GROUND DAILY.

GROUND COFFEE, 20c., 25c., 30c., 35c., best 40c. per lb. Hotels, Saloons, Boarding-house keepers, and Families who use large quantities of Coffee, can economize in that article by using our FRENCH BREAKFAST AND DINNER COFFEE, which we sell at the low price of 30c. per pound, and warrant to give perfect satisfaction. ROASTED (Unground), 30c., 35c., best 40c. per lb. GREEN (Unroasted), 25c., 30c., 35c., best 35c. per lb.

Parties sending club or other orders for less than \$30, had better send a Post-office draft or money with their orders, to save the expense of collections by Express, but larger orders we will forward by express, to "collect on delivery."

Hereafter we will send a complimentary package to the party getting up the club. Our profits are small, but we will be as liberal as we can afford. We send no complimentary packages for clubs of less than \$30.

Parties getting their Teas of us may confidently rely upon getting them pure and fresh, as they come direct from the Custom-House stores to our warehouses.

We warrant all the goods we sell to give entire satisfaction. If they are not satisfactory, they can be returned, at our expense, within thirty days, and have the money refunded.

N. B.—Inhabitants of villages and towns where a large number reside, by clubbing together, can reduce the cost of their Teas and Coffee about one-third (besides the Express charges), by sending directly to "The Great American Tea Company."

CAUTION.—As many parties in this city and elsewhere are imitating our name and manner of doing business, we hope our friends will be particular to address their letters to our principal warehouses, "Nos. 31, 33, 35, & 37 Vesey Street; Post-office Box, 5643, New York City." Attention to this will avoid mistakes.

Edward O. Jenkins, Steam

Book and Job Printer, and Stereotyper, No. 20 North William Street, New York, announces to his friends and the public that his establishment is replete with Presses, Type, and material for the rapid production of every description of printing.

173 William Street, New York City.

Watson's Manual of Calis-

TRINICS contains a complete course of physical exercises, WITHOUT APPARATUS. It has all needful directions, rules, and explanations, with sections on phonetics and respiration. The exercises are arranged in accordance with well-known principles of anatomy, physiology, and hygiene. They have been thoroughly tested, securing the happiest results. These exercises, practiced habitually and energetically, can not fail to yield grace, agility, suppleness, a ready hand, as well as robust health and power of endurance. Almost any school-room or parlor will suffice for the exercises. For those who use the piano to enliven the exercises, there is music, prepared by the best masters.

The book is richly illustrated; is printed on superior paper, and bound in best style. A reviewer writes: "This is the most elaborate and satisfactory attempt yet made to apply practically to educational purposes the great truths of physiology, relating to physical culture and training. To those in authority it is a positive duty to promote the circulation of this book by every means in their power. All who have the physical welfare of the human race at heart, and understand how powerless the intellect is to contend against the burden of a feeble frame, are equally interested in its teachings, and answerable each in his own sphere, however small it be, for the consequences of neglecting them. Sent by mail on receipt of \$1.

J. W. SCHERMERHORN & CO., Publishers, 14 Bond St., New York. 3t.

Copies of these works should be placed within the reach of every member of every family. Their moral, religious, and educational influence would have an elevating and reformatory tendency on all readers. A hundred dollars will pay for a complete set. Who will have one? Single copies by post; large quantities by express. Address S. R. WELLS, 389 Broadway, N. Y.

THE ONE HUNDRETH VOLUME.

On January 1st, 1869, "Littell's Living Age" will enter upon its One Hundredth Volume.

It has received the commendation of Judge Story, Chancellor Kent, President Adams, Historians Sparks, Prescott, Bancroft, and Ticknor, Rev. Henry Ward Beecher, and many others; and it admittedly "continues to stand at the head of its class." It is a work which commends itself to every one who has a taste for the best literature of the Magazines and Reviews, or who cares to keep up with the events of the time. It contains the best Reviews, Criticisms, Tales, Fugitive Poetry, Scientific, Biographical, Historical, and Political Information, gathered from the entire body of English Periodical Literature, and forming four handsome volumes every year, of immediate interest, and solid, permanent value. It is issued every Saturday, giving fifty-two numbers, of sixty-four pages each, or more than THREE THOUSAND double-column octavo pages of reading matter, yearly.

EXTRACTS FROM NOTICES.

From the late President of the United States, John Quincy Adams.

"Of all the periodicals devoted to literature and science, which abound in Europe and this country, *The Living Age* has appeared to me the most useful."

From Rev. Henry Ward Beecher, May, 1867.

"Were I, in view of all the competitors that are now in the field, to choose, I should certainly choose *The Living Age*. Nor is there, in any library that I know of, so much instructive and entertaining reading in the same number of volumes."

From the New York Times.

"The taste, judgment, and wise tact displayed in the selection of articles are above all praise, because they have never been equaled."

From the Springfield (Mass.) Republican.

"We can do those among our readers who love sound and pure literature no better service than by referring them to this sterling weekly. It is decidedly the best magazine of the class published in the United States, if not in the world."

From the New York Independent.

"No one can read, from week to week, the selections brought before him in *The Living Age*, without becoming conscious of a quickening of his own faculties, and an enlargement of his mental horizon. Few private libraries, of course, can now secure the back volumes, sets of which are limited and costly. But public libraries in towns and villages ought, if possible, to be furnished with such a treasury of good reading; and individuals may begin as subscribers for the new series, and thus keep pace in future with the age in which they live."

From the Philadelphia Inquirer, 1867.

"Age can not wither, nor custom stale, its infinite variety." On the contrary, it improves with time, presenting as it does, from week to week, the latest and best thoughts of cotemporary writers. A constant reader of *Littell's* is ever enjoying literary advantages obtainable through no other source."

From the Congregationalist and Recorder, Boston.

"For instructive, substantial articles, entertaining stories of the best class, choice poetry, and wise variety of selections, adapted to intelligent Christian families, we certainly make no abatement in our recommendation of *Littell*. No better present can be found than a subscription receipt for the issues of the coming year."

From the Richmond Whig, 1867.

"If a man were to read *Littell's* magazine regularly, and read nothing else, he would be well informed on all prominent subjects in the general field of human knowledge."

From the Round Table, New York, 1867.

"There is no other publication which gives its readers so much of the best quality of the leading English magazines and reviews."

From the Episcopalian, New York and Philadelphia, 1868.

"Each volume is a library in itself; and the magazine is the leading one of its class."

From the Boston Journal, 1867.

"Amid the multiplicity of publications claiming the attention of readers, few give such solid satisfaction as this periodical."

From the Christian Statesman, Philadelphia, 1868.

"No single journal gives so perfect a reflection of the mind of the present age."

Published weekly at \$3 a year, free of postage. An extra copy sent gratis to any one getting up a Club of Five New Subscribers. For other Club Terms, send for Circular. Address LITTELL & GRAY, 80 Bromfield Street, Boston.

NOTE.—The PHRENOLOGICAL JOURNAL and LITTELL'S LIVING AGE sent to one address, one year, on receipt of \$9. Address office of either publication. Dec. 21.

American Artisan and Patent Record.—New Series.

The *American Artisan*, now in the fourth year of its publication, is a Weekly Journal, devoted to fostering the interests of Artisans and Manufacturers, encouraging the genius of Inventors, and protecting the rights of Patentees.

Each number contains numerous original engravings and descriptions of new machinery, etc., both American and Foreign; reliable receipts for use in the field, the workshop, and the household; practical rules for mechanics and advice to farmers; "Mechanical Movements," and other useful lessons for young artisans; the official list of claims of all patents issued weekly from the United States Patent Office; reports of law cases relating to patents, etc.

Each number of the *American Artisan* contains sixteen pages of instructive and interesting reading matter, in which the progress of the arts and sciences is recorded in familiar language. Twenty-six numbers form a handsome half-yearly volume. The columns of the *American Artisan* are rendered attractive by articles from the pens of many talented American writers upon scientific and mechanical subjects.

Terms of subscription: Single copies, by mail, per year, \$3 50 in advance. Single copies, by mail, 6 months, \$1 25 in advance.

The publishers of the *American Artisan* are also extensively engaged as Solicitors of American and Foreign Patents, and will promptly forward to all who desire it, per mail, gratis, a pamphlet, entitled "Important Information for Inventors and Patentees." BROWN, COOMBS & CO.,

Proprietors of the *American Artisan*, Mch. 11. No. 189 Broadway, New York.

THE MINK.

THE MINK.*

THIS little animal is an object of very much interest in society, for the reason that he furnishes the ladies with furs but a little inferior to the much revered sable. In this country the skin of the mink has become most popular as an article of ladies' wear in cold weather, and commands very high prices. The mink is an inhabitant of the northern parts of America, Europe, and Asia, and belongs to the *mustelids* or weasel family. In many respects it resembles the ferret and ermine. Its feet are much webbed, but it is not amphibious like the muskrat, although its favorite haunts are the banks of streams, and its swimming powers great. It is a slender, delicately-formed animal, varying from thirteen to eighteen inches in length, exclusive of the tail, with short, stout legs, a broad and somewhat depressed head, short, round ears, and small eyes. The fur is generally of a dark brown color, and varies in fineness with the locality in which the animal is found; the more southern its *habitat*, the coarser and stiffer the hair.

Naturalists recognize two varieties in America: one, small, dark-colored, common in the Northern and Eastern States and Canadas; the other, larger, with lighter-colored, coarser, and less valuable fur, common in the Western and Southern States. The mink is carnivorous and nomadic in its habits. It is an active predator in the farm-yard, sometimes killing several chickens in a single night; it feeds on fish, frogs, snakes, birds, mice, and muskrats. Speckled trout are particularly relished by the mink, and the brooks where these fish are found are well known to the cunning little

anglers. The breeding season commences about the last of April; and from four to six young are produced at a litter. The mother hides her young until they have attained nearly half their growth, as the male minks, like the marten, weasel, and panther, destroy their young when they can find them.

The fur of the mink was formerly considered hardly worth collecting, a skin being valued at only 50 cents; now that fashion has discovered its utility, skins of a fine quality are worth about \$4.

The common mode of taking minks is in traps baited with fish, birds' heads, or the flesh of a muskrat. Like most other animals of its genus, the mink is very tenacious of life.

AN ARCHITECTURAL CURIOSITY.—The tallest chimney in the world is said to be at the Port Dundas Works, Glasgow, Scotland. Its height from the foundation is 468 feet; above the level of the ground, 454 feet, the foundation being fourteen feet deep; the outside diameter, on a level with the ground, is thirty-four feet; at the top, twelve feet eight inches; thickness at the ground, seven bricks; at the top, one and a half bricks; the internal diameter at the base is twenty feet, which gradually contracts at the top to ten feet four inches diameter. There are no other human structures in the world higher than this chimney but the Strasburg Cathedral, which is 466 feet above the ground, and that of St. Stephen's Church, in Vienna, which is 465 feet high.

The most wonderful part of the story of this lofty chimney is, that, having been twisted out of the vertical line to the extent of seven feet nine inches, by a violent wind, before the mortar was hardened, human skill has reduced it to a perfect perpendicular again. The mortar was sawed out on the windward side, so as to allow the chimney to settle sufficiently to restore the perpendicular, which was soon accomplished.

A GOOD TEMPERANCE STORY.

JUDGE BAY, the temperance lecturer, in one of his efforts, got off the following hard hit at "moderate drinkers:"

"All those who in youth acquire a habit of drinking whisky, at forty years of age will be total abstainers or drunkards. No one can use whisky for years with moderation. If there is a person in the audience whose experience disputes this, let him make it known. I will account for it, or acknowledge that I labor under a mistake."

A tall, large man arose, and folding his arms across his breast, said:

"I offer myself as one whose own experience contradicts your statement."

"Are you a moderate drinker?" asked the Judge.

"I am."

"How long have you drank in moderation?"

"Forty years."

"And were you never intoxicated?"

"Never."

"Well," remarked the Judge, scanning his subject closely from head to foot, "yours is a singular case; yet I think it easily accounted for. I am reminded by it of a little story: A colored man, with a loaf of bread and a bottle of whisky, sat down to dine on the bank of a clear stream. In breaking the bread he dropped some of the crumbs into the water. These were eagerly seized and eaten by the fish. That circumstance suggested to the darkey the idea of dipping the bread into the whisky and feeding it to them. He tried it. It worked well. Some of the fish ate of it, became drunk, and floated helplessly on the surface. In this way he easily caught a large number. But in the stream was a large fish very unlike the rest. It partook freely of the bread and whisky, with no perceptible effect. It was shy of every effort of the darkey to take it. He resolved to have it at all hazards, that he might learn its name and nature. He procured a net, and after much effort caught it, carried it to a colored neighbor, and asked his opinion in the matter. The other surveyed the wonder a moment, and then said: 'Sambo, I understands dis case. Dis fish is a mullet-head; it aint got any brain!' In other words," added the Judge, "alcohol affects only the brains, and of course those having none may drink without injury."

The storm of laughter which followed drove the "moderate drinker" suddenly from the house.—*Southern Sun.*

THE
PHRENOLOGICAL JOURNAL
AND LIFE ILLUSTRATED

Is devoted to **The Science of Man**, in all its branches including PHRENOLOGY, PHYSIOLOGY, PHYSIOGNOMY, PSYCHOLOGY, ETHNOLOGY, SOCIOLOGY, etc. It furnishes a guide in **Choosing a Pursuit**, and in judging the dispositions of those around us, by all the external "Signs of Character."

Published monthly, \$3 a year in advance, (clubs ten or more, \$2 each. Sample numbers, 30 cents.) Now is the time to subscribe. A new volume began with the July number. Supplied by Booksellers and News-men everywhere.
